Compagnie Générale des Matières Nucléaires (COGEMA) of France secured mineral-prospecting rights in an area of 500,000 sq km from the Ministry of Petroleum and Mineral Resources. There are 213m. tons of proved phosphate-bearing ore (averaging 21% phosphoric anhydride content) at Al-Jalamid in the far north of Saudi Arabia. In May 1994 the Government invited proposals for the extraction from these reserves of 4.5m. tons of phosphate concentrate per year, to be transported by slurry pipeline to Jubail as feedstock for a proposed 2.9m. tons-per-year diammonium phosphate plant. A feasibility study was initiated in 1993 on proposals to establish a 150,000 tons-per-year copper smelter and refinery at Yanbu. Strategic control of the minerals sector is exercised by the Directorate-General of Mineral Resources (DGMR). In 1997 the state-owned Saudi Arabian Mining Company (Ma'aden) was established to take over existing state interests in the non-oil mining sector and to serve as a vehicle for future state mining ventures. Ma'aden had an initial capital of 4,000m. riyals. In addition to taking sole ownership of the Mahd adh-Dhahab mine, where 1997 gold production was around 170,000 oz, Ma'aden inherited PETROMIN's 50% interest in the Sukhaybarat gold mine, whose 1997 production was around 90,000 oz. Ma'aden was granted a 30-year gold mining lease at Al-Amar (220 km south-west of Riyadh) in September 1997 and a 30-year gold and silver mining lease at Al-Hajar (350 km south-east of Jeddah) in May 1998. The company said that it aimed to double Saudi Arabia's gold production by 2001. Demand for gold in Saudi Arabia (one of the top five consuming countries) increased by 8% to 199 tons in 1997.

ELECTRICITY AND WATER

Saudi Arabia's electricity system has to satisfy rapidly growing urban and industrial demand, and also to supply power for small, widely-scattered rural settlements. Until the 1970s, generation was controlled by a large number of small companies: 26 of them were operating in the Eastern Province alone. The main aim was to create regional grids, each operated by a single company. In 1977 the companies operating in the Eastern Province merged into a single Saudi Consolidated Electric Co (SCECO-East), managed by Aramco. A unified company for the southern region (SCECO-South) was formed in 1979. The other unified regional companies are SCECO-West and SCECO-Central. Northern areas continued to be supplied by separately-controlled local plants in 1994. SCECO-Central imports about 40% of its supply from SCECO-East via the only connection between two regional grids. Total sales of electric power increased from 1,690m. kWh in 1970 to 55,201m. kWh in 1988/89, of which 15,524m. kWh were used by industry. Electricity generation capacity was 16,850 MW at the end of 1991, and there were 2.4m. subscribers. An increasing amount of electricity is now produced in association with sea-water desalination. By the end of 1992 the kingdom's installed electricity generating capacity totalled 17,049 MW, and the combined power capacity of water desalination projects was 2,825 MW. Peak load in 1992 was 14,389 MW. Industrial users accounted for 27% of total power consumption in 1992. By 1994 peak load was approaching 19,000 MW, following steep rises in demand, attributable in part to low tariff levels, which covered less than one-half of the costs of production. A major programme for the expansion of capacity was planned, coupled with a campaign to reduce wasteful consumption (accounting for an estimated 30% of current electricity usage). In 1994 the standard monthly tariff for electricity supply was 0.05 riyal per unit for the first 4,000 kWh, 0.08 riyal per unit for the next 2,000 kWh, and 0.15 riyal per unit for consumption in excess of 6,000 kWh. From January 1995 a surcharge of 0.05 riyal per unit was imposed on all monthly consumption in excess of 2,000 kWh. Electricity consumption continued to increase rapidly in 1995, however, causing power cuts in Jeddah in August (the month of peak demand for air-conditioning). During August 1996 Saudi oil exports were subject to reductions of up to 5% in order to make supplementary fuel supplies available to the kingdom's power stations. Installed generating capacity totalled 21,300 MW in mid-1996.

In 1996, the number of electricity subscribers rose by 115,000 to 3.15m., and by 1997, according to government estimates, demand was growing at an annual rate of 16% (the Government's long term forecast for 1995–2020 envisaged annual growth of 4.5%). A wide range of development options, including national and international private sector participation, were under review in 1997 as the Government considered the practicalities of sustaining an expansion of generating capacity at an average rate of 1,500 MW–2,000 MW per year. In April 1997 contractors were invited to bid for a new power station development on a 'build-own-operate' basis, although in mid-1998 it was reported that a conventional 'turnkey' bidder seemed likely to win the contract.

The state body with overall responsibility for the Saudi electricity system is the General Electricity Corpn, founded in 1976. The Corporation has been especially active in establishing power networks in rural areas. By 1982 SCECO-South was implementing its own rural schemes, including the largest single rural project, Tihama rural electricity supply programme, costing an estimated 4,000m. riyals. By August 1984 the overall target of the 1980–85 Development Plan, which was to provide 80% of the population with electricity and water, had already been reached. Substantial additional progress has since been made in this field with the aid of heavy government subsidies, which necessitated a considerable finacial burden. As a result the government has been preparing the electricity sector for eventual privatization. In November 1998 it was annoucned that the ten existing power companies (four Saudi Consolidated Electric Companies and six smaller regional power-generating companies) were to be merged into the Saudi Electricity Company; SEO) which would also take over rural electric power provision from the General Electricity Corpn. A new higher structure of tariffs was to be introduced prior to SEC's incorporation and the new company was to be mandated to collect tariffs more effectivley. A regulatory body was to be established within one year of SEC's incorporation. Greater efficiency was to be achieved through the further development of a national electricity network.

Urban water supply has been a major challenge. At one time, the exploitation of underground resources appeared to be the best solution, but this has encountered technical difficulties. However, aquifers at depths as great as 1,700 m are to be tapped. The largest projects are at Riyadh: the Minjur aquifer began supplying the city in 1979, and the huge Wasia aquifer produced 200,000 cu m of water per day in 1983, while an additional 110,000 cu m per day were supplied by Salbakh and Buwaib. The construction of dams throughout the kingdom, as a means of preserving rainwater, has also expanded in recent years. In 1997 the construction of a dam at Bisha, with the capacity to store 325m. cu m of water was completed, bringing the total number of dams in Saudi Arabia to 187 (with aggregate storage capacity of 777.6m. cu m). A further 12 dams with total capacity of 60m. cu m were under construction in 1998.

Desalination projects are the responsibility of the Saline Water Conversion Corpn (SWCC), which is the world's largest producer of desalinated water. Jeddah already receives 350,000 cu m per day, or 91% of its water, from the SWCC, and massive new plants at Jubail and al-Khobar are due to supply the Eastern Province. In 1991 the Western Province Water and Sanitary Disposal Department approved contracts worth 327m. riyals to undertake three maintenance programmes in Mecca and Jeddah. A pipeline carries water from the Jubail plant inland to Riyadh. In the mid-1990s the Shuaiba desalination plant was pumping 35m. gallons to Mecca and 15m. gallons to Ta'if daily. The 1985–90 Plan foresaw investment of 31,789m. riyals in water projects. The aim was to increase desalination capacity to 1.8m. cu m per day by 1990. Emphasis will be placed on developing water reuse and surface water resources for direct use and for recharging aquifers. In 1991 a contract worth 31m. riyals was awarded to As-Saiqh Trading to implement an expansion project in Yanbu, and a contract worth 15m. riyals was awarded to Al-Fahd Corporation for Trading, Contracting and Industry to work on one of a series of projects to dispose of rising ground water in Riyadh. In 1994 the SWCC had 24 plants in 15 locations, with a combined capacity of about 2m. cu m (450m. gallons) per day; was in the process of constructing 1m. cu m per day of additional capacity; and was considering plans for 15 new units with a combined capacity of 1.2m. cu m per day. The SWCC had a 1996 project budget of 1,900m. riyals (unchanged from 1995), of which an estimated 800m.–1,000m.

riyals was required for maintenance work on existing installations. Water output in 1996 was around 2 36m cu. m (520m gallons) per day, while the SWCC's electricity generating capacity was around 3,000 MW (due to rise to 4,500 MW on completion of the current expansion programme).

TRANSPORT, COMMUNICATIONS AND TOURISM

Until 1964 the only surfaced roads, besides those in the petroleum network, were in the Jeddah-Mecca-Medina area Since then, roads have been given priority, and at the end of 1997 there were about 146,500 km of roads, of which about 30% were paved During the third Plan period (1980–85), the length of paved roads increased at an annual average rate of 15.8%, a major project being the 317-km Riyadh–Qassim highway, which was completed in the late 1980s In 1991 Kuwait was awarded a contract worth US $25 8m to implement part of a project which would link Mecca by road with the Riyadh–Ta'if expressway. Some 1,923 km of major roads were built in 1997 Saudi Arabia's national bus operator, the Saudi Public Transport Co (SAPTCO, whose 1,700 vehicles serve mainly inter-city routes), made a net profit of 82 6m riyals in the first half of 1994

The main sea ports are at Jeddah, Yanbu and Gizan on the Red Sea and at Dammam and Jubail on the Gulf A programme of rapid expansion and modernization was undertaken by the Saudi Ports Authority in the late 1970s which improved facilities, particularly at Jubail, Yanbu and Gizan In 1988 the expansion of exports from the agricultural and industrial sectors led to a revival in cargo-handling, despite the continuing decline in the volume of imports. The emergence of the industrial ports of Jubail and Dammam as important export centres has been prompted by the decision, in 1987, to reduce port tariffs for industrial and some agricultural goods produced locally by 50% and to extend the period of free storage from two to 10 days Jeddah port, however, has continued to suffer from the decline in imported cargo, and therefore SEAPA agreed in late 1988 to revise the regulations to allow transhipment. In 1997 10,867 vessels used Saudi Arabian ports, which, in 1997 had a total of 183 berths (137 at six commercial ports and 46 at two industrial ports). The volume of cargo (excluding crude petroleum) handled by Saudi ports in 1997 totalled 88 79m tons (60 69m tons of exports and 28.10m. tons of imports). A programme was introduced in 1997 to 'commercialize' the operation of the main ports by offering 10-year operations, maintenance and management leases to private-sector contractors, who would derive their income from stevedoring fees charged to port users and would pay a proportion of their income to SEAPA as royalties In 1983 Saudi Arabia became the 40th member of the London-based International Maritime (now Mobile) Satellite Organization (INMARSAT). Vela, the shipping arm of Saudi Aramco, owns one of the world's largest fleets of oil tankers, which in 1994 included 23 vessels classified as very large or ultra-large crude carriers Operational management of the fleet, hitherto contracted out to various international companies, was due to be transferred during 1996 to an in-house ship operating division, based in Dubai. In 1997 the National Shipping Company of Saudi Arabia (NSCSA) made a net profit of 5m riyals, compared with a net loss of 77.5m riyals in 1996 Primarily an operator of container and general cargo services, the NSCSA also owned five very large crude carriers, currently on long-term charter to Vela

In the late 1980s Saudi Arabia established satellite transmission and reception stations, facilitating direct telephone dialling to most of the rest of the world. About 50,000 new telephone lines became available in mid-1996, on completion of the first phase of a US $3,950m scheme to add 1 5m digital lines to the system over a seven-year period In early 1998 there were 2 2m. telephone lines installed (about 12 lines per 100 inhabitants), the current planning aim being to reach a 'teledensity' of at least 30 lines per 100 inhabitants within five years The number of cellular phone users in the kingdom increased from 174,700 in 1996 to 316,100 in 1997 and was forecast to reach 500,000 by the end of the century In April 1998 a royal decree authorized the transfer of state-run telecommunications interests to a new Saudi Telecommunications Company (STC) with an initial capital of 12,000m riyals It was intended that STC, once established as a profitable commercial enterprise, should become the subject of Saudi Arabia's first major privatization exercise Private involvement was meanwhile introduced into the provision of postal services in June 1998, when the first three-year licences were issued to applicants wishing to set up privately-run post offices in six areas of the kingdom

There are 25 commercial airports in the kingdom The principal international airports are at Jeddah (King Abd al-Aziz), Dhahran (the Eastern Province International Airport) and Riyadh (King Khalid) In the late 1970s plans were announced for new airports in the three main regions King Fahd International Airport in Dhahran came into operation in 1990. The new Riyadh airport, inaugurated in November 1983, cost some US $5,000m to build and is one of the world's largest. More than 25m. passengers, including 16m on domestic flights, passed through Saudi Arabian airports on normal flights in 1996 There were also 864,000 passengers on special flights for Muslim pilgrims. In July 1998 the Government drew up plans to introduce departure taxes for all non-pilgrim travellers on international routes, the proposed rates being 50 riyals at airports and 20 riyals at seaports

The Government operates the national carrier, Saudi Arabian Airlines (SV), which links important Saudi cities and operates regular flights to many foreign countries 1994. In October 1995 Saudia signed an agreement to purchase 61 new aircraft from the US companies Boeing and McDonnell Douglas at an estimated total cost of US $7,500m New hangars and maintenance facilities were expected to cost a further $600m Delivery of the new fleet was to begin in September 1996 and be completed within three to five years, while payment for the aircraft would be made over a period of up to 10 years It was intended that the introduction of the new fleet would be accompanied by a campaign to improve the airline's competitiveness (the Government's declared aim being to open Saudia to private investment as soon as its operations had been suitably restructured) Use of the name Saudia was phased out at the end of 1996 and replaced by the full name Saudi Arabian Airlines. In 1996 the airline carried 11 7m. passengers, including 3 87m. on international services, and handled 225,473 tons of freight, 65% of it on international routes. By mid-1998 the airline was taking delivery of new aircraft at the rate of three to four per month, and expected to have 39 of its new fleet in operation by the end of 1998

Saudi Arabia has the only rail system in the Arabian peninsula, in the year ending June 1994 it carried 402,570 passengers and 1 9m. tons of freight Operating revenue in excess of 70m riyals (28% from passengers and the balance from freight) was insufficient to cover costs, and the 1994 government subsidy totalled 192.4m riyals. The principal lines are a 571-km single-track railway which connects the port of Dammam, on the Gulf, with Riyadh, and a 322-km line, linking Riyadh with Hufuf, which was inaugurated in May 1985 In early 1995 plans to create a 120-km rail link between Dammam and Jubail, at an estimated cost of 920m. riyals, were presented to potential industrial users and development authorities by the Saudi Railway Organization, which forecast an annual revenue yield of between 140m. and 170m riyals if the scheme was implemented. In 1991 it was announced that an automated light railway service was to be built, to take pilgrims from parking areas to the Grand Mosque, as part of the project to develop the holy places in Mecca and Medina. The project was estimated to cost US $100m.

A causeway linking Bahrain with the Saudi mainland was opened in late 1986 It is open for 24 hours per day, although trucks and lorries may only use it at off-peak times.

In June 1992 the Saudi Automotive Services Co (SASCO) approved plans to produce light and heavy trailers, refrigerated boxes, wagons and tankers. In the latter half of 1992 the company began manufacturing spares for the main makes of cars available in Saudi Arabia (i e for US, Japanese and German models)

In 1996 several tourism development projects, representing a total investment of some 15,000m. riyals, were under way in Saudi Arabia, many of them designed to appeal primarily to Saudi citizens wishing to holiday in their own country. (Saudi citizens spent an estimated 6,700m riyals on foreign tourism in 1995) The largest single tourism development was the new town of al-Buhairat, being built at a cost of 4,800m riyals to provide a wide range of accommodation and leisure facilities on

the Red Sea coast about 45 km north of central Jeddah (and about 15 km from Jeddah's international airport) Designed to house a population of about 18,000 when fully developed, al-Buhairat was due to receive its first residents before the end of 1996 Another town-sized development, Durrat al-Arus, was under construction on an island at the mouth of the Gulf of Salman, north of al-Buhairat. Costing 1,300m. riyals and including a racecourse, golf-course, marina, theme park and aqua park, Durrat al-Arus was scheduled to open in mid-1996 and to complete all its planned attractions by 1998 Most tourism facilities under development on Saudi Arabia's Gulf coast in 1996 were smaller in scale Developments in the Half Moon Bay area, south of al-Khobar, included the al-Nakheel tourist village, a complex of 120 villas under construction at a cost of 124m riyals

FOREIGN TRADE

The total value of the country's exports, of which more than 90% was provided by petroleum before 1988, rose from 138,242m. riyals in 1978 to 362,885m. riyals in 1980, but by 1985 had decreased to 99,536m riyals, before increasing again, to 166,339m. riyals in 1990. Total exports, including re-exports, increased to 187,403m. riyals in 1995, to 227,428m. riyals in 1996 and then declined slightly, to 223,516m riyals, in 1997. Sales of petroleum and petroleum products accounted for 87.6% of total export revenue in 1997 The principal customers for Saudi Arabia's exports in 1996 were the USA (taking 17.5% of the total), Japan (15.0%), the Republic of Korea (10.5%) and Singapore (6.0%). Other important sources of foreign exchange are the local expenditure of foreign companies and the pilgrimage traffic

The value of Saudi Arabia's imports increased from 69,180m riyals in 1978 to 139,335m. riyals in 1982, but fell to 85,564m. riyals in 1985, and by 1990 had increased to 90,139m. riyals The main categories of imports are machinery and transport equipment, consumer goods, and food and beverages. In 1997 the kingdom's major suppliers were the USA (accounting for 21.9% of total imports), the United Kingdom (10.7%), Japan (6.7%), Switzerland (5.8%) and Germany (5 5%). The main items to be imported from Japan are cars, pick-up trucks and spare parts. Cars and machinery are the main imports from the USA, and from the United Kingdom military equipment is pre-eminent. In 1990 the visible trade surplus increased by 150%, to US $22,889m., as a result of exports worth $44,414m. (an increase of 56.5% over 1989) and imports worth $21,525m. (an increase of 11.9%). In 1993 the visible trade surplus decreased to $16,522m. (exports $42,395m., imports $25,873m.), but recovered to $21,289m. (exports $42,614m., imports $21,325m.) in 1994, and $24,390m. (exports $50,041m., imports $25,650m.) in 1995. Non-oil exports were worth an estimated $5,700m. in 1995, having increased by about 50% since 1993 (mainly because of the rapid expansion of the petrochemicals sector). In 1996 the impact of a downturn in world petrochemical prices was more than offset by a strengthening of oil export prices The visible trade surplus for 1996 was $35,370m. (exports $60,729m., imports $25,358m.), and in 1997 there was a visible trade surplus of $34,362m (exports $60,731m., imports $26,370m.). The decline in petroleum prices in 1998 severely affected trade in Saudi Arabia, reducing the visible trade surplus to $12,238m. (exports $39,772m., imports $27,535m.).

Saudi Arabia's current-account surplus increased dramatically from US $2,520m. in 1973 to $23,025m in 1974, under the influence of the increases in the price of petroleum, and in 1980 it reached $41,503m. The impact of the fall in petroleum output in 1982 was dramatic: the decline in export revenues was far greater than the drop in imports, and by 1983 a deficit of $16,852m. had been recorded. The deficit decreased to $12,932m in 1985, and $4,152m. in 1990, but in 1991 extraordinary items arising out of the Gulf conflict were largely responsible for a sharp increase in the overall current-account deficit to $27,546m (that year's deficit on services being $35,896m., while net transfers abroad totalled $20,235m. and net unearned income totalled $6,767m). By 1994 the current-account deficit had been reduced to $10,487m and it decreased further in 1995, to $5,325m In 1996 the current account showed its first surplus (of $681m) for 14 years. A further surplus, of $257m , was recorded in 1997. In 1998, however, owing to the decline in petroleum prices, a deficit of $12,880m. was recorded. The deficit on services in 1998 was $12,677m , while net transfers abroad totalled $15,081m and net unearned income $2,642m.

In June 1993 Saudi Arabia, which had held observer status in GATT since 1985, submitted an application for full GATT membership In mid-1996 negotiations with GATT's successor body, the World Trade Organization, were at a preliminary stage and it subsequently became apparent that negotiations were unlikely to be completed before the end of the century Major restructuring of the economy and its regulatory system will be necessary for industry to be able to benefit from the trade liberalization

FINANCE

Since mid-1977, and particularly since July 1978, the Saudi Arabian Monetary Agency (SAMA) has made a series of frequent small adjustments in the exchange rate of the Saudi riyal against the US dollar At the end of June 1984 the rate was US $1 = 3.505 riyals, and by the end of the year the riyal had been devalued seven times Following three further adjustments in the first six months of 1985, the exchange rate stood at $1 = 3.645 riyals in June This rate remained unchanged until June 1986, when a rate of $1 = 3 745 riyals was established This remained in effect at mid-1993, after which the currency came under heavy pressure from speculators who maintained that it was overvalued at a time of weak oil prices. However, the Government ruled out any devaluation, accepting a rise in Saudi interest rates at the end of 1993 in order to defend the existing exchange rate SAMA, established in 1952, acts as a central bank

At the end of 1977 Saudi Arabia's international reserves totalled US $30,034m and were surpassed only by those of the Federal Republic of Germany. From April 1978 Saudi Arabia's reserves were redefined to exclude foreign exchange cover against the note issue, then about $5,300m Under the new definition, reserves declined to $16,756m in October 1979, but they then made a sharp recovery, rising to $32,422m at the end of 1981 Reserves declined to $25,181m. in December 1985, and by December 1990 had declined further to $11,897m. (including gold valued at $229m.). By the end of 1993 total reserves stood at only $7,649m , following heavy expenditure to finance the international action against Iraq in 1990–91 and to purchase new military equipment in the aftermath of the crisis At the end of 1995 reserves minus gold totalled $8,622m. decreasing to $6,794m. at the end of 1996 and recovering to $7,353m. at the end of 1997 and $7,520m. at the end of 1998

Until September 1997 there were 12 commercial banks in Saudi Arabia, of which three were wholly Saudi and nine joint ventures. The largest Saudi commercial bank is the National Commercial Bank (NCB) In 1988 the formalities were completed for the creation of the country's twelfth commercial bank, the Ar-Rajhi Banking and Investment Co (ARABIC), which had previously been the country's leading money-changing company, and had been endeavouring to become a commercial bank since 1984 In September 1997 the United Saudi Commercial Bank merged with the Saudi Cairo Bank to form the United Saudi Bank, making the total number of banks 11. In terms of its capital, the new bank is the third largest in the kingdom. In mid-1999 the United Saudi Bank completed a further merger, with the Saudi American Bank, reducing the total number of banks to 10.

Specialized credit institutions provide project finance: the Saudi Industrial Development Fund (SIDF) is the major source, and was set up by the Government in 1974. It grants low-interest loans for up to 50% of the total cost of a project (up to 80% in the case of electricity projects). The SIDF is managed by Chase Manhattan Bank. The Public Investment Fund (PIF), established in 1972, finances large-scale commercial and industrial projects in the public sector. In 1984 the National Industrialization Co was established by private investors: its object is to encourage and plan development in the private sector.

Another major state financial institution which assists in the country's development is the Real Estate Development Fund (REDF), whose capital has been raised successively from 240m. riyals to 23,800m riyals. The REDF provides a home-loan scheme under which purchasers are required to pay 80% of loan principal The Saudi Agricultural Bank, set up in 1963, offers

medium- and short-term loans for farmers The Saudi Credit Bank was set up in 1973 to advance interest-free loans to low-income Saudis for purposes such as getting married or carrying out home repairs

Saudi banks have become more outward-looking, and the most obvious example of this trend is the 55% Saudi-owned Saudi International Bank, which opened as a fully-fledged merchant bank in London in March 1976 SAMA holds 50% of the capital, while the NCB and Riyad Bank have 2 5% each The principal non-Saudi partner in the enterprise is the Morgan Guaranty Trust Co, a US bank, which also provides management. The other shares are held by leading Western and Japanese banks. The first wholly private Saudi bank abroad—As-Saudi Banque—opened in Paris in the autumn of 1976 Riyad Bank has a share in the Paris-based Union de Banques Arabes et Françaises, and in the Gulf Riyad Bank in Bahrain. The NCB has small stakes in European-Arab Holding and the Compagnie Arabe et Internationale d'Investissement, both based in Luxembourg, and in the Amman-based Arab-Jordanian Investment Bank, which opened in the spring of 1978

Total assets of Saudi banks grew by 12%, to 191,059m riyals in 1987/88, and nearly one-half of these were held abroad. In 1988 the performance of the banking sector improved, although the recovery was not uniform among all the 12 commercial banks The United Saudi Commercial Bank, Riyad Bank and the Arab National Bank increased their profits, but NCB recorded no profit and the Saudi Cairo Bank trebled its losses The main reason for the poor performance of the banking sector in the mid-1980s was the domestic recession, but they also needed to make substantial provision against loan losses In 1985 SAMA began requiring banks to report their non-performing loans In March 1987 King Fahd ordered the central bank to establish a committee to arbitrate in bank loan disputes By mid-1988 the outstanding loans and advances disbursed by the Saudi Agricultural Bank, the Saudi Credit Bank, the PIF, the SIDF and the REDF totalled 166,600m riyals. In 1992 the Saudi commercial banking sector experienced very strong growth The audited accounts released by the 11 publicly-quoted banks showed aggregate assets of 234,233m. riyals, an increase of 13.4% on the 1991 total, and aggregate profits of 3,712m riyals, a rise of nearly 29% on the previous year's level A 30% increase in Saudi banking profits in 1993 was followed by a 4% fall in 1994, when commercial banks' aggregate net income totalled 4,808m riyals. In 1998 Saudi Arabia's 11 commercial banks had aggregate assets of 386,032m. riyals, compared with 357,947m riyals in 1997, when aggregate net profits were 6,588m. riyals

During the course of 1994 banks came under increasing pressure to provide short-term credit facilities to companies affected by delays in government payments to contractors undertaking public-sector projects By the last quarter of the year, when some payments were more than 12 months overdue, a total of 18,750m. riyals was believed to be involved, causing senior bankers to appeal for urgent government action to resolve the situation The Government subsequently undertook to release cash payments to contractors that were owed less than 10m riyals, and had by late April 1995 reduced its debt to such contractors by an estimated 3,000m–5,000m riyals. Contractors that were owed more than 10m riyals were, in March 1995, issued with government bonds maturing at different dates between March 1996 and September 1997 and carrying fixed coupons of between 6 5% and 7.25% The bonds were negotiable through the banking system and could be used as security against commercial borrowing The March 1995 bond issue covered a total of 5,200m riyals owed to 120 local and foreign companies Between January and March 1996 the Government issued negotiable non-interest-bearing certificates to the value of an estimated 9,500m. riyals to Saudi farmers who were awaiting official payments (mainly for grain production). Contractors' bonds worth an estimated 4,000m riyals, and maturing between April 1998 and April 2002, were issued to corporate creditors in April 1996 In January 1998 the Saudi Government secured a seven-year sovereign loan of US $4,330m from a consortium of international banks to finance the purchase of a new fleet of US aircraft for the national carrier Saudi Arabian Airlines (The airline was not in a position to raise its own finance, having incurred operating losses for many years because of the low level of domestic air fares for Saudi citizens) In mid-1998 the state energy company Saudi Aramco renewed an existing $2,000m five-year revolving credit facility and opened negotiations with international banks for a new $2,000m syndicated loan repayable over four years

In May 1987 Saudi Arabia opened its first stock-exchange trading floor in Riyadh, under the jurisdiction of SAMA However, the Central Trading Hall was closed indefinitely less than a month after it had opened, owing to technical problems and to disagreement about procedures between the Ministry of Finance, which is responsible for SAMA, and the Ministry of Commerce Shares are traded by banks and independent brokers, and in 1990 SAMA introduced an electronic trading system Although the market is limited, the value of traded shares rose by 80% in 1991, compared with 1990, to some 8,000m. riyals, and share prices increased overall by about 70% In 1995 shares were being traded in 69 companies with a market capitalization of 153,400m riyals In 1997 market capitalization was about 218,750m riyals and the value of shares traded was 62,060m riyals It was estimated that the Government owned about 25% of all quoted shares in 1997 and that a single large corporation (SABIC) accounted for 21% of total market capitalization in that year A Saudi Arabia Investment Fund was launched in June 1997 by Saudi American Bank as a vehicle for indirect market participation by non-GCC investors. Saudi Arabia's insurance market, in which about 80 companies and agencies were active in 1992, was worth some 1,870 5m riyals in gross written premiums in that year. The only locally registered insurer, the National Company for Co-operative Insurance, wrote 619m riyals of insurance premiums in 1993, when it had gross claims of 228.4m. riyals and made a net surplus of 61 6m riyals

In July 1989 Saudi Arabia signed a syndicated loan for US $660m , apparently the first international borrowing by the Saudi Government for a quarter of a century. There has been a reluctance to raise funds publicly over the last two decades, due to the memory of the 1950s, when an excess of borrowing led to economic crisis Economists in Saudi Arabia speculated that the loan, raised in the name of the PIF, could be used to finance the budget deficit, while other observers claimed that it was to be used to refinance concessionary loans made by the Government to SABIC.

Owing to the Saudi Government's own budget deficit, in 1991 it was forced to sign a term-loan worth US $4,500m with international banks, in addition to borrowing $2,500m. in foreign currency from domestic banks It was agreed that the larger Saudi banks would lend a maximum of $400m. each to the Government, while the smaller banks would lend $50m –$100m. each. The major part of the foreign borrowing was believed to be needed to defray costs incurred as a result of the multinational military assistance provided to Saudi Arabia during the Gulf crisis in 1990–91. In November 1991 SAMA announced the kingdom's first issue of Treasury bills, starting with issues of up to 2,000m. riyals per week, to finance the budget deficit The Government's other main public financing instrument is medium-term development bonds, first introduced in 1988 The first repayment of $900m. to international banks under the terms of the 1991 loan was made on schedule in May 1994 In April 1994 the Government had signed a new loan agreement under which a syndicate of local banks would lend the Ministry of Finance and National Economy $1,300m. over seven years, with two years' grace Repayment of the international banks' 1991 loan was completed in May 1995. In 1996 SAMA accepted an invitation to join the Bank for International Settlements In June 1998 the Government made its third issue of contractors' bonds, worth an estimated total of 5,000m.–6,000m riyals, maturity periods ranged from one to five years and rates of interest payable ranged from 5.67% to 5 95%. The farmers' payment certificates issued in 1996 were redeemable in three instalments, the third of which (amounting to 3,000m riyals in respect of the 1994 wheat crop) was due in August 1998 In July 1998 the Government indicated that wheat farmers would receive a total of 2,200 riyals for their 1996 harvest but did not specify whether payment would be made in cash or certificates

AID

Between 1973 and 1989, grants and concessionary loans that Saudi Arabia made available to developing countries totalled $59,470m , representing 5 5% of GNP and placing the kingdom fourth in the world list of aid-donors. Among OPEC members, Saudi Arabia is by far the largest aid-donor, having contributed more than 80% of OPEC allocations in the period 1980–89. Between 1972 and 1983, aid totalling US $25,568m was provided to other Islamic states, where most aid is sent (in particular to the 'front-line' countries and Pakistan) Saudi contributions to the 'front-line' states after 1974 amounted to $1,000m per year The country has generally been the principal contributor to the various Arab funds that have been established to help poor Arab and poor African states, as well as to the IMF oil facilities. In April 1981 Saudi Arabia made a $10,000m. loan to the IMF for two years Following further loans, the country was estimated to have advanced $15,000m by 1984 It has also lent large sums to the World Bank at commercial rates The Saudi Fund for Development (SFD), established in 1974, makes concessionary loans to Africa, Asia and Latin America, as well as to the Arab world Financial support was given to Iraq during its war with Iran from 1980 to 1988, and in 1983 a substantial loan was granted to France. In March 1989 Saudi Arabia donated $85.5m to the PLO, the last tranche of a 10-year programme of payments to the organization A further $6m. per month during 1989 was pledged for Palestinians in the Israeli-occupied territories. In the period 1975–91 the SFD granted 277 loans to 61 countries, totalling 18,727m riyals.

In May 1991 Saudi Arabia gave $3,650m in cash payments towards the US military effort in the Gulf War in January–February 1991 The USA had so far received $8,186m in cash for its military contribution In July the Saudi Government approved a loan worth 64m riyals to Egypt by the SFD, to build an expressway from Asyut to Cairo In the same month the US received a further $850m for costs incurred during the Gulf crisis (1990–91). Saudi Arabia pledged to give $16,839m. in total, and as of August the outstanding balance was $4,110m In August the Government announced its intention to give Turkey $1,000m. worth of free crude petroleum, in addition to supplies that Turkey had already received, worth $1,600m., to compensate for the adverse effects that the Gulf crisis had had on the Turkish economy. Bangladesh was to receive aid worth $100m. to help in the rebuilding of infrastructure which was destroyed during the flood disaster in May 1991 In mid-August Saudi Arabia paid $175m. of its $1,000m. pledge to the United Kingdom towards that country's military costs during the Gulf War. Aid allocations approved in 1993 included $100m. for reconstruction in Lebanon and $26m. for Bosnian refugee relief In June 1997 $2 4m of exceptional aid was given to the UN Relief and Works Agency for Palestine Refugees in the Near East.

BUDGETS

Government revenues from petroleum traditionally provide more than 90% of the State's budget revenue. As originally presented in December 1989, the Government's budget proposals for 1990 envisaged expenditure of 143,000m. riyals, and a deficit of 25,000m. riyals In view of the Gulf crisis, no separate 1991 budget was prepared, the 1990 provisions being extended through the year. In the event, official figures for 1990, published in April 1992, revealed that actual expenditure had reached 210,430m. riyals and revenue 154,721m. riyals, producing a deficit of 55,709m riyals. Provisional figures for 1991 showed that expenditure increased to 261,570m riyals, and the deficit to 77,000m. riyals Budget deficits were recorded in 1992 and 1993, at 39,500m. riyals (revenue 165,400m riyals, expenditure 204,900m. riyals) and 27,800m. riyals (revenue 169,150m riyals, expenditure 196,950m riyals) respectively.

The 1994 budget provided for the first balanced budget since 1982, at 160,000m riyals However, this revenue projection proved to be wholly unrealistic, and in the 1995 budget statement the Government's 1994 revenue was stated as 120,000m. riyals, leaving a deficit of 40,000m. riyals In the 1995 budget provision was made for total expenditure of 150,056m. riyals (6.2% less than in 1994) and total revenue of 135,000m. riyals (12 5% more than the revised revenue total for 1994), leaving a 1995 budget deficit of 15,056m. riyals (over 60% lower than the previous year's recorded deficit) The expenditure total in the budget did not include spending of 1,088m riyals by the municipal and water sector and 2,175m. riyals by the state telephone company, funded out of the service providers' charges to users On the revenue side of the 1995 budget, the Government used a very conservative oil price forecast of $14 per barrel while imposing new or higher charges for a range of subsidized items, including fuel, power, water, telecommunications and transport. Other measures included substantial rises in visa fees for foreign workers. The total yield from domestic revenue-raising measures in 1995 was expected to exceed 9,000m. riyals.

The 1996 budget provided for total expenditure of 150,000m. riyals and total revenue of 131,500m. riyals, leaving a deficit of 18,500m. riyals. Less than half of the 1996 expenditure total was attributed to specific sectors in the budget announcement, the specified allocations being those for education (18 4%), health and social development (8.9%), transport and communications (6 1%), domestic subsidies (4.6%), infrastructure, industry and electricity (4 1%) and municipalities and water (3.6%) As in 1995, the revenue estimates assumed an average oil export price of US $14 per barrel, whereas the actual price of Saudi Arabia's main export grade averaged $17 73 per barrel in the first half of 1996 (compared with $16.26 per barrel in the first half of 1995) This price increased further in the second half of 1996 to $18.56 per barrel, boosting the Government's actual revenue for 1996 to 179,100m riyals Expenditure was revised upwards to 198,100m riyals, leaving a deficit of 19,000m. riyals. Of the 48,100m riyals of additional expenditure in 1996, some 22,000m. riyals were used to reduce the Government's indebtedness to domestic creditors The Government's 1997 budget provided for revenue of 164,000m. riyals and expenditure of 181,000m. riyals, leaving a deficit of 17,000m riyals. Levels of taxation and subsidy remained unchanged in the 1997 budget, which included no new revenue-raising measures Sectoral spending allocations detailed in the 1997 budget were 41,692m. riyals (23% of total expenditure) for education, 17,763m riyals (9 8%) for health and social development, 10,432m. riyals (5.7%) for transport and communications, 8,631m. riyals (4.8%) for infrastructure, industry and electricity, 7,133m. riyals (3.9%) for domestic subsidies and 6,473m. riyals (3 6%) for municipal services and water The remaining 49.1% of the 1997 budget (including expenditure on defence and security) was aggregated as 'other spending'.

Oil export prices remained above budgeted levels in 1997, with the result that the Government's actual revenue for that year totalled 205,500m riyals. Expenditure was revised upwards to 221,300m. riyals, leaving a deficit of 15,800m. riyals. The 1998 budget provided for total revenue of 178,000m. riyals and total expenditure of 196,000m riyals, resulting in a deficit of 18,000m. riyals Sectoral spending allocations itemized in the budget announcement were 45,595m. riyals (23.3% of total expenditure) for education, 19,700m riyals (10%) for health and social development, 11,750m riyals (6%) for transport and communications, 10,655m riyals (5.4%) for infrastructure, industry and electricity, 7,640m. riyals (3.9%) for municipal services and water, 7,271m riyals (3 7%) for domestic subsidies and social insurance and 5,000m. riyals (2 5%) for state development organizations and funds. Independent analysts estimated that around 31 5% of the total 1998 budget was earmarked for spending on defence and national security The Government's 1998 revenue projections assumed an average oil export price of about US $14 50 per barrel However the actual price of the kingdom's main export grade averaged only $11.46 per barrel during the first 28 weeks of 1998, compared with an average of $17 05 per barrel for the whole of 1997, resulting in actual revenue of 143,000m riyals in 1998. Expenditure was reduced slightly, to 189,000m riyals, increasing the deficit to 46,000m. riyals. The budget for 1999 envisaged a deficit of 44,000m. from revenue of 121,000m. riyals and expenditure of 165,000m. riyals

EDUCATION, HEALTH AND SOCIAL SECURITY

Within the Government's development policy, considerable emphasis has been placed on the improvement of education, health services and other aspects of social security. The number of schools and institutes of higher education increased from 3,107 in 1970 to 17,268 in 1991, with the number of students increasing from 547,000 to 3 1m. over the same period. There

are plans to expand the universities at Umm al-Qura, Jeddah and Medina. The total number of students enrolled at all levels of education increased to 3 9m in 1995/96 Illiteracy rates were officially estimated at 14 9% among males and 35 5% among females in 1995/96 UNESCO estimates for 1995, however, suggested much higher rates (28 5% for males and 49 8% for females) The number of hospitals under the control of the Ministry of Health increased from 47 in 1970 to 290 in 1998, with medical and paramedical personnel increasing from 4,494 to almost 100,000, and the number of beds to 43,000 In early 1991 there were four hospital beds for every 1,000 inhabitants, a ratio similar to that in the USA In 1994 there were 1,668 health centres. In August 1994 the Ministry of Health announced that work would soon commence on the construction of 2,000 additional primary health care centres and that the possibility of establishing a comprehensive health insurance programme was being studied In December 1995 the Government introduced a compulsory health insurance scheme for expatriate workers, 80% of the cost of contributions being borne by employers and 20% by employees. Social security payments are made available by the Deputy Ministry of Social Care, and total disbursements increased from 41.7m riyals (to 198,000 beneficiaries) in 1970 to 1,537m riyals (to 314,117 beneficiaries) in 1985/86 The budget allocation for expenditure on health and social services in 1990 was 11,239m riyals, the same allocation applying to 1991. In the 1992 budget the allocation for health and social development was 12,200m riyals, and the 1993 budget proposals allocated 14,087m. riyals In 1994 the allocation was reduced by an unspecified amount (the IMF's estimate of 1994 spending on 'social development' being 11,300m riyals) The 1995 budget allocated 13,366m riyals for health and social services, and the 1996 allocation was fractionally lower at 13,329m riyals The 1997 health and social development budget of 19,700m. riyals included allocations of capital for the construction of 11 new hospitals Housing has also been an important part of government policy, and since 1974 it is estimated that more than 500,000 housing units have been constructed throughout the kingdom. about half by the Government and half by the private sector By late 1991 a total of 477,000 housing units had been wholly or partly funded by the REDF All adult Saudi Arabians, if not independently wealthy, are entitled to a plot of land and a loan of US $80,000 with which to build a home In 1988 a total of 347,260 people received the loan

SAUDI ARABIA-IRAQ NEUTRAL ZONE

The Najdi (Saudi Arabian) frontier with Iraq was defined in the Treaty of Mohammara in May 1922. Later a Neutral Zone of 7,044 sq km was established adjacent to the western tip of the Kuwait frontier No military or permanent buildings were to be erected in the zone and the nomads of both countries were to have unimpeded access to its pastures and wells A further agreement concerning the administration of this zone was signed between Iraq and Saudi Arabia in May 1938 In July 1975 Iraq and Saudi Arabia signed an agreement providing for an equal division of the diamond-shaped zone between the two countries, with the border following a straight line through the zone

SAUDI ARABIA-KUWAIT NEUTRAL ZONE

A Convention signed at Uqair in December 1922 fixed the Najdi (Saudi Arabian) boundary with Kuwait The Convention also established a Neutral Zone of 5,770 sq km immediately to the south of Kuwait in which Saudi Arabia and Kuwait held equal rights The final agreement on this matter was signed in 1963 Since 1966 the Neutral Zone, or Partitioned Zone as it is sometimes known, has been divided between the two countries and each administers its own half, in practice as an integral part of the State. However, the petroleum deposits in the Zone remain undivided and production from the onshore oil concessions in the Zone is shared equally between the two states' concessionaires.

Directory

The Constitution

The Basic Law of Government was introduced by royal decree in 1992

Chapter 1 defines Saudi Arabia as a sovereign Arab, Islamic state Article 1 defines God's Book and the Sunnah of his prophet as the constitution of Saudi Arabia The official language is Arabic. The official holidays are Id al-Fitr and Id al-Adha The calendar is the Hegira calendar

Chapter 2 concerns the system of government, which is defined as a monarchy, hereditary in the male descendants of Abd al-Aziz ibn Abd ar-Rahman al-Faisal as-Sa'ud It outlines the duties of the Heir Apparent The principles of government are justice, consultation and equality in accordance with Islamic law (*Shari'a*)

Chapter 3 concerns the family The State is to aspire to strengthen family ties and to maintain its Arab and Islamic values Article 11 states that 'Saudi society will be based on the principle of adherence to God's command, on mutual co-operation in good deeds and piety and mutual support and inseparability' Education aims to instil the Islamic faith

Chapter 4 defines the economic principles of the State All natural resources are the property of the State The State protects public money and freedom of property Taxation is only to be imposed on a just basis.

Chapter 5 concerns rights and duties The State is to protect Islam and to implement the *Shari'a* law The State protects human rights in accordance with the *Shari'a* The State is to provide public services and security for all citizens Punishment is to be in accordance with the *Shari'a* The Royal Courts are open to all citizens

Chapter 6 defines the authorities of the State as the judiciary, the executive and the regulatory authority The judiciary is independent, and acts in accordance with *Shari'a* law The King is head of the Council of Ministers and Commander-in-Chief of the Armed Forces The Prime Minister and other ministers are appointed by the King. It provides for the establishment of a Consultative Council (Majlis ash-Shoura).

Chapter 7 concerns financial affairs It provides for the annual presentation of a state budget. Corporate budgets are subject to the same provisions

Chapter 8 concerns control bodies Control bodies will be established to ensure good financial and administrative management of state assets

Chapter 9 defines the general provisions pertaining to the application of the Basic Law of Government.

The Government

HEAD OF STATE

King FAHD IBN ABD AL-AZIZ AS-SA'UD (acceded to the throne 13 June 1982).

Crown Prince: ABDULLAH IBN ABD AL-AZIZ AS-SA'UD.

COUNCIL OF MINISTERS
(September 1999)

Prime Minister: King FAHD IBN ABD AL-AZIZ AS-SA'UD

MAJLIS ASH-SHOURA
(Consultative Council)

In March 1992 King Fahd issued a decree to establish a Consultative Council of 60 members, whose powers include the right to summon and question ministers The composition of the Council was announced by King Fahd in August 1993, and it was officially inaugurated in December of that year Each member is to serve for four years. The Council's membership was increased to 90 when its second term began in July 1997

Chairman: Sheikh MUHAMMAD IBN IBRAHIM AL-JUBAIR.

Judicial System

Judges are independent and governed by the rules of Islamic *Shari'a* The following courts operate:

Supreme Council of Justice: consists of 11 members and supervises work of the courts; reviews legal questions referred to it by the Minister of Justice and expresses opinions on judicial questions, reviews sentences of death, cutting and stoning, Chair. Sheikh SALIH AL-LIHAYDAN.

Court of Cassation: consists of Chief Justice and an adequate number of judges; includes department for penal suits, department for personal status and department for other suits

General (Public) Courts: consist of one or more judges; sentences are issued by a single judge, with the exception of death, stoning and cutting, which require the decision of three judges

Summary Courts: consist of one or more judges, sentences are issued by a single judge

Specialized Courts: Article 26 of the judicial system stipulates that the setting up of specialized courts is permissible by Royal Decree on a proposal from the Supreme Council of Justice.

Religion

ISLAM

Arabia is the centre of the Islamic faith, and Saudi Arabia includes the holy cities of Mecca and Medina. Except in the Eastern Province, where a large number of people follow Shi'a rites, the majority of the population are Sunni Muslims, and most of the indigenous inhabitants belong to the strictly orthodox Wahhabi sect The Wahhabis originated in the 18th century but first became unified and influential under Abd al-Aziz (Ibn Sa'ud), who became the first King of Saudi Arabia. They are now the keepers of the holy places and control the pilgrimage to Mecca In 1986 King Fahd adopted the title of Custodian of the Two Holy Mosques The country's most senior Islamic authority is the Council of Ulema

Mecca: Birthplace of the Prophet Muhammad, seat of the Great Mosque and Shrine of Ka'ba, visited by 993,000 Muslims in the Islamic year 1413 (1992/93).

Medina: Burial place of Muhammad, second sacred city of Islam

Grand Mufti and Chairman of Council of Ulema: Sheikh ABD AL-AZIZ IBN ABDULLAH ASH-SHEIKH.

CHRISTIANITY

The Roman Catholic Church

Apostolic Vicariate of Arabia: POB 54, Abu Dhabi, United Arab Emirates; responsible for a territory comprising most of the Arabian peninsula (including Bahrain, Oman, Qatar, Saudi Arabia, the United Arab Emirates and Yemen), containing an estimated 900,000 Roman Catholics at 31 December 1997, Vicar Apostolic GIOVANNI BERNARDO GREMOLI, Titular Bishop of Masuccaba

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, Saudi Arabia forms part of the diocese of Cyprus and the Gulf. The Anglican congregations in the country are entirely expatriate The Bishop in Cyprus and the Gulf is resident in Cyprus, while the Archdeacon in the Gulf is resident in the United Arab Emirates.

Other Denominations

The Greek Orthodox Church is also represented

The Press

Since 1964 most newspapers and periodicals have been published by press organizations, administered by boards of directors with full autonomous powers, in accordance with the provisions of the Press Law. These organizations, which took over from small private firms, are privately owned by groups of individuals experienced in newspaper publishing and administration (see Publishers).

There are also a number of popular periodicals published by the Government and by the Saudi Arabian Oil Co, and distributed free of charge The press is subject to no legal restriction affecting freedom of expression or the coverage of news.

Saudi Aramco Mobil Refinery Co Ltd (SAMREF): POB 30078, Yanbu as-Sinaiyah, tel. (4) 396-4000, fax (4) 396-0942; f. 1984, operated by Saudi Aramco and Mobil, capacity 360,000 b/d, CEO Muhammad Saib al-Gosaibi

Saudi Aramco Shell Refinery Co (SASREF): POB 10088, Jubail 31961, tel (3) 357-2000; telex 832060; fax (3) 3572235; e-mail k.al-buainain@pr.sasrefalj simis.com, internet http // www shell com, operated by Saudi Aramco and Shell; capacity 300,000 b/d, exports began in 1985; Chair Abd al-Aziz M al-Hokail.

Yanbu Refinery: POB 5000, Dhahran 31311, tel. (4) 321-8400; fax (4) 396-2756, f 1983, wholly-owned by Saudi Aramco, production capacity of 190,000 b/d; production 60m barrels (1990); Exec. Dir (Saudi Aramco) Talib A ad-Dossary.

Saudi Basic Industries Corpn (SABIC): POB 5101, Riyadh 11422, tel (1) 406-9900, telex 401177, fax (1) 401-2045; f 1976 to foster the petrochemical industry and other hydrocarbon-based industries through jt ventures with foreign partners, and to market their products, 70% state-owned; production 23 7m. tons (1997), Chair Minister of Industry and Electricity; Vice-Chair. and CEO Muhammad al-Mady.

Projects include

Al-Jubail Petrochemical Co (Kemya): POB 10084, Jubail 31961; tel. (3) 357-6000, telex 832058; fax (3) 358-7858, f 1980, began production of linear low-density polyethylene in 1984, of high-density polyethylene in 1985, and of high alfa olefins in

1986, capacity of 330,000 tons per year of polyethylene, jt venture with Exxon Corpn (USA) and SABIC, Pres KHALIL I. AL-GANNAS, Exec Vice-Pres CLAY LEWIS

Arabian Petrochemical Co (Petrokemya): POB 10002, Jubail 31961; tel (3) 358-7000, telex 832053, fax (3) 358-4480, produced 1.2m. tons of ethylene, 135,000 tons of polystyrene, 100,000 tons of butene-1, 300,000 tons of propylene, 100,000 tons of butadiene and 70,000 tons of benzene in 1993, wholly-owned subsidiary of SABIC, owns 50% interest in ethylene glycol plant producing 203,000 tons per year of monoethylene glycol, 21,700 tons per year of diethylene glycol and 1,300 tons per year of triethylene glycol, Chair IBRAHIM A IBN SALAMAH; Pres NABIL A MANSOURI

Eastern Petrochemical Co (Sharq): POB 10035, Jubail 31961; tel. (3) 357-5000; telex 832037; fax (3) 358-0383, f 1981 to produce linear low-density polyethylene, ethylene glycol, total capacity 660,000 tons of ethylene glycol and 280,000 tons of polyethylene per year, a SABIC jt venture, Pres. IBRAHIM S ASH-SHEWEIR.

National Industrial Gases Co (Gas): POB 10110, Jubail, tel (3) 357-5700, telex 832082, fax (3) 358-8880, total capacity of 876,000 tons of oxygen and 492,750 tons of nitrogen per year, jt venture with Saudi private sector, Pres. ABDULLAH ALI AL-BAKR

National Plastics Co (Ibn Hayyan): POB 10002, Jubail 31961, tel. (3) 358-7000, telex 832053, fax (3) 358-4736, produces 390,000 tons per year of vinylchloride monomer and 324,000 tons per year of polyvinylchloride, jt venture with Lucky Group (Republic of Korea), SABIC and three other cos, Pres NABIL A. MANSOURI

Saudi-European Petrochemical Co (Ibn Zahr): POB 10330, Jubail 31961; tel (3) 341-5060; telex 832157, fax (3) 341-2966, f 1985, annual capacity 1.4m. tons of methyl-tertiary-butyl ether (MTBE), 0.3m. tons of propylene; SABIC has a 70% share, Ecofuel, Neste Corpn and APICORP each have 10%, Pres. SAMI AS-SUWAIGH

Saudi Methanol Co (ar-Razi): POB 10065, Jubail Industrial City 31961; tel. (3) 357-7820; telex 832023; fax (3) 358-0838, f. 1979; capacity of 1,280,000 tons per year of chemical-grade methanol; total methanol exports in 1992 were 1,338,000 tons; jt venture with a consortium of Japanese cos, cap 259m , Pres. ABD AL-AZIZ I ALAUDAH; Exec Vice-Pres. T SEKI

Saudi Petrochemical Co (Sadaf): POB 10025, Jubail Industrial City 31961; tel (3) 357-3000; telex 832032; fax (3) 357-3142, f. 1980; to produce ethylene, ethylene dichloride, styrene, crude industrial ethanol, caustic soda and methyl-tertiary-butyl ether (MTBE); total capacity of 3,190,000 tons per year, Shell (Pecten) has a 50% share; Pres. M. S AL-OHALI.

Saudi Yanbu Petrochemical Co (Yanpet): POB 30129, Yanbu; tel. (4) 396-5000; telex 662359, fax (4) 396-3236, f. 1980; to produce 820,000 tons per year of ethylene, 600,000 tons per year of high-density polyethylene and 340,000 tons per year of ethylene glycol; total capacity 1,692,200 tons per year by 1990, Mobil and SABIC each have a 50% share; Pres. ALI AL-KHURAIMI, Exec Vice-Pres P. J. FOLEY.

UTILITIES

Utilities Co (Uco): Jubail; f. 1999; owned equally by Royal Commission for Jubail and Yanbu, Public Investment Fund, Saudi Aramco and SABIC; cap. 2,000m riyals, to provide utilities in industrial cities of Jubail and Yanbu

Electricity

In November 1998 the Government approved legislation establishing the **Saudi Electricity Co (SEC)** to replace the entities listed below. A joint stock company, with capital of SR23,960m., the SEC was to organize the generation, transmission and distribution of electricity into separate operating companies. The establishment of a regulatory authority was also envisaged. No timetable was given for the formation of these two bodies, but their creation seemed likely in 1999.

Electricity Corporation: Industry and Electricity Ministry Bldg, POB 1185, Riyadh 11431; tel. (1) 477-2722; telex 401393; f. 1976; state body; co-ordinates supply in areas not covered by companies below.

Saudi Consolidated Electric Co (Central): POB 57, Riyadh 11411, tel. (1) 403-2222; fax (1) 405-0723; f 1979, supplies central region, cap. 8,000m.; CEO ABD AL-AZIZ AL-WAHED.

Saudi Consolidated Electric Co (East): POB 5190, 31422 Dammam; tel. (3) 857-2300 ; telex 802030; fax (3) 858-6601; f. 1977; supplies eastern region, cap 5,000m.; Chair. YOUSUF ABDULLAH AL-HAMMAD; Gen. Man SULAYMAN A AL-QADI.

Saudi Consolidated Electric Co (South): Abha; tel (7) 227-1111, fax (7) 227-1627; f 1979; supplies southern region; cap 3,564m , CEO MUHAMMAD ABDULLAH AZ-ZUBA.

Saudi Consolidated Electric Co (West): POB 433, 21411 Jeddah, tel. (2) 651-1008, fax (2) 653-4139; f 1981; supplies western region; cap. 8,000m.; CEO MAHMOUD ABDULLAH TAIBAH

Water

Saline Water Conversion Corpn (SWCC): POB 4931, 21412 Jeddah, tel (2) 6821240, telex 602300, fax (2) 682-0415, provides desalinated water, 24 plants, capacity 2m. cu m per day (1994); Dir-Gen ABD AL-AZIZ OMAR NASSIEF

MAJOR COMPANIES

Figures for sales and capital are in Saudi riyals.

Arabian Cement Co Ltd: POB 275, Jeddah, tel (2) 682-8270; telex 600718, fax (2) 682-9989, f 1956; produces ordinary Portland cement and sulphate-resistant cement, subsidiary company Cement Product Industry Co Ltd, cap. 600m ; Chair Prince TURKI IBN ABD AL-AZIZ AS-SA'UD, Dir-Gen Eng MUHAMMAD NAJIB KHEDER, 800 employees

As-Safi Dairy Establishment: POB 10525, Riyadh 11443, tel (1) 462-9643; fax (1) 462-9647, dairy products.

Jeddah Steel Rolling Co (Sulb): POB 1826, Jeddah 21441; tel (2) 636-7462, telex 602127, fax (2) 636-8161; f. 1967; capacity of 150,000 tons per year of reinforcing steel bars, cap 62.4m , Man GERHARD JUNG

Al-Jubail Fertilizer Co (Samad): POB 10046, Jubail 31961, tel (3) 341-6488, telex 832024; fax (3) 341-7122, f. 1979; capacity of 620,000 tons per year of urea, 40,000 tons per year of ammonia, 150,000 tons per year of 2-ethyl hexanol, 50,000 tons per year of di-octyl phthalate and 180,000 tons per year of ISO-butaraldehyde, jt venture between SABIC and Taiwan Fertilizer Co; Pres AHMAD A AL-AHMAD.

Manufacturing and Building Co Ltd (MABCO): POB 52743, Riyadh 11573, tel. (1) 498-1222, fax (1) 498-4807, f. 1977, manufacture of pre-cast components for construction of buildings, sales 150m (1997), cap. p u. 100m.; Gen Man HASSAIN AL-WATBAN, 700 employees

National Fisheries Development Co Ltd: POB 4590, Riyadh 11515, tel (1) 402-7904; fax (2) 402-1272

National Methanol Co (Ibn Sina): POB 10003, Jubail 31961; tel. (3) 340-5500, telex 832033, fax (3) 340-5506; began commercial production of chemical-grade methanol in November 1984; capacity 1m tons per year, began commercial production of methyl-tertiary-butyl ether (MTBE) in May 1994; capacity 900,000 tons per year, jt venture of SABIC, Hoechst-Celanese Corpn (USA) and PanEnergy Corpn (USA), Pres K S. RAWAF

National Pipe Co Ltd: POB 1099, al-Khobar 31952, tel. (3) 857-0535, fax (3) 857-0962; f. 1978; manufacture and marketing of spiral-welded steel pipes for oil and gas transmission, sales 208m (1996), cap 50m , Chair TEYMOUR ALIREZA; Gen. Man. TOMOYAKI TAKI; 300 employees.

Qassim Cement Co: POB 345, Buraidah, Qassim, tel (6) 381-0795; fax (6) 381-6187, production of 2,000 tons per day, Hon. Chair Prince ABDULLAH AL-FAISAL AS-SA'UD; Chair Prince SULTAN AL-ABDULLAH AL-FAISAL AS-SA'UD

Saudi Arabian Fertilizer Co (SAFCO): POB 553, Dammam 31421, tel. (3) 857-5011; telex 870117, fax (3) 857-4311; produced 353,744 tons of urea, 225,735 tons of ammonia, 98,535 tons of sulphuric acid and 20,240 tons of melamine in 1993; owned 41% by SABIC, 10% by its staff and 49% by private Saudi investors; Pres. AHM M. AN-NEKHILAN

Saudi Arabian Mining Co (Ma'aden): Riyadh; f. 1997; produced 7 tons of gold in 1997, Pres. ABDULLAH AD-DABBAGH

Saudi Cable Group of Companies: POB 4403, Jeddah 21491; tel. (2) 638-0080, telex 607154, fax (2) 637-5447, f 1975; manufacture of building wires, power and telecommunication cables including fibre optic cables, copper and aluminium rod, PVC compounds, information technology products, power transmission and distribution products, turnkey services, revenue 1,509m.; cap. 500m (1997), Chair. KHALID ALIREZA; 2,000 employees

Saudi Cement Co: POB 306, Dammam 31411, tel (3) 834-4500; telex 801068; fax (3) 834-5460; f. 1955, cap 1,020m , Chair. Sheikh ABD AL-AZIZ H. AL-GOSAIBI; Gen. Man ABD AL-AZIZ M SHOWAIL, 1,930 employees

Saudi Fisheries Co (SFC): POB 6535, Dammam 31452, tel (3) 857-3979, telex 802020, fax (3) 857-2493, Chair Minister of Agriculture and Water, Gen Man ABD AL-LATIF IBRAHIM AL-AJAJI.

Saudi Iron and Steel Co (Hadeed): POB 10053, Madinat al-Jubail as-Sinaiyah 31961; tel (3) 357-1100, telex 832022, fax (3) 358-7385, f 1979, produced more than 2 2m. tons of steel reinforcing bars, coils of wire rod and light sections in 1998, Pres MUTLAQ AL-MORISHED

Saudi Plastic Products Co Ltd (SAPPCO): POB 2828, Riyadh 11461, tel (1) 448-0448, fax (1) 446-1392, f 1969, manufacture and supply of UPVC pipes and fittings, cap 75m , total assets 194m , Chair Sheikh OMAR A AGGAD, Gen Man SALEH M AL-BARGAN, 170 employees.

Saudi United Fertilizer Co: POB 4811, Salaheldin Ayyoubi Rd, al-Malaz area, Riyadh 11412, tel. (1) 478-1304, telex 401865, fax (1) 478-9581, import and export of agricultural fertilizers, pesticides, forage seeds, field sprayers and agricultural machinery, Man Dir SAMIR ALI KABBANI

Southern Province Cement Co: (Head Office) POB 548, Gizan; tel (7) 227-1500, telex 905010, fax (7) 227-1003, Chair Prince KHALID IBN TURKI AT-TURKI, Gen Man Eng AMER SAEED BARGAN

Tamimi Co: POB 172, Dammam 31411; tel. (3) 857-4050, telex 801561, fax (3) 857-1592, e-mail tamimi h.o@tamimi.geis com; f. 1964, pipeline construction, mechanical and civil construction, industrial catering, real estate, cap 20m., Chair TALAL A TAMIMI

Yanbu Cement Co: POB 5330, Jeddah, POB 467, Yanbu, tel (4) 322-6652, fax (2) 653-1420; Chair Prince MESHAL IBN ABD AL-AZIZ, Dir-Gen Dr SAUD SALEH ISLAM

Az-Zamil Group: POB 9, al-Khobar 31952, tel. (3) 894-4888; telex 670132; fax (3) 894-9336; f 1930; involved in real estate and land development as well as the marketing of products from numerous subsidiary companies, including Az-Zamil Aluminium Factory Ltd, Zamil Soule Steel Building Co Ltd, Yamama Factories, Arabian Gulf Construction Co Ltd, Bahrain Marble Factory, Az-Zamil Nails and Screws Factory, Saudi Plastics Factory, Pres MUHAMMAD A AZ-ZAMIL; 2,500 employees

TRADE UNIONS

Trade unions are illegal in Saudi Arabia

Transport

RAILWAYS

Saudi Arabia has the only rail system in the Arabian peninsula The Saudi Government Railroad comprises 719 km of single and 157 km of double track. In addition, the total length of spur lines and sidings is 348 km. The main line, which was opened in 1951, is 578 km in length; it connects Dammam port, on the Gulf coast, with Riyadh, and passes Dhahran, Abqaiq, Hufuf, Harad and al-Kharj A 310-km line, linking Hufuf and Riyadh, was inaugurated in May 1985. A 933m -riyal rail link to Jubail was under consideration in 1996 A total of 546,600 passengers travelled by rail in the kingdom in 1996, and 1 6m. metric tons of freight was carried by the railways in the same year.

Saudi Railways Organization: POB 36, Dammam 31241; tel. (3) 871-5151, telex 801050, fax (3) 833-6337, an independent entity with a Board of Dirs headed by the Minister of Transport, Pres FAISAL M ASH-SHEHAIL

ROADS

Asphalted roads link Jeddah to Mecca, Jeddah to Medina, Medina to Yanbu, Ta'if to Mecca, Riyadh to al-Kharj, and Dammam to Hufuf as well as the principal communities and certain outlying points in Aramco's area of operations During the 1980s the construction of other roads was undertaken, including one extending from Riyadh to Medina The trans-Arabian highway, linking Dammam, Riyadh, Ta'if, Mecca and Jeddah, was completed in 1967 A causeway linking Saudi Arabia with Bahrain was opened in November 1986 A 317-km highway linking Riyadh to Qassim was completed in the late 1980s. At the end of 1997 there were 146,524 km of roads, of which 14,749 km were main roads (including motorways), 8,330 km were secondary roads and 21,061 km were asphalted agricultural roads Metalled roads link all the main population centres. Some 802 km of asphalted roads were constructed during 1996

Saudi Public Transport Co (SAPTCO): POB 7830, Jeddah 21472, tel (2) 691-0019, telex 602222, fax (2) 691-2118, f. 1979, operates a public bus service throughout the country and to neighbouring countries, the Govt holds a 30% share, Chair Dr NASIR AS-SALOOM, CEO Dr ABD AL-AZIZ AL-OHALY

National Transport Co of Saudi Arabia: Queen's Bldg, POB 7280, Jeddah 21462, tel (2) 643-1561, telex 401235, specializes in inward clearance, freight forwarding, general and heavy road haulage, re-export, charter air freight and exhibitions, Man Dir A D BLACKSTOCK, Operations Man I CROXSON

SHIPPING

The commercial ports of Jeddah, Dammam, Yanbu, Dhiba and Gizan, the King Fahd Industrial Ports of Jubail and Yanbu, and the oil port of Ras Tanura, as well as a number of minor ports, are under the exclusive management of the Ports Authority In 1997 the total cargo handled by Saudi Arabian ports, excluding crude petroleum, was 88 8m metric tons, compared with 68.2m tons in 1990/91

Jeddah is the principal commercial port and the main point of entry for pilgrims bound for Mecca It has berths for general cargo, container traffic, 'roll on, roll off' (ro-ro) traffic, livestock and bulk grain shipments, with draughts ranging from 8 m to 14 m The port also has a 200-ton floating crane, cold storage facilities and a fully-equipped ship-repair yard In 1997 a total of 4,515 vessels called at Jeddah Islamic Port, and 17 1m tons of cargo were handled

Dammam is the second largest commercial port and has general cargo, container, ro-ro, dangerous cargo and bulk grain berths Draughts at this port range from 9 m to 14 m It has a 200-ton floating crane and a fully-equipped ship-repair yard In 1997 a total of 2,430 vessels called at King Abd al-Aziz Port in Dammam, and 10 1m tons of cargo were handled

Jubail has one commercial and one industrial port The commercial port has general cargo, bulk grain and container berths with ro-ro facilities, and a floating crane Draughts at this port range from 12 m to 14 m In 1997 a total of 183 vessels called at Jubail Commercial Port, and 2 2m tons of imported goods were handled The industrial port has bulk cargo, refined and petrochemical and ro-ro berths, and an open sea tanker terminal suitable for vessels up to 300,000 dwt Draughts range from 6 m to 30 m In 1997 a total of 1,032 vessels called at King Fahd Industrial Port in Jubail and 29 0m tons of cargo were handled

Yanbu, which comprises one commercial and one industrial port, is Saudi Arabia's nearest major port to Europe and North America, and is the focal point of the most rapidly growing area, in the west of Saudi Arabia The commercial port has general cargo, ro-ro and bulk grain berths, with draughts ranging from 10 m to 12 m. It also has a floating crane, and is equipped to handle minor ship repairs In 1997 a total of 77 vessels called at Yanbu Commercial Port, and less than 0.1m. tons of cargo were handled. The industrial port has berths for general cargo, containers, ro-ro traffic, bulk cargo, crude petroleum, refined and petrochemical products and natural gas liquids, and a tanker terminal on the open sea In 1997 a total of 1,388 vessels called at King Fahd Industrial Port in Yanbu, the port handled 29 1m. tons of cargo

Gizan is the main port for the southern part of the country It has general cargo, ro-ro, bulk grain and container berths, with draughts ranging from 8 m to 11 m It also has a 200-ton floating crane. In 1997 a total of 752 vessels called at Gizan Port, and 0.2m tons of cargo were handled

Dhiba port, on the northern Red Sea coast, serves the Tabouk region It has three general cargo berths with a ro-ro ramp, and passenger-handling facilities Maximum draught is 10.5m In 1997 a total of 490 vessels called at Dhiba, and 0 1m tons of cargo were handled

In addition to these major ports, there are a number of minor ports suitable only for small craft, including Khuraiba, Haql, al-Wajh, Umlujj, Rabigh, al-Lith, Qunfoudah, Farasan and al-Qahma on the Red Sea coast and al-Khobar, Qatif, Uqair, Darin and Ras al-Khafji on the Gulf coast. Ras Mishab, on the Gulf coast, is operated by the Ministry of Defence and Civil Aviation

Defence

Chief of the General Staff: Gen. SALEH IBN ALI AL-MUHAYA

Director-General of Public Security Forces: Brig.-Gen ABDULLAH IBN ASH-SHEIKH

Commander of Land Forces: Lt-Gen SULTAN IBN ALI AL-MUTAYRI

Commander of Air Force: Maj ABD AL-AZIZ IBN MUHAMMAD HUNAIYDI

Defence Budget (estimate, 1998) 69,000m riyals

Military Service: male conscription (18–35 years of age)

Total Armed Forces (August 1998) 105,500 (army 70,000, navy 13,500, air force 18,000); air defence forces 4,000; national guard 57,000 active personnel

Paramilitary Forces (August 1998) 10,500 frontier force and 4,500 coastguard

Education

The educational system in Saudi Arabia resembles that of other Arab countries Educational institutions are administered mainly by the Government The private sector plays a significant role at the first and second levels, but its total contribution is relatively small compared with that of the public sector

Pre-elementary education is provided on a small scale (with 85,484 children enrolled in 1996/97), mainly in urban areas Elementary or primary education is of six years' duration and the normal entrance age is six The total number of pupils at this stage in 1996/97 was 2,256,185, with 175,458 teachers Intermediate education begins at 12 and lasts for three years The total number of pupils at this stage in 1996/97 was 938,345, with teachers numbering 74,570 Secondary education begins at 15 and extends for three years After the first year, successful pupils branch into science or arts groups The total number of pupils at this stage in 1996/97 was 566,727, with 41,397 teachers In that year the total number of students enrolled at all levels of education (including University level) was 4,063,919, with 314,199 teachers Enrolment of children in the primary age-group increased from 32% in 1970 to 61% (boys 63%, girls 60%) in 1996 Over the same period enrolment at intermediate and secondary schools rose from 9% to 61% (boys 65%, girls 57%) The proportion of females enrolled in Saudi Arabian schools increased from 25% of the total number of pupils in 1970 to 46.7% in 1997

Industrial and commercial schools can be entered after the completion of the intermediate stage In 1990/91 there were eight industrial schools, 22 commercial schools and one agricultural school In addition, there were seven higher technical and four higher commercial colleges offering two-year courses. Vocational craft-training institutes are maintained in 62 centres, providing courses in electrical, mechanical and allied trades. In 1993 a total of 30,686 students attended 101 technical and vocational institutes

There are seven universities, with a total of 165,262 students in 1996/97, and 65 colleges. There are also 12 colleges and one higher institute for girls Adult education continues for three years. In 1993 there were 117,357 students enrolled at adult education schools According to estimates by UNESCO, adult illiteracy declined from 97 5% in 1962 to 37 2% (males 28 5%; females 49 8%) in 1995. Government expenditure on education in 1998 was provisionally estimated at 45,595m riyals, equivalent to 23% of total expenditure

SPANISH NORTH AFRICA

Geography

Spanish North Africa comprises Ceuta and Melilla, two enclaves within Moroccan territory, and several rocky islets off the Moroccan coast The average temperature is 17°C

CEUTA

The ancient port and walled city of Ceuta is situated on a rocky promontory on the North African coast overlooking the Strait of Gibraltar, the Strait here being about 25 km wide. Ceuta was retained by Spain as a plaza de soberanía (a presidio, or fortified enclave, over which Spain has full sovereign rights) when Morocco became independent from France in 1956, and is administered as part of Cádiz Province. The Portuguese first established a fort at Ceuta in 1415, and it was subsequently ceded to Spain by Portugal. It developed as a military and administrative centre for the former Spanish Protectorate in Morocco, and now functions as a bunkering and fishing port Ceuta occupies an area of 19.7 sq km In May 1996 its population was 68,796

MELILLA

Melilla is situated north of the Moroccan town of Nador, on the eastern side of a small peninsula jutting out into the Mediterranean Sea It was retained by Spain as a plaza de soberanía when Morocco became independent in 1956, and is administered as part of Málaga Province. The Spanish Crown assumed control in 1556, and the territory has served as a military stronghold ever since. Melilla is an active port The territory's area totals 12.5 sq km. In May 1996 its population was estimated to be 59,576 (including the islets separately mentioned below)

THE PEÑÓN DE VÉLEZ DE LA GOMERA, PEÑÓN DE ALHUCEMAS AND CHAFARINAS ISLANDS

These rocky islets are administered with Melilla. The Peñón de Vélez de la Gomera is situated 117 km south-east of Ceuta, lying less than 85 m from the Moroccan coast, to which it is connected by a narrow strip of sand This rocky promontory, of 1 ha in area, rises to an altitude of 77 m above sea-level, an ancient fortress being situated at its summit. Spain maintains a small military base on the rock. The Peñón de Alhucemas lies 155 km south-east of Ceuta and 100 km west of Melilla, being 300 m from the Moroccan coast and the town of al-Hocima. A military garrison of fewer than 100 men is stationed on the islet, which occupies an area of 1 5 ha. The uninhabited rocks of Mar and Tierra lie immediately to the east of the Peñón de Alhucemas. The three Chafarinas Islands (from west to east Isla del Congreso, Isla de Isabel II and Isla del Rey) are situated 48 km east of Melilla and about 3 5 km from the Moroccan fishing port of Ras el-Ma (Cabo de Agua). The islands are of volcanic origin, their combined area being 61 ha. A garrison of about 100 Spanish soldiers is maintained on Congreso.

History

CEUTA

Ceuta was conquered by Juan I of Portugal in 1415. Following the union of the crowns of Spain and Portugal in 1580, Ceuta passed under Spanish rule and in 1694, when Portugal was formally separated from Spain, the territory requested to remain under Spanish control. During the 16th, 17th and 18th centuries Ceuta endured a number of sieges by the Muslims Ahmad Gailan, a chieftain in northern Morocco, blockaded the town in 1648–55. The Sultan of Morocco, Mulai Ismail (1672–1727), attacked Ceuta in 1674, 1680 and 1694, after which he maintained a blockade against the town until 1720 Ahmad Ali ar-Rifi, a chieftain from northern Morocco, made yet another unsuccessful assault in 1732. A pact of friendship and commerce was negotiated between Spain and Morocco at Aranjuez in 1780, a peaceful agreement following in the next year over the boundaries of the Ceuta enclave. In 1844–45 there was a sharp dispute once more about the precise limits of Ceuta Further disagreement led to the war of 1859–60 Spanish forces, after an engagement at Los Castillejos, seized Tetuán from Morocco Following another battle at Wadi Ras in March 1860 the conflict came to an end A settlement was then made, which enlarged the enclave of Ceuta and obliged Morocco to forfeit to Spain 100m pesetas as war indemnities In 1974 the town became the seat of the Capitanía General de Africa.

MELILLA

Spain secured control of Melilla in 1556, the town having been conquered in 1497 by the ducal house of Medina Sidonia, which had been empowered to appoint the governor and seneschal with the approval of the Spanish Crown. The Rif tribesmen attacked Melilla in 1562–64 Later still, the Sultan of Morocco, Mulai Ismail (1672–1727) assaulted the town in 1687, 1696 and 1697. Sultan Muhammad b Abdallah (1757–90) besieged Melilla in 1771 and 1774. An agreement concluded between Spain and Morocco in 1780 at Aranjuez led, however, in the following year, to a peaceful delimitation of the Melilla enclave. There was a brief period of tension in 1844 and then, in 1861, under the terms of an agreement signed at Madrid, after Spain's Moroccan campaign of 1860, Melilla received an extension of its boundaries Conflict with the Rif tribesmen gave rise in 1893–94 to the so-called 'War of Melilla', which ended with a settlement negotiated at Marrakesh It was not until 1909 that Spanish forces, after a hard campaign, occupied the mountainous hinterland of Melilla between the Wadi Kert and and Wadi Muluya—a region in which, some 15 km behind Melilla, were situated the rich iron mines of Beni Bu Ifrur In July 1921 the Rif tribes, under the command of Abd al-Krim, defeated a Spanish force near Annual and threatened Melilla itself. Only in 1926, with the final defeat of the Rif rebellion, was Spanish control restored over the Melilla region Melilla was the first Spanish town to rise against the government of the Popular Front on 17 July 1936, at the beginning of the Spanish Civil War Since 1939 both Ceuta and Melilla have been ruled as integral parts of Spain, though this arrangement is disputed in the territories.

OTHER POSSESSIONS

The Chafarinas Islands came under Spanish control in 1847. The Peñón de Alhucemas was occupied in 1673. The Peñón de Vélez de la Gomera, about 80 km further west, came under Spanish rule in 1508, was then lost not long afterwards and reoccupied in 1564. All three possessions are, like Melilla, incorporated into the province of Málaga. Spanish sovereignty over the uninhabited island of Perejil, which lies north-west of Ceuta, is uncertain.

RECENT EVENTS

Those born in Ceuta, Melilla and the island dependencies, whether Christian or Muslim, are Spanish citizens and subjects. Both Ceuta and Melilla have municipal councils (ayuntamientos), and are administered as an integral part of Spain by an official (Delegado del Gobierno) directly responsible to the Ministry of the Interior in Madrid This official is usually assisted by a government sub-delegate There is also one delegate from each of the ministries in Madrid.

In October 1978 King Hassan of Morocco attempted to link the question of the sovereignty of Melilla to that of the return of the British dependent territory of Gibraltar to Spain In November King Hassan stated his country's claim to Ceuta and Melilla In October 1981 Spain declared before the UN that Ceuta and Melilla were integral parts of Spanish territory. In April 1982 the Istiqlal, a Moroccan political party, demanded

action to recover the territories from Spain, and in March 1983 the Moroccan Government blocked the passage of goods across the frontiers of Ceuta and Melilla In August the movement of Moroccan workers to Ceuta, Melilla and also Gibraltar was restricted.

From 1984 there was increasing unease over Spanish North Africa's future. The riots in Morocco in January 1984 and the signing of the treaty of union between Libya and Morocco in August gave rise to disquiet Following the opening of the Spanish frontier with Gibraltar, in early 1985 Morocco reiterated its claim to Ceuta and Melilla King Hassan indicated, however, that he desired a political solution to the problem Spain continued to reject any comparison between the two enclaves and Gibraltar In July 1985 the joint Libyan-Moroccan assembly passed a resolution calling for the 'liberation' of Ceuta and Melilla In the same month the leaders of the nationalist parties of both Ceuta and Melilla visited Gibraltar for talks with the Chief Minister, in an effort to secure support for their cause

Details of the enclaves' new draft statutes, envisaging the establishment of two local assemblies, with jurisdiction over such matters as public works, agriculture, tourism, culture and internal trade, were announced in August and approved by the central Government in December 1985 Unlike Spain's other regional assemblies, however, those of Ceuta and Melilla were not to be vested with legislative powers, and this denial of full autonomy was much criticized in the two enclaves In March 1986 up to 20,000 people took to the streets of Ceuta in a demonstration to demand autonomy

Meanwhile, the introduction by Madrid of a new aliens law in July 1985 required all foreigners resident in Spain to register with the authorities or risk expulsion In Ceuta most Muslims possessed the necessary documentation However, in Melilla (where the Muslim community was estimated to number 27,000, of whom only 7,000 held Spanish nationality) thousands of Muslims staged a protest against the new legislation in November 1985, as a result of which the central Government gave an assurance that it would assist the full integration into Spanish society of Muslims in Ceuta and Melilla, and promised to improve conditions in the territories In December an inter-ministerial commission, headed by the Minister of the Interior, was created to formulate plans for investment in the enclaves' transport, health services (in 1982 Ceuta had 112 doctors and Melilla 110) and other public facilities.

Tension in Melilla was renewed in December 1985, when 40,000 members of the Spanish community attended a demonstration in support of the new aliens law In January 1986 the brutality with which the police dispersed a peaceful rally by Muslim women provoked outrage in all quarters In addition to the hunger strike already being undertaken by a number of Muslims, a two-day general strike was called In February 1986, however, the Ministry of the Interior in Madrid and the leaders of the Muslim communities of Ceuta and Melilla reached agreement on the application of the aliens law. A joint commission to study the Muslims' problems was to be established, and a census to determine those eligible for Spanish citizenship was to be carried out The agreement was denounced as unconstitutional by the Spanish populations of the enclaves The Minister of the Interior visited the territories in April and reiterated that the implementation of the aliens law (the deadline for registration having been extended to 31 March 1986, following three postponements) would not entail mass expulsions of Muslim immigrants

After negotiations with representatives of the Muslim community, in May the Government agreed to grant Spanish nationality to more than 2,400 Muslims resident in the enclaves By mid-1986, however, the number of Muslims applying for Spanish nationality in Melilla alone had reached several thousand As a result of the delays in the processing of the applications by the authorities, Aomar Muhammadi Dudú, the leader of the newly-founded Muslim party, Partido de los Demócratas de Melilla (PDM), accused the Government of failing to fulfil its pledge to the Muslim residents

At the general elections of June 1986 the ruling Partido Socialista Obrero Español (PSOE) was successful in Ceuta, but was defeated by the centre-right Coalición Popular (CP) in Melilla, the latter result indicating the strong opposition of local Spaniards to the Government's plan to integrate the Muslim population Tight security surrounded the elections in Melilla, where 'parallel elections', resulting in a vote of confidence in the PDM leader, were held by the Muslim community The elections were accompanied by several days of unrest, involving right-wing Christians and local Muslims, and there were further violent clashes between the police and Christian demonstrators demanding the resignation of the Government Delegate in Melilla, Andrés Moreno.

In August 1986 work began on the census of Muslim residents in Ceuta and Melilla In the same month Juan Díez de la Cortina, Secretary-General of the extreme right-wing Partido Nacionalista (Español) de Melilla, was arrested on suspicion of planning a terrorist attack against the Government Delegate in Melilla Following talks in Madrid between representatives of the main political parties in Melilla and the Ministry of the Interior, concessions to the enclave included the replacement of Andrés Moreno as Government Delegate by Manuel Céspedes The Madrid negotiations were denounced by Aomar Muhammadi Dudú, the Muslim leader of Melilla, who nevertheless in September agreed to accept a senior post in the Ministry of the Interior in Madrid, with responsibility for relations with the Muslim communities of Spain

In October 1986 it was reported that Dudú had travelled to Rabat for secret discussions with the Moroccan Minister of the Interior In November Muslim leaders in Melilla announced that they wished to establish their own administration in the enclave, in view of the Madrid Government's failure to fulfil its promise of Spanish citizenship for Muslim residents The Spanish Minister of the Interior, however, reiterated an assurance of the Government's intention to carry out the process of integration of the Muslim community Later in the month, Muslim traders staged a four-day closure of their businesses to draw attention to their plight, and thousands of Muslims took part in a peaceful demonstration, reaffirming support for Dudú, who had resigned from his Madrid post after only two months in office (Dudú subsequently went into exile in Morocco and lost the support of Melilla's Muslim community) A similar protest, to have taken place in Ceuta in December, was banned by the Spanish authorities

In January 1987 the Spanish Minister of the Interior paid an official visit to Morocco King Hassan proposed the establishment of a joint commission to seek a solution to the problem of the Spanish enclaves, but the proposal was rejected by Spain There was a serious escalation of tension in Melilla in early February, when a member of the Muslim community died from gunshot wounds, following renewed racial clashes Police reinforcements were flown in from Spain to deal with the crisis Numerous demonstrators were detained Several prominent Muslims were charged with sedition and transferred to a prison in Almería on the Spanish mainland, but were released shortly afterwards. The indictment of a total of 27 Muslims was completed in mid-1988

In March 1987 King Hassan of Morocco reaffirmed his support for the Muslims of the Spanish enclaves, and later warned that a serious crisis in relations between Rabat and Madrid would arise if Spain were to grant autonomy to the territories King Hassan renewed his proposal for dialogue, ruling out the possibility of a 'green march' similar to the campaign organized in 1975, when 300,000 unarmed Moroccan volunteers had attempted to occupy the Spanish Sahara, which Spain had subsequently agreed to relinquish

In April 1987 Spanish and Moroccan troops participated in joint manoeuvres on Moroccan territory adjacent to Melilla, as part of a programme of military co-operation In early May thousands of Melilla residents attended a demonstration in favour of autonomy for the enclave. During a visit to Melilla a senior official of the ruling PSOE emphasized the need for the integration of Christians and Muslims, while asserting that Spanish sovereignty would continue and would form the basis of the territory's future autonomy statute In July, following a visit to Rabat by the Spanish Minister of Foreign Affairs, King Hassan declared that agreement had been reached on the holding of talks on the question of Ceuta and Melilla The Spanish Government, however, denied the existence of such an agreement, maintaining that the issue was not negotiable.

At the end of July 1987 Spain was obliged to order its fishing fleet to withdraw from Moroccan waters, upon the expiry of an agreement signed with Morocco in 1983 (prior to Spain's accession to the European Community—EC, now European Union—EU), allowing Spain access to the rich fishing grounds off the Moroccan coast in exchange for financial aid of US $550m Having previously appeared unwilling to extend the treaty, in an attempt to link the issue of fishing rights to that of Spanish North Africa, Morocco unexpectedly agreed to a provisional renewal of the accord, whereby Spanish vessels would be permitted to continue operating in Moroccan waters until December 1987, pending the negotiation of a new agreement between Morocco and the EC At the end of 1987, when the temporary accord expired, Spanish fishing vessels were once again expelled from Moroccan waters and were unable to resume operations until March 1988, upon the entry into force of a new four-year agreement between the EC and Morocco This agreement was renewed for a further three years in May 1992 (see Morocco, p 892)

In Ceuta, meanwhile, there was renewed unrest in August 1987, following the indiscriminate shooting dead of a Muslim by a member of the security forces On a visit to that territory in September, the Spanish Minister of Justice emphasized the difficulty of elevating the status of the enclaves to that of an autonomous region In February 1988 it was announced that, in accordance with EC regulations, Moroccan citizens would in due course require visas to enter Spain Entry to Spanish North Africa, however, was to be exempt from the new ruling

In March 1988 a group of seven Muslims began an indefinite occupation of the Melilla office responsible for the processing of applications for Spanish nationality, to protest against its alleged inefficiency Of the 8,000 applications presented, it was claimed, fewer than one-half had been granted After several months of negotiations, in March the central Government and main opposition parties in Madrid reached a broad consensus on the draft autonomy statutes for the Spanish External Territories.

Spain's relations with Morocco improved in June 1988, when the two countries signed an agreement on bilateral economic co-operation, whereby Spain was to grant credits totalling 125,000m. pesetas to Morocco In the same month the Melilla representative to the Madrid Senate requested that the Government clarify all aspects of Spanish North Africa's security position, in view of the territories' exclusion from the NATO 'umbrella'

In July 1988 a senior member of the ruling PSOE acknowledged that the party's Programme 2000 contained contradictory proposals regarding Ceuta and Melilla Although it was envisaged that Spain would retain the territories, the possibility of a negotiated settlement with Morocco was not discounted In late July, seven years after the enclaves' first official request for autonomy, the central Government announced that the implementation of the territories' autonomy statutes was to be accelerated Revised draft statutes were submitted by the PSOE to the main opposition parties for consideration The statutes declared Ceuta and Melilla to be integral parts of Spain and, for the first time, the Spanish Government undertook to guarantee financial support for the territories A further innovation contained in the revised draft provided for the establishment of mixed commissions to oversee the movement of goods and services through the territories As previously indicated by the Spanish Government, the two Spanish North African assemblies were to be granted 'normative' rather than legislative powers Each new assembly would elect from among its members a city president

It was subsequently revealed that the revised statutes encompassed only the enclaves of Ceuta and Melilla, thus excluding the associated Spanish North African islands (the Chafarinas Islands, the Peñón de Alhucemas, the Peñón de Vélez de la Gomera and the island of Perejil, Spanish sovereignty over the latter being uncertain), and that they had been erroneously incorporated in the preliminary statutes, approved by the Government in December 1985. Although remaining the responsibility of the Spanish Ministry of Defence, these islands were not, therefore, to become part of any Spanish autonomous region

In August 1988 a Moroccan Minister of State asserted that Spain should negotiate a peaceful, political solution to the question of Ceuta and Melilla. In October the Moroccan Minister of Foreign Affairs formally presented his country's claim to Ceuta and Melilla to the UN General Assembly An official visit by King Hassan to Spain, scheduled for November, was indefinitely postponed without explanation, and in Melilla a Muslim group acknowledged that it had been in receipt of financial assistance from the Moroccan Government. By December 1988 a total of 5,257 Muslims in Melilla had been granted Spanish citizenship since 1986, and a further 1,126 applications were pending (By 1990 nearly all residents were in possession of an identity card) On a visit to Ceuta in December 1988 a Spanish government official stated that the enclaves would be granted autonomy during the present Government's term of office

In January 1989, however, King Hassan reiterated Morocco's claim to Ceuta and Melilla A planned visit to Rabat by the Spanish Minister of Foreign Affairs was postponed, but in March Narcís Serra, the Spanish Minister of Defence, travelled to Morocco for consultations with King Hassan on security matters. In April the Spanish Government and the Partido Popular (PP), the main opposition party, reached agreement on the revised statutes for Ceuta and Melilla In May the Spanish Prime Minister and King Hassan met in Casablanca for discussions on the situation in the Middle East. King Hassan paid an official visit to Spain in September 1989 The question of Spanish North Africa was not discussed, although the King of Morocco reiterated his country's claim to the territories, while discounting the use of force as a means of settling the dispute. Spain and Morocco agreed to hold annual summit meetings, in order to improve relations

At the general election held in October 1989 the ruling PSOE retained its Ceuta seats, despite allegations by the opposition PP that many names on the electoral register were duplicated. In Melilla, however, the election results were declared invalid, following the discovery of serious irregularities Melilla's one seat in the Congress of Deputies and one of its two seats in the Senate in Madrid had originally been allocated to the PSOE, the PP winning the second seat in the Senate At the repeated ballot held in March 1990, however, at which 52% of the electorate voted, both Senate seats and the one Congress seat were won by the PP, the latter result stripping the PSOE of its overall majority in the Madrid lower chamber The Government Delegate in Melilla claimed that voting irregularities had again occurred

In January 1990, meanwhile, the Partido Comunista de España (PCE) and its Moroccan counterpart, the Parti du Progrès et du Socialisme (PPS), had issued a joint communiqué urging the Governments of Spain and Morocco to open dialogue and work towards a satisfactory solution to the question of Ceuta and Melilla Relations between Spain and Morocco were strained in March, when Spanish fishermen blockaded Algeciras and other ports (thereby disrupting communications with Ceuta) in protest at the Moroccan authorities' imposition of greatly-increased penalties on Spanish fishing vessels found to be operating without a licence in Moroccan waters Following negotiations between the EC and Morocco, Spain agreed to grant financial compensation to Morocco

In a newspaper article in March 1990 a Moroccan government minister repeated his country's claim to Spanish North Africa, maintaining that, with the accession of Namibia to independence, Ceuta and Melilla were the last vestiges of colonialism in Africa In April the Spanish Government decided to open negotiations with the political groupings of Ceuta and Melilla, the autonomy statutes being presented for discussion in the territories It was confirmed that the enclaves were to remain an integral part of Spain, and that they were to be granted self-government at municipal, rather than regional, level The Spanish Government's decision provoked a strong reaction from Moroccan political parties, which were united in their denunciation of the perceived attempt to legalize Spanish possession of the territories. In June a two-hour strike in Ceuta, in support of demands for full autonomy for the enclave, was widely observed.

In July 1990 the Istiqlal, the Moroccan opposition party, announced that it was initiating a new campaign to press for the 'liberation' of Ceuta and Melilla. In the following month the Istiqlal organized a protest march through the streets of Martil,

a Moroccan town 40 km from Ceuta The Muslim community of Ceuta, however, expressed its concern at these developments.

In mid-August 1990 Spain granted its Government Delegate in Melilla direct powers to expel illegal residents from the territory In the same month King Hassan and the Spanish Prime Minister, met near Rabat for talks Their discussions focused on the Gulf crisis, caused by Iraq's invasion of Kuwait, and on their bilateral relations, particularly increased co-operation and security In December a Spanish delegation, led by Felipe González, travelled to Morocco, where the first of the planned regular summit meetings between the Spanish and Moroccan Prime Ministers took place Among the topics discussed was the forthcoming implementation (in May 1991) of new visa requirements for North Africans entering Spain, which had caused dismay in the Muslim community Special arrangements were to apply to Moroccan citizens who worked in, or travelled regularly to, Ceuta and Melilla At the meeting a Spanish credit to Morocco of 25,000m pesetas (in addition to that agreed in 1988) was also arranged.

The outbreak of the Gulf war in early 1991 gave rise to renewed disquiet in Spanish North Africa In February 800 Muslims marched through the streets of Melilla to protest against the war, in which the US military bases in Spain were to play a crucial role In the same month, as anti-Western sentiment in North Africa increased, the Spanish Minister of Foreign Affairs embarked on a tour of five Maghreb countries Discussions with his Moroccan counterpart took place in Rabat

Elections for the 25-member municipal councils of Ceuta and Melilla were held in May 1991, and in each territory the PSOE Mayor was replaced In Ceuta Francisco Fraiz Armada of the Progreso y Futuro de Ceuta (PFC) became Mayor In Melilla, where the PP had secured 12 of the 25 seats, Ignacio Velázquez Rivera of the right-wing Partido Nacionalista de Melilla (PNM) was elected Mayor of the enclave

In July 1991, in Rabat, the Spanish and Moroccan heads of government signed a treaty of friendship In addition to the promotion of co-operation in the fields of economy, finance, fisheries, culture and the judiciary, agreement was also reached on Spanish military aid to Morocco Shortly afterwards the Moroccan Minister of the Interior, Driss Basri, and a cabinet colleague unexpectedly accepted an invitation from the Spanish Minister of the Interior to visit Ceuta, their brief trip being the first ever visit by members of the Government of King Hassan

The draft autonomy statutes of Ceuta and Melilla were submitted to the Congress of Deputies in Madrid for discussion in October 1991 During the debate the PP accused the PSOE of supporting Moroccan interests. In November thousands of demonstrators, many of whom had travelled from the enclaves, attended a protest march in Madrid (organized by the Governments of Ceuta and Melilla), in support of demands for autonomy for the territories In early 1992, however, the central Government confirmed that the assemblies of Ceuta and Melilla were not to be granted full legislative powers In May a general strike in Ceuta, to protest against this denial of full autonomy, was widely supported.

In mid-1992 relations between Spain and Morocco were dominated by the issue of illegal immigration. In addition to the problem of the large numbers of Moroccans trying to enter mainland Spain (many drownings in the Strait of Gibraltar being reported), there had been a sharp increase in the numbers of those from other (mainly West African) countries attempting to gain entry to Europe via Morocco and the two Spanish enclaves In July the Spanish Minister of Foreign Affairs flew to Rabat for discussions on the problem

In March 1993 it was revealed that Spain would require the permission of NATO before employing its most modern military equipment in the defence of the enclaves In the same month, in an attempt to bring about the transfer of powers to the territories, the PP submitted its own draft statute for Melilla to the central Government, which immediately condemned the document as unconstitutional All political parties in Melilla, except the PSOE, demanded that a local referendum be held on the issue of autonomy In September the Spanish Minister of Public Administration affirmed his commitment to the conclusion, within the next few months, of an agreement on the territories' statutes

At the general election of June 1993, meanwhile, the PSOE of Ceuta lost its one seat in Congress and its two seats in the Senate to the PP In Melilla the PSOE candidate defeated the incumbent PP Congress member, the PP also lost one of its two seats in the Senate.

In February 1994 the Mayor of Ceuta, Francisco Fraiz Armada, was obliged to resign, following the Supreme Court's ratification of a lower court ruling that barred him from holding public office for six years. His disqualification resulted from his involvement in irregularities in the housing sector in 1984, when unauthorized evictions had been carried out He was replaced by Basilio Fernández López, also of the PFC

In March 1994 King Hassan declared his opposition to the forthcoming adoption of the autonomy statutes, repeating Morocco's claim to the territories By May, however, the final statutes had still not been presented to the Cortes in Madrid Representatives of Ceuta were particularly critical of the dilatory conduct of the Minister of Public Administration, and urged the central Government and the opposition PP to bring the matter to a speedy conclusion. In the same month King Juan Carlos of Spain received a delegation from Melilla, led by the Mayor, Ignacio Velázquez Rivera, who emphasized the necessity for a swift adoption of the enclave's autonomy statute and conveyed his citizens' concern at the Moroccan monarch's recent statement

In September 1994 the final statutes of autonomy were approved by the Spanish Government, in preparation for their presentation to the Cortes The statutes provided for 25-member local assemblies with powers similar to those of the municipal councils of mainland Spain Morocco, however, announced that it was initiating a new diplomatic campaign to reassert its claim over the territories Spain rejected as 'inappropriate' the Moroccan Prime Minister's efforts, in a speech to the UN General Assembly, to draw a comparison between the position of the enclaves and the forthcoming return to Chinese sovereignty of the British dependent territory of Hong Kong and of the Portuguese territory of Macau

The proposals for limited self-government were generally acceptable in Melilla but not in Ceuta, where, in October 1994, a general strike received widespread support. An estimated 20,000 residents of Ceuta participated in a demonstration to demand equality with other Spanish regions and full autonomy for the enclave Earlier in the month, following expressions of concern regarding the territories' protection in the event of Moroccan aggression, the Minister of Defence confirmed that Spain would continue to maintain an appropriate military presence in Ceuta and Melilla. In December more than 2,000 citizens of Ceuta attended a demonstration in Madrid in support of their demands for full autonomy

Following their approval by the Congress of Deputies in December 1994, the autonomy statutes were ratified by the Senate in February 1995 This approval of the statutes by the Spanish Cortes was denounced by the Moroccan Government, which, upon taking office in March, declared that the recovery of Ceuta and Melilla was to be one of its major objectives In April responsibility for two explosions in Ceuta was claimed by the Organización 21 de Agosto para la Liberación de los Territorios Marroquíes Usurpados, a group that had apparently remained inactive since 1975, and which the Spanish Government suspected was now receiving covert assistance from the Moroccan authorities

In September 1994 Morocco had demanded that the fishing accord with the EU be renegotiated and that quotas be drastically reduced At the end of April 1995 hundreds of Spanish fishing vessels, including some from Ceuta, were obliged once again to withdraw from Moroccan waters, following the EU's failure to renegotiate the agreement with Morocco In May, as anti-Moroccan sentiment grew, there were violent scenes when Spanish fishermen and farmers attempted to obstruct the entry of Moroccan produce into the ports of southern Spain. The protests were renewed in late August Negotiations between the EU and Morocco continued intermittently in mid-1995. In October Morocco agreed to accept an irrevocable four-year accord (rather than a three-year arrangement as it had originally demanded) on the basis of decreases in fish catches. Morocco also agreed to reduce its claim for financial compensation Following final agreement on issues such as the compulsory

unloading of a certain percentage of fish in Moroccan ports, vessels from EU nations, mainly Spain, were able to return to Moroccan waters in late November The accord entered into force in January 1996.

Elections for the new local assemblies were held in May 1995 In Ceuta the PP won nine of the 25 seats, the PFC six, the nationalist Ceuta Unida four and the PSOE three Basilio Fernández López of the PFC was re-elected Mayor/President, heading a coalition with Ceuta Unida and the PSOE. Mustafa Mizziam Ammar, leader of the Partido Democrático y Social de Ceuta (PDSC), became the first Muslim candidate ever to be elected in the territory Fewer than 57% of those eligible voted in Ceuta In Melilla, where the level of participation was less than 62%, the PP won 14 of the 25 seats, the PSOE five seats, Coalición por Melilla (CpM), a new Muslim grouping, four seats and the right-wing Unión del Pueblo Melillense (UPM) two seats. Ignacio Velázquez (PP/PNM) returned to the position of Mayor/President

In Ceuta concern about the level of illegal immigration from sub-Saharan Africa increased during 1995. By mid-1995 these immigrants, many of whom were without documentation and claimed to have fled from war-ravaged countries such as Rwanda, were estimated to total more than 300 In October a violent confrontation occurred between about 150 Africans and the security forces, the latter being joined by citizens' vigilante groups. During the course of the affray a policeman was shot and seriously injured An investigation into the shooting discounted the possibility that an African demonstrator had been responsible Nevertheless, more than 100 illegal immigrants were transferred to a detention centre on the Spanish mainland, while 15 Africans who were alleged to have led the riot were imprisoned in Ceuta In an attempt to curtail illegal immigration, Ceuta's frontier with Morocco was strengthened

A general election was held in March 1996 In Ceuta the three PP delegates to the Cortes in Madrid were re-elected In Melilla the PSOE lost its seat in the lower house to the PP, which also took both seats in the Senate. Following the installation of the PP administration in Madrid, both Government Delegates in the territories were replaced In the same month, following the killing of a Spanish legionnaire in a bar brawl, which led to a rampage by hundreds of soldiers through the streets of a Muslim district of Melilla, more than 100 legionnaires were confined to barracks At the end of March thousands of Muslims, organized by Coalición por Melilla, took part in a demonstration to protest against their position on the margins of society

In February 1996, meanwhile, at a summit meeting in Rabat (the first since December 1993) the Spanish and Moroccan Prime Ministers concluded an agreement relating to a Spanish credit of 150,000m pesetas, to be extended to Morocco over the next five years An arrangement was also reached regarding Morocco's bilateral debt of 242,300m pesetas In May, however, on his first official overseas trip, José María Aznar, the newly-appointed Prime Minister, travelled from Spain to Morocco for discussions with King Hassan The new head of government appeared to adopt a less conciliatory stance on the question of debt relief for Morocco The issue of Ceuta and Melilla was not given prominence

In July 1996 the Mayor/President of Ceuta, Basilio Fernández López of the PFC, resigned after seven months at the head of a minority administration, and was replaced by Jesús Fortes Ramos of the PP, who urged that the enclave be considered a full autonomous region In September the Secretary-General of NATO confirmed that Ceuta and Melilla would remain outside the alliance's sphere of protection if Spain were to be fully integrated into NATO's military structure

In mid-1996 attention focused once again on the issue of illegal immigration from Africa Both Ceuta and Melilla appealed to the EU for financial assistance to counter the problems arising from the enclaves' attractive location as an entry point to Europe and from the recent implementation of the EU's Schengen Convention permitting the free movement of persons among the accord's signatory countries In June, following disturbances involving refugees from Central Africa during which several people were injured, a total of 103 immigrants were flown from Melilla to detention centres on the Spanish mainland and thence, only hours later in a clandestine operation, were expelled via the Canary Islands to various sub-Saharan countries The Spanish Government's apparently peremptory procedure and dismissal of requests for asylum not only provoked criticism from humanitarian groups, but also led to demands from senior judges and politicians for clarification of the events. The General Prosecutor of Spain was ordered to initiate an inquiry The Spanish Ministry of the Interior, having been obliged to admit that sedative drugs had been administered to the refugees prior to their deportation, also opened an investigation. The case was closed in July 1998, no charges having been brought.

As the exodus of emigrants from Africa continued, the Spanish authorities intercepted numerous small boats in the Strait of Gibraltar In September 1996 the Red Cross declared that its supplies of rations were insufficient to feed the 406 (mainly Moroccan and Algerian) immigrants located at an encampment in Ceuta In October the Spanish Minister of the Interior met his Moroccan counterpart in Madrid for discussions. The negotiations resulted in an agreement on the establishment of two joint commissions to address the specific problems of illegal immigration and drugs-trafficking

In October 1996 two police-officers were injured in disturbances in Ceuta, the third such protest by disaffected citizens in that year In November, for the first time in more than 14 years, the Spanish Minister of Defence paid an official visit to the enclaves which, upon Spain's proposed full integration into the military structure of NATO, were to remain outside the organization's sphere of protection In early December it was reported that Spain was to convert part of Morocco's debt into investment projects Later in the month the Spanish Minister of the Interior travelled to Rabat for further discussions on the issues of illegal immigration and drugs-trafficking. For the first time since the signing of a joint accord in 1992, Morocco agreed to the readmission of illegal immigrants held in the Spanish enclaves

Between January and December 1996, according to the Spanish Ministry of the Interior, a total of 1,552 illegal Moroccan immigrants were detained in Ceuta, while 2,321 were detained in Melilla The central Government allocated emergency funding of 28m pesetas to meet the immediate needs of the immigrants A sum of 30m pesetas was granted to the Red Cross In early 1997 concern grew that much of the illegal immigration from Morocco was being controlled by networks involved in the smuggling of drugs and tobacco. In April the Spanish Minister of the Interior expressed reservations regarding the likely success of the first joint police operation with Morocco against these networks.

In March 1997, in Melilla, a motion of censure against Ignacio Velázquez resulted in the Mayor/President's defeat, owing to the defection to the opposition of two PP councillors, Enrique Palacios and Abdelmalik Tahar The latter subsequently absconded to the Canary Islands. The opposition then declared Enrique Palacios to be Mayor/President, although the central Government continued to recognize Ignacio Velázquez as the rightful incumbent In May Enrique Palacios alleged that at the election of May 1995 that party had employed irregular tactics in its campaign for the support of Muslim voters Also in May 1997, for the first time, the Mayor/Presidents of Ceuta and Melilla attended a conference of the autonomous regions' presidents, held in Madrid. Despite the attempted 'coup' in Melilla, the territory was represented by Ignacio Velázquez In November 1997, from Tenerife, Abdelmalik Tahar accused Ignacio Velázquez and five associates of having subjected him to blackmail and threats, as a result of which he had relinquished his seat on the Council, thereby permitting the PP to replace him and to regain its majority In December 1997 Tahar, who was now under police protection, declared to the investigating judge that he had been offered 50m pesetas (of which he had received 3m.) and a monthly sum of 200,000 pesetas Following an appeal by Enrique Palacios and a judicial ruling leading to the successful revival of the motion of censure against Ignacio Velázquez in February 1998, Palacios took office as Mayor/President of Melilla, accusing his predecessor, furthermore, of serious financial mismanagement A new motion of censure, presented by the PP urging that (despite the bribery charges against him) Ignacio Velázquez be restored to office,

was deemed to be illegal and therefore rejected in a decree issued by Enrique Palacios, who also ordered the temporary closure of the local assembly. In July Enrique Palacios accused the PP of having employed public funds, amounting to more than 200m. pesetas, to secure the votes of some 2,500 Muslims at the 1995 local elections, the bribes reportedly having taken the form of building materials for the purposes of residential repairs. The allegations were denied by the PP.

During 1997 there was increased concern regarding the numbers of illegal immigrants. In June police reinforcements were drafted into Melilla, following renewed disturbances in which one immigrant died. More than 100 illegal immigrants were immediately returned to Morocco as part of a special security operation, and on the same day of action a total of 873 Moroccans were denied entry to Melilla. (More than 10,000 Moroccans daily continued to cross the border legally, in order to work in the enclave.) In July a young Moroccan was shot and wounded, and two civil guards were injured, during a confrontation on the Melilla border. Meanwhile, many North Africans continued to risk their lives attempting to cross the Strait of Gibraltar, often in makeshift vessels, in the hope of gaining access to Europe.

In August 1997 various non-governmental organizations condemned the rudimentary conditions in which more than 800 illegal immigrants, mainly from sub-Saharan Africa and Algeria, were being held in Melilla. Furthermore, it was announced that a Melilla reception centre housing about 100 Algerians was to close, owing to unsatisfactory conditions. It was envisaged that a new refuge, to accommodate 300 immigrants, would open in November 1997. In Ceuta 51 Moroccans and 43 Algerians were detained in August, as they tried to leave the enclave hidden in lorries bound for shipment to the Spanish mainland. They were swiftly repatriated. In the same month hundreds of Moroccan children, who had been begging on the streets of Melilla, were returned to their homeland. The increasing involvement of organized criminal gangs in such activities continued to cause disquiet. Following an incident involving Moroccan immigrants, in which 15 cars were destroyed by fire, the Melilla Government accused the Moroccan authorities of facilitating the entry of the illegal immigrants. In August the Spanish General Prosecutor demanded emergency measures to address the immigrant crisis, having already urged the Ministry of the Interior in June to find an immediate solution.

In September 1997, as Melilla commemorated the 500th anniversary of its foundation by the Spanish, various Moroccan political parties renewed their denunciation of Spain's 'colonial' occupation of the territory. In the same month, at the UN General Assembly in New York, the Moroccan Prime Minister denounced the situation in Ceuta and Melilla.

In Ceuta one Algerian man died during an altercation among immigrants at the Calamocarro camp in September 1997. As tension in the camps increased, by December 1997 the number of immigrants in Melilla alone totalled 930. In that month the Spanish Government announced that 1,206 sub-Saharan Africans were to be transferred from Ceuta and Melilla to the mainland. In late December the authorities effected the first transfers to Spain, where the illegal immigrants were received by various non-governmental organizations. The Minister of the Interior announced that two new reception centres were to be built in Ceuta and Melilla.

In January 1998 three police-officers were injured and six immigrants were detained, as a result of a confrontation in offices of the Red Cross in Melilla, where about 50 immigrants from central Africa staged a demonstration against the criteria for transfer to mainland Spain. About 200 Algerians, protesting against delays in their transfer, demonstrated outside government offices. During the same month four members of the security forces were injured in three separate incidents, involving carriers of contraband, on the border with Morocco. As the territories' borders were strengthened and both maritime and street patrols increased, in February 1998 it was announced that during the course of the previous year 4,358 illegal immigrants had been expelled from Ceuta. In March 1998, in Melilla, a demonstration by Algerian immigrants left three people injured. In April 1998 it was revealed that in the first three months of the year a total of 1,317 illegal immigrants, mostly from Morocco, had been detained in Cádiz, compared with 714 in the corresponding period of the previous year. On the occasion of the Spanish Prime Minister's visit to Morocco in April 1998, his newly-appointed Moroccan counterpart requested that Spain review its policy on Ceuta and Melilla.

In mid-1998 it was estimated that since 1990 some 2,000 people had drowned during unsuccessful attempts to cross the Strait of Gibraltar, while about 20,000 illegal immigrants had been arrested by the Spanish authorities. In August 1998 it was reported that at least 38 Moroccans had been drowned several weeks previously when their boat capsized during an attempted illegal sea crossing. In Madrid the Ministry of the Interior was criticized for its apparent failure to assist in a rescue attempt. The Spanish Government, however, maintained that the disaster had taken place within Moroccan waters. Also in August some 40 illegal immigrants from sub-Saharan Africa broke through the security fence to reach Melilla, where an extensive police operation to capture them was immediately mounted. At the end of August 55 potential immigrants from North Africa were detained in southern Spain and 45 makeshift vessels were confiscated, in an operation conducted by the civil guard. In Ceuta in September an illegal immigration network was dismantled upon the discovery of an attempt to conceal 51 Africans from the authorities.

In September 1998 the Government of Melilla was the first to reject Morocco's offer of dual nationality for the citizens of the two enclaves, urging the Spanish Government to lodge a protest with the Moroccan authorities.

Within three days in December 1998 a total of 95 illegal immigrants were apprehended by the authorities of Ceuta in the waters of the Strait of Gibraltar, while a further 47 were detained at the Ceuta frontier as they prepared to embark. In January 1999 the Ceuta authorities expelled more than 100 Moroccans, including 60 children, all of whom lacked documentation. In March, however, the Spanish General Prosecutor ordered the police force of Ceuta to suspend expulsions of destitute minors. In February it was revealed that hundreds of Africans were in hiding in Tangiers and other Moroccan towns, in the hope of gaining illegal access to Ceuta.

In January 1999 the PP Senator for Melilla, Aurel-Gheorghe Sava, announced his resignation owing to an internal party dispute. He was replaced by Beatriz Caro. In the same month, after 12 years' exile in Morocco, Aomar Muhammadi Dudú, the former Muslim leader, returned to Melilla, in preparation for the local elections to be held in June. In February, as the internal crisis within the local party grew, the PP lost a motion of censure against Enrique Palacios.

In February 1999 it emerged that the two enclaves were being used extensively by drugs-traffickers for the purpose of 'money-laundering' operations. The Ministry of Economy and Finance began an inquiry into these irregular movements of substantial amounts of foreign exchange. In March the Ministry of the Interior initiated an investigation into allegations of corruption in the prison and security services of Ceuta, the accusations again related to the trade in illicit drugs. By mid-1999 there was serious concern in Ceuta over the increasing number of drugs-related shootings. Between 1995 and May 1999 a total of 39 such incidents, resulting in six deaths and 32 woundings, were recorded. In July 1999 48 arrests were made in Melilla following a police operation to dismantle an extensive 'money laundering' network, believed to be responsible for the illegal processing of a total of 1,000m. pesetas derived from drugs-trafficking.

In early 1999 it was conceded that the security barrier on Ceuta's border with Morocco was proving inadequate. The project had been funded by the EU, the total cost being 5,500m. pesetas, and although initiated five years previously, remained unfinished. Further improvements, scheduled for completion in June 2000 at a cost of 2,800m. pesetas, were therefore announced. The new security measures were to incorporate 17 surveillance towers, two additional fences of more than 3m in height (bringing the total to four, running parallel to a patrol road), thermal cameras and fibre optic sensors. Security on the beaches was also strengthened. Between January and July 1999 alone a total of 21,411 illegal immigrants were apprehended on Ceuta's frontier and returned to Morocco. Meanwhile, work progressed on a new reception centre in Ceuta to replace the inadequate facilities of the Calamocarro camp, where in mid-1999 more than 1,000 illegal immigrants, mainly from sub-Saharan Africa, were being held. The centre was to be completed in December 1999 at a cost of

2,800m. pesetas and, like Calamocarro, was to be staffed largely by Red Cross volunteers. In September 1999, in one of the most serious disturbances to date, damage estimated at 20m. pesetas was caused during rioting at a reception centre in Melilla, where 300 illegal immigrants were accommodated. The inmates alleged that they were being mistreated by the security guards. Following the disturbances, eight Algerian immigrants were accused of public disorder and arson, and were transferred to prison.

In Morocco, meanwhile, King Hassan died in July 1999. In August the Moroccan Prime Minister urged Spain to open negotiations on the future of Ceuta and Melilla. In the same month the Spanish Prime Minister paid a brief visit to Rabat. During his discussions with the newly-enthroned King Muhammad, the issue of Ceuta and Melilla was not raised. The fishing agreement between Morocco and the EU, permitting Spanish vessels access to Moroccan waters, was due to expire at the end of November. Although Morocco had previously indicated that the accord would not be renewed, negotiations on the matter commenced in mid-September.

At the elections of June 1999, the most successful party in both Ceuta and Melilla was the Grupo Independiente Liberal (GIL), recently founded by Jesús Gil, the controversial Mayor of Marbella. The GIL secured 12 of the 25 seats in the local assembly of Ceuta and seven of the 25 in Melilla. Antonio Sampietro Casarramona of the GIL replaced Jesús Fortes Ramos of the PP as Mayor/President of Ceuta. In Melilla the two newly-elected PSOE councillors defied a central directive to vote with the five PP delegates (in order to obstruct the accession of the GIL to the city presidency), and instead gave their support to Mustafa Aberchán Hamed of the CpM, which had won five seats. The Muslim Mustafa Aberchán was thus elected to replace Enrique Palacios as Mayor/President of Melilla. In mid-July Mustafa Aberchán and the GIL agreed to form a minority Government. The two rebel PSOE councillors subsequently relinquished their seats. In August a replacement PSOE delegate claimed that a representative of Mustafa Aberchán had offered him a bribe of 20m. pesetas in exchange for the renunciation of his seat. The fact that his predecessor had relinquished her seat, and then attempted to withdraw her resignation, led to intense speculation that she had also been offered a bribe. Similar allegations of malpractice were made in Ceuta. In September, following a rift between the CpM and the GIL, the Mayor/President of Melilla was attempting to form a minority Government with representatives of the Partido Independiente de Melilla (PIM), recently established by Enrique Palacios.

Economy

CEUTA AND MELILLA

Ceuta and Melilla, both free ports, are in fact of little economic importance, while the other possessions, with a 1982 population of 312, mostly military personnel and fishermen, are of negligible significance. The basic reason for Spanish retention of these areas was their predominantly Spanish population. The registered populations of both Ceuta and Melilla have fallen since the 1960s, owing to the lack of economic opportunities in the towns, although the proportion of Arab residents has greatly increased, particularly in Melilla. There are large number of immigrants from Morocco.

In 1991 Ceuta's gross domestic product (GDP) was 33.6% below the average for the whole of Spain, while that of Melilla was 30.5% below. In the same year the average disposable family income of Ceuta was only 76.85% that of Spain, the figure in Melilla being 84.76%. Social security benefits accounted for 22.75% of the average family income in Ceuta and 24.25% in Melilla. In 1992 the GDP of the two territories totalled 133,767m. pesetas, equivalent to 1,072,607 pesetas per head. In 1995 the territories' combined GDP per head was 11.61% below the average for the whole of Spain. In that year, compared with 1994, the GDP of Ceuta and Melilla increased by 1.98%. In 1996 GDP per head was estimated to have increased by 1.58% in Ceuta and by 1.68% in Melilla. By 1996, although the two territories' income per head was below the average for Spain, family income per caput being 0.83% below the Spanish average in Ceuta and 6.04% above in Melilla, purchasing power was 3.03% higher in Ceuta and 6.55% higher in Melilla. An unofficial report issued in October 1996 classified Melilla as by far the poorest city in Spain. In 1997, compared with the previous year, the GDP of Ceuta increased by 2.82%, while that of Melilla expanded by 2.76%, among the lowest growth rates in Spain.

The hinterland of the two cities is small. Development is restricted by the lack of suitable building land. Ceuta, in particular, suffers from intermittent water shortages. In September 1995 tenders were invited for the construction of a desalination plant in the territory, which would be capable of processing 12,000 cu m of sea water per day (rising to 16,000 cu m). The apparent shortcomings of the territories' infrastructure were demonstrated in Melilla in November 1997 by the rupture of a large water-storage tank. The resultant flood killed 11 people, injured 41 and caused damage estimated at more than 1,350m. pesetas.

Most of the population's food has to be imported, with the exception of fish, which is obtained locally. Sardines and anchovies are the most important items. A large proportion of the tinned fish is sold outside Spain. More important to the economies of the cities is the port activity; most of their exports take the form of fuel supplied—at very competitive rates—to ships. Most of the fuel comes from the Spanish refinery in Tenerife. Ceuta's port is the busier, receiving a total of 8,203 ships in 1993. Apart from the ferries from Málaga and Almería in mainland Spain, Melilla's port is not so frequented and its exports are correspondingly low. Ceuta's main exports are frozen and preserved fish, foodstuffs and beer. Industry is limited to meeting some of the everyday needs of the cities. There is a local brewery in Ceuta.

In both cities a negligible percentage of the working population is employed in agriculture. In 1989 the economically active population of the two enclaves totalled 49,400, of whom 15,200 were unemployed, 1,800 were employed in the construction sector, 1,400 in industry and 100 in agriculture; 30,800 were employed in the services sector. In 1996 the civil service employed 2,904 workers in Ceuta and 2,877 in Melilla. In the same year the average rate of unemployment was estimated at 12.90% of the labour force in Ceuta and at 12.70% in Melilla. In July 1998 there were 3,462 registered unemployed in Ceuta and 3,730 in Melilla. By August 1999 the number of unemployed in the two enclaves had declined to 6,223, equivalent to 11.4% of the registered labour force. The average annual rate of inflation in 1996 was 2.2% in Ceuta and 3.6% in Melilla, compared with 4.5% in the two enclaves in 1995. In the 12 months to December 1997 and again in the year to December 1998 the inflation rate was 1.9% in Ceuta and Melilla combined. In the 12 months to August 1999 the rate of inflation declined to 0.7%.

In 1986 the Spanish Government announced that it was to grant 6,500m. pesetas to Ceuta and 8,500m. to Melilla for the purposes of infrastructural development. In 1989 a campaign to attract more investment to Ceuta began. Tax concessions and other incentives were offered. In the three years to 1990 the Spanish Government's investment in Melilla totalled 32,000m. pesetas. Ceuta received 9,000m. pesetas for the purposes of public works, and its health service was allocated 347m. pesetas. In early 1993 investment of a further 18,000m. pesetas for housing and transport projects in Melilla was announced. In Ceuta the apparent lack of banking controls and alleged corruption at senior levels drew criticism in April 1993, when evidence of the territory's use as a 'money-laundering' centre for the proceeds of drugs-trafficking was revealed. A sum of more than 25,000m. pesetas was believed to be involved. Furthermore, in December fraudulent operations, allegedly involving almost 100m. pesetas and in which two civil servants were implicated, were uncovered at the city hall of Ceuta. Following Spain's intensification of security at its frontier with Gibraltar in 1995–96, many drug and tobacco smugglers were believed to have relocated their bases to Ceuta.

Tourism previously made a significant contribution to the territories' economies. Almost 1m. tourists visited Ceuta in 1986, attracted by duty-free goods. High ferry-boat fares and the opening of the Spanish border with Gibraltar in 1985, however, had an adverse effect on the enclaves' duty-free trade. Successive defence cuts led not only to fears for Spanish North Africa's security but also to losses in income from military personnel stationed in the territories.

Upon the accession of Spain to the European Community (EC, now European Union—EU) in January 1986, Ceuta and Melilla were considered as Spanish cities and European territory, and joined the Community as part of Spain. They retained their status as free ports. The statutes of autonomy, adopted in early 1995, envisaged the continuation of the territories' fiscal benefits. In June 1994 the EU announced substantial regional aid: between 1995 and 1999 Ceuta and Melilla were to receive totals of ECU 28m. and ECU 45m., of which ECU 20m. and ECU 18m., respectively, were to be in the form of direct aid. With assistance from the European Social Fund, a programme of employment and vocational training for Melilla was announced in 1996. In 1997 projected state investment in Ceuta and Melilla was 7,786m. pesetas, compared with 6,363m. pesetas in 1996. Ceuta's budget for 1999 was estimated at 22,000m. pesetas. As a proportion of GDP per head in relation to the EU average, the estimate for Ceuta rose from 37.0% in 1960 to 66.2% in 1996, while that for Melilla increased from 30.8% in 1960 to 70.9% in 1996. The comparable figures for Spain as a whole were 57.2% in 1960 and 76.2% in 1996.

Statistical Survey

Ceuta

Area: 19.7 sq km.

Population (1 May 1996): 68,796 (34,229 males, 34,567 females).

Density (1 May 1996): 3,492.2 per sq km.

Births, Marriages and Deaths (1994): Live births 962; Marriages 440; Deaths 422.

Finance: Spanish currency: 100 céntimos = 1 peseta. *Sterling, Dollar and Euro Equivalents* (30 April 1999): £1 sterling = 253.18 pesetas; US $1 = 157.01 pesetas; €1 = 166.39 pesetas; 1,000 pesetas = £3.950 = $6.369 = €6.010. *Average exchange rate* (pesetas per US $): 126.66 in 1996; 146.41 in 1997; 149.40 in 1998.

External Trade: Ceuta is a duty-free port. Trade is chiefly with mainland Spain, the Balearic and Canary Islands and Melilla. Ceuta supplies fuel and water to ships entering the port. Other exports include frozen and preserved fish, beer and foodstuffs.

Transport: *Road Traffic:* vehicles registered (1994): 2,156; vehicles entered (1993): 205,886; vehicles departed (1993): 150,499. *Shipping* (1993): Ships entered 8,203. Goods unloaded 2,758,797 metric tons (of which fuel 685,117 metric tons, water 1,461,782 metric tons); Passenger departures 1,062,005; arrivals 1,215,010.

Education (1994/95): Pre-school 2,388 pupils, General basic 9,351 pupils, 24 schools; Secondary 3,438 pupils, 5 schools; Vocational (1987/88) 873 students, 3 centres.

Melilla

Area: 12.5 sq km.

Population: (1 May 1996): 59,576 (29,647 males, 29,929 females (incl., at March 1982, Peñón de Alhucemas 61, Chafarinas 191, Peñón de Vélez de la Gomera 60).

Density (1 May 1996): 4,766.1 per sq km.

Births, Marriages and Deaths (1988, provisional): Live births 997; Marriages 332; Deaths 396.

Finance: Spanish currency (see Ceuta).

External Trade: Melilla is a duty-free port. Most imports are from Spain but over 90% of exports go to non-Spanish territories. The chief export is fish.

Transport: *Road Traffic* (vehicles registered, 1987, provisional): 1,498. *Shipping* (1989): Ships entered 819; (1992, provisional): Goods loaded and unloaded 639,000 metric tons; Passenger departures and arrivals 476,000. *Civil Aviation* (1989): Goods loaded and unloaded 560 metric tons; Passenger departures and arrivals 168,000.

Education (1987/88): Pre-school 1,961 pupils, 61 centres; General basic 8,256 pupils, 245 schools; Secondary 1,863 pupils, 4 schools; Vocational 927 students, 1 centre.

Deputy elected to the Congress in Madrid: FRANCISCO ANTONIO GONZÁLEZ PÉREZ (PP). Representatives to the Senate in Madrid: JOSÉ LUIS MORALES MONTERO (PP), FRANCISCO OLIVENCIA RUIZ (PP). Commandant-General: FERNANDO LÓPEZ DE OLMEDO.

COUNCIL

Election, 13 June 1999

	Seats
Grupo Independiente Liberal (GIL)	12
Partido Popular (PP)	8
Partido Socialista Obrero Español (PSOE)	2
Partido Democrático y Social de Ceuta (PDSC)	3
Total	25

POLITICAL ORGANIZATIONS

Ceuta Unida (CEU): Ceuta; nationalist party; Sec.-Gen. JOSÉ ANTONIO QUEROL.

Grupo Independiente Liberal (GIL): Ceuta; f. 1999; National Leader JESÚS GIL.

Iniciativa por Ceuta (INCE): Plaza de Africa 10, 1°, 11701 Ceuta; fax (956) 516890; f. 1993; Muslim party; 380 mems; Pres. AHMED SUBAIRE; Sec. ABDELKADER MAIMON.

Izquierda Unida: Ceuta; left-wing electoral alliance; Leader ROSA RODRÍGUEZ.

Partido Democrático y Social de Ceuta (PDSC): Ceuta; Muslim party; Leader MUSTAFA MIZZIAM AMMAR.

Partido Humanista: B. Príncipe Alfonso, Ceuta; Leader MOHAMED ALI.

Partido Popular (PP): Ceuta; fmrly Alianza Popular; centre-right; Leader RICARDO MUÑOZ RODRÍGUEZ.

Partido Socialista Obrero Español (PSOE): Ceuta; socialist workers' party; Leader ANTONIO TROYANO PÉREZ.

Partido Socialista del Pueblo de Ceuta (PSPC): Carretera del Embalse 10, 11704 Ceuta; dissident group of PSOE; Leader JUAN LUIS ARÓSTEGUI.

Progreso y Futuro de Ceuta (PFC): Marina de Ceuta, Ceuta; Leader FRANCISCO FRAIZ ARMADA.

There are branches of the major Spanish parties in Ceuta, and also various civic associations. The **Asociación Ceuta y Melilla (Acyme)** is based in Granada (Pres. FRANCISCO GODINO), and is opposed to the limited autonomy of the enclaves. The **Organización 21 de Agosto para la Liberación de los Territorios Marroquíes Usurpados** resumed its activities in 1995.

JUDICIAL SYSTEM

Tribunal Superior de Justicia de Andalucía, Ceuta y Melilla: Plaza Nueva s/n, 18071 Granada; tel. (958) 242108; fax (958) 242156; Pres. AUGUSTO MÉNDEZ DE LUGO Y LÓPEZ DE AYALA.

RELIGION

The majority of the European inhabitants are Christians, almost all being adherents of the Roman Catholic Church. Most Africans are Muslims, totalling about 13,000 in 1991. The Jewish community numbers several hundred.

TRADE AND INDUSTRY

Cámara Oficial de Comercio, Industria y Navegación: Muelle Cañonero Dato s/n, 11701 Ceuta; tel. (956) 509590; fax (956) 509589; Pres. LUIS MORENO NARANJO; Sec.-Gen. FRANCISCO OLIVENCIA RUIZ.

Confederación de Empresarios de Ceuta: Teniente Arrabal 2, 11701 Ceuta; tel. (956) 516912; employers' confederation; Pres. JOSÉ MARIA CAMPOS MARTINEZ; Sec.-Gen. EVARISTO RIVERA GOMEZ.

TRANSPORT

Much of the traffic between Spain and Morocco passes through Ceuta; there are ferry services to Algeciras, Spain. Plans for an airport are under consideration.

TOURISM

Visitors are attracted by the historical monuments and museums, and by the availability of duty-free goods. In 1992 Ceuta had four hotels and 27 hostels and guest houses. Plans to build additional accommodation were under way.

Consejería de Turismo, Ferias y Fiestas: Paseo de las Palmeras 26, Ceuta; tel. (956) 518022.

Oficina de Información de Turismo: Muelle Cañonero Dato 1, 51001 Ceuta; tel. (956) 501410.

DEFENCE

Military authority is vested in a commandant-general (see Government). The enclaves are attached to the military region of Sevilla. In August 1998 Spain had 11,500 troops deployed in Spanish North Africa, compared with 21,000 in mid-1987. Two-thirds of Ceuta's land area are used exclusively for military purposes.

EDUCATION

The conventional Spanish facilities are available. In higher education, links with the University of Granada are maintained.

Melilla

GOVERNMENT

(September 1999)

Delegación del Gobierno: Avda de la Marina Española 3, 52001 Melilla; tel. (95) 2675840; fax (95) 2672657; Government Delegate in Melilla: ENRIQUE BEAMUD MARTIN.

Consejo de Gobierno: Plaza de España 1, 52001 Melilla; tel. (95) 2681663; fax (95) 2674800; Mayor/President of Melilla MUSTAFA ABERCHÁN HAMED (CpM).

Deputy elected to the Congress in Madrid: ANTONIO GUTIÉRREZ MOLINA (PP). Representatives to the Senate in Madrid: CARLOS A. BENET CAÑETE (PP), AUREL-GHEORGHE SAVA (resigned Jan. 1999; replaced by BEATRIZ CARO). Commandant-General: FRANCISCO DÍAZ MORENO.

Television

A fibre optic cable linking Melilla with Almería was laid in 1990. From March 1991 Melilla residents were able to receive three private TV channels from mainland Spain: Antena 3, Canal+ and Tele 5.

FINANCE

The following banks have branches in Melilla: Banco Bilbao Vizcaya (2 brs), Banco Central Hispanoamericano, Banco Español de Crédito (Banesto), Banco Meridional, Banco Popular Español and Banco de Santander (2 brs).

TRADE AND INDUSTRY

Cámara Oficial de Comercio, Industria y Navegación: Cervantes 7, 52001 Melilla; tel. (95) 2684840; fax (95) 2683119; f. 1906; Pres. MARGARITA LÓPEZ ALMENDÁRIZ; Sec.-Gen. MARÍA JESÚS FERNÁNDEZ DE CASTRO Y PEDRAJAS.

Confederación de Empresarios de Melilla: Paseo Marítimo Mir Berlanga 26—Entreplanta, Apdo de Correos 445, 29806 Melilla; tel. (95) 2678295; telex 79407; fax (95) 2676175; f. 1979; employers' confederation; Pres. MARGARITA LÓPEZ ALMENDÁRIZ; Sec.-Gen. JERÓNIMO PÉREZ HERNÁNDEZ.

TRANSPORT

There is a daily ferry service to Málaga and a service to Almería. Melilla airport, situated 4 km from the town, is served by daily flights to various destinations on the Spanish mainland, operated by Iberia and by Melilla Jet/Pauknair. There are also services to Madrid and Granada. Plans to extend the runway were approved in early 1993.

TOURISM

There is much of historic interest to the visitor. Melilla had 19 hotels in the late 1980s. Further hotels, including a luxury development, were under construction in 1990.

DEFENCE

See Ceuta. More than one-half of Melilla's land area is used solely for military purposes.

EDUCATION

In addition to the conventional Spanish facilities, the Moroccan Government finances a school for Muslim children in Melilla, the languages of instruction being Arabic and Spanish. The curriculum includes Koranic studies. In 1982 only 12% of Muslim children were attending school, but by 1990 the authorities had succeeded in achieving an attendance level of virtually 100%. The Spanish open university (UNED) maintains a branch in Melilla.

The Peñón de Vélez de la Gomera, Peñón de Alhucemas and Chafarinas Islands

These rocky islets, situated respectively just west and east of al-Hocima (Alhucemas) and east of Melilla off the north coast of Morocco, are administered with Melilla. The three Chafarinas Islands lie about 3.5 km off Ras el-Ma (Cabo de Agua). The Peñón de Alhucemas is situated about 300 m from the coast. The Peñón de Vélez de la Gomera is situated about 80 km further west, lying 85 m from the Moroccan shore, to which it is joined by a narrow strip of sand. Small military bases are maintained on the Peñón de Vélez, Peñón de Alhucemas and on the Isla del Congreso, the most westerly of the Chafarinas Islands. A supply ship calls at the various islands every two weeks. Prospective visitors must obtain the necessary military permit in Ceuta or Melilla.

SYRIA

Physical and Social Geography

W. B. FISHER

Before 1918 the term 'Syria' was rather loosely applied to the whole of the territory now forming the modern states of Syria, Lebanon, Israel and Jordan. To the Ottomans, as to the Romans, Syria stretched from the Euphrates to the Mediterranean, and from the Sinai to the hills of southern Turkey, with Palestine as a smaller province of this wider unit. Although the present Syrian Arab Republic has a much more limited extension, covering 185,180 sq km (71,498 sq miles), an echo of the past remains to colour the political thinking of some present-day Syrians and from time to time there are references to a 'Greater Syria' as a desirable but possibly remote aspiration. None the less, there is evidence of the attachment to the idea of a 'Greater Syria' in current Syrian policy towards Israel and, especially, Lebanon.

The frontiers of the present-day state are largely artificial, and reflect to a considerable extent the interests and prestige of outside powers—Britain, France and the USA—as these existed in 1918–20. The northern frontier with Turkey is defined by a single-track railway line running along the southern edge of the foothills—probably the only case of its kind in the world; whilst eastwards and southwards boundaries are highly arbitrary, being straight lines drawn for convenience between salient points. Westwards, the frontiers are again artificial, although less crudely drawn, leaving the headwaters of the Jordan river outside Syria and following the crest of the Anti-Lebanon hills, to reach the sea north of Tripoli.

PHYSICAL FEATURES

Geographically, Syria consists of two main zones: a fairly narrow western part, made up of a complex of mountain ranges and intervening valleys; and a much larger eastern zone that is essentially a broad and open platform dropping gently towards the east and crossed diagonally by the wide valley of the Euphrates river.

The western zone, which contains over 80% of the population of Syria, can be further subdivided as follows. In the extreme west, fronting the Mediterranean Sea, there lies an imposing ridge rising to 1,500 m above sea-level, and known as the Jebel Ansariyeh. Its western flank drops fairly gradually to the sea, giving a narrow coastal plain; but on the east it falls very sharply, almost as a wall, to a flat-bottomed valley occupied by the Orontes river, which meanders sluggishly over the flat floor, often flooding in winter, and leaving a formerly malarial marsh in summer. Farther east lie more hill ranges, opening out like a fan from the south-west, where the Anti-Lebanon range, with Mount Hermon (2,814 m), is the highest in Syria. Along the eastern flanks of the various ridges lie a number of shallow basins occupied by small streams that eventually dry up or form closed salt lakes. In one basin lies the city of Aleppo, once the second town of the Ottoman Empire and still close to being the largest city of Syria. In another is situated Damascus, larger, irrigated from five streams, and famous for its clear fountains and gardens—now the capital of the country. One remaining sub-region of western Syria is the Jebel Druse, which lies in the extreme south-west, and consists of a vast outpouring of lava, in the form of sheets and cones. Towards the west this region is fertile, and produces good cereal crops, but eastwards the soil cover disappears, leaving a barren countryside of twisted lava and caverns, for long the refuge of outlaws, bandits, and minority groups. Because of its difficulty and isolation, the Jebel Druse has tended socially and politically to act independently, remaining aloof from the rest of the country.

The entire eastern zone is mainly steppe or open desert, except close to the banks of the Euphrates, the Tigris and their larger tributaries, where recent irrigation projects have allowed considerable cultivation on an increasing scale. The triangularly-shaped region between the Euphrates and Tigris rivers is spoken of as the Jezireh (Arabic *jazira* = island), but is in no way different from the remaining parts of the east.

The presence of ranks of relatively high hills aligned parallel to the coast has important climatic effects. Tempering and humid effects from the Mediterranean are restricted to a narrow western belt, and central and eastern Syria show marked continental tendencies: that is, a very hot summer with temperatures often above 100°F (38°C) or even 110°F (43°C), and a moderately cold winter, with frost on many nights. Very close to the Mediterranean, frost is unknown at any season, but on the hills altitude greatly reduces the average temperature, so that snow may lie on the heights from late December to April, or even May. Rainfall is fairly abundant in the west, where the height of the land tends to determine the amount received; but east of the Anti-Lebanon mountains the amount decreases considerably, producing a steppe region that quickly passes into true desert. On the extreme east, as the Zagros ranges of Persia are approached, there is once again a slight increase, but most of Syria has an annual rainfall of less than 250 mm.

ECONOMIC LIFE

There is a close relationship between climate and economic activities. In the west, where up to 750 mm (30 ins) or even 1,000 mm (40 ins) of rainfall occur, settled farming is possible, and the main limitation is difficult terrain. From the Orontes valley eastwards, however, natural rainfall is increasingly inadequate, and irrigation becomes necessary. The narrow band of territory where annual rainfall lies between 200 mm and 380 mm (8 ins–15 ins) is sometimes spoken of as the 'Fertile Crescent', since it runs in an arc along the inner side of the hills from Jordan through western and northern Syria as far east as Iraq. In its normal state a steppeland covered with seasonal grass, the Fertile Crescent can often be converted by irrigation and efficient organization into a rich and productive territory. Such it was in the golden days of the Arab caliphate; now, after centuries of decline, it has been revived. From the 1950s onwards, a marked change was seen and, initially because of small-scale irrigation schemes and the installation of motor pumps to raise water from underground artesian sources, large areas of the former steppe began to produce cotton, cereals and fruit. Syria used to have a surplus of agricultural production, especially cereals, to export to Jordan and Lebanon, neither of which are self-sufficient in foodstuffs. It was expected that production would increase with the eventual doubling of Syria's irrigated area (by 640,000 ha) as the Euphrates Dam at Tabqa developed fully. However, only about 60,000 ha had been irrigated by 1988; difficulties have been experienced in irrigating part of the designated area and some experts believe that perhaps 300,000 ha may be impossible to develop according to the original plans. Over the last few years, production of cereals and cotton has declined, partly owing to lack of technical and management skills, and partly to drought. High military expenditure has also reduced available development funds.

Because of its relative openness and accessibility and its geographical situation as a 'waist' between the Mediterranean and the Persian (Arabian) Gulf, Syria has been a land of passage, and for centuries its role was that of an intermediary, both commercial and cultural, between the Mediterranean world and the Far East. From early times until the end of the Middle Ages there was a flow of traffic east and west that raised a number of Syrian cities and ports to the rank of international markets.

Since the 1930s, following a long period of decline and eclipse resulting from the diversion of this trade to the sea, there has been a revival of activity, owing to the new elements of air transport and the construction of oil pipelines from Iraq.

In addition, Syria was able to develop its own deposits of petroleum and phosphate; and its greatly improved political standing (as, temporarily at least, the successor of Egypt as the leading politically activist Arab state) brought economic benefits. The Syrian economy became stronger, and the country was able to 'balance' between the Soviet and Western political groups, although the cost of wars and internal political uncertainties eroded some development gains. After 1981, however, Syria became more isolated from its Arab neighbours, and the policy of balance, both in external and internal affairs, was less successful. In response to the collapse of communism in Eastern Europe and the diminution of Soviet influence, Syria's foreign policy has remained, above all, pragmatic. This was clearly illustrated by the country's allying itself with the Western powers and the 'moderate' Arab states against Iraq in 1990/91, in return for diplomatic and economic gains.

RACE AND LANGUAGE

Racially, many elements can be distinguished in the Syrian people. The nomads of the interior deserts are unusually pure specimens of the Mediterranean type, isolation having preserved them from intermixture. To the west and north there is a widely varying mosaic of other groups: the Kurds and Turkish-speaking communities of the north, and the Armenians, who form communities in the cities; groups such as the Druzes, who show some affinity to the tribes of the Persian Zagros, and many others.

As a result, there is a surprising variety of language and religion. Arabic is spoken over most of the country, but Kurdish is widely used along the northern frontier and Armenian in the cities. Aramaic, the language of Christ, survives in three villages.

History

Revised for this edition by the Editor

ANCIENT HISTORY

From the earliest times, Syria has experienced successive waves of Semitic immigration—the Canaanites and Phoenicians in the third millennium BC, the Hebrews and Aramaeans in the second, and, unceasingly, the nomad tribes infiltrating from the Arabian peninsula. This process has enabled Syria to assimilate or reject, without losing its essentially Semitic character, the alien invaders who, time and again, in the course of a long history, have established their domination over the land. Before Rome assumed control of Syria in the first century BC, the Egyptians, the Assyrians and the Hittites, and, later, the Persians and the Macedonian Greeks had all left their mark to a greater or lesser degree. Damascus is claimed to be the oldest capital city in the world, having been continuously inhabited since about 2000 BC, and Aleppo may be even older. Under Roman rule the infiltration and settlement of nomad elements continued, almost unnoticed by historians, save when along the desert trade routes a Semitic vassal state attained a brief importance as, for example, the kingdom of Palmyra in the Syrian desert, which the Emperor Aurelian destroyed in AD 272 or, later still, when the Byzantines ruled in Syria, the Arab state of Ghassan, prominent throughout the sixth century AD as a bulwark of the Byzantine Empire against the desert tribes in the service of Sasanid Persia.

ARAB AND TURKISH RULE

When, after the death of the Prophet Muhammad in AD 632, the newly-created power of Islam began a career of conquest, the populations of Syria, Semitic in their language and culture and, as adherents of the Monophysite faith, ill-disposed towards the Greek-speaking Orthodox Byzantines, did little to oppose the Muslims, from whom they hoped to obtain a greater measure of freedom. The Muslims defeated the Byzantine forces at Ajnadain in 634, seized Damascus in 635, and, by their decisive victory on the Yarmouk river (636), virtually secured possession of all Syria. From 661 to 750 the Umayyad dynasty ruled in Syria, which, after the conquest, had been divided into four military districts or junds (Damascus, Homs, Urdun, i.e. Jordan, and Palestine). To these the Caliph Yazid I (680–83) added a fifth, Kinnasrin, for the defence of northern Syria, where in the late seventh century, the Mardaites, Christians from the Taurus, were making serious inroads under Byzantine leadership. Under Abd al-Malik (685–705), Arabic became the official language of the state, in whose administration, hitherto largely carried out by the old Byzantine bureaucracy, Syrians, Muslim as well as Christian, now had an increasing share. For Syria was now the heart of a great Empire, and the Arab army of Syria, well trained in the ceaseless frontier warfare with Byzantium, bore the main burden of imperial rule, taking a major part in the two great Arab assaults on Byzantium in 674–8 and in 717–18.

The new regime in Syria was pre-eminently military and fiscal in character, representing the domination of a military caste of Muslim Arab warriors, who governed on the basic assumption that a large subject population, non-Muslim and non-Arab in character, would continue indefinitely to pay tribute. But this assumption was falsified by the gradual spread of Islam, a process which meant the progressive diminution of the amount of tribute paid to the state, and the consequent undermining of the fiscal system as a whole. In theory, conversion meant for the non-Arab convert (*mawla*; in the plural, *mawali*) full social and economic equality with the ruling caste, but in practice it was not enough to be a Muslim, one had to be an Arab as well. The discontent of the *mawali* with their enforced inferiority expressed itself in an appeal to the universal character of Islam, an appeal which often took the form of religious heresies, and which, as it became more widespread, undermined the strength of the Arab regime.

To the ever present fiscal problems of the Arab state and the growing discontent of the *mawali* was added a third and fatal weakness: the hostility between those Arab tribes which had arrived in Syria with or since the conquest, and those which had infiltrated there at an earlier date. The Umayyad house strove to maintain a neutral position over and above the tribal feuds; but from the moment when, under the pressure of events, the Umayyads were compelled to side with one faction to oppose the other (Battle of Marj Rahit, 684), their position was irretrievably compromised.

When in AD 750, with the accession of the Abbasid dynasty, the centre of the Empire was transferred to Iraq, Syria, jealously watched because of its association with the former ruling house, became a mere province, where in the course of the next hundred years, several abortive revolts, inspired in part by the traditional loyalty to the Umayyads, failed to shake off Abbasid control. During the ninth century Syria was the object of dispute between Egypt and Baghdad. In 878 Ahmad ibn Tulun, Governor of Egypt, occupied it and, subsequently, every independent ruler of Egypt sought to maintain a hold, partial or complete, over Syria. Local dynasties, however, achieved from time to time a transitory importance, as did the Hamdanids (a Bedouin family from northern Iraq) who, under Saif ad-Daula, ruler of Aleppo from 946–967, attained a brief ascendancy, marked internally by financial and administrative ineptitude, and externally by military campaigns against the Byzantines which did much to provoke the great Byzantine re-conquest of the late 10th century. By the treaty of 997, northern Syria became Byzantine, while the rest of the country remained in the hands of the Fatimid dynasty which ruled in Egypt from 969. Fatimid control

remained insecure and from about 1027 a new Arab house ruled at Aleppo—the Mirdasids, who were soon to disappear before the formidable power of the Seljuq Turks. The Seljuqs, having conquered Persia, rapidly overran Syria (Damascus fell to them in 1075) but failed to establish there a united state. As a result of dynastic quarrels, the Seljuq domination disintegrated into a number of amirates: Seljuq princes ruled at Aleppo and Damascus, a local dynasty held Tripoli and, in the south, Egypt controlled most of the littoral.

This political fragmentation greatly favoured the success of the First Crusade which, taking Antioch in 1098 and Jerusalem in 1099, proceeded to organize four feudal states at Edessa, Antioch, Tripoli and Jerusalem, but did not succeed in conquering Aleppo, Homs, Hama, and Damascus. From the death of Baldwin II of Jerusalem in 1131, the essential weakness of the crusading states began to appear. Byzantium, the Christian state of Lesser Armenia, and the Latin principalities in Syria never united in a successful resistance to the Muslim counter-offensive which, initiated by the energetic Turkish general Zangi Atabeg of Mosul, developed rapidly in the third and fourth decades of the century. Zangi, who seized Aleppo in 1128, and the Latin state of Edessa in 1144, was succeeded in 1146 by his able son Nur ad-Din, who by his capture of Damascus in 1154 recreated in Syria a united Muslim power. On Nur ad-Din's death in 1174, the Kurd Saladin, already master of Egypt, assumed control of Damascus and, in 1183, seized Aleppo. His victory over the Crusaders at Hattin (July 1187) destroyed the kingdom of Jerusalem. Only the partial success of the Third Crusade (1189–92) and, after his death in 1193, the disintegration of Saladin's empire into a number of separate principalities, made it possible for the Crusaders to maintain an ever more precarious hold on the coastal area of Syria. The emergence in Egypt of the powerful Mamluk sultanate (1250) meant that the end was near. A series of military campaigns, led by the Sultan Baibars (1260–77) and his immediate successors, brought about the fall of Antioch (1268) and Tripoli (1289), and, with the fall of Acre in 1291, the disappearance of the crusading states in Syria.

Before the last crusading states had been reduced, the Mamluks had to encounter a determined assault by the Mongols until, in 1260, the Mongol army of invasion was crushed at the Battle of Ain-Jalut, near Nazareth. The Mongol Il-Khans of Persia made further efforts to conquer Syria in the late 13th century, negotiating for this purpose with the papacy, the remaining crusader states, and Lesser Armenia. In 1280 the Mamluks defeated a Mongol army at Homs; but in 1299 were themselves beaten near the same town, a defeat which enabled the Mongols to ravage northern Syria and to take Damascus in 1300. Only in 1303, at the Battle of Marj as-Suffar, south of Damascus, was this last Mongol offensive finally repelled.

The period of Mamluk rule in Syria, which endured until 1517, was on the whole one of slow decline. Warfare, periodical famine, and not least, the plague (there were four great outbreaks in the 14th century, and in the 15th century 14 more recorded attacks of some severity) produced a state of affairs which the financial rapacity and misrule of the Mamluk governors and the devastation of Aleppo and Damascus by Timur (1400–01) served only to aggravate.

The ill-defined protectorate which the Mamluks asserted over Cilicia and considerable areas of southern Anatolia occasioned, in the late 15th century, a growing tension with the power of the Ottoman Turks, which broke out into inconclusive warfare in the years 1485–91. When to this tension was added the possibility of an alliance between the Mamluks and the rising power of the Safavids in Persia, the Ottoman Sultan Selim I (1512–20) was compelled to seek a decisive solution to the problem. In August 1516 the battle of Marj Dabik, north of Aleppo, gave Syria to the Ottomans, who proceeded to ensure their continued hold on the land by conquering Egypt (1517). Turkish rule, during the next three centuries, although unjustly accused of complete responsibility for a decay and stagnation which appear to have been well advanced before 1517, brought only a temporary improvement in the unhappy condition of Syria, now divided into the three provinces of Damascus, Tripoli, and Aleppo. In parts of Syria the Turkish pashas in reality administered directly only the important towns and their immediate neighbourhood; elsewhere, the older elements—Bedouin emirs, Turcoman chiefs, etc.—were left to act much as they pleased, provided the due tribute was paid. The pashas normally bought their appointment to high office and sought in their brief tenure of power to recover the money and bribes they had expended in securing it, knowing that they might, at any moment, be replaced by someone who could pay more for the post. Damascus alone had 133 pashas in 180 years. As the control of the Sultan at Constantinople became weaker, the pashas obtained greater freedom of action, until Ahmad Jazzar, Pasha of Acre, virtually ruled Syria as an independent prince (1785–1804).

The 19th century saw important changes. The Ottoman Sultan Mahmoud II (1808–39) had promised Syria to the Pasha of Egypt, Muhammad Ali, in return for the latter's services during the Greek War of Independence. When the Sultan declined to fulfil his promise, Egyptian troops overran Syria (1831–33). Ibrahim Pasha, son of Muhammad Ali, now gave to Syria, for the first time in centuries, a centralized government strong enough to hold separatist tendencies in check and to impose a system of taxation which, if burdensome, was at least regular in its functioning. But Ibrahim's rule was not popular, for the land-owners resented his efforts to limit their social and political dominance, while the peasantry disliked the conscription, the forced labour, and the heavy taxation which he found indispensable for the maintenance of his regime. In 1840 a revolt broke out in Syria, and when the Great Powers intervened on behalf of the Sultan (at war with Egypt since 1839), Muhammad Ali was compelled to renounce his claim to rule there.

Western influence, working through trade, through the protection of religious minorities, and through the cultural and educational efforts of missions and schools, had received encouragement from Ibrahim Pasha. The French Jesuits, returning to Syria in 1831, opened schools, and in 1875 founded their University at Beirut. The American Presbyterian Mission (established at Beirut in 1820) introduced a printing press in 1834, and in 1866 founded the Syrian Protestant College, later renamed the American University of Beirut. Syria also received some benefit from the reform movement within the Ottoman Empire, which, begun by Mahmoud II, and continued under his successors, took the form of a determined attempt to modernize the structure of the Empire. The semi-independent pashas of old disappeared, the administration being now entrusted to salaried officials of the central Government; some effort was made to create schools and colleges on Western lines, and much was done to deprive the landowning classes of their feudal privileges, although their social and economic predominance was left unchallenged. As a result of these improvements, there was, in the late 19th century, a revival of Arabic literature which did much to prepare the way for the growth of Arab nationalism in the 20th century.

MODERN HISTORY

By 1914 Arab nationalist sentiment had made some headway among the educated and professional classes, and especially among army officers. Nationalist societies like al-Fatat soon made contact with Arab nationalists outside Syria—with the army officers of Iraq, with influential Syrian colonies in Egypt and America, and with the Sharif Husain of Mecca. The Husain-McMahon Correspondence (July 1915–January 1916) encouraged the Arab nationalists to hope that the end of the First World War would mean the creation of a greater Arab kingdom. This expectation was disappointed, for as a result of the Sykes-Picot Agreement, negotiated in secret between England, France, and Russia in 1916 (see Documents on Palestine, p. 98), Syria was to become a French sphere of influence. At the end of the war, and in accordance with this agreement, a provisional French administration was established in the coastal districts of Syria, while in the interior an Arab government came into being under Amir Faisal, son of the Sharif Husain of Mecca. In March 1920 the Syrian nationalists proclaimed an independent kingdom of Greater Syria (including Lebanon and Palestine); but in April of the same year the San Remo Conference gave France a mandate for the whole of Syria, and in July, French troops occupied Damascus.

By 1925 the French, aware that the majority of the Muslim population resented their rule, and that only amongst the Chris-

tian Maronites of the Lebanon could they hope to find support, had carried into effect a policy based upon the religious divisions so strong in Syria. The area under mandate had been divided into four distinct units; a much enlarged Lebanon (including Beirut and Tripoli), a Syrian Republic, and the two districts of Latakia and Jebel Druse. Despite the fact that the French rule gave Syria a degree of law and order which might have rendered possible the transition from a medieval to a more modern form of society, nationalist sentiment opposed the mandate on principle, and deplored the failure to introduce full representative institutions and the tendency to encourage separatism amongst the religious minorities. This discontent, especially strong in the Syrian Republic, became open revolt in 1925–26, during the course of which the French twice bombarded Damascus (October 1925 and May 1926).

The next 10 years were marked by a hesitant and often interrupted progress towards self-government in Syria, and by French efforts to conclude a Franco-Syrian treaty. In April 1928 elections were held for a Constituent Assembly, and in August a draft Constitution was completed; but the French High Commissioner refused to accept certain articles, especially Article 2, which, declaring the Syrian territories detached from the old Ottoman Empire to be an indivisible unity, constituted a denial of the separate existence of the Jebel Druse, Latakia, and the Lebanese Republic. After repeated attempts to reach a compromise, the High Commissioner dissolved the Assembly in May 1930 and, on his own authority, issued a new Constitution for the State of Syria, much the same as that formerly proposed by the Assembly, but with those modifications which were considered indispensable to the maintenance of French control. After new elections to a Chamber of Deputies (January 1932), negotiations were begun for a Franco-Syrian treaty, to be modelled on that concluded between the United Kingdom and Iraq in 1930, but no compromise could be found between the French demands and those of the nationalists who, although in a minority, wielded a dominant influence in the Chamber and whose aim was to limit both in time and in place the French military occupation, and to include in Syria the separate areas of Jebel Druse and Latakia. In 1934 the High Commissioner suspended the Chamber indefinitely. Disorders occurred early in 1936 which induced the French to send a Syrian delegation to Paris, where the new Popular Front Government showed itself more sympathetic towards Syrian aspirations than former French governments had been. In September 1936 a Franco-Syrian treaty was signed which recognized the principle of Syrian independence and stipulated that, after ratification, there should be a period of three years during which the apparatus of a fully independent state should be created. The districts of Jebel Druse and Latakia would be annexed to Syria, but would retain special administrations. Other subsidiary agreements reserved to France important military and economic rights in Syria. It seemed that Syria might now enter a period of rapid political development; but the unrest caused by the situation in Palestine, the crisis with Turkey, and the failure of France to ratify the 1936 treaty were responsible, within two years, for the breakdown of these hopes.

In 1921 Turkey had consented to the inclusion of the Sanjak of Alexandretta in the French mandated territories, on condition that it should be governed under a special regime. The Turks, alarmed by the treaty of 1936, which envisaged the emergence of a unitary Syrian state including, to all appearance, Alexandretta, now pressed for a separate agreement concerning the status of the Sanjak. After long discussion the League of Nations decided in 1937 that the Sanjak should be fully autonomous, save for its foreign and financial policies which were to be under the control of the Syrian Government. A treaty between France and Turkey guaranteed the integrity of the Sanjak, and also the Turco-Syrian frontier. Throughout 1937 there were conflicts between Turks and Arabs in the Sanjak, and in Syria a widespread and growing resentment, for it was clear that sooner or later Turkey would ask for the cession of Alexandretta. The problem came to be regarded in Syria as a test of Franco-Syrian co-operation, and when, in June 1939, under the pressure of international tension, Alexandretta was finally ceded to Turkey, the cession assumed in the eyes of Syrian nationalists the character of a betrayal by France. Meanwhile, in France itself, opposition to the treaty of 1936 had grown steadily; and in December 1938 the French Government, anxious not to weaken its military position in the Near East, declared that no ratification of the treaty was to be expected.

Unrest in Syria led to open riots in 1941, as a result of which the Vichy High Commissioner, Gen. Dentz, promised the restoration of partial self-government; while in June of the same year, when in order to combat Axis intrigues the Allies invaded Syria, Gen. Catroux, on behalf of the Free French Government, promised independence for Syria and the end of mandatory rule. Syrian independence was formally recognized in September 1941, but the reality of power was still withheld, with the effect that nationalist agitation, inflamed by French reluctance to restore constitutional rule and by economic difficulties owing to the war, became even more pronounced. When at last elections were held once more, a nationalist Government was formed, with Shukri al-Kuwatli as President of the Syrian Republic (August 1943).

Gradually all important powers and public services were transferred from French to Syrian hands; but conflict again developed over the Troupes Spéciales, the local Syrian and Lebanese levies which had existed throughout the mandatory period as an integral part of the French military forces in the Levant, and which, transferred to the Syrian and Lebanese Governments, would enable them to form their own armies. Strongly supported by the newly-created Arab League, Syria refused the French demand for a Franco-Syrian Treaty as the condition for the final transfer of administrative and military services which had always been the main instruments of French policy. In May 1945 disturbances broke out which ended only with British armed intervention and the evacuation of French troops and administrative personnel. The Troupes Spéciales were now handed over to the Syrian Government, and with the departure of British forces in April 1946 the full independence of Syria was at last achieved.

UNSTABLE INDEPENDENCE

After the attainment of independence Syria passed through a long period of instability. It was involved in a complicated economic and financial dispute with the Lebanon (1948–50) and also in various schemes for union with Iraq—schemes which tended to divide political opinion inside Syria itself and, in addition, to disrupt the unity of the Arab League. Syria, in fact, found itself aligned at this time with Egypt and Saudi Arabia against the ambitions of the Hashemite rulers of Iraq and Jordan. These rivalries, together with the profound disappointment felt at Damascus over the Arab failures in the war of 1948–49 against Israel, were the prelude to three *coups d'état* in 1949. Dislike of continued financial dependence on France, aspirations towards a greater Syria, the resentments arising out of the unsuccessful war against the Israelis—all help to explain the unrest inside Syria.

The intervention of the army in politics was itself a cause of further tension. Opposition to the dominance of the army grew in the Syrian Chamber of Deputies to such an extent that yet another *coup d'état* was carried out in December 1951. Syria now came under the control of a military autocracy with Col Shishakli as head of state. The Chamber of Deputies was dissolved in December 1951; a decree of April 1952 abolished all political parties in Syria. After the approval of a new Constitution in July 1953 Shishakli became President of Syria in August of that year. The formation of political parties was now allowed once more. Members of the parties dissolved under the decree of April 1952 proceeded, however, to boycott the elections held in October 1953, at which President Shishakli's Movement of Arab Liberation obtained a large majority in the Chamber of Deputies. Politicians hostile to the regime of President Shishakli established in November 1953 a Front of National Opposition, refusing to accept as legal the results of the October elections and declaring as their avowed aim the end of military autocracy and the restoration of democratic rule. Demonstrations at Damascus and Aleppo in December 1953 led soon to the flight of Shishakli to France. The collapse of his regime early in 1954 meant for Syria a return to the Constitution of 1950. New elections held in September 1954 brought into being a Chamber of Deputies notable for the large number of its members (81 out of 142) who might be regarded as independents grouped around leading political figures.

INFLUENCE FROM ABROAD

There was still, however, much friction in Syria between those who favoured union or at least close co-operation with Iraq and those inclined towards an effective *entente* with Egypt. In August 1955 Shukri al-Kuwatli became President of the Republic. His appointment was interpreted as an indication that pro-Egyptian influence had won the ascendancy in Syria. On 20 October 1955 Syria made with Egypt an agreement for the creation of a joint military command with its headquarters at Damascus.

The USSR, meanwhile, in answer to the developments in the Middle East associated with the Baghdad Pact, had begun an intensive diplomatic, propaganda and economic campaign of penetration into the Arab lands. In the years 1954–56 Syria, the only Arab state where the Communist Party was legal, made a number of barter agreements with the USSR and its associates in Eastern Europe. A report from Cairo intimated, in February 1956, that Syria had joined Egypt in accepting arms from the USSR.

At the end of October 1956 there occurred the Israeli campaign in the Sinai peninsula, an event followed, in the first days of November, by the armed intervention of Great Britain and France in the Suez Canal region. On 30 October the President of the Syrian Republic left Damascus on a visit to the USSR. A state of emergency was declared in Syria. Reports from Beirut revealed on 3 November that Syrian forces had put out of action the pipelines which carried Iraqi oil to the Mediterranean. The damage that Syrian elements had done to the pipelines earned the sharp disapproval of such Arab states as Iraq and Saudi Arabia, both of whom were now faced with a severe loss of oil revenues. The Syrian Government declared that it would not allow the repair of the pipelines until Israel had withdrawn its troops from Gaza and the Gulf of Aqaba. Not until March 1957 was it possible to restore the pipelines, Israel having in the mean time agreed to evacuate its forces from the areas in dispute.

UNION WITH EGYPT

The Syrian National Assembly, in November 1957, passed a resolution in favour of union with Egypt and the formal union of Egypt and Syria to constitute one state under the title of the United Arab Republic (UAR) received the final approval of the Syrian National Assembly on 5 February 1958. President Nasser of Egypt, on 21 February, became the first head of the combined state. A central Cabinet for the UAR was established in October 1958, also two regional executive councils, one for Syria and one for Egypt. A further move towards integration came in March 1960, when a single National Assembly for the whole of the UAR consisting of 400 deputies from Egypt and 200 from Syria, was instituted.

Syrian dissatisfaction with the union grew over the next three years, as administrators and officials of Egyptian origin came to hold influential positions in the Syrian Region, and on 28 September 1961 there occurred in Syria a military *coup d'état* which aimed—successfully—at the separation of Syria from Egypt and at the dissolution of the UAR. Political figures representing most of the parties which existed in Syria before the establishment of the UAR in 1958 met at Damascus and Aleppo on 3 October 1961, issuing a declaration of support for the new regime and calling for free elections to a new legislature. President Nasser recognized the *fait accompli*. Most foreign states made haste to grant formal recognition to the Government at Damascus. On 13 October 1961 Syria became once more a member of the United Nations (UN). A provisional Constitution was promulgated in November and elections for a Constituent Assembly took place on 1 December 1961.

The regime thus established in Syria rested on no sure foundation. At the end of March 1962 the Syrian army intervened once more, bringing about the resignation of Dr Nazim Kudsi, the President of the Republic, and also of the ministers who had taken office in December 1961. After demonstrations at Aleppo, Homs and Hama in April 1962, Dr Kudsi was reinstated as President, but further ministerial resignations in May of that year pointed to the existence of continuing tensions within the Government.

THE REVOLUTION OF 1963

A military junta, styled the National Council of the Revolutionary Command, seized control in Damascus on 8 March 1963. In May the Baathists (members of the Arab nationalist socialist party) took measures to purge the armed forces and the administration of personnel known to favour a close alignment with Egypt. A new Government, formed on 13 May and strongly Baathist in character, carried out a further purge in June and at the same time created a National Guard recruited from members of the Baath movement. These measures led the pro-Egyptian elements to attempt a *coup d'état* at Damascus on 18 July 1963. The attempt failed, however, with a considerable loss of life. On 27 July Maj-Gen. Amin al-Hafiz, Deputy Prime Minister and Minister of the Interior, became President of the National Council of the Revolutionary Command, a position equivalent to head of state.

BAATH SOCIALISM

The nationalization of all Arab-owned banks in 1963, and of various industrial enterprises, also the transfer of land to the peasants—all had contributed to bring about much dissatisfaction in the business world and amongst the influential landed elements. The Baath regime depended for its main support on the armed forces which, however, had been recruited in no small degree from the religious minorities in Syria, including adherents of the Alawi faith (a schism of the Shi'ite branch of Islam)—most Syrians being, in fact, of Sunni or orthodox Muslim allegiance. In general, conservative Muslims tended to oppose the Baath Government under guidance of the *'ulama* (scholars/lawyers) and of the Muslim Brotherhood. The mass of the peasant population was thought to have some pro-Nasser sympathies; the working class (small in number) was divided between pro-Nasser and Baathist adherents; the middle and upper classes opposed the domination of al-Baath. The unease arising out of these frictions and antipathies took the form of disturbances and finally of open revolt—soon suppressed—at Hama (April 1964).

On 25 April 1964 a provisional Constitution had been promulgated, describing Syria as a democratic socialist republic forming an integral part of the Arab nation. A Presidential Council was established on 14 May 1964, with Gen. Hafiz as Head of the State.

The, as yet, undeveloped petroleum and other mineral resources of Syria were nationalized in 1964, together with other industrial concerns. On 7 January 1965 a special military court was created with sweeping powers to deal with all offences, of word or deed, against the nationalization decrees and the socialist revolution. General Hafiz denounced the *'ulama* and the Muslim Brotherhood as being involved in the resulting demonstrations. Further nationalization followed.

A National Council, almost 100 strong, was established in August 1965 with the task of preparing a new constitution which would be submitted to a public referendum. Meeting for the first time on 1 September 1965, it created a Presidential Council, of five members, which was to exercise the powers of a head of state.

RADICAL REACTION

The tensions hitherto visible in al-Baath were, however, still active. Two groups stood ranged one against the other—on the one hand the older, more experienced politicians in al-Baath, less inclined than in former years to insist on the unrestrained pursuit of the main Baathist objectives, socialism and Pan-Arab union, and, on the other hand, the extreme left-wing elements, doctrinaire in their attitude and enjoying considerable support amongst the younger radical officers in the armed forces.

The tensions thus engendered found expression in a new *coup d'état* on 23 February 1966. A military junta representing the extreme radical elements in al-Baath seized power in Damascus and placed under arrest a number of personalities long identified with al-Baath and belonging to the international leadership controlling the organization throughout the Arab world—amongst them Michel Aflaq, the founder of al-Baath; Gen. Hafiz, the Chairman of the recently established Presidential Council; and Salah ad-Din Bitar, the Prime Minister of the displaced administration.

ARAB–ISRAELI WAR OF 1967

The friction ever present along the frontier between Syria and Israel had provoked violent conflict from time to time during

recent years, particularly in the region of Lake Tiberias. Now, in the winter of 1966–67, the tension along the border began to assume more serious proportions. Israel, in October 1966, complained to the Security Council of the UN about guerrilla activities from Syria across the frontier into Israeli territory. In April 1967 mortars, cannon and air force units from Syria and Israel were involved in fighting south-east of Lake Tiberias.

The continuing tension on the Syrian-Israeli frontier was now to become a major influence leading to the war which broke out on 5 June 1967 between Israel and its Arab neighbours Egypt, Syria and Jordan. During the course of hostilities, which lasted six days, Israel defeated Egypt and Jordan and then, after some stubborn fighting, outflanked and overran the Syrian positions on the hills above Lake Tiberias. With the breakthrough accomplished, Israeli forces made a rapid advance and occupied the town of Quneitra about 65 km from Damascus. On 10 June Israel and Syria announced their formal acceptance of the UN proposal for a cease-fire, but Syria effectively boycotted the Arab summit conference held at Khartoum in August 1967 and in September the Baath Party of Syria rejected all idea of a compromise with Israel. A resolution adopted by the UN Security Council in November, urging the withdrawal of the Israelis from the lands occupied by them during the June war and the ending of the belligerency which the Arab Governments had until then maintained against Israel, was rejected by Syria, which alone maintained its commitment to a reunified Palestine.

STRUGGLE FOR POWER 1968–71

The ruling Baath Party had for some years been divided into two main factions. Until October 1968 the dominant faction had been the 'progressive' group led by Dr Atassi and Dr Makhous, the premier and foreign minister respectively. This group was distinguished by its doctrinaire and Marxist-oriented public pronouncements and by the strong support it received from the USSR. It held that the creation of a strong one-party state and economy along neo-Marxist lines was of paramount importance, overriding even the need for a militant stand towards Israel and for Arab unity.

By October 1968 the Government felt particularly insecure, partly owing to a feud with the new Baath regime in Iraq, and at the end of the month a new Cabinet was formed including several members of the opposing 'nationalist' faction. This group took less interest in ideological questions and favoured a pragmatic approach to the economy, improved relations with Syria's Arab neighbours and full participation in the campaign against Israel, including support for the *fedayin* movement. Its leader was Lt-Gen. Hafiz al-Assad, who assumed control of the all-important Ministry of Defence. His critical attitude to the powerful Soviet influence on the Government, seen by some 'nationalists' as tantamount to colonialism in restricting Syria's freedom of action, led to a prolonged struggle with the 'progressive' leadership. Cabinet reshuffles took place in March and May, but both Dr Atassi and Gen. Assad retained their positions. During the spring of 1969 a number of communists were arrested or sent into exile, and the leader of the Syrian Communist Party, still technically an illegal organization, flew to Moscow.

General Assad attempted to take over the Government in February 1969 but was forestalled by Soviet threats that if he did so all military supplies (including spares), economic and technical aid, and trade agreements would end. This would have brought about a major disruption in the national economy and the armed forces, and the 'nationalists' were obliged to yield. In May Gen. Mustafa Tlass, the Chief of Staff of the army and Gen. Assad's principal assistant, led a military delegation to the People's Republic of China to negotiate the purchase of military equipment. The incident indicated a new independence from Moscow. Some observers also saw this independence in the creation of a joint military command with Iraq (with whom relations improved during the spring) and Jordan. Relations with Lebanon worsened, owing to Syria's support of the Lebanese *fedayin* movement, containing many Syrian members. In the 1968–70 period this appeared to direct much of its activity towards bringing down the precarious Lebanese Government, presumably in the hope that a more militantly anti-Israel ministry would take power.

In November 1970, following a reported coup attempt backed by Iraq in August, the struggle between the two factions of the Baath Party culminated in Gen. Assad's seizure of power. Dr Atassi, who was in hospital at the time, was placed under guard and a retired general, Salah Jadid, Assistant Secretary-General of the Baath Party and leader of the civilian faction, was arrested. Other members of the civilian wing were arrested or fled to Lebanon. The coup was precipitated by attempts of Jadid and his supporters to oust Assad and Tlass from their posts. This power struggle had become acute as a result of differences over support for the Palestine guerrillas during the fighting with the Jordanian army in September. Jadid and Yousuf Zeayen, a former Prime Minister, controlled the movement of tanks from Syria into Jordan to support the Palestinian guerrillas' efforts against the Jordanian army; this Assad and the military faction opposed. Their approach to the Palestinian problem was more akin to Nasser's and they wanted to avoid giving any provocation to Israel, because they considered the Syrian armed forces to be unready to offer adequate resistance.

ASSAD IN POWER

There was no obvious opposition to the military *coup d'état*. Ahmad Khatib became acting President and Gen. Assad Prime Minister and party secretary-general. A new Regional Command of the Baath Party was formed. The old leaders were removed from their posts in a purge which stretched into the new year. Following amendments to the 1969 provisional Constitution in February 1971, Gen. Assad was elected President for a seven-year term in March. In the following month Maj.-Gen. Abd ar-Rahman Khlefawi became Premier and Mahmoud al-Ayoubi was appointed Vice-President. In February the first legislative body in Syria since 1966, the People's Assembly, was formed. Of its 173 members, 87 represented the Baath Party.

The Nasserite leanings of the new regime in foreign policy soon became apparent. Although Syria continued to reject the November 1967 UN Security Council Resolution (No. 242), relations with the UAR and Jordan improved, and Syria's isolation in the Arab world was soon reduced. Syria's willingness to join a union with the UAR, Sudan and Libya almost immediately became apparent and agreement on federation with Libya and the UAR was reached in April 1971, but the Federation had little effect.

After coming to power, the Assad regime increased the Syrian army's control over the Palestinian guerrilla group, Saiqa (Vanguard of the Popular Liberation War). In April 1971 guerrilla operations against Israeli positions from the Syrian front were banned by the Government. Then, at the beginning of July, some guerrilla units were forced out of Syria into southern Lebanon and arms destined for them and arriving from Algeria were seized by the Syrian authorities. Yet, after the Jordanian Government's final onslaught on the Palestinian guerrillas in northern Jordan in July, Syria closed its border and in August severed diplomatic relations when the tension had become so great that tank and artillery clashes developed between the two armies. Egyptian mediation reduced the chances of a more serious conflict developing, but diplomatic links remained severed with Jordan until October 1973. Relations with the USSR improved during the last half of 1971 and in 1972, and in May Marshal Grechko, the Soviet Minister of Defence, visited Damascus. Syria was not prepared, however, at that time to sign a friendship treaty with the USSR, like Egypt and Iraq. On the other hand, the Syrian Government, which had been broadened in March 1972 to include representatives of parties other than the Baath, like the communists, did not follow Egypt's example in July and expel its Soviet advisers.

In December 1972 Maj.-Gen. Khlefawi resigned from the post of Prime Minister for health reasons, and a new Government was formed by Mahmoud al-Ayoubi, the Vice-President, who allotted 16 out of 31 government portfolios to the Baath Party. A new Syrian Constitution, proclaiming socialist principles, was approved by the People's Assembly in January 1973 and confirmed by a referendum in March. The Sunni Muslims were dissatisfied that the Constitution did not recognize Islam as the state religion, and, as a result of their pressure, an amendment was passed, declaring that the President must be a Muslim. Under the Constitution, freedom of belief was guaranteed, with the state respecting all religions, although the Constitution

recognized that Islamic jurisprudence was 'a principal source of legislation'. In 1972 a National Charter created a National Progressive Front (NPF), a grouping of the Baath Party and its allies. Elections were held in March 1973 for the new People's Assembly, under the aegis of the Front, and 140 out of the 186 seats were won by the Progressive Front, while 42 seats were won by independents and four by the opposition.

THE FOURTH ARAB–ISRAELI WAR AND ITS AFTERMATH

On the afternoon of 6 October 1973, Egyptian and Syrian forces launched a war against Israel in an effort to regain territories lost in 1967. On both the Egyptian and Syrian fronts, complete surprise was achieved, giving the Arabs a strong initial advantage, much of which they subsequently lost. (The course of the war is described in Arab–Israeli Relations 1967–99, pp. 19–87.) Although Egypt signed a disengagement agreement with Israel on 18 January 1974, fighting continued on the Syrian front, in the Golan Heights area, until a disengagement agreement was signed on 31 May, after much diplomacy and travel by the US Secretary of State, Dr Henry Kissinger (see Documents on Palestine, p. 109).

Syria continued to maintain an uncompromising policy in the Middle East, especially regarding the Palestinian question, and after the 1973 war it received vast amounts of Soviet military aid in order to fully re-equip its forces. Contact with Moscow and Eastern European states remained close. Syria's strong support for the PLO was vindicated in October 1974 at the Arab summit meeting in Rabat, Morocco, where the PLO's claim to the West Bank was recognized. By June 1976, however, Syria was in the position of invading Lebanon to crush the Palestinians, and finding most of the remainder of the Arab world agreeing to send a peace-keeping force to the Lebanon to quell the conflict.

FOREIGN AFFAIRS 1975–78

This reversal for Syria arose out of a lengthy chain of events. An improvement in relations with Jordan took place in 1975, with King Hussein visiting Damascus in April and President Assad visiting Amman in June. A joint military and political command was set up between the two countries, and by the spring of 1977 their customs, electricity networks and education systems were unified. Plans were made for the eventual union of the two countries. Relations between Syria and Jordan deteriorated, however, after Jordan appeared to give guarded support to Sadat's peace initiative in November 1977.

The second Egyptian-Israeli disengagement agreement in Sinai, signed in September 1975, met with Syria's strong condemnation. Syria accused Egypt of acting without the agreement of other Arab states and, by agreeing to three years of peace with Israel, of weakening the general Arab position and betraying the Palestinians.

Syria had shown considerable interest in the Lebanese civil war since it began in April 1975. Initially, Syria wanted to protect the position of the Palestinians in Lebanon and perhaps also to further plans for a 'Greater Syria', sending in about 2,000 Saiqa troops in January 1976. After having secured a cease-fire, Assad pledged that he would control the Palestinians in Lebanon, and the core of the PLO, under Yasser Arafat, began to be apprehensive that they would be dominated by Syria. By early June 1976 the fighting in Lebanon was so fierce that Syria felt obliged to intervene militarily and overtly. This time, Syria's intervention was welcomed by the Christian right-wing parties and condemned by the Palestinians and the Muslim left (and also Egypt).

A meeting of the Arab League ministers of foreign affairs on 8–9 June agreed that an Arab peace-keeping force should be sent to Lebanon to effect a cease-fire. After some delay, a peace-keeping force, consisting of Syrian and Libyan troops in equal proportions, did arrive in Lebanon, but the fighting continued unabated until October 1976, when Arab summit meetings, at Riyadh and Cairo, secured a more lasting cease-fire. A 30,000-strong Arab Deterrent Force, consisting largely of Syrian troops, was given authority at the Arab summit meetings to maintain the peace. President Assad's prestige, in Syria and the Arab world, was considerably strengthened by this success. Relations with Egypt improved after a tacit understanding that Syria would end its criticism of the September 1975 Egyptian-Israeli agreement on Sinai in return for Egypt's acceptance of Syria's intervention in Lebanon.

In August 1976 Syria's Prime Minister, Mahmoud al-Ayoubi, was replaced by his predecessor, Gen. Khlefawi. He held office until March 1978, when he was succeeded by Muhammad Ali al-Halabi, previously Speaker of the People's Assembly.

Relations with the USSR, which had been extremely poor during most of 1976, improved after the October 1976 summit meetings and were consolidated when Assad visited Moscow in April 1977. With Iraq, however, relations remained poor. Iraq shut off the flow of petroleum from its Kirkuk oilfield to the Syrian port of Banias in protest at Syria's intervention in Lebanon. Another Iraqi grievance was Syria's use of water from the Euphrates river for irrigation projects. When an attempt to assassinate the Syrian Vice-Premier and Minister of Foreign Affairs, Abd al-Halim Khaddam, was made in December 1976, sources in Syria were swift to blame terrorists trained in Iraq. Relations between Syria and Egypt deteriorated again as a result of President Sadat's peace initiative in November 1977. Syria's President Assad strongly criticized the move and diplomatic relations between the two countries were severed in December.

Syria's rift with Egypt grew even wider after Sadat and Prime Minister Begin of Israel signed the Camp David agreements (see Documents on Palestine, p. 111 et seq.) in the USA in September 1978. The third summit meeting of the 'Steadfastness and Confrontation Front', comprising Arab countries strongly opposed to Egypt's attempt to make a separate peace with Israel, met in Damascus in late September 1978. When the Egyptian-Israeli peace treaty was finally signed in March 1979 (see Documents on Palestine, p. 112), Syria joined most of the other Arab League member countries at a meeting in Baghdad which endorsed political and economic sanctions against Egypt.

Egypt's *rapprochement* with Israel led to a brief improvement in Syria's relations with Iraq. In October 1978 Syria and Iraq signed a 'national charter for joint action' in which the eventual intention was complete political and economic union between the two countries. Although the oil pipeline from Iraq to Banias was reopened, the scheme for union collapsed when an internal conspiracy in Iraq in July 1979 was attributed to Syrian intrigue.

DIFFICULTIES OF THE EARLY 1980s

Although President Assad was comfortably returned for a second seven-year term of office in February 1978, there was growing evidence of internal dissatisfaction in Syria. Important government posts were largely in the hands of Alawites, a minority Muslim sect to which Assad belongs, and after 1977, assassinations of Alawites became an increasing problem. In June 1979 more than 60 army cadets, most of them thought to be Alawites, were massacred. The slaughter was officially attributed to the Muslim Brotherhood, who were also held responsible for subsequent killings.

President Assad's attempts to end this violence met with little lasting success. In January 1980 he appointed a new Council of Ministers with Dr Abd ar-Rauf Kassem as Prime Minister, and 23 of the 37 ministers had never before held ministerial posts. Militias of workers, peasants and students were set up, but were ineffective in helping the regular authorities to curb violence.

During the spring of 1980 the number of Soviet advisers in the country grew to more than 4,000, and in October 1980 Syria signed a 20-year treaty of friendship and co-operation with the USSR. By 1986 Syria had received US $2,000m. from the USSR in military loans since 1982, and a total of between $12,000m. and $13,000m. since 1973. A proposed merger between Syria and Libya, announced in September 1980, has not been achieved.

At the outbreak of war between Iraq and Iran in September 1980, Syria supported Iran, on account of its own long-standing distrust of the rival Baath Party in Iraq. A crisis with Jordan soon developed, partly because of Syrian allegations that Muslim Brotherhood treachery was being planned from within Jordan and partly because of Jordan's support for Iraq in the Iran–Iraq War. Towards the end of 1980 Syrian and Jordanian troops faced each other across the frontier and conflict was finally averted by Saudi mediation.

Syria's biggest distraction, however, was its involvement in Lebanon. The 30,000 Syrian troops of the Arab Deterrent Force had been in Lebanon since 1976, and had been a severe drain on Syrian resources. In the summer of 1980 the Phalangist militia consolidated its position in Lebanon and came to occupy the town of Zahle in the Beka'a valley, east of Beirut. Clashes developed in the Zahle area between Syrian troops and the Phalangist militia, and the Christian forces found themselves under siege in Zahle in April 1981. Syria maintained that Zahle and the Beka'a valley were vital to its security against Israel. Israeli aircraft made repeated sorties into Lebanon, and at the end of April Syria moved surface-to-air (SAM) missiles into the Beka'a valley after two Syrian helicopters had been shot down by Israeli planes. A prolonged international crisis developed, with a serious threat of war between Israel and Syria. After Saudi and Kuwaiti mediation, however, the siege of Zahle was lifted at the end of June, and the Phalangist militia withdrew. The SAM missiles remained in the Beka'a valley, as the Syrians maintained that this was a separate issue.

In the following year, however, there were a number of reversals for President Assad. In December Israel formally annexed the Golan Heights, a development which prompted Syria to try to obtain more arms from the USSR. A huge car bomb explosion in Damascus in November was attributed to the Muslim Brotherhood, and this was followed by further indications of incipient unrest, culminating in February 1982 in an uprising in Hama which lasted for nearly three weeks. This was eventually suppressed by Assad's forces with brutal ferocity, and, although it was again attributed to the Muslim Brotherhood, other opposition elements were also involved. On 20 February an opposition group called the National Alliance of the Syrian People was formed, consisting of 19 factions drawn from, among others, Baathists, Nasserites, Christians, Alawites and the Muslim Brotherhood.

These problems were completely overshadowed, however, by the Israeli invasion of Lebanon in June 1982. Israeli forces quickly reached Beirut, trapping the PLO guerrillas there; the Syrian missiles in the Beka'a valley were destroyed; and the Syrian presence in northern Lebanon, in the guise of the Arab Deterrent Force, was rendered impotent.

In August agreement was reached on the evacuation of PLO and Syrian forces from Beirut, and their withdrawal, supervised by an international peace-keeping force, took place between 21 August and 1 September. The number of evacuees was estimated to be more than 14,500. No change occurred in the relative positions of Syrian and Israeli forces in Lebanon as a whole, however.

In January 1983, shortly after the start of negotiations between Lebanon and Israel for an agreement covering the withdrawal of foreign forces from Lebanon, Syria took delivery of a number of Soviet SAM-5 anti-aircraft missiles. Soviet *Scud* ground-to-ground rockets were already deployed with Syrian forces, but the SAM missiles, with a range of 240 km, posed a potential threat to aircraft over Lebanon, parts of Jordan and over Israel almost as far as Jerusalem. Two bases were built to accommodate the missiles: one at Dumeir, north of Damascus, and the other at Shinshar, near Homs. These missiles had never before been deployed outside the USSR and Eastern Europe, and the arrival of the technicians who were employed to operate the system was thought to have increased the number of Soviet military personnel in Syria to 6,000.

Syria opposed all US-sponsored diplomatic initiatives towards a peace agreement between Lebanon and Israel, and categorically rejected President Reagan's proposed settlement of the Palestinian question, based on an eventual Palestine-Jordan confederation, which he announced on 1 September 1982. Finally, on 17 May 1983, after almost six months of talks, an agreement was reached between Lebanon and Israel announcing the end of hostilities and imposing a time limit of three months for the withdrawal of foreign troops from Lebanon. The agreement, formulated by the US Secretary of State, George Shultz, was rejected outright by President Assad, who refused to withdraw Syrian forces from northern Lebanon—thus creating a stalemate with Israel, which refused to leave Lebanon unless the Syrians and the PLO did so first. President Assad insisted on Israel's unconditional withdrawal, declaring that the status of Syrian troops, which had been invited into Lebanon by the Lebanese Government in 1976, was not to be compared with that of the invading Israeli forces. He stated that the agreement between Israel and Lebanon placed unacceptable limitations on Lebanon's sovereignty and threatened Syrian security. Support for the Syrian position from the rest of the Arab world was less than unanimous, with only Libya, the People's Democratic Republic of Yemen (PDRY) and Kuwait expressing outright opposition to the agreement.

THE STRUGGLE FOR CONTROL OF THE PLO

By July 1983 the position was little changed. About 40,000 Syrian troops, camped in the Beka'a valley, and between 8,000 and 10,000 PLO guerrillas, entrenched in the eastern Beka'a and northern Lebanon, faced some 25,000 Israelis in the south of the country. Neither side seemed eager for war, but, equally, neither was prepared to withdraw. Syria, which continued to supply, and, effectively, to control the militias of the Lebanese Druze and Shi'ite factions in their struggle with the Lebanese Government and the Christian Phalangists in and around Beirut, began to address itself to destabilizing the regime of President Amin Gemayel of Lebanon by trying to unite Lebanese opposition groups in a pro-Syrian 'national front'. Syria was also supporting Palestinian rebels involved in the struggle for power within the PLO which erupted in the Beka'a valley in May, fundamentally over dissatisfaction with what radical Fatah members viewed as the compromise diplomacy of the PLO Chairman, Yasser Arafat, which, they believed, had been responsible for the Palestinians' humiliation in Beirut in 1982. Arafat accused Syria and Libya of inspiring the revolt in order to win control of the PLO, and at the end of June he travelled to Damascus to receive a personal letter of support from President Andropov of the USSR, only to be ordered out of the country by the Syrian authorities. Syrian forces now faced armed opposition in Lebanon, not only from the Israeli army, but also from Sunni Muslims in Tripoli, Maronite Christians in the centre of the country, and guerrillas loyal to Arafat in the Beka'a valley.

Syrian and rebel PLO forces, led by 'Abu Musa' and 'Abu Saleh', finally trapped Arafat in the Lebanese port of Tripoli in November 1983. After fierce fighting, a truce, arrived at through the mediation of Saudi Arabia, allowed Arafat and some 4,000 of his followers to leave Lebanon in December, in five Greek ships, under UN protection. Syria had failed to gain control of the Palestine Liberation Movement, though it had been instrumental in effecting a dilution of Arafat's authority within the PLO. This became apparent in a series of reconciliation talks held between several of the rival Palestinian factions (though not those which had sent troops against Arafat in Tripoli) in the first half of 1984. The agreements reached at these talks saw the PLO wishing to move towards a more collective style of leadership. Whether this style would give rise to policies deferential to Syria's preferred role as leader of the Arab world remained to be seen.

Syria's progress towards a position of pre-eminence in the Arab world was eroded during 1984, as the rehabilitation of Egypt continued. Syria dissented from the decision to readmit Egypt to membership of the Organization of the Islamic Conference in March 1984, and opposed Jordan's restoration of diplomatic relations with Egypt in September and King Hussein's alliance with Yasser Arafat. Syria's attempt to wrest control of the PLO from Yasser Arafat succeeded in splitting the movement. Arafat retained his leadership of the bulk of the organization and manoeuvred it towards an emergent moderate Arab alliance including Egypt, Jordan, Iraq and Saudi Arabia.

SYRIAN INFLUENCE IN LEBANON

Although Israel withdrew its forces from Beirut, redeploying them along the Awali river, south of the capital, in September 1983, Syria's army remained entrenched in northern Lebanon. There were occasional exchanges of fire between Syrian forces around Beirut and aircraft and naval guns of the US fleet standing off shore in support of the US contingent in the multinational peace-keeping force in Beirut. The state of civil war existing in and around Beirut eventually compelled the evacuation of the multinational force in the first three months of 1984.

In March President Gemayel of Lebanon was forced to succumb to the controlling influence of Syria in Lebanese affairs.

He abrogated the 17 May agreement with Israel, as President Assad had always insisted that he should, and reconvened the National Reconciliation Conference of the rival Lebanese factions (which had first met in Geneva in November 1983) in Lausanne, Switzerland, under pressure from Syria to agree constitutional reforms which would give the majority Muslim community of Lebanon greater representation in government. In return, Gemayel received guarantees of internal security from Syria. These involved Syrian agreement to restrain the Druze and Shi'ite Amal militias (led by Walid Joumblatt and Nabih Berri, respectively) which relied on Syria to continue their armed struggle.

The National Reconciliation Conference failed to produce the results for which Syria had hoped and it marked the beginning of the rapid disintegration of the Lebanese National Salvation Front, comprising leading Lebanese opponents of President Amin Gemayel, which had been created, with Syrian backing, in July 1983. At the Conference, a member of the Front, the former Lebanese President, Sulayman Franjiya, vetoed Syrian plans for constitutional changes in Lebanon involving the diminution of the powers of the President, traditionally a Maronite Christian. So, despite careful Syrian orchestration, the Conference broke up without having agreed any reforms of the Lebanese system of government.

The reversal was short-lived, for, in April, President Gemayel returned to Damascus to gain approval from President Assad for plans for a government of national unity in Lebanon, giving equal representation in the cabinet to Muslims and Christians. Assad accepted the terms of composition of the government under the premiership of Rashid Karami (who had been Prime Minister of Lebanon on 10 previous occasions); Gemayel was to retain the presidency. Walid Joumblatt and Nabih Berri greeted their appointment to posts in the new Lebanese Cabinet on 30 April, and the very idea of a government of national unity under a Christian President, with scepticism. After consulting Syrian officials, however, both agreed to participate in the Government. Inter-factional fighting, which continued and intensified in Beirut despite the creation of the new Government, threatened its existence. It was only through the intercession of the Syrian Vice-President for Political Affairs (and former Minister of Foreign Affairs; see below), Abd al-Halim Khaddam, and the negotiation, with his help, of a comprehensive security agreement between the warring factions, that the Government survived, and some semblance of order was restored in Beirut. Although this agreement, like many before it, and the political basis on which the new Lebanese Government was built, seemed fragile and prone to collapse, still, the fact that they existed at all was testimony to the extent of Syrian influence in the country's affairs.

INTERNAL TENSION

In November 1983 President Assad suffered what was thought to be a heart attack, though this was denied by the Syrian authorities. He recovered, but his evidently weakened condition aroused speculation regarding his eventual successor. During Assad's illness, potential rivals for the succession made displays of military force in and around Damascus, involving various units of the armed forces, to establish the strength of their claims to power. Prominent among these was Rifaat Assad, the President's brother and commander of the 20,000–30,000-strong defence brigades which, effectively, controlled Damascus and defended the regime's authority. The defence brigades and units of the regular army confronted each other in further, similar displays up to March 1984.

On 4 March the Council of Ministers, under Prime Minister Abd ar-Rauf Kassem, resigned. Kassem was then invited to form a new Council of Ministers to fill four vacancies left as a result of the deaths of ministers. It was the first ministerial reshuffle for four years. At the same time as a new Council of Ministers was being formed, President Assad appointed an unprecedented three Vice-Presidents. Rifaat Assad was made Vice-President for Military and National Security Affairs; Abd al-Halim Khaddam, the former Minister of Foreign Affairs, was made Vice-President for Political Affairs; and Zuheir Masharkah was promoted from his post as a regional secretary of the Baath Party to become Vice-President for Internal and Party Affairs. Ostensibly, President Assad's intention was to ease his workload after his debilitating illness, but another possible motive for the appointment of three Vice-Presidents was to distribute power evenly between his potential successors, giving none an overall advantage. Rifaat Assad thus gained some recognition of his claim to the succession and retained control of the defence brigades; but the regular army (Assad's power-base in what is, essentially, a military dictatorship) was still commanded by officers loyal to President Assad, including the Chief of Staff, Gen. Hikmat Shehabi, who was responsible for the appointment and dismissal of senior officers in the army, and a rival of Rifaat Assad.

In what was seen, in the event, as a disciplinary measure against those principally responsible for the confrontations between military units which took place in and around Damascus after President Assad's illness in November 1983, Rifaat Assad, Gen. Ali Haydar (commander of the special forces élite army unit), and Gen. Shafiq Fayyadh (commander of the third armoured division) were sent as part of a delegation to Moscow in June. While the rest of the delegation returned to Syria within one week, these three were, apparently, not permitted to do so. Rifaat Assad was sent to Geneva, Switzerland, and Gens Haydar and Fayyadh to Sofia, Bulgaria, into what appeared to be temporary exile. While Rifaat Assad was abroad, the defence brigades were absorbed into the army, with the exception of a few units which were put under the command of Rifaat Assad's son-in-law. Rifaat Assad was finally permitted to return to Syria in November 1984 and was given responsibility for national security affairs. President Assad was re-elected for a third seven-year term of office in February 1985 and appeared to have regained much of his former authority. In January 1985 he declared an amnesty for some members of the Muslim Brotherhood who were imprisoned in Syria, and invited those in exile to return to the country. A ministerial reshuffle took place in April 1985.

THE IRAN–IRAQ WAR AND OIL SUPPLIES

Syria's reliance on Iran for supplies of crude oil for processing at its oil refineries (see Economy), which occurred as a direct result of its support for Iran in the Iran–Iraq War, was exposed as a serious weakness in 1984, as hostilities in the conflict began to affect the passage of oil tankers in the Gulf. Attacks on shipping were made by both sides in the first half of the year, threatening Syria's oil link with Iran. President Assad attempted to restrain Iran from widening the conflict and endangering vital oil supplies. An agreement on the continued delivery of Iranian oil to Syria was reached in May, but attacks on Gulf shipping by both Iran and Iraq continued. A Soviet attempt to bring about a reconciliation between the rival Baathist regimes in Syria and Iraq, involving the reopening of the oil pipeline between Kirkuk, in Iraq, and Banias, in Syria, made no progress.

ISRAEL'S WITHDRAWAL FROM LEBANON

By dint of Syrian mediation, a security plan for Beirut was agreed and put into operation at the beginning of July 1984. The plan met with only limited success, and the extent of Syria's influence with its Lebanese allies came into question when, in September, even the threat of force failed to win Walid Joumblatt's unequivocal approval of an extension of the security plan to allow the Lebanese army into the Druze stronghold of the Chouf mountains. In September Syria arranged a truce to end fighting in Tripoli between the pro-Syrian Arab Democratic Party and the Sunni Muslim Tawheed Islami (Islamic Unification Movement). This prepared the way for the Lebanese army to enter the city in November, under the terms of an extended security plan, backed by Syria, to assert the authority of the Lebanese Government in Beirut, Tripoli and south of the capital. On this occasion, Walid Joumblatt's opposition to the plan's provisions for the army to take control of the coastal road south of Beirut appeared to have tacit Syrian approval. However, the plan finally went ahead in January 1985.

Syria's rejection of Israel's demand that any withdrawal from Lebanon should be undertaken by both sides simultaneously was vindicated as it became clear, during the latter half of 1984, that Israel would be forced by domestic economic, political and social pressures to withdraw unilaterally. Syria approved Lebanese participation in talks with the Israelis to co-ordinate the departure of the Israeli Defence Force (IDF) from southern

Lebanon with other security forces, in order to prevent an outbreak of civil violence. A series of talks began in an-Naqoura (Lebanon) in November and repeatedly foundered on the question of which forces should take the place of the IDF. Under Syrian influence, the Lebanese wanted the UN Interim Force in Lebanon (UNIFIL) to police the Israel–Lebanon border (as it had been mandated to do in 1978), and the Lebanese army to deploy north of the Litani river, between UNIFIL and the Syrians in the Beka'a valley. Israel was not convinced of the competence of the Lebanese army, and wanted UNIFIL to be deployed north of the Litani, while the Israeli-backed, so-called 'South Lebanon Army' (SLA) patrolled the southern Lebanese border. In the absence of an agreement, Israel withdrew from the talks, and on 14 January 1985 the Israeli Cabinet voted to take steps towards a three-phased unilateral withdrawal to the international border.

The first phase involved the evacuation of the IDF from the western sector of occupied southern Lebanon, covering about 500 sq km around Sidon, and this was carried out in February 1985. In the second phase the IDF left the occupied central and eastern sectors where it faced the Syrian army and its Palestinian allies in the Beka'a valley, completing the operation on 29 April. On 10 June Israel announced the accomplishment of the third and final phase of the withdrawal, taking its forces behind the southern Lebanese border and leaving a protective buffer zone inside Lebanon, policed by the SLA with IDF support. Although Syria was evidently determined to retain control of events in Lebanon, the Israeli withdrawal offered the opportunity of reducing its costly military presence in the north and east of the country. At the end of June and the beginning of July Syria withdrew an estimated 10,000 troops from the Beka'a valley, leaving some 25,000 in position.

SYRIA LOSES ITS GRIP ON LEBANON

In March 1985 Dr Samir Geagea, a regional commander of the Christian Lebanese Forces (LF) militia, rebelled against the Phalange Party leadership and the extent to which it was prepared to accept the Syrian influence in Lebanese affairs, particularly as manifested in President Gemayel's apparent willingness to accommodate Syrian-backed plans for constitutional reform favouring the Muslim majority in Lebanon. Geagea immediately secured the support of the greater part of the LF and threatened to set up an independent Christian administration. Syria, though unwilling to be drawn into the civil-military entanglement in Lebanon, feared the necessity of having to send troops into Christian east Beirut to quell the revolt, which threatened to precipitate the partition of Lebanon along sectarian lines, creating a number of unstable mini-states close to the Syrian border, in a condition of perhaps permanent conflict and vulnerable to exploitation by Syria's enemies. Indeed, Syria accused Israel of inciting the revolt. It ended, however, as suddenly as it had begun, in May, when the LF elected a new leader, Elie Hobeika, who announced his readiness to negotiate with Syria and its Druze allies.

The extent of Syria's diminishing influence over the actions of its allies in Lebanon was repeatedly demonstrated by its inability to prevent renewed inter-factional fighting in Beirut. If the members of the LF were alarmed by the prospect of constitutional reform, their Muslim counterparts were dissatisfied with the lack of progress towards it. This could account for continued fighting between Christians and Muslims, but other factors now led to conflict between rival Muslim factions. On 17 April Prime Minister Rashid Karami, a Sunni Muslim, tendered his resignation, partly over the failure of the Council of Ministers to agree to reinforce the army, which was engaged in heavy fighting against elements of Samir Geagea's rebel LF around Sidon, and partly over attacks on Sunni Muslims by the Shi'ite Amal militia. The Shi'ites had combined with the Druze in trying to eliminate the Sunni Murabitoun militia, which had joined forces with members of the PLO, whose numbers in Beirut were growing again. Amal hoped to prevent the re-emergence anywhere in Lebanon of a PLO power-base which might attract Israeli military retaliation. Karami withdrew his resignation later on 17 April and, on a subsequent visit to Damascus, was persuaded to remain as Prime Minister and ensure the survival of the Government of national unity.

In May and June, however, Syria itself backed Amal in attempting to suppress a resurgence of the PLO (in particular the pro-Arafat wing of the movement) in the Palestinian refugee camps of Sabra, Chatila and Bourj el-Barajneh in Beirut. Many of the estimated 5,000, mostly pro-Arafat, Palestinians who had infiltrated Lebanon since the Israeli withdrawal became inevitable, had made their way to Beirut. Walid Joumblatt's Druze militia refused to assist its former allies in imposing a siege on the camps, but Amal had the support of the predominantly Shi'ite sixth brigade of the Lebanese army. In the bloody battle for the camps, which spanned May and June, more than 600 people were killed, but Amal failed to take control of the camps. An unforeseen development was the extent to which pro- and anti-Arafat PLO factions united to resist the attack on the Palestinian community. On 17 June a fragile Syrian-sponsored cease-fire agreement was reached in Damascus between Amal and the Palestinian National Salvation Front (PNSF), representing the pro-Syrian, anti-Arafat element in the camps.

Weeks of fighting between Christians and Muslims along the 'Green Line' dividing east and west Beirut, and between Muslims and Druze in the west of the capital, preceded an attempt to enforce another Syrian-sponsored security plan for the city. The plan was introduced in July, after 13 Muslim and Druze leaders had met to discuss it in Damascus. Under the terms of the plan, Muslim west Beirut was to comprise five security zones; the militias were to leave the streets and close their offices, with the police taking their place, supported by a unit of the sixth army brigade. These measures were meant to lay the foundations for the extension of the plan to Christian east Beirut and the renewal of inter-sectarian dialogue on political and constitutional reform. However, more heavy fighting soon reduced the plan to utter ineffectiveness.

President Assad was able to demonstrate that he retained some command over events in Lebanon when his intercession was instrumental in securing the release of 39 American hostages from a hijacked TWA airliner, who had been detained at secret locations in Beirut since 17 June 1985 by members of the extremist Shi'ite group Hezbollah (the Party of God). Assad threatened to sever relations with Hezbollah and to provide no further aid if the hostages were not released. The hostages were freed and driven to Damascus on 30 June.

Four weeks of intensive fighting between rival militias in the Lebanese town of Tripoli in September and October were interpreted as part of Syria's campaign to prevent the re-emergence of the pro-Arafat wing of the PLO in Lebanon. The pro-Arafat, Sunni Muslim group, Tawheed Islami, and the pro-Syrian, Alawite Arab Democratic Party fought for control of the town and its port, which was allegedly being used to distribute weapons and supplies to Arafat loyalists in other parts of the country. A cease-fire was agreed in Damascus in November, and troops of the Syrian army moved into the town.

THE ABORTIVE NATIONAL AGREEMENT IN LEBANON

One month of negotiations, under Syrian auspices, between the three main Lebanese militias, the Druze forces, Amal and the LF, which began in October 1985, led to the preparation of a draft accord for a politico-military settlement of the civil war. The agreement was finally signed by the three militia leaders (Walid Joumblatt, Nabih Berri and Elie Hobeika) on 28 December, in Damascus. It provided for an immediate cease-fire and for an end to the state of civil war within one year; the militias would be disbanded, and the responsibility for security would pass to a reconstituted and religiously-integrated army, supported by Syrian forces. The accord sought the immediate establishment of a national coalition government which would preside over the abolition of the confessional system of power-sharing government and the creation of a secular administration. It also recognized Lebanon's community of interest with Syria and envisaged a 'strategic integration' of the two countries in the fields of military relations, foreign policy and security.

It was always doubtful that the Damascus accord could be implemented. The Shi'ite Hezbollah and the Sunni Murabitoun militias were not party to the agreement, the Christian community was divided over it, and it made no provision for dealing with the problem of Palestinian refugees or the PLO. Among

the Muslim community, only Amal appeared to be wholly in favour of the accord. President Gemayel, who had not been consulted during the drafting of the agreement, refused to endorse it, and at the end of December 1985 clashes erupted in east Beirut between elements of the LF who supported the agreement and those loyal to President Gemayel, who resented the concessions that had been made on their behalf by Elie Hobeika. In January 1986 Hobeika was forced into exile, and Samir Geagea resumed command of the LF, urging the renegotiation of the Damascus agreement. The long round of intersectarian clashes in Beirut resumed in earnest on 22 January.

Fighting between Palestinian guerrillas and Shi'ite Amal militiamen for control of the refugee camps in the south of Beirut, which had continued sporadically ever since a cease-fire nominally took effect in June 1985, escalated into major exchanges on 19 May 1986. The Palestinian refugee camps of Sabra, Chatila and Bourj el-Barajneh were increasingly under the control of guerrillas loyal to Yasser Arafat, who were continuing to return to Lebanon. Concentrations of PLO guerrillas were also identified in and around the refugee camps on the outskirts of Tyre and Sidon, while mobile PLO bases resumed rocket attacks on settlements in the north of Israel during 1986, drawing retaliatory attacks from the Israeli air force. Syria appeared to be powerless to prevent the resurgence of the PLO in Lebanon, despite the efforts of the Syrian-backed Amal militia to keep Palestinian and radical pro-Iranian Hezbollah guerrillas, who were growing in strength, away from the Israeli security zone inside the southern Lebanese border. The PLO claimed that the number of guerrillas in Lebanon in 1986 exceeded the 14,300 who, according to its own figures, had been evacuated from Beirut in 1982. Independent estimates assessed the number in Beirut at several thousands. Syria itself apparently ignored Israeli warnings not to fill the military vacuum which had been left by their withdrawal in 1985. In May 1986 it was reported that Syrian forces were constructing fortifications and tank and gun emplacements in the Lake Karoun area, in the southern Beka'a, immediately to the north of the SLA-patrolled security zone.

THE SYRIAN ARMY RETURNS TO BEIRUT

Leaders of the Muslim communities in Lebanon met Syrian Government officials in Damascus, and agreed to impose a cease-fire around the Palestinian refugee camps in Beirut on 14 June. The cease-fire, which reduced the fighting to exchanges of sniper fire, proved to be the first element in a Syrian-sponsored peace plan for Muslim west Beirut. About 1,000 Lebanese troops were deployed in west Beirut at the end of June. The Amal, Druze and Murabitoun militias were ordered to close their offices and to leave the streets. Crucial to their co-operation in the plan was the appearance in Beirut, for the first time since 1982, of uniformed Syrian soldiers (several hundred in number), supported by members of the Syrian security service, *Muhabarat* (literally, 'information'), under the command of Brig.-Gen. Ghazi Kena'an. The security plan was successful in its limited objective of curbing the activities of militias in west Beirut, but the plan (and Syria's visible involvement in it) was strongly opposed in Christian east Beirut, and the Syrians hesitated over extending the plan into the southern suburbs, which contained the majority of the city's Palestinian refugees and was controlled by the radical Shi'ite Hezbollah, who were backed by Iran, which Syria was concerned not to offend. (See Histories of Israel and Lebanon.)

RAPPROCHEMENT WITH JORDAN

Syria opposed the joint Jordanian-Palestinian agreement, which was signed by King Hussein and Yasser Arafat in Amman in February 1985, and its proposals for a Middle East peace settlement. In August, with Algeria, Lebanon, Libya and the PDRY, Syria boycotted the extraordinary meeting of the League of Arab States in Casablanca, which was convened partly to consider the Amman accord. The PLO's persistent refusal to acknowledge the UN Security Council Resolutions (Nos 242 and 338) on the Palestinian issue, and a series of terrorist incidents in the second half of 1985 in which the PLO was implicated, reducing its credibility as a potential partner in peace negotiations, and reducing the prospects that the joint peace initiative would make progress, led King Hussein to seek a reconciliation with Syria. (It was suggested in some quarters that factions of the PLO, and other Palestinian groups supported by Syria, were involved in a campaign to discredit Yasser Arafat's wing of the movement.) Relations between Jordan and Syria had been poor since 1979, when Syria had accused Jordan of harbouring anti-Syrian groups. Apart from their different sympathies in the struggle for control of the PLO, a further cause of contention was Syria's support for Iran in the Iran–Iraq War, in which Jordan openly backed Iraq. In November 1985 King Hussein admitted that Jordan had, unwittingly, been a base for the Sunni fundamentalist Muslim Brotherhood in its attempts to overthrow President Assad, but he stated that members of the group would no longer receive shelter in Jordan. The Prime Ministers of the two countries met in Damascus in November, and agreed on the need for 'joint Arab action' to achieve peace in the Middle East. At subsequent talks in Riyadh (Saudi Arabia) in October, Jordan and Syria rejected 'partial and unilateral' solutions (ruling out separate negotiations with Israel) and affirmed their adherence to the Fez plan, omitting all reference to the Jordanian-Palestinian peace initiative. President Assad and King Hussein confirmed the improved state of Syrian–Jordanian relations when they met in Damascus in December. In February 1986 King Hussein withdrew from his political alliance with Yasser Arafat, and in April Jordan appointed its first ambassador to Syria since 1980.

King Hussein acted as a mediator between President Assad and President Saddam Hussain of Iraq during the first half of 1986. However, a meeting between the Syrian and Iraqi Ministers of Foreign Affairs, which was heralded as the beginning of a reconciliation between the two countries, was cancelled by President Assad, shortly before it was due to take place, in June 1986. Only days before, Syria had concluded an agreement with Iran to renew purchases of Iranian petroleum, while in southern Lebanon the guerrilla activities of pro-Iranian groups (in particular, Hezbollah) had been threatening Syria's already tenuous hold on the region through its proxy, Amal.

Syria broke off diplomatic relations with Morocco in July 1986, after King Hassan held talks with the Prime Minister of Israel, Shimon Peres.

BOMB ATTACKS IN SYRIA

On 13 March 1986 a bomb exploded in Damascus causing casualties which were estimated at 60 dead and 110 wounded. Syria blamed Iraqi agents for the attack. Then, on 15 April, bombs exploded, almost simultaneously, in five Syrian towns. Several more bomb attacks were made on buses and trains in towns, including Damascus, before the end of the month. In May the Government admitted that 144 people had been killed, and 149 injured, during the campaign of bombings in April. According to the Voice of Lebanon radio station, a hitherto unknown Syrian group (the '17 October Movement for the Liberation of the Syrian People') claimed responsibility for the campaign, and its message suggested that it was a pro-Iraqi, Islamic fundamentalist organization.

SYRIA AND INTERNATIONAL TERRORISM

Although it failed to provide conclusive proof of Syrian involvement, the USA claimed that there was evidence of a link between Syria and the Palestinian terrorists who carried out attacks on Rome and Vienna airports in December 1985, and on a discotheque in West Berlin in April 1986. The USA attacked the Libyan cities of Tripoli and Benghazi in April 1986, as punishment for alleged Libyan involvement in international terrorism, and reserved the right to use force against other countries which had proven links with terrorist operations. President Assad denied that Syria was sponsoring terrorism, and refused to restrict the activities of Palestinian groups (including the Abu Nidal faction, the Fatah Revolutionary Council) on Syrian territory, which, he claimed, were 'cultural and political'.

In October 1986 a Jordanian, Nezar Hindawi, was convicted in the UK of attempting to plant a bomb on an Israeli airliner at London's Heathrow airport in the previous April. The British Government claimed that it had proof of the complicity of Syrian diplomats in the affair, and, on 24 October, severed diplomatic relations with Syria. One month later, three Syrian diplomats were expelled from the Federal Republic of Germany (FRG),

after a court in West Berlin ruled that the Syrian embassy in East Berlin was implicated in the bombing of a discotheque in the West of the city in 1986. In November the UK and its partners in the EC (excluding Greece), and the USA and Canada, imposed limited diplomatic and economic sanctions against Syria (the US and Canadian ambassadors to Syria were both recalled). Syria persistently denied any involvement in international terrorism, and by April 1987 several EC countries had made tentative advances to Syria, seeking to upgrade diplomatic relations, and only the UK continued to insist on a ban on high-level (ministerial) contacts. It had always seemed unlikely that the isolation of Syria would last long. Several EC countries, in particular France, had been unenthusiastic supporters of the sanctions demanded by the UK, mindful of the crucial role that Syria had to play in the Middle East peace process, and of the need for its co-operation in securing the release of Western hostages being held by Islamic fundamentalist groups in Beirut. For its part, Syria appeared to be anxious to be seen to dissociate itself from terrorist groups and to use its influence in Lebanon to free Western hostages. In June 1987 it was reported that the offices of Abu Nidal's Fatah Revolutionary Council, near Damascus, had been closed, and many of its members expelled, by the Syrian authorities, and that Abu Nidal himself had moved to Libya. The EC, with the exception of the UK, lifted its ban on ministerial contacts with Syria in July, and financial aid was resumed in September, although a ban on the sale of arms to Syria remained in force. The UK, although it had withdrawn its opposition to its EC partners' restoration of contacts with Syria, remained sceptical as to the true extent of Syria's rejection of terrorism, and alleged that Abu Nidal's group was still active in Lebanon, in the Syrian-controlled Beka'a valley.

PAX SYRIANA IN LEBANON

In October 1986 the Syrian-backed resistance to the re-emergence of the pro-Arafat PLO in Lebanon spread from Beirut to the Palestinian refugee camps around Tyre and Sidon, which were besieged by the forces of Amal. In February 1987 Syria reportedly asked Amal to abandon the blockade of the camps, but the respite for the inhabitants of the camps of Bourj el-Barajneh, in Beirut, and Rashidiyah, near Tyre, where supplies were allowed in, proved to be brief, and the siege of the other camps remained in force.

In February 1987 fierce fighting took place in west Beirut between Amal forces and an alliance of Druze, Murabitoun and Communist Party militias. Muslim leaders appealed for Syria to intervene, to restore order, and about 4,000 Syrian troops were deployed in west Beirut on 22 February. The Syrian force (which was soon increased to some 7,500 troops) succeeded in enforcing a cease-fire in the central and northern districts of west Beirut, and moved into areas occupied by Hezbollah, killing 23 Hezbollah members and forcing others to return to their stronghold in the southern suburbs, into which the Syrians still declined to venture.

A Syrian-supervised cease-fire at the embattled Palestinian refugee camps in Beirut took effect on 6 April 1987. The cease-fire agreement was negotiated by representatives of Syria, Amal and the pro-Syrian Palestine National Salvation Front (PNSF), and brought an end to the worst fighting. Members of the PNSF and Arafat loyalists had made common cause in defence of the camps, and their alliance was a contributory factor in the re-unification of the PLO under Arafat's leadership, which took place at the 18th session of the Palestine National Council (PNC) in Algiers in April, turning the Syrian-backed PNSF into a rump, depriving it of the support of the largest and most influential groups that had rebelled against Arafat in 1983. The PNC adopted a resolution committing itself to improving PLO relations with Syria.

It was not until September 1987 that the Arafat wing of the PLO and Amal reached a comprehensive cease-fire agreement, which provided for the lifting of the siege of the Beirut, Tyre and Sidon camps, in return for a withdrawal by PLO forces from the positions around Ain al-Hilweh camp in Sidon, which they had captured from Amal in October and November 1986. However, neither measure was implemented, and differences concerning the withdrawal of Palestinian guerrillas led to renewed fighting around the disputed positions to the east of Sidon in mid-October. In January 1988, avowedly as a gesture of support for protests by Palestinians living in Israeli-occupied territories, Nabih Berri, the leader of Amal, announced the lifting of the siege of the Palestinian refugee camps in Beirut and southern Lebanon. On 21 January Syrian troops replaced Amal militiamen and soldiers of the Sixth Brigade of the Lebanese army in positions around the Beirut camps, and the 14-month siege of Rashidiyah camp, near Tyre, was lifted. However, PLO guerrillas loyal to Yasser Arafat refused to withdraw from their positions overlooking Ain al-Hilweh, interrupting the withdrawal of Amal from around Rashidiyah.

A new political crisis overtook Lebanon in mid-1987, which emphasized the division between the Muslim and Christian communities and the extent of the problem that Syria faced in its attempts to oversee a political settlement. The Lebanese Prime Minister, Rashid Karami, who had tendered his resignation on 4 May, as a result of the Cabinet's failure to agree on measures to alleviate the country's acute economic problems, was assassinated on 1 June. Although it was not clear who was responsible for Karami's death, the Muslim community strongly suspected the Christian section of the divided Lebanese army and the Christian LF militia. Karami, a Sunni Muslim, had been a firm ally of Syria and had been one of the leaders who invited Syrian troops into Beirut in February, in the face of Christian opposition. Syria had yet to confront the problem of Christian-controlled east Beirut, to which no attempt had been made to extend the security plan.

In July 1987 representatives of Walid Joumblatt's Druze Parti socialiste progressiste, Nabih Berri's Amal, the Communist, Baath and Arab Democratic parties, and the Popular Nasserite Organization formed a brittle-seeming Unification and Liberation Front (the third of its type to be formed under Syrian auspices since 1977). The stated aims of the new, largely Muslim, left-wing front were: the unification of Lebanon; the expulsion of Israeli forces from southern Lebanon: the abolition of the confessional system of government; and the reintegration of the army.

RELATIONS WITH IRAN AND IRAQ

A realignment of Syrian policy towards Iran, which became more apparent during 1987, led to an increasingly uneasy relationship between the two countries. As international opinion turned against Iran in the Iran–Iraq War and moves were made to engineer a diplomatic settlement of the conflict, Syria's support for Iran became more of a liability. The USSR was critical of Syria's stance (reportedly withholding sales of arms to Syria in July), and, as the only Arab country, apart from Libya, to support Iran, Syria attracted the displeasure of other Arab states. (Libya switched its allegiance to Iraq in September.) Syria, significantly, responded to Iranian threats of reprisals against Saudi Arabia and Kuwait, after the deaths on 31 July of 275 Iranian pilgrims in riots in Mecca, by stating that it would not stand by and allow a fellow Arab country to be attacked with impunity. Syria's concern to regain the favour of Western nations and to play a full role in proposed Middle East peace initiatives by distancing itself from Islamic fundamentalist and anti-Arafat terrorist groups, and by seeking the release of Western hostages in Lebanon, brought it into dispute with Iran. Syrian troops in Beirut did not venture into the southern suburbs where Hezbollah (a group inspired by the Islamic revolution and backed by Iran) was based, but, after their deployment in February and to Iran's obvious annoyance, they harassed Hezbollah members and limited their freedom of movement in the parts of Lebanon under the group's effective jurisdiction. Syria also controlled the entry of Iranians into the country, and in June sent tanks and 'special forces' to surround the camps of Hezbollah militiamen and several hundred Iranian Revolutionary Guards, who were stationed at Ba'albek in the Beka'a valley. Syria was evidently concerned about the destabilizing influence of Hezbollah's brand of Islamic fundamentalism, which aimed to create in Lebanon an Islamic republic on the Iranian model.

Syria's relations with Iran were further strained by the kidnapping in June 1987 of Charles Glass, an American journalist, allegedly by Hezbollah. This was the first abduction of a Westerner in west Beirut since the Syrian army assumed responsibility for security there in February, and was the cause of

annoyance and embarrassment to Syria, which was eager to improve its relations with the USA. When, four weeks later, Glass escaped from his captors, his freedom was attributed to Syrian mediation with Hezbollah. Syrian influence was also instrumental in securing the release in September of a West German hostage, one of 23 Western captives who were being held in south Beirut. At the beginning of September the US ambassador to Damascus, who had been recalled to Washington in November 1986, returned to Syria, and the US Government withdrew its opposition, of the preceding 10 months, to operations by US oil companies in Syria.

Rumours of a *rapprochment* between Syria and Iraq were revived by reports that President Assad and President Hussain had met secretly in Jordan in April 1987, at the instigation of King Hussein of Jordan and Crown Prince Abdullah of Saudi Arabia. It was confirmed that this meeting had taken place when, in November, the two leaders held talks with King Hussein and other leaders at an extraordinary summit meeting of the League of Arab States in Amman, Jordan. The summit, which had been organized by King Hussein to discuss the Iran–Iraq War, produced a unanimous statement expressing solidarity with Iraq, condemning Iran for prolonging the war and for its occupation of Arab (i.e. Iraqi) territory, and urging it to observe the cease-fire proposals contained in UN Security Council Resolution 598. Syria's acquiescence in the statement appeared to represent a significant modification in its support for Iran. It was widely reported that Syria had been offered financial inducements by Saudi Arabia (which is Syria's principal source of aid), Kuwait and other Gulf states to realign its policy on the Iran–Iraq War with majority Arab opinion, and compensatory supplies of oil, should such a realignment result in Iran's withholding oil shipments. However, after the summit meeting, Syria announced that it had succeeded in obstructing an Iraqi proposal that Arab states should sever diplomatic relations with Iran, that a reconciliation with Iraq had not taken place, and that Syrian relations with Iran remained fundamentally unchanged. Syria had used its veto to prevent the adoption of an Iraqi proposal to readmit Egypt to membership of the League of Arab States, but it could not prevent the inclusion in the final communiqué of a clause permitting individual member nations to re-establish diplomatic relations with Egypt. By mid-February 1988, 11 Arab countries, including Iraq, had resumed diplomatic links with Egypt.

In March 1988 the Minister of Information, Muhammad Salman, announced that two months of Syrian mediation between Iran and the Arab states of the Gulf (designed to prevent an escalation of the Iran–Iraq War), which had been fiercely criticized by Iraq, had produced an Iranian undertaking to desist from attacks on tankers belonging to the members of the Co-operation Council for the Arab States of the Gulf (Gulf Co-operation Council—GCC, see p. 255).

In July 1987 Syria and Turkey signed a security protocol in which both agreed to curb the activities on their soil of terrorist and separatist groups carrying out operations against the other. Turkey believed that guerrilla attacks in its south-eastern provinces had been organized by Kurdish exiles in Damascus. Turkey also assured Syria that the series of dams that it was building on the Euphrates river would not be deliberately used in such a way as to deprive Syria of vital water supplies further downstream.

GOVERNMENT CHANGES

A major government reshuffle took place in November 1987, following the resignation of the Prime Minister, Abd ar-Rauf al-Kassem. His Government had been accused of corruption and inefficiency, and of failure to solve the country's severe economic problems. Earlier, four ministers (in June those of Agriculture and of Construction; and, in October, those of Industry and of Supply and Internal Trade) had been forced to resign, following accusations of mismanagement, which led to votes of 'no confidence' in the People's Assembly. Mahmoud az-Zoubi, the Speaker of the People's Assembly, was appointed Prime Minister on 1 November. His Council of Ministers contained 15 new members.

SYRIAN AND IRANIAN SURROGATES CLASH IN LEBANON

The Syrian-inspired lifting of the siege of the Palestinian refugee camps in January 1988, was a carefully calculated move. In cynical terms it was politically inexpedient for Syria to continue to employ its proxy, Amal, in its attempt to suppress the PLO in Lebanon, at a time when the Palestinian *intifada* (uprising) in the Israeli-occupied territories (see below) was attracting the sympathy of the world (in particular, the Arab world) to the plight of the Palestinians and increasing support for Arafat's mainstream PLO. By suspending Amal's campaign against the (pro-Arafat) PLO, Nabih Berri's Amal forces could be deployed against the Iranian-backed Hezbollah, whose strength was viewed by Syria as a threat to its own ambitions to control Lebanon.

Amal's attacks were initially directed against Hezbollah bases in southern Lebanon, and clashes (the first military confrontation between the two groups) occurred at the end of March in the Nabatiyeh area. On 9 April Amal claimed to have captured Hezbollah's last stronghold in the south, at Siddiqin, while Iranian Revolutionary Guards stationed at Sharqiyah and Jibshit had been ordered to leave the area.

In Beirut, Syria had demonstrated its opposition to hostage-taking by preventing a Kuwaiti Boeing 747, which had been hijacked by Islamic fundamentalists (alleged to be Lebanese), from landing at the city's airport in early April 1988. On 5 May fighting broke out between the Amal and Hezbollah militias (the latter supported by Iranian Revolutionary Guards) in the southern suburbs of Beirut. Attempts to impose a cease-fire through Iranian and Syrian mediation failed, and Syrian troops became involved in the fighting on 13 May when Hezbollah guerrillas, who had wrested control of about 90% of the 36-sq-km southern suburbs from Amal, briefly advanced into a Syrian-controlled area of west Beirut. On 15 May 7,500 Syrian troops encircled the southern suburbs, ready to advance into the enclave to restore order, while intensive negotiations took place between Syria and Iran, neither of which, despite their divergent ambitions in Lebanon, was eager to alienate the other. On 27 May several hundred Syrian troops moved into the southern suburbs of Beirut to enforce a cease-fire agreement reached by Syria, Iran and their militia proxies on the previous day. When the Syrian deployment was complete, Amal and Hezbollah were to close down their military operations in all parts of the southern suburbs, except in areas adjoining the 'Green Line' which separated west Beirut from the Christian-controlled east of the city, where they would continue to be allowed to post their men. On 3 June, in accordance with the agreement, Nabih Berri announced the disbandment of the Amal militia in Beirut and the Beka'a valley (areas under Syrian control) and all other areas of the country except the south (which was not controlled by Syrian troops).

ARAFAT LOYALISTS DRIVEN OUT OF BEIRUT

In April 1988 a reconciliation was reported to have taken place between President Assad and Yasser Arafat, though Assad continued to insist on the severance of all relations between Arafat's Fatah and Egypt. The two leaders held discussions (their first since Arafat's expulsion from Syria in 1983) when Arafat attended the funeral in Damascus of Khalil al-Wazir ('Abu Jihad'), the military commander of the Palestine Liberation Army. At the end of April, Arafat loyalists in the Palestinian refugee camps of Chatila and Bourj el-Barajneh in Beirut, possibly interpreting Syria's support for the Palestinian *intifada* and subsequent indications of a *rapprochement* between their leader and Assad as evidence of the Syrian President's waning commitment to the revolt within the PLO, attempted to drive out the fighters belonging to the Syrian-backed group, al-Fatah Intifada (Fatah Uprising), led by PLO dissident 'Abu Musa'. The Syrian troops who had surrounded the camps in April 1987, did not attempt to intervene in the fighting but, with Syria's other surrogate in Lebanon's factional conflict, the Amal militia, otherwise occupied, they allowed reinforcements to reach the rebel Fatah group. On 27 June the Arafat loyalists in the camp of Chatila were overrun and surrendered to the forces of 'Abu Musa'. On the following day, Syria granted 100 PLO guerrillas safe passage from Chatila to the Palestinian camp at Ain al-Hilweh, near Sidon. On 7 July Bourj el-Barajneh, Yasser

Arafat's last stronghold in Beirut, fell to 'Abu Musa' and 120 Arafat loyalists were evacuated to Ain al-Hilweh.

LEBANON FAILS TO ELECT A NEW PRESIDENT

Amin Gemayel's term of office as President of Lebanon was due to expire on 22 September 1988 and the National Assembly was required to elect a new President prior to that date. Syria, naturally, was concerned that a candidate sympathetic to its views should be elected. Talks between Syria and the US Under-Secretary of State for Near Eastern and South Asian Affairs, Richard Murphy, during the summer, failed to produce agreement on a candidate who would be acceptable to both sides and who would be likely to gain the support of both Muslims and Christians in Lebanon.

Three main contenders for the presidency (traditionally a post occupied by a Maronite Christian) emerged: Gen. Michel Awn, the Commander-in-Chief of the armed forces; Raymond Eddé, the exiled leader of the Maronite Bloc National; and Sulayman Franjiya, who was President of Lebanon between 1970 and 1976. The latter did not announce his candidacy until 16 August 1988, two days before the election was scheduled to take place, and the news immediately united President Gemayel and Samir Geagea, the commander of the Christian LF militia, in opposition to Franjiya's candidature, on the grounds that he represented Syrian interests. It was Franjiya who, as President, had invited Syria to intervene militarily in Lebanon to end the civil war in 1976.

On 18 August 1988, only 38 of the 76 surviving members of the National Assembly attended the session at which the new President was to be elected. The President of the National Assembly declared the session inquorate and the election was postponed. It was strongly alleged that a number of Christian deputies had been intimidated, threatened or forcibly prevented from attending the election by the LF and soldiers under the command of Gen. Awn.

Consultations between Syria and the USA resumed during September 1988 to find a compromise candidate for the presidency. It was reported that they had agreed to support the candidacy of Mikhail ad-Daher, a deputy in the National Assembly, but Christian leaders in Lebanon repeated their rejection of any candidate imposed upon them by foreign powers.

A second attempt to stage the presidential election was made on 22 September 1988, but, again, the session of the National Assembly failed to achieve a quorum. Only minutes before his term of office was due to expire, President Gemayel appointed a six-member interim military Government, composed of three Christian and three Muslim officers, led by Gen. Awn, to rule until a new President was elected. Muslim politicians had refused to participate in an interim civilian government headed, contrary to the Constitution, by a Maronite Prime Minister, Pierre Hélou, instead of a Sunni Muslim. The three Muslim officers named in the interim military Government refused to take up their posts, while the two Christian members of the existing civilian Government surrendered their posts in recognition of the authority of the interim military administration. Lebanon was plunged into a constitutional crisis, with two Governments, one Christian, in east Beirut, and one predominantly Muslim, in west Beirut, claiming legitimacy. Syria refused to recognize the interim military Government and there were fears that, unless a new President could be elected, the fact of dual-authority would formalize what was already an effective partition of the country into Christian and Muslim cantons.

The new interim military Government was regarded with suspicion by the LF militia, which feared that it would seek an accommodation with Syria in order to further the presidential ambitions of Gen. Awn. In February 1989 there was a major confrontation between the LF and Lebanese army brigades (both Christian and Muslim) loyal to Gen. Awn. While neither side achieved a decisive victory, the authority of the Lebanese army (which had been steadily eroded) was restored as a result of the clashes. On 17 February, after having suffered heavy losses, the LF was ordered by its commander, Samir Geagea, to withdraw from many parts of east Beirut. In response to allegations by Gen. Awn that it was levying illegal taxes, the LF agreed to close its 'customs point' in east Beirut, and Geagea subsequently claimed that both the LF and the Lebanese army were united in the aim of expelling Syrian forces from Lebanon.

GENERAL AWN'S 'WAR OF LIBERATION'

In March 1989 the most violent clashes for two years erupted in Beirut between Christian and Muslim brigades of the Lebanese army, loyal to Gen. Awn, and Syrian-backed Muslim militia, positioned on either side of the 'Green Line'. While the immediate cause of the fighting was the blockade of illegal ports in west and south Beirut by Christian forces, Gen. Awn declared at a press conference on 14 March that his Government had decided to take all measures for the immediate withdrawal of Syrian forces from Lebanon.

During the ensuing six months, Gen. Awn's self-declared 'war of liberation' developed into one of the most violent confrontations of the Lebanese conflict, causing heavy casualties in both the Christian and Muslim communities. Syria's claim that its forces were not directly involved in the hostilities was regarded as highly disingenuous, but most observers doubted whether Gen. Awn realistically expected to achieve the withdrawal of Syrian forces from Lebanon by military means. Rather, his aim was perceived to be the 'internationalization' of the Lebanese conflict in order to increase diplomatic pressure on Syria to effect such a withdrawal.

The ferocity of the fighting and the scale of the casualties prompted several diplomatic initiatives to secure a peace settlement (for a full account, see chapter on Lebanon). However, successive plans for peace foundered on the question of the withdrawal of Syria's estimated 35,000–40,000 troops in Lebanon, on which Gen. Awn insisted as an essential condition of any cease-fire agreement. At an emergency summit meeting of Arab leaders in Casablanca during 23 May–28 May, the proposal (supported by Egypt, Iraq, Jordan and the PLO) that Syria should immediately withdraw its troops from Lebanon was abandoned in response to Syrian opposition. Indeed, as the 'war of liberation' progressed, it became apparent that no agency was able or willing to exert sufficient diplomatic pressure on Syria to gain such a concession. While the Arab League was on one occasion officially to condemn Syria as the principal obstacle to peace in Lebanon, and while many Arab leaders were reportedly ready to admit, in private, that this was so, the Arab world feared that Syria's withdrawal from Lebanon would be perceived as a victory by Iraq (for Syrian–Iraqi rivalry in Lebanon, see below) and that it might lead to a direct confrontation between Iraq and Syria. While the USSR endorsed the proposals of the Tripartite Arab League Committee on Lebanon (formed at the Arab League summit meeting in May 1989), and urged Syria to accept them, the influence that it was able to exert as Syria's principal supplier of arms was limited.

By August 1989 it had become clear that Syria was prepared to disregard international censure of its role in Lebanon and to wage a war of attrition against the Lebanese army. Its refusal to consider any compromise with regard to the withdrawal of its forces stemmed from the longstanding strategic consideration of its need to control Lebanon in order to guard against any Israeli strike in the Beka'a valley. However, Syria was restrained from using its overwhelming military superiority to impose its authority on 'Christian Lebanon' by several factors. Initially, Syria feared that Israel might come to the defence of Lebanese Christians in the event of a full-scale military assault on the Christian enclave. Also, for economic reasons, it was anxious to avoid any further deterioration of its relations with Western countries, and with the USSR, which such an assault might have provoked.

In September 1989 the Tripartite Arab Committee on Lebanon announced details of a seven-point plan for peace in Lebanon which, unlike its previous diplomatic initiatives, did not demand the withdrawal of Syrian forces from Lebanon. Rather, in recognition of the futility of attempting to persuade Syria to withdraw its forces, diplomatic efforts in support of the new peace plan now concentrated on persuading Gen. Awn to accept its terms. The new plan for peace envisaged a cease-fire (to be supervised by a Lebanese security committee under the auspices of the Assistant Secretary-General of the Arab League, Lakhdar al-Ibrahimi); the ending of the Syrian naval blockade of the Christian enclave; and the convening of the Lebanese National Assembly to discuss a 'charter of national conciliation' drafted

by the Tripartite Committee. The new plan presented Gen. Awn with a dilemma, since he had already, on previous occasions, rejected its principal proposals. At the same time, it had become clear that the 'war of liberation' was being fought in vain. The evacuation in early September of US diplomatic personnel and the closure of the US embassy in Beirut, in response to alleged threats of 'Christian terrorism', were widely regarded as signalling the end of Awn's hopes of achieving his aim though international intervention. Moreover, by September more than 800 people were reported to have been killed, and more than 2,000 injured, in the six months since the escalation of the hostilities. The Christian population (those who had not already fled Beirut), which had at first enthusiastically supported the 'war of liberation', was badly demoralized. On 22 September, following reports that the French Minister of Foreign Affairs had warned him that he could expect no international assistance if he refused to accept the Tripartite Arab Committee's latest proposals, Gen. Awn announced that he had abandoned the 'war of liberation' against Syria and agreed to the seven points of the Committee's peace plan for Lebanon. However, he subsequently vowed to continue the war by political means until the liberation was complete. For Syria, therefore, the problem remained of how to impose its authority on Christian Lebanese by means other than military force, since, ultimately, it had been international pressure which had forced Gen. Awn to abandon his campaign. On 25 September it was announced that the Lebanese National Assembly would convene in Saudi Arabia on 30 September to discuss political reforms aimed at ending the Lebanese conflict. The proposed reforms envisaged, among other things the transfer of executive powers from the Christian Maronite President to the Sunni Muslim Prime Minister; the ending of sectarianism in the army and the civil service; and an increase in the number of seats in the National Assembly, from 99 to 108.

In October 1989 the Lebanese National Assembly endorsed a charter of national reconciliation (the Ta'if agreement—for full details, see chapter on Lebanon, p. 781), which envisaged a continuing role for the Syrian armed forces in Lebanon by stipulating that they should assist in the implementation of a security plan incorporated in the agreement. The endorsement of the charter by the National Assembly was denounced by Gen. Awn as a betrayal of Lebanese sovereignty, since Christian deputies to the Lebanese National Assembly had reportedly assured Gen. Awn that they would permit concessions on the question of political reform in Lebanon only in exchange for a full withdrawal of Syrian forces.

Following a meeting of the newly-formed Lebanese Cabinet on 28 November 1989, it was announced that Gen. Awn had again been dismissed as Commander-in-Chief of the Lebanese army, and that Gen. Emile Lahoud had been appointed in his place. It was feared that Syrian forces would now launch an assault on Awn's stronghold in Baabda, east Beirut. Samir Geagea, the commander of the LF, announced that, in the event of such an assault, the LF would fight beside Gen. Awn, even though the Ta'if agreement had, to a large extent, been facilitated by the co-operation of Lebanon's Maronite leaders. Geagea's refusal to reject the Ta'if agreement led Gen. Awn to declare the LF to be an ally of Syria, and precipitated intense fighting between Awn's forces and the LF in early 1990 for control of the Christian enclave in Beirut.

In October 1990 thousands of Syrian troops were deployed to evict Gen. Awn from the presidential palace at Baabda, after President Hrawi of Lebanon had requested their assistance.

THE INTIFADA AND THE SHULTZ PLAN

In December 1987 a violent Palestinian uprising (*intifada*) against Israeli occupation of the West Bank and Gaza Strip, erupted in the Occupied Territories. At the end of February 1988, with the *intifada* showing no sign of moderating in intensity, the US Secretary of State, George Shultz, embarked on a tour of Middle Eastern capitals, including Damascus, in an attempt to solicit support for a new peace initiative. The Shultz Plan proposed an international peace conference and direct talks between Israel and each of its adversaries (excluding the PLO), and an interim period of limited autonomy for Palestinians in the Occupied Territories, pending a permanent negotiated settlement (for full details, see Documents on Palestine, p. 117). President Assad stopped short of rejecting the plan outright, but, in certain fundamental respects, it was impossible for any Arab leader to accept: it failed to recognize the right of the PLO to participate in peace negotiations or the right of the Palestinians to self-determination. Further talks between Shultz and Assad in April failed to reconcile the two sides.

At the beginning of June 1988 an extraordinary summit meeting of the Arab League was held in Algiers to discuss the *intifada* and the Arab–Israeli conflict in general. The final communiqué of the summit, endorsed by all 21 League members, including Syria, rendered the Shultz Plan effectively moribund by demanding the participation of the PLO in any future peace conference, endorsing the Palestinians' right to self-determination and urging the establishment of an independent Palestinian state in the West Bank.

Syria, alone of all the Arab states, refused to recognize the independent Palestinian State (proclaimed at the 19th session of the PNC in Algiers in November 1988), in accordance with its long-standing policy of preventing any other force in Lebanon from acquiring sufficient power to challenge Syrian interests there (for full details of the Declaration of Palestinian Independence, see Documents on Palestine, p. 117).

FOREIGN RELATIONS 1988–90

The cease-fire in the Iran–Iraq War, which came into force on 20 August 1988, created a number of problems for Syria. As the sole Arab supporter of Iran, Syria was already isolated, and the cessation of hostilities presented Iraq with an opportunity to settle old scores with its Baath rival, initially by attempting to thwart Syrian plans for domination over Lebanon. In September, Iraq was reportedly supplying arms and money to the Christian LF in Lebanon and, following the failure of the Lebanese National Assembly to elect a new President, Iraq proclaimed its support for the interim military administration appointed by President Gemayel, which was opposed by Syria. After March 1989, when the 'war of liberation' waged by the Lebanese army against Syrian forces in Lebanon began, Iraq became the principal supplier of arms to the Lebanese army. The expression of Syrian–Iraqi rivalry by proxy in Lebanon also complicated attempts by the Arab League to achieve a cease-fire there following the escalation of hostilities in March 1989, since it was feared that the withdrawal of Syrian forces from Lebanon might provoke a direct confrontation between Iraq and Syria.

Syria found itself on the same side as Iraq in a dispute with Turkey over the diversion of water from the Euphrates river in order to fill the reservoir supplying Turkey's newly-constructed Atatürk dam. In January 1990 Syria lodged a formal complaint with Turkey over the effects of the diversion on Syria's water and electricity supplies. However, the Turkish Government rejected the complaint, claiming that it had increased the supply of water to Iraq and Syria by 50% between November 1989 and January 1990 in order to make good the loss of water caused by the diversion in early 1990. The Syrian and Turkish Ministers of Foreign Affairs met in Turkey in June 1990 to discuss relations, in particular the sharing of the Euphrates waters.

SYRIA AND THE 1990–91 GULF CRISIS

In August 1990 Syria was eager to exploit the diplomatic opportunities arising from Iraq's invasion of Kuwait, and, in particular, to improve its relations with the USA and Egypt. In December 1989 Egypt and Syria had agreed to re-establish diplomatic relations after a rupture lasting almost 12 years, and in May 1990 President Mubarak of Egypt visited Syria, the first such visit by an Egyptian leader since 1977. The talks he held with President Assad reportedly concentrated on the faltering Middle East peace process and on means of achieving Arab unity to oppose the increased emigration of Soviet Jews to Israel, a process which had begun in 1989 and accelerated in early 1990.

Syria supported Egypt's efforts to co-ordinate Arab responses to Iraq's invasion of Kuwait, and agreed, at an emergency summit meeting of the Arab League, held in Cairo on 10 August 1990, to send troops to Saudi Arabia as part of a pan-Arab deterrent force supporting the US effort to deter an Iraqi invasion of Saudi Arabia. Despite widespread popular support among Syria's Palestinian population for the Iraqi President,

Saddam Hussain, Syria committed itself to the demand for an unconditional Iraqi withdrawal from Kuwait, and later in August the first contingent of Syrian troops was deployed in Saudi Arabia, joining a US-led multinational force. In September the US Secretary of State, James Baker, made a visit to Damascus, where he held talks with President Assad. The USA emphasized the importance of establishing a dialogue with Syria, in view of its opposition to Iraq's occupation of Kuwait. Syria, for its part, claimed that its troops were in Saudi Arabia purely for defensive purposes. In late September President Assad held discussions with President Rafsanjani in Iran. They reportedly agreed on the desirability of a regional security system, but were unable to elaborate a common position regarding the deployment of Western forces in the Gulf region, which Iran had strongly condemned.

In late October 1990 the objections of the United Kingdom prevented the EC from removing the economic sanctions which it had applied against Syria since 1986. In late November 1990, however, it became apparent that Syria's participation in the US-led multinational force was transforming its relations with the West, when diplomatic ties were restored between Syria and the United Kingdom. By the beginning of December it was estimated that some 20,000 Syrian troops had been deployed in Saudi Arabia.

In mid-January 1991 President Saddam Hussain of Iraq rejected a message from President Assad, who sought to persuade him that Iraq's occupation of Kuwait benefited Israel alone. Following attacks by Iraqi *Scud* missiles on Israel, Syria warned Israel not to become militarily involved in the Gulf crisis, and implied that it might be obliged to withdraw from the multinational force in the event of an Israeli attack on an Arab state. Subsequent statements, however, indicated that Syria would tolerate limited Israeli retaliation against Iraq for the missile attacks.

In early 1991 the overwhelming military defeat of Iraq by the US-led multinational force placed Syria in a stronger position with regard to virtually all of its major regional concerns. Syria consolidated the improvement in relations with Egypt, which had begun in December 1989, and laid the foundation for increased co-operation in matters of regional security. In early March 1991 the Ministers of Foreign Affairs of the members of the GCC (Saudi Arabia, Kuwait, Qatar, Bahrain, the UAE and Oman) met their Egyptian and Syrian counterparts in Damascus to discuss regional security. The formation of an Arab peace-keeping force, comprising mainly Egyptian and Syrian troops, was subsequently announced. In early May, however, Egypt announced its decision to withdraw all of its forces from the Gulf region within three months, thus casting doubt on the future of joint Syrian-Egyptian security arrangements.

Syria's decision to ally itself, in opposition to Iraq, with the Western powers and the so-called 'moderate' Arab states led the USA to realize that it could no longer seek to exclude it from any role in the resolution of the Arab–Israeli conflict. After the conclusion of hostilities with Iraq, US diplomacy focused on seeking to initiate negotiations between Israel, the Arab states, including Syria, and Palestinian representatives. The loss of credibility which the PLO had suffered as a result of its support for Iraq in the Gulf War left all the Arab states in a stronger position to dictate the final terms of a peace settlement with Israel, and was especially gratifying to Syria, which had long opposed Yasser Arafat's leadership.

In March 1991 the Israeli Prime Minister, Itzhak Shamir, indicated that Israel was prepared to take steps to reduce tension in the Middle East, and reaffirmed his commitment to the peace initiative which he had proposed in May 1989 (see chapter on Israel). However, he was dismissive of the prospects for peace with Syria. In late April, immediately prior to a visit to Damascus by the US Secretary of State, James Baker, the official Syrian newspaper, *Tishrin*, listed a number of Syrian conditions for a peace settlement with Israel. These included the unconditional withdrawal of Israel from the Occupied Territories; the safeguarding of Palestinian national rights; and a prominent role for the UN in any future peace conference. The Israeli Government had already made it clear that it regarded these conditions as unacceptable.

Despite attempts in early May 1991 by both the USA and the USSR to create sufficient common ground between Israel and Syria for peace negotiations to begin, Baker stated that there were still 'significant' differences between Israel and Syria regarding the holding of a Middle East peace conference. Syria remained adamant that talks with Israel should take place within the framework of an international conference, with the full participation of the UN, and that afterwards such a conference should reconvene at regular intervals. Israel remained opposed both to the participation of the UN and to the reconvening of the conference after an initial session had been held. The USA, for its part, excluded the possibility of holding a peace conference without Syrian participation.

In mid-July 1991 President Assad agreed for the first time (following a meeting with the US Secretary of State), to participate in direct negotiations with Israel at a regional peace conference, for which the terms of reference would be a comprehensive peace settlement based on UN Security Council Resolutions 242 and 338. By agreeing to participate on the terms proposed by the USA, Syria decisively increased the diplomatic pressure on Israel to do likewise. On 4 August the Israeli Cabinet formally agreed to attend a peace conference on the terms proposed by the USA and the USSR.

NEGOTIATIONS WITH ISRAEL

By late October 1993—following an initial, 'symbolic' session of the conference held in Madrid, Spain, in October 1991, and attended by Israeli, Syrian, Egyptian, Lebanese and Palestinian-Jordanian delegations—11 sessions of bilateral negotiations had been held between Israeli and Syrian delegations. In April 1992 they had proceeded to debate the precise meaning of UN Security Council Resolution 242, but the Israeli Government continued firmly to reject any exchange of occupied land—including the Golan Heights—in return for a peace settlement. In May, owing to the failure of bilateral negotiations to achieve any progress towards a peace settlement, Syria and Lebanon refused to attend multilateral negotiations, convened in Belgium, Austria, Canada and Japan, to discuss, among other issues, water resources and the question of Palestinian refugees. In the aftermath of the further disintegration of the USSR, which took place in December 1991, and the consequent erosion of its position as a potential counterfoil to the USA's Middle Eastern policies, Syria remained obliged actively to support and participate in the US peace initiative. With regard to other regional issues, however, the Syrian Government appeared determined not to simply acquiesce in the interests of the USA, announcing, in mid-April 1992, that it would continue to maintain air links with Libya, in defiance of the sanctions which the UN had imposed on that country (see chapter on Libya). In late April, in an attempt to allay suspicions of its Middle Eastern policies, the US Administration formally assured the Syrian Government that it had no hostile intentions towards it.

The formation, in mid-July 1992, of a new Israeli coalition Government, in which the Labour Party was the dominant element, aroused fears in Syria that any improvement in such a government's relations with the USA might increase the pressure on Syria to make disadvantageous concessions in the ongoing Middle Eastern peace process. The sixth round of bilateral negotiations between Israeli and Syrian delegations, which commenced on 24 September in Washington, DC, and lasted for a month, seemed at times to be close to achieving real progress on the issue of the Israeli-occupied Golan Heights. The new Israeli Government was reported to have indicated its willingness to consider some form of compromise, although there was no sign that it was prepared to meet Syria's minimum demand: Israel's full and unconditional compliance with UN Security Council Resolution 242, which requires, among other things, the withdrawal of Israeli armed forces from territories occupied in 1967.

Initially, the Declaration of Principles on Palestinian Self-Rule in the Occupied Territories (see Documents on Palestine, p. 120), signed by Israel and the PLO on 13 September 1993, drew a guarded response from Syria. Subsequently, however, President Assad indicated that he had serious reservations about the agreement, and that he regarded the secret negotiations between Israel and the PLO which had led to it as having weakened the united Arab position in the ongoing peace process with Israel. It appeared that Syria would not actively oppose the agreement, but there was no sign that it would cease to

support those Palestinian factions, such as the Damascus-based Popular Front for the Liberation of Palestine—General Command (PFLP—GC), which had vowed to do so. Syria was reported to fear that Israel might now view the terms of the Declaration of Principles concluded with the PLO as a model for an agreement with Syria on the Golan Heights (i.e. the exchange of only a partial withdrawal of Israeli armed forces from the Golan Heights for a comprehensive peace settlement).

In January 1994 Syria agreed to resume bilateral negotiations with Israel, claiming that it had secured a commitment from Jordan to delay the finalization of any agreement with Israel until Lebanon and Syria had negotiated their own agreements with Israel. On 16 January President Assad met with the US President Clinton for talks in Geneva aimed at giving fresh momentum to the negotiations. The Israeli Prime Minister, Itzhak Rabin, responded by announcing that a referendum would have to be held in Israel on the issue of the withdrawal from the Golan Heights; Syrian Minister of Foreign Affairs, Farouk ash-Shara', claimed that this would contravene international law. Talks between the two countries continued in Washington, DC, on 24 January, but were temporarily suspended on 27 February following the murder of some 30 Muslim worshippers at a mosque in Hebron on the West Bank by a right-wing Jewish extremist. Assad continued to reject proposals to hold secret talks with Israel and ignored Israeli demands to prevent attacks by Lebanese militia groups on the Israeli forces in south Lebanon. In late April Warren Christopher, the US Secretary of State, visited the Middle East in an apparent attempt to break the deadlock over the Golan Heights. Under the Israeli plan, to be phased over a period of eight years, Syria would initially be granted control over the four Druze settlements in the Golan Heights, the next stage would involve the closure of Israeli settlements in the Golan, and the final phase would be a full-scale withdrawal. In May, when an agreement was signed between Israel and the PLO providing for Palestinian self-rule in the Gaza Strip and Jericho, Syrian officials remained sceptical, arguing in favour of a united Arab approach to the peace settlement. Syria similarly expressed dissatisfaction at the agreement reached between Israel and Jordan in early June, accusing the two sides of placing obstacles in the way of reaching a comprehensive regional peace settlement.

In July and August 1994 Warren Christopher visited Damascus for further talks; following the August trip he acknowledged that major differences still remained between Israel and Syria, but claimed that a 'psychological barrier' had been broken through. The US envoy, Dennis Ross, met with Israeli and Syrian leaders in September as speculation grew about possible secret talks between the two countries. In Israel Itzhak Rabin faced growing public discontent over the prospect of withdrawal from the Golan Heights, and in late September a group of Labour party members submitted a proposal to the Knesset to table a law requiring the Government to secure an absolute majority in order to withdraw from the Golan. The Middle East peace process was again curtailed in mid-October following the events in the Gulf (see chapter on Kuwait). On 18 October a group of 300 Syrian Jews were allowed to emigrate to Israel in what was seen as a gesture of good-will on the part of the Syrian Government towards its Israeli neighbour. President Clinton attended the signing of the peace treaty between Israel and Jordan on 26 October, and on the following day he visited Syria—the first visit to the country by a US President for 20 years. Pressure on President Assad to reach an agreement with Israel over the Golan Heights increased following the Israeli-Jordanian treaty and it was reported that Assad might be considering Israel's proposal for a phased withdrawal but over a shorter period of time. In mid-March 1995—more than one year after their suspension—talks between Syria and Israel finally resumed. Initially they involved only the ambassador of each country to the USA, but were subsequently to include high-level Syrian and Israeli military delegations. In April the US special co-ordinator for the Middle East peace process visited the Middle East and indicated that the USA was trying to widen the scope of the talks taking place between Syria and Israel to include military officials. In mid-April, however, the Syrian Minister of Foreign Affairs stated that senior Syrian military officials would not participate because no agreement had been reached on security principles.

In late May 1995 Israel and Syria concluded a 'framework understanding on security arrangements', in order to facilitate the participation in the negotiations of the two countries' chiefs of staff. Israel stated publicly, for the first time, that it had proposed a four-year timetable for the withdrawal of its armed forces from the Golan Heights, but that Syria had insisted on one of 18 months. In June the then Israeli Minister of Foreign Affairs, Shimon Peres, referred to the Golan as 'Syrian territory' while the Israeli President, Ezer Weizman, clearly stated that Israel was negotiating on the basis of a full withdrawal to the international border. Opinion polls in Israel, however, suggested that the majority of the population was against full withdrawal, in particular Jewish settlers on the Golan itself. President Assad spoke publicly about the peace process for the first time in June and took the unprecedented step of actually referring to Israel by name. In late June the Israeli and Syrian chiefs of staff held talks in Washington, DC. Syria was reported to have proposed a means of demilitarization in the Golan Heights whereby Syria would demilitarize 10 km on its side of the border for every 6 km demilitarized by Israel. However, neither government was prepared to release further details of the negotiations. Syria's willingness to compromise on demilitarization failed to give a new impetus to the peace talks which had reportedly become blocked over Israel's insistence on retaining its early warning system on Mount Hermon. There were also differences over the delineation of the final border between the two countries, with Syria insisting on a return to the border that existed before the 1967 war, and Israel demanding a return to the pre-1948 border. Syria blamed Israel for the lack of progress, and many observers concluded that the Israeli Prime Minister Rabin had decided not to try to reach a full settlement with Syria until after the Israeli elections due to take place in 1996. In October President Assad stated that Syria was willing to accept Israeli air surveillance over the Golan Heights but not radar monitoring. Efforts by US Secretary of State, Warren Christopher, who met President Assad at the end of October, failed to achieve a resumption of peace talks. In November, on becoming Israeli Prime Minister after the assassination of Itzhak Rabin, Shimon Peres declared that peace talks with Syria would be his top priority. He immediately strengthened the Israeli negotiating team and called for the talks to be expanded to cover a range of political issues in addition to military questions. Syria welcomed Peres' initiative, and the two countries concluded a 10-point agreement to act as a framework for new negotiations. A new round of US-sponsored talks began at the end of December in Maryland, USA, and continued in January and February 1996. According to US officials some progress was made, and there were rumours that agreement had been reached in principle on border issues. US Secretary of State Christopher visited Damascus in February to assure President Assad that despite Peres' decision to call an early election in May, the Israeli Prime Minister remained determined to negotiate a settlement with Syria. The USA clearly hoped that a Labour victory in the elections would put Peres in a strong position to make concessions to Syria and that a preliminary agreement might be reached before the US presidential elections in November 1996.

A series of suicide bomb attacks in Israel in late February and early March 1996, in which more than 50 Israelis died, shattered support for the peace process in Israel. As part of the tough stance Prime Minister Peres adopted following the attacks, and against US advice, he broke off negotiations with Syria. Despite pressure from the USA and Egypt, President Assad refused to attend the 'summit of peacemakers' at Sharm esh-Sheikh, Egypt, which was convened in March in response to these attacks. Syria claimed that the summit meeting was simply an attempt to support the embattled Israeli Prime Minister and argued that the only effective means of saving the peace process was to reconvene the Madrid conference. After the summit Israel demanded that Syria should explicitly condemn terrorism before it would resume peace talks. Syria stated that it did condemn terrorism, but claimed that violent resistance to Israeli occupation was a legitimate right of the Palestinians. Syria also rejected demands by Israel and the USA that it should close down the offices in Damascus of radical Palestinian groups opposed to the peace process.

Negotiations received a further setback in April when Israel launched 'Operation Grapes of Wrath', a massive bombardment

of Lebanon in response to Hezbollah rocket attacks on Kiryat Shmona and other northern settlements (see below). Some analysts argued that this offensive confirmed Syrian interpretations of the objectives of Prime Minister Peres, that neutralizing Hezbollah would not only bring advantages in terms of security, but would also allow Israel to take a tougher stance in its negotiations with Syria on the Golan Heights and southern Lebanon. Having failed to achieve these objectives, when both Syria and Lebanon refused to yield to Israeli and US demands, Peres gave priority once again to negotiations with the Palestinians and it appeared that talks with Syria might be suspended for a long time.

During the approach to the Israeli elections at the end of May 1996, Shimon Peres told voters that he doubted whether a peace agreement could be reached with Syria without returning all of the Golan Heights and added that he had always been prepared to make territorial compromises over the Golan. His right-wing challenger, Likud leader Binyamin Netanyahu, in contrast, repeated his pledge that he would only negotiate with Syria on the understanding that Israel retained control over the Golan Heights. Netanyahu's unexpected victory in the elections and the subsequent formation of a right-wing Government in Israel was greeted with alarm in Syria which condemned the new administration as 'a cabinet of rabbis, racists and generals'. Addressing the Knesset in June, Prime Minister Netanyahu appealed for the reopening of unconditional peace talks with Arab states but rejected the land-for-peace policies of his Labour predecessor and told deputies that his emphasis would be on security. He insisted that retaining sovereignty over the Golan Heights must be the basis of any peace settlement with Syria. When the new Israeli Minister of Foreign Affairs, David Levy, suggested that Israel might meet Syria 'half-way' on the Golan problem, his statement was immediately disavowed by Netanyahu's spokesman, who insisted that only statements made by the Prime Minister reflected Israeli policy on these issues. The final communiqué of the emergency Arab League summit meeting held in Cairo at the end of June urged the new Israeli Government not to abandon the land-for-peace principle. It appealed for the removal of all Israeli settlements on the Golan Heights and its return to Syria. In response, however, the Israeli Prime Minister, and the Minister of Internal Security Avigdor Kahalani, stated that Israel should wait at least two generations before even discussing the possibility of giving up the Golan Heights, even if Syria agreed to normalize relations with Israel. In July Dennis Ross, the US special envoy to the Middle East, visited Damascus, and, after talks with President Assad, indicated that Syria still wanted to pursue peace talks with Israel. The French Minister of Foreign Affairs, Hervé de Charette, also visited Damascus as part of France's efforts to assume a more active role in the Middle East peace process. When Netanyahu visited Washington, DC, in July, he reiterated Israel's refusal to withdraw from Golan but stated that he was willing to resume talks with Syria without pre-conditions. His offer was rejected by the Syrian authorities which stated that renewed talks would only be possible if the new Israeli Government accepted the 'land-for-peace' principle. At the end of July a well-informed Israeli source predicted that Netanyahu would maintain an intransigent stance towards Syria and would strengthen and enlarge Jewish settlements on the Golan Heights. In exchange for peace, it was argued, the new Israeli Prime Minister would promise to persuade the USA to remove Syria from its list of countries which support terrorism, but only after Syria had disarmed Hezbollah militants in Lebanon. As these conditions were likely to be rejected by Syria, some influential members of Likud suggested that Israel should wait for a new and weaker regime in Syria that would be more amenable to Israeli demands.

In early August 1996, during a visit to Israel's 'security zone' in southern Lebanon, Netanyahu warned that further attacks by Hezbollah guerrillas might provoke Israeli reprisals against Syria. Tensions mounted as the Syrian Chief of Staff claimed that the military option was still open to Syria in its dispute with Israel, and intelligence sources reported the redeployment of large numbers of Syrian troops from Lebanon to new positions in Syria, possibly to reinforce the western defences of the capital, Damascus. An offer by Netanyahu to withdraw Israeli troops from southern Lebanon, on condition that Hezbollah forces were disarmed and that both Lebanon and Syria agreed to prevent them launching any new attacks on northern Israel, was rejected by President Assad. Such a move would have denied Syria the option of using Hezbollah to exert pressure on Israel while leaving Israel firmly in control of Golan. The Syrian President insisted that peace negotiations could only resume if Netanyahu's Government honoured earlier agreements and understandings reached with Itzhak Rabin and Shimon Peres. President Assad stated that, before his assassination, Prime Minister Rabin had given a commitment to the USA that Israel would withdraw from the whole of the Golan Heights. However, Netanyahu declared that he was under no obligation to abide by what he referred to as 'theoretical statements' made by his predecessor during the course of negotiations, and insisted that peace talks must be without prior conditions. At the end of December Syria blamed Israel for a bomb attack on a bus in Damascus, although most observers believed that responsibility for the attack lay elsewhere (see below). During the early part of 1997 the Israeli Government's determination to proceed with the controversial Jewish settlement at Har Homa in Arab East Jerusalem, and the collapse in negotiations between Israel and the Palestinian National Authority (PNA), further obstructed the Israeli-Syrian peace initiative. In February Israel announced that new Jewish settlements were to be constructed on the Golan, and in July withdrawal from the Golan was made conditional on approval by two-thirds of the Knesset. In April the Israeli press accused Syria of developing weapons of mass destruction, including missiles armed with lethal nerve gas capable of hitting targets inside Israel. The allegations were confirmed by the Israeli Minister of Defence, Itzhak Mordechai, but denied by Damascus. Nevertheless, during a visit to Paris in June Mordechai stated that he was keen to see peace talks with Syria resume, even if the two sides were not in agreement. However, in July Syria withdrew from the Middle East and North Africa economic summit as a result of Israel's inclusion. Syria also urged other Arab countries to boycott the summit in Doha, Qatar, which went ahead, as scheduled, in November, but without the participation of leading Arab states. In August President Assad invited a delegation of Israeli Arabs, including members of the Knesset, to Damascus, only the second visit of its kind. Assad told them that he thought a withdrawal from the Golan was unlikely while Netanyahu remained Prime Minister. Meanwhile, Western military analysts reported that Syria had deployed new 200T-55MV main battle tanks, supplied by Ukraine, in forward positions near the Golan Heights. Nevertheless, there were reports in the Israeli press that Israeli, Syrian and US officials had begun preliminary talks in Washington, DC, in November and December, in an attempt to restart negotiations between the two countries.

Syria was sceptical that the US-brokered Wye River Memorandum (see Documents on Palestine, p. 134), signed in October 1998 by Israel and the PNA, would increase the likelihood of a lasting peace in the Middle East; President Assad reiterated demands for a resumption of 'land-for-peace' negotiations. In early November the Syrian-based militant Islamic Jihad claimed responsibility for a bomb attack in Jerusalem, and threatened further attacks in opposition to the Wye agreement. In mid-February 1999 Syria apparently rejected an Israeli proposal to resume negotiations, stating its intention to postpone talks until after the Israeli general election, scheduled for May of that year. In early 1999 Israel urged the Syrian Government to exert its influence to end Hezbollah attacks on Israeli forces in southern Lebanon, and to curb the group's activities during the Israeli election campaign. Following the defeat of Binyamin Netanyahu and his Likud party on 17 May, Israel's new Prime Minister, Ehud Barak (of the Labour-led One Israel coalition), reportedly proposed a five-phase plan to conclude a peace with Syria and to effect an Israeli withdrawal from southern Lebanon. Syria responded by demanding that Barak should uphold his pre-election pledge to withdraw from Lebanon within one year of his election and to resume peace negotiations from their point of deadlock in 1996. However, Syria welcomed Barak's success at the Israeli elections, and in late June 1999, during an interview for the London-based *Al-Hayat* newspaper, President Assad was reported to have described Barak as a 'strong and sincere' man with a 'real desire' to achieve peace with Syria. Similarly complimentary remarks made by Barak about the

Syrian leader led many countries involved in the Middle East peace process, including the USA, to express hope for a breakthrough in Israeli–Syrian relations and a prompt resumption of peace negotiations between the two countries. However, Syria strongly condemned air strikes carried out by Israel on central and southern Lebanon at the end of June, which were alleged to have been wholly attributable to the outgoing Netanyahu administration (see chapter on Lebanon). At the inauguration of the new Israeli Cabinet on 6 July, Barak promised to negotiate a bilateral peace with Syria, based on UN Security Council Resolutions 242 and 338, thus signalling to Damascus (in the opinion of many observers) his intention to return most of the occupied Golan Heights to Syria in exchange for peace and normalized relations. In mid-July, prior to a meeting in Washington, DC, between Barak and US President Clinton, Syria was reported to have warned dissidents of Palestinian organizations based in Damascus to cease their military operations against Israel and was believed to have temporarily disrupted the supply of weapons from Iran to Hezbollah guerrillas in southern Lebanon, in order to demonstrate to Israel its commitment to a resumption of peace talks. Moreover, on 20 July Syria reported a 'cease-fire' with Israel, although difficulties between the two countries remained; most notably there was disagreement over the point at which previous peace negotiations had been suspended. Nevertheless, in late August the Israeli Prime Minister expressed his certainty that a formula for resuming talks with Syria would soon be found. On 4 September, the day that Israel and the Palestinian authorities signed the 'Wye Two' (see Documents on Palestine, p. 136) agreement (detailing a revised timetable for the outstanding provisions of the original Wye River Memorandum—see chapter on Israel), the US Secretary of State, Madeleine Albright, held talks with President Assad in Damascus. However, although US officials described the meeting as 'encouraging in laying the groundwork for new Israeli-Syrian talks', nothing concrete was agreed regarding the resumption of peace talks with Israel. On 22 September Secretary of State Albright held discussions with Syria's Minister of Foreign Affairs, Farouk ash-Shara', in New York, USA; ash-Shara' described the meeting as 'fruitful and useful'. US President Clinton met with ash-Shara' on 29 September in Washington, DC, in a renewed attempt to break the deadlock between Israel and Syria, although the talks were apparently inconclusive. Meanwhile, at the end of the month Albright angered Israelis when, for the first time, she openly declared US support for Syrian demands for a complete Israeli withdrawal from the Golan Heights.

SYRIAN DOMINANCE IN LEBANON

By aligning itself with the Western powers and the moderate Arab states against Iraq in August 1990, Syria had obtained a free rein to consolidate its interests in Lebanon. In October 1990 it had acted to suppress the revolt led by Gen. Michel Awn (see above) as the first step towards the implementation of the Ta'if agreement. The Ta'if agreement stipulated a formal role for Syrian forces in Lebanon, assigning to them the responsibility for maintaining security there until the various Lebanese militias had been disbanded and the Lebanese army could itself assume that role. The implementation of the Ta'if agreement accelerated in the aftermath of Iraq's military defeat by the US-led multinational force in February 1991, and it culminated in the signing, in May, of a treaty of 'fraternity, co-operation and co-ordination' between Syria and Lebanon.

In late May 1992 there was international concern at the escalating tension between Israel and Syria, as expressed in southern Lebanon. Syria feared that the USA might permit Israel to undermine, through military action, the implementation of the Ta'if agreement. The possibility of direct conflict between Syrian and Israeli armed forces arose from Syria's decision to allow Hezbollah fighters to continue to mount attacks on northern Israeli settlements, in the belief that only by continued coercion would Israel withdraw from occupied Arab territories. It is widely recognized that Syria has used its ability to control the supply of Iranian arms to Hezbollah in order to raise, or reduce, pressure on the Israeli Government in the context of the Middle East peace process. By the same token, the Israeli Government cited attacks by Hezbollah fighters in justification of its refusal to comply with UN Security Council Resolution 425 and withdraw its armed forces from the southern Lebanese 'buffer zone'. In July 1993 Israeli armed forces launched their most intense offensive against the positions of Hezbollah and other guerrilla factions in southern Lebanon since 'Operation Peace for Galilee' in 1982. Israeli aircraft were also reported to have attacked the positions of Syrian armed forces in the Beka'a valley. Many civilians were killed and more than a quarter of a million Lebanese were forced to flee from their homes. The Israeli Prime Minister, defying strong criticism from the UN and the EU, admitted that the operation, code-named 'Operation Accountability', had been deliberately intended to embarrass the Lebanese and Syrian Governments and to persuade them to stop their territory being used against Israel and Israel's so-called 'security zone' in southern Lebanon. Mediation by the USA and Syria produced an informal 'understanding' between Israel and Hezbollah under which fighting was to be confined to the southern 'security zone'. However, Hezbollah continued to strike at Israeli targets, provoking Israeli reprisals. In February 1994 four Israeli soldiers were killed by Hezbollah fighters in the 'buffer zone'. In May the leader of an Islamic resistance group was abducted by Israeli forces, and on 21 June, following an ambush by the Hezbollah in which three Israeli soldiers were killed, the Israeli forces conducted air raids over the 'buffer zone' and in the Beka'a valley close to the Syrian border. In October, after Israel attacked the southern Lebanese village of Nabatiyah killing seven civilians, Hezbollah launched rocket attacks on targets in northern and western Israel. In March 1995, after Hezbollah leader, Rida Yasin was assassinated by Israeli forces, fierce fighting erupted as Hezbollah fighters attacked Israeli military targets in the 'security zone' and fired rockets into Galilee. After the death of three children in an Israeli attack on Nabatiyah in July Hezbollah retaliated with further rocket attacks on settlements in northern Israel. In August Israel launched air and artillery attacks against Hezbollah strongholds during which heavy casualties were reported. Israel continued to blame Syria for not restraining Hezbollah.

In April 1996, little more than a month before the Israeli general elections, there was a new escalation in the conflict in southern Lebanon. After Hezbollah fighters fired rockets into northern Israel wounding 36 people, and killed an Israeli soldier in the security zone, Prime Minister Peres launched 'Operation Grapes of Wrath' during which, for almost two weeks, Israel attacked targets in the southern part of the 'security zone', the Beka'a valley and for the first time in 14 years the southern suburbs of Beirut. The massive bombardment resulted in many civilian casualties, and in the most serious incident more than 100 Lebanese civilians, who had taken refuge in the UN base at Qana, near Tyre, were killed when the base was hit by Israeli artillery fire. The Israeli air and artillery attacks provoked another exodus of refugees from southern Lebanon. However the Israeli bombardment failed to stop Hezbollah's rocket attacks on targets in northern Israel, and neither the Lebanese nor the Syrian Government yielded to Israeli and US demands. In the face of international pressure to bring about a cease-fire, the US Secretary of State, Warren Christopher, turned to Syria (as the main power broker in Lebanon) to resolve the crisis. After a week of shuttle diplomacy by Secretary of State Christopher between Jerusalem, Damascus and Beirut, a cease-fire agreement was reached, under which Hezbollah agreed to end its rocket attacks on settlements in northern Israel, but could still attack Israeli military targets inside the 'security zone'. Less than a month after the accord, Syria accused Israel of violating the cease-fire agreement after a Lebanese civilian was wounded in clashes between Israeli forces and Hezbollah in the security zone. Under the agreement both sides had pledged not to attack civilians but Israel claimed once again that Hezbollah units had sheltered in civilian areas. In late July 1996 representatives from Syria, Lebanon, Israel, the USA and France attended the first meeting of the international committee set up to monitor the cease-fire agreement.

In late March 1992 some Syrian armed forces began to withdraw from Beirut, in preparation for the withdrawal of all Syrian armed forces to eastern Lebanon by September 1992 (in accordance with the Ta'if agreement). However, Syrian influence on Lebanese internal affairs remained pervasive and was regarded by some observers as having contributed to the resig-

nation of the Lebanese Government on 6 May. The former Lebanese Prime Minister, Omar Karami, alleged that, had it not been for Lebanon's close relations with Syria, Western economic aid to Lebanon would have been more substantial, and the economic crisis that had led to his Government's resignation less severe.

The decision of the new Lebanese Government to hold elections to the National Assembly in August and September 1992, before the redeployment of Syrian armed forces to eastern Lebanon had taken place, attracted strong criticism both in Lebanon and abroad. Lebanese Maronites and other Christian groups, and Western governments argued that the continued presence of the Syrian forces would prejudice the outcome of the elections. However, the Lebanese Government argued that its own army was still unable to guarantee the country's security in the absence of the Syrian armed forces, and that the timetable for elections, as stipulated by the Ta'if agreement, should be observed. Syria claimed that the continued presence of its forces did not contravene the Ta'if agreement, which allowed for them to remain to assist the Lebanese Government until constitutional reforms had been fully implemented. There was no doubt, however, that the electoral process had been severely compromised in the eyes of Christian, especially Maronite, Lebanese. In many Maronite constituencies the participation of the electorate was very low, although there was not—as some Maronite leaders urged—a total boycott. Other Maronite leaders adopted a more pragmatic approach, acknowledging Syria's domination of Lebanon as a *fait accompli*. However, in 1999 (ten years after the Ta'if agreement), some 30,000 Syrian troops remained deployed in Lebanon. No decision of any importance is taken by the Lebanese Government without the agreement of the Syrian regime, resulting in regular visits by Lebanese officials to Damascus. Some analysts maintained that in order to ensure a key role for Syria in the Middle East, President Assad had strengthened his grip on Lebanon. To that end the Syrian President had, in October 1995, given his support to the Lebanese Prime Minister's proposal to extend Lebanese President Hrawi's term of office by another three years, a change subsequently approved by 110 of the 128 Lebanese deputies in the National Assembly. Parliamentary elections held in mid-1996 produced an Assembly dominated by pro-Syrian supporters of Prime Minister Hariri. The largely Christian opposition parties had little success, and there were allegations of vote-rigging. During the elections Syria redeployed an estimated 10,000–12,000 of its troops from Lebanon to more secure positions in Syria amidst speculation that Damascus feared Israeli attacks. In September the Commander of the Israeli-backed SLA, Gen. Antoine Lahad, suggested that Israel might carry out a unilateral withdrawal from southern Lebanon but would hold Syria responsible for any new attacks on northern Israel. Shortly before, the Israeli Prime Minister had put forward a similar proposal which had been immediately rejected by Syria (see above). In mid-December a bus carrying Syrian workers was attacked in a predominantly Christian area prompting swift action by the Lebanese authorities who arrested some 50 government opponents, (most of whom were subsequently released). In response to the attack the Syrian Vice-President, Abd al-Halim Khaddam, accused Lebanese opposition leaders of conspiring with Israel against Syria.

During his visit to Lebanon in May 1997 Pope John Paul II called for the reconciliation of Christians and Muslims and for Lebanon's complete independence, voicing regret at the presence of non-Lebanese forces on Lebanese territory, but refraining from mentioning Syria or Israel. Lebanon's Constitutional Court overturned the results of the 1996 elections to four parliamentary seats, and accused Syria of intimidating voters. The defeated Maronite Christian candidate for one of the seats, Mikhael Daher, claimed that, at the request of President Hrawi, Syrian intelligence officers had arrested and abused voters in order to coerce them to vote for his opponent, the Minister of Culture and Higher Education, Fawzi Habish. The 1996 elections were described as the most corrupt in Lebanese history by the independent monitoring group, the Lebanese Association for the Democracy of Elections. Also in 1997 the Washington-based Human Rights Watch accused Syrian forces of seizing over 100 Lebanese and Palestinians in Lebanon and holding them in Syria. It called on the Lebanese President and Prime Minister publicly to condemn such abuses of human rights and for Syrian forces to be held accountable for crimes that they committed in Lebanon. In August fighting again escalated in southern Lebanon between Syrian-backed Hezbollah guerrillas and Israeli troops supporting the SLA. The rising death toll among Israeli soldiers in Israel's self-declared 'security zone' led to renewed calls within Israel for a unilateral withdrawal of its forces from Lebanon. Syrian support for Hezbollah in southern Lebanon remained part of a strategy by Damascus to put pressure on Israel to withdraw from the Golan Heights. In August the head of the Maronite Church, Cardinal Nasrallah Pierre Sfeir, an outspoken critic of the Syrian presence in Lebanon, stated that Damascus was interfering in every aspect of life and undermining the country's right to self-determination. However, the Lebanese Prime Minister, Rafik Hariri, repeated that the Syrian presence was necessary to guarantee domestic security and was in accordance with the 1989 Ta'if agreement. In September the US Secretary of State, Madeleine Albright, visited Beirut and pledged to support a 'free and democratic sovereign Lebanon', a comment which was interpreted as a reference to Syria's control over the country's internal and external affairs.

At the beginning of April 1998 the Lebanese and Syrian Governments rejected an offer by Israel to withdraw from its 'security zone' in southern Lebanon on the provision that there were adequate security guarantees for its northern border. Damascus dismissed the proposal as propaganda designed by the Netanyahu Government to improve Israel's image in the West. At the same time, Israel's request for direct negotiations with Lebanon concerning security issues in southern Lebanon led Damascus to suspect that the Israeli authorities were seeking to undermine Syrian dominance in Lebanon. In mid-October 1998 Syrian influence in Lebanon was evident in the selection of Gen. Emile Lahoud as the new Lebanese President, and the subsequent appointment of a Lebanese government of national unity (for further details, see chapter on Lebanon). In late December Lebanon and Syria signed a bilateral trade agreement which prepared for the customs union between the two countries, which entered into effect on 1 January 1999.

FOREIGN RELATIONS SINCE 1995

Throughout 1995 Syria's relations with the USA were dominated by the US-sponsored peace negotiations with Israel (see above), with the Syrian official press praising the USA for its 'remarkable efforts' to achieve a just and comprehensive peace in the region. However, in August, after reports that the Damascus office of Hamas had threatened to attack US interests, the USA urged Syria to strive to prevent Syrian-based Palestinian groups opposed to the peace process from carrying out any such attack. Syria denied that any of these groups was planning to carry out 'military acts' against US targets. The expulsion of the Palestinian 'rejectionist' groups from its territory is believed to be the key prerequisite for Syria's removal from the US list of countries which sponsor terrorism. In early 1996 relations between the two countries deteriorated. The USA blamed the collapse of Israeli-Syrian peace negotiations on President Assad's intransigence, and the US Department of State became increasingly exasperated with the Syrian regime as it attempted to broker a cease-fire in southern Lebanon. US officials began to question the priority given to Syria in US Middle East diplomacy, remarking that since 1993 Secretary of State Christopher had made 24 visits to Damascus, compared with six to Paris, two to Mexico and only one to China. There were demands from some members of both the US Senate and the US Congress to increase the pressure on Syria and a suggestion that, in the light of its continued support for terrorists and its intransigence in the peace negotiations, new sanctions might be imposed on it. Prospects for Middle East peace declined dramatically after the right-wing victory in the Israeli elections in May 1996 and Syria appealed to the USA to abandon its pro-Israeli bias in favour of a more balanced approach towards the peace process. However, although the US special envoy visited Syria in July the Syrian peace track remained deadlocked. In September 1997, during her first visit to the region, the US Secretary of State, Madeleine Albright, held talks in Damascus with President Assad. In mid-December the US Assistant Secretary of State for Near East and South Asian Affairs, Martin Indyk,

also met the Syrian leader. By the end of the year Washington appeared to have persuaded Syria to begin talks with Israel towards establishing a basis for the resumption of bilateral negotiations. In November 1997 efforts by Damascus to combat drugs production and trafficking in Lebanon's Beka'a valley (largely controlled by the Syrian army) were rewarded when President Clinton removed both Lebanon and Syria from the list of states allegedly producing or trafficking in illegal drugs. However, as long as Syria continues to support Hezbollah in southern Lebanon, it is likely to remain on the US list of countries which sponsor terrorism. Efforts by the Syrian Government to involve the EU in the peace negotiations with Israel, in order to counterbalance the USA's role, met with little success, although Syria was invited to participate in the first Euro-Mediterranean conference held in Barcelona, Spain, in November 1995. During the conference Syria's Minister of Foreign Affairs, Farouk ash-Shara', clashed with his Israeli counterpart over the Nuclear Non-proliferation Treaty. Syria continued to press for greater EU involvement in the Middle East peace process and in particular welcomed France's efforts to bring about a cease-fire in Lebanon after renewed fighting between Hezbollah and Israeli forces in April 1996, although it recognized that French influence was likely to be modest compared with that of the USA. The French foreign minister visited Damascus in July and his Syrian counterpart made several visits to Paris. In October 1996 President Chirac visited Damascus and announced the rescheduling of some 1,900m. French francs of debt arrears owed to France. In late 1997 Israeli officials visited Paris for talks with the French Government regarding the resumption of peace negotiations with Syria, and in November 1997 and January 1998 the French Minister of Foreign Affairs, Hubert Védrine, held talks in Damascus. In mid-July 1998 President Assad held discussions with President Chirac in France—the Syrian leader's first state visit outside the Middle East (with the exception of US-Syrian meetings in Switzerland) since 1976. The French President expressed support for Syria's rejection of Israel's recent proposal for withdrawal from southern Lebanon. In mid-July 1999 Spain became the first European country to sign a loan agreement with Syria, covering credit facilities worth some $55m. In November 1997 Jacques Poos, the Minister of Foreign Affairs of Luxembourg and leader of an EU mission to the Middle East, met President Assad in Damascus and indicated that the EU supported Syria's demand that Israel withdraw completely from the Golan Heights. Following a visit to Damascus in October 1997 by Manuel Marín, a Vice-President of the European Commission, Syria indicated that it was prepared to enter negotiations towards establishing a free-trade association agreement with the EU.

At the end of 1997 Russia also joined diplomatic efforts to restart peace negotiations between Syria and Israel. The Russian Deputy Minister of Foreign Affairs, Viktor Posvalyuk, held talks in Damascus and Jerusalem in December 1997, but angered Israelis by supporting Syria's position that negotiations should begin at the point where they were broken off in February 1996 (see above). There were visits to Damascus by a number of senior Russian officials in early 1998, and the Syrian-Russian committee, which had been set up in 1993 to co-ordinate bilateral relations, held its first meeting. Amid speculation that the strong links that had existed between Damascus and Moscow during the Soviet era were being re-established, in mid-November 1998 Syria and Russia signed a military agreement whereby Russia would assist in the modernization of Syria's defence systems and provide training to military personnel. However, in late January 1999 Syria denied Western reports that it was receiving military assistance from Russia in the development of chemical weapons. On 5–6 July President Assad visited Moscow at the head of a high-level Syrian delegation—his first visit to the Russian capital since the collapse of the USSR. (The Syrian leader had postponed a scheduled visit to Moscow in April, apparently owing to the presence in the city of the then Israeli Minister of Foreign Affairs, Ariel Sharon.) Assad held talks with President Boris Yeltsin and the then Russian premier, Sergei Stepashin, which were reported to be successful: topics discussed included the Middle East peace process, military and technical co-operation between the two countries and the issue of Syria's debt to Russia (estimated to be more than US $10,000m.). Russia reiterated its support for Syria's demand for a complete Israeli withdrawal from the Golan Heights and southern Lebanon, and that Israeli-Syrian peace negotiations be resumed from the point at which they stalled in 1996. There was, however, no confirmation of reports that a major arms deal had been concluded whereby Russia had agreed to supply Syria with $2,000m.-worth of defensive weaponry.

Following a meeting of the Syrian, Iranian and Turkish Ministers of Foreign Affairs in Teheran in September 1995, a statement was issued reaffirming their commitment to the territorial integrity of Iraq and warning against foreign interference in Iraq's internal affairs. Although Syria has become a centre for elements of the Iraqi opposition, the Syrian regime is concerned that the disintegration of Iraq could set a dangerous precedent for its own minorities, and also fears that Saddam Hussain might be replaced by a pro-Western regime. In November 1995 the Syrian Minister of Foreign Affairs accused Israel of trying to destroy Iraq by plotting its division into Kurdish, Sunni and Shi'a regions. It was alleged that President Assad had conducted a clandestine meeting with the Iraqi President, Saddam Hussain, on the Syrian-Iraqi border in May 1996 to discuss common issues including Turkey's military agreement with Israel, although some sources maintained that the meeting was only attended by their representatives. In May 1997 an economic delegation from Syria, including the Chairman of the Federation of Syrian Chambers of Commerce, visited Baghdad for talks with the Iraqi trade minister, Muhammad Mahdi Salih, about securing contracts for Syrian exports to Iraq following implementation of the UN 'oil-for-food' agreement. A high-level Iraqi trade delegation visited Damascus the following month. Commenting on the visit, the Syrian Vice-President, Abd al-Halim Khaddam, stated that his Government's decision to reopen trade links with Baghdad, after an interlude of 18 years, was largely due to concern that Turkey was seeking to monopolize trade with Iraq in order to impose its economic domination over the country. However, it seemed more likely that the decision was influenced by Syria's concern about Turkey's military co-operation with Israel and Ankara's military operations against the Kurdistan Workers' Party (PKK) in northern Iraq. On 2 June border crossings between the two countries were reopened, and each country closed down radio stations that had been broadcasting propaganda against the other since the late 1970s. By September 1997 several large contracts for Syrian exports of food and medical supplies to Iraq had been signed, and it was agreed that the Syrian ports of Tartous and Latakia would receive goods in transit for Iraq. Baghdad was also reported to have requested that Syria reopen the oil pipeline linking Iraq's Kirkuk oilfields to the Mediterranean terminal of Banias in Syria, which had been closed since 1982. At the end of 1997, as tension mounted between Baghdad and Washington, the Iraqi Deputy Prime Minister, Tareq Aziz, was received in Damascus by the Syrian Minister of Foreign Affairs, Farouk ash-Shara', the first public meeting between senior ministers of the two countries for 17 years. After the meeting there were reports that ash-Shara' had gone to Riyadh with a letter from President Assad to King Fahd of Saudi Arabia, setting out proposals for reintegrating Iraq into the Arab fold. In early February 1998, when the US sought regional support for renewed air strikes against Iraq, Syria strongly opposed such action. To emphasize this point, President Assad received the Iraqi Minister of Foreign Affairs in Damascus on 10 February, the first time that he had met publicly with a senior Iraqi official since the early 1980s. At the end of March 1998 the Syrian Minister of Health, Iyad ash-Shatti, became the first Syrian minister to visit Baghdad for almost 20 years. In September Iraq, Iran and Syria agreed to establish a joint forum to co-ordinate their foreign policy (particularly towards the USA). In the same month Syria and Iraq reopened commercial centres in one another's capitals, and in April 1999 a series of bilateral deals were reportedly signed, as part of the process of normalizing relations (which began in 1997). The Syrian Government expressed strong criticism regarding air strikes carried out by the USA and UK against Iraq in late 1998 and early 1999.

Relations with Iran deteriorated in late 1995 after the Syrian regime voiced support for the UAE in its dispute with Teheran over Abu Musa and the Greater and Lesser Tunb islands. In

protest, Hassan Habibi, an Iranian Vice-President, and the Iranian Minister of Foreign Affairs, cancelled a visit to Damascus, and there were attacks on Syria in the Iranian press. Since Iraq's invasion of Kuwait in 1990 Syria has continued to strengthen its links with Saudi Arabia and the Gulf states, while assuring Teheran that it is still committed to maintaining the 'strategic' relationship with Iran. There were signs of an improvement in Syrian-Iranian relations in February 1996 when a joint committee to co-ordinate bilateral co-operation was set up. A little later, when Syria expressed support for the Bahrain Government, it was careful to avoid any reference to alleged Iranian involvement in the unrest on Abu Musa. In August 1996 a Syrian delegation, led by the Prime Minister, met senior Iranian government officials in Teheran. During this visit, President Rafsanjani called for closer links between the two countries to confront the threat posed by the USA and Israel. In July 1997 President Assad visited Teheran. However, there were reports that Syrian interest in a triple alliance with Iran and Iraq, to counter growing military co-operation between Israel, Turkey and the USA, had not met with a positive response from Iranian officials, owing to continuing tensions between Iran and Iraq. Nevertheless, in September 1998 Iran, Iraq and Syria agreed to the formation of a joint forum to co-ordinate their foreign policy (see above).

Syria's relations with Turkey remained strained, owing to continuing disagreements over cross-border water supplies, and over the Kurds. Although the two countries have a provisional accord for sharing water from the Euphrates river, whereby Turkey allows a flow of 500 cu m/second of water into Syria, they have failed to conclude a permanent accord, and both Syria and Iraq are concerned that new dam projects in Turkey, especially the Birecik dam, will reduce the volume of Euphrates water downstream. Both Syria and Iraq have also blamed Turkey for increased pollution levels in the water they receive. At the end of 1995 Syria retaliated by announcing that it would reduce the water supply to Turkey from the Orontes river. Syria also used its support for the rebel PKK to put pressure on its powerful neighbour. The PKK is known to have bases in the Syrian-controlled Beka'a valley in Lebanon, and at the end of 1995 Kurdish fighters crossed the Turkish border from Syria and launched attacks on Turkish military targets. In February 1996 Turkey accused the Syrian Government of giving refuge to the PKK leader, Abdullah Ocalan, and demanded his extradition to Turkey. Relations between the two countries deteriorated sharply in April 1996 after it was revealed that Turkey and Israel had signed a military accord earlier in the year allowing the Israeli air force to use Turkish military airfields for training purposes. The Syrian press denounced the treaty, declaring that Israel had extended its 'security zone' to the borders of Iran and warning that Turkey should respect its historical links with the Arab world. In mid-April the Turkish Prime Minister, Mesut Yılmaz, travelled to the frontier province of Hatay, the former *sanjak* of Alexandretta ceded by France to Turkey in 1939 and still claimed by Syria, where he urged President Assad to stop criticizing the military accord with Israel and Turkey's control over the regulation of Euphrates water. Two days later, the Turkish Deputy Prime Minister, Nahib Mentese, intensified the verbal conflict by accusing the Syrian Baathists of never abandoning their ambitions to create a 'Greater Syria' and promising to retaliate with force if they ever tried to reconquer the province of Hatay. He also denounced Syria's support for the PKK. Syria interpreted these threats as part of an Israeli-US attempt to pressurize the Syrian regime into being more accommodating and conceding Israeli demands in the peace negotiations. The crisis between Syria and Turkey was aggravated at the end of April when Turkey temporarily closed the flood gates of the Euphrates dams for 'technical reasons', resulting in water rationing in Damascus on the eve of the festival of Id al-Adha and provoking widespread concern in the Arab world. When a series of small bombs exploded in Syrian cities in May there was speculation that the Turkish Government might be responsible and that they were in response to Syria's support for the PKK separatist guerrillas, particularly as the apartment of the PKK leader in Damascus had reportedly been a target. Although the Syrian Government denied that the bombings had taken place, it was reported to have arrested several hundred ethnic Turks in retaliation. The Turkish media blamed Syria's banned Muslim Brotherhood for the explosions. Some commentators argued that the military accord between Turkey and Israel was part of an emerging strategic partnership in the Middle East (to replace the Middle East peace process) involving an alliance of Turkey, the USA, Israel and Jordan in order to form a military front against those states in the region perceived as enemies of the West. The new partnership would leave Syria, increasingly vilified by the USA for its intransigence in the peace negotiations, dangerously isolated. After Turkey's first Islamist-led Government took office in July 1996, the Syrian ambassador to Ankara was one of the first envoys to visit the new Turkish Prime Minister, Necmettin Erbakan. Whilst in opposition, Erbakan's Refah party had strongly criticized Turkey's military accord with Israel and had urged closer relations with neighbouring Arab and Muslim countries. Once in government, Erbakan did indicate his desire for a political solution to the dispute with the PKK but pressure from the military caused him to revert to the official line, condemning PKK terrorism. In addition, military co-operation with Israel was expanded, again at the insistence of the military, which regarded the accord as a means of exerting pressure on Syria for its support of the PKK. Relations with Turkey deteriorated once again in May 1997, when it launched another military operation against PKK bases in northern Iraq. It was reported that Syria mobilized troops on its border with Turkey and called on Ankara to withdraw its forces from Iraq. Also in May the Turkish authorities accused Syria of helping Kurdish dissidents to set up television transmitters along the border with Turkey so that Kurds living in south-eastern Anatolia could receive programmes broadcast by the pro-PKK Kurdish-language channel, MED-TV. During a meeting of the Organization of the Islamic Conference in Teheran in early December, at which Turkey faced implicit criticism for its military co-operation with Israel, the Syrian Minister of Foreign Affairs, Farouk ash-Shara', stated that Ankara had agreed not to renew its agreement with Israel. This was later denied by Turkish officials.

Tension between Syria and Turkey increased considerably in October 1998, when Turkey threatened to invade Syria if its demands for an end to alleged Syrian support for the separatist PKK were not met. The Turkish authorities also demanded the extradition of the PKK leader, Abdullah Ocalan (who, they claimed, was directing PKK operations from Damascus) and insisted that Syria renounce its historic claim to the Turkish province of Hatay. In early October the Turkish armed forces Chief of General Staff announced that a state of 'undeclared war' existed between Syria and Turkey. The latter's aggressive stance was viewed by Syria as evidence of a Turkish-Israeli military and political alliance, and as a result both Syria and Turkey ordered troops to be deployed along their joint border. Diplomatic attempts to defuse the crisis were made by the Egyptian President, Hosni Mubarak, as well as by the UN Secretary-General, Kofi Annan, and the Iranian Minister of Foreign Affairs, Kamal Kharrazi. By mid-October mediation efforts, particularly by Mubarak, and Syrian assurances that Ocalan was not residing in Syria, allowed a degree of normalization in relations. In late October, following two days of negotiations near the southern Turkish city of Adana, Turkey and Syria signed an agreement whereby the PKK was to be banned from entering Syrian territory, while the organization's active bases in Syria and Lebanon's Beka'a valley were to be closed. Turkey and Syria also agreed mutual security guarantees, and resolved to invite Lebanon to participate in further negotiations regarding the issue of PKK activity. During 1999 Syrian concerns regarding the closeness of Turkish-Israeli relations persisted: as these ties increased, it appeared that they might seriously jeopardize efforts by both Israel and Syria to resume peace negotiations.

The election of a right-wing Government in Israel at the end of May 1996 resulted in closer contacts between Syria, Egypt, Jordan and the PNA. After informal talks between Syria, Egypt and Saudi Arabia, an Arab League summit was convened in Cairo at the end of June. Although Syria's more militant proposals, including a 'freeze' on existing relations with Israel and the reintroduction of the Arab economic boycott of Israel, were opposed by the moderate Arab states, the summit was widely seen as a success for Syria. The final communiqué stated that existing steps taken towards conciliation with Israel would be

reconsidered in the light of Israeli government policies, and that any agreement was still dependent upon the principle of 'land-for-peace'. Also at the summit, Turkey was urged to reconsider its military agreement with Israel (see above). The Egyptian President, Hosni Mubarak, had condemned this agreement fearing that it would further undermine Egypt's regional role, and had pledged his support for President Assad. In the following months, as hopes for the peace process collapsed, there were regular consultations between Syrian and Egyptian officials. At the Cairo summit King Hussein had accused the Syrian authorities of sponsoring terrorist operations in Jordan in an attempt to destabilize the kingdom. Syria's relations with Jordan had become increasingly acrimonious since Jordan signed a separate peace agreement with Israel in 1994, and Syrian officials claimed that Jordan was working with Israel and Turkey to undermine President Assad's regime. However, after direct talks between King Hussein and President Assad at the summit, relations between the two countries were reported to have improved, and in August the King met Assad again in Damascus—his first visit to Syria since 1994. Following this visit, the Syrian authorities arrested a number of Palestinians and other Arabs who were alleged to have been implicated in organizing attacks in Jordan or in Israel through Jordan, and the two countries agreed to reopen talks to resolve their differences over the use of water from the Yarmouk river.

In mid-October 1998 the Jordanian Foreign Minister presented the Syrian chargé d'affaires in Amman with a list of 239 Jordanians allegedly missing in Syria, and a further 190 whom it claimed were imprisoned there; the Jordanian Government demanded 'immediate answers' from Syria as to their whereabouts. The Syrian authorities reportedly denied the claims, and challenged Jordan to reproduce 'a single name' of a missing person. Syria agreed, however, to investigate the matter, although it stated that most of those named on the list were, in fact, members of Palestinian organizations, linked with Jordan, and who had violated Syrian laws. In early February 1999 President Assad unexpectedly attended the funeral of King Hussein of Jordan, and reportedly held a private meeting with the new King, Abdullah; this was Assad's first visit to Jordan for five years. (Due to the historic tensions between Jordan and Syria, the latter had been expected to send a low-level delegation to the funeral.) King Abdullah, whose selection as successor to King Hussein had been welcomed by Syria, made his first official visit to Syria in late April. During talks with President Assad, the two leaders urged a resumption of the peace process, and increased bilateral co-operation; it was also agreed that Syria would supply Jordan with water during 1999, and that future discussions should be held regarding Jordanian prisoners in Syria. (In late May four Jordanian prisoners were released by the Syrian authorities.) In early May it was announced that Syria would supply Jordan with water over a period of four months, in order to ease Jordan's drought; Syria began to supply the water in mid-May. In late June Syria welcomed Jordan's decision not to participate in joint Turkish-Israeli navel exercises, scheduled for the following month; similar exercises in 1998 had led to a diplomatic crisis with Syria. In late July 1999 King Abdullah visited Syria, amid Jordanian concerns that any peace agreement concluded by Israel and Syria might isolate and undermine the Palestinian cause in future negotiations. In early August the joint Jordanian-Syrian higher committee met in Amman, under the chairmanship of both countries' premiers—the first time in almost a decade that a senior Syrian delegation had visited Jordan's capital. A bilateral deal was signed which promised to boost trade between the two countries. Regarding the issue of Jordanian prisoners held in Syria, Prime Minister az-Zoubi stated that many of the prisoners had been released under a general amesty which took place in July (see below) and that the 'very few' who remained in Syrian jails were non-political prisoners. Later in August it was reported that Syria had agreed to allow the free circulation of Jordanian newspapers and publications in that country, after a 10-year ban.

During the Cairo summit held in June 1996, President Mubarak of Egypt also persuaded Assad to meet the PNA President, Yasser Arafat. The two men had been bitter rivals for many years and had not met since 1993 (when Assad condemned Arafat for signing the Oslo accords); however, the meeting improved relations between the two men. One month later Arafat visited Damascus and his foreign affairs adviser, Farouk Kaddumi, held talks with leaders of Palestinian groups which were opposed to the Oslo accords and which were based in the Syrian capital. Early in 1997 there were reports that the Syrian authorities had warned the PFLP and other Palestinian groups based in Damascus that if they continued to organize military operations against Israel from Syria their offices would be closed down. In early August 1999 a diplomatic crisis developed between Syria and the PNA, after the Syrian Minister of Defence, Mustafa Tlass, publicly accused Arafat of having 'sold Jerusalem and the Arab nation' in peace agreements concluded with Israel since 1993, and made other personal insults against the Palestinian leader. The PNA demanded the immediate resignation of Tlass, while President Assad was said to have been angered by the Minister's remarks.

INTERNAL AFFAIRS

In May 1990 elections were held to the People's Assembly, in which the number of seats had been increased from 195 to 250. Candidates representing the Baath Party were elected to 134 seats, 54% of the total, compared with 66% of the total in elections held in 1986. Other parties which had joined the Baath Party in the National Progressive Front (NPF), an electoral coalition, were elected to 32 seats, while independent candidates were elected to 84 seats. Some 60% of the electorate were reported to have participated in the elections, which were contested by 9,765 candidates.

There was speculation in late 1991 that President Assad was preparing to introduce a degree of liberalization into Syria's political system, which is widely regarded as one of the most autocratic in the world. In December it was announced that 2,864 political prisoners were to be released. In March 1992 Assad indicated that new political parties might in future be established in Syria. However, he rejected the adoption by Syria of foreign democratic frameworks as unsuited to the country's level of economic development. In late June a limited reshuffle of the Council of Ministers took place.

In January 1994 the future stability of the regime became uncertain when Assad's eldest son, Basel, who had been expected to succeed his father as President, died in a motor accident. The President's second son, Bashar, was instructed to assume the role previously carried out by his brother, in order to avoid a power struggle. In June the Minister of Electricity, Kamal al-Baba, was dismissed following two years of electricity shortages and power cuts. In August 16 senior officials, including the special forces commander, Ali Haidar, were removed from office in an apparent attempt by Assad to consolidate his position, weaken the influence of the old guard and improve the country's international stance. At the People's Assembly elections held on 24 August more than 7,000 candidates were presented, but turnout at the polls was recorded at just over 50% of the electorate. The coalition parties in the NPF maintained their dominant position, winning 167 seats; the remaining seats were won by independent candidates. Leading business people were reported to be among the 158 newly-elected members. At the inaugural session of the new Assembly, on 14 November, the Prime Minister announced a programme of major economic reforms. A report by a prominent human rights organization, Amnesty International, published in April 1995, concluded that although some attempts had been made to improve human rights in Syria, further reforms were still urgently needed.

In November 1995 rallies were held across the country to mark President Assad's 25 years in power, and some 1,200 political prisoners, including members of the banned Muslim Brotherhood, were released. The Muslim Brotherhood is no longer seen as a threat to the regime and a number of the organizations's leading figures, among them the former Secretary-General, Abd al-Fattah Abu Ghuddah, have been allowed to return from exile. In November 1995 the Minister of Tourism, Amin Abu ash-Shamat, was replaced by Danhu Daoud, a Minister of State, apparently because ash-Shamat had alienated influential figures in the private sector, which controls much of Syria's tourism. In May 1996 Syrian officials denied reports that a series of bomb explosions had taken place in Damascus, Aleppo and Latakia, amid speculation that the attacks had been

carried out with Turkish involvement (see above). However, a Jordanian source subsequently claimed that they were intended to form part of an army coup involving Sunni Muslim officers supported by the US and Israeli intelligence services. Later that month, Abd al-Majid at-Tarabulsi, the Minister of Awqaf (Islamic Endowments), died and was succeeded by Muhammad Abd ar-Ra'uf Ziyadah. Musallam Muhammad Hawwa was appointed Minister of State for Cabinet Affairs, but rumours of a major cabinet reshuffle, including the replacement of Mahmoud az-Zoubi as premier, proved unfounded. Towards the end of the year there were several reports that President Assad was ill, provoking more speculation about the succession. While the President is believed to be in poor health, there has been no definite confirmation that he has been seriously ill since 1983, when he is thought to have suffered a heart attack. Syrian officials quickly condemned the latest reports as 'malicious lies' aimed at destabilizing the country and stated that the President had undergone minor surgery but was expected to require a long period of convalescence. President Assad has continued to prepare his surviving son, Bashar, for high office but Bashar himself was reported to be reluctant to assume a leading role and it was unclear whether the President really intends him to become his successor. Nevertheless, in the early months of 1997 a poster campaign in support of Bashar appeared in towns and cities throughout the country, and, in a sermon during the festival of Id al-Fitr, the Mufti of Damascus referred to Bashar as his father's successor. The Mufti also acknowledged Bashar's role in heading the Government's campaign against corruption, which is known to be widespread and to involve the President's family, prominent government officials and members of the ruling Baath Party. In early 1997 President Assad's brothers, Jamil and Rifaat, both came under investigation for their business dealings, and, as a result, Jamil was sent into exile in Paris. Earlier, in June 1996, Nadir an-Nabulsi, then Minister of Petroleum and Mineral Wealth, was dismissed after corruption charges were made against him relating to the period when he headed the Al-Furat Petroleum Company. When a bomb exploded on a bus in Damascus at the end of December 1996, killing 11 people, some commentators argued that it may have been related to the Government's anti-corruption drive and the investigations into the business affairs of the President's family. Others supposed that it was the work of Lebanese opposition groups (see above). Few details were released about the incident but an official statement accused Israel of responsibility for the attack. Towards the end of 1997 there were reports that Bashar, newly appointed to the rank of lieutenant-colonel in the army, had been given new responsibilities in economic policy-making, notably in the promotion of privatization and foreign investment, in addition to heading the campaign against corruption and overseeing Syrian interests in Lebanon, especially contacts with the Maronite Christian community, although he still had no specific political post. Speculation continued concerning the possibility that Bashar would succeed his father as President. Some analysts argued that President Assad was not preparing his son for the presidency but was seeking to strengthen Bashar's position so that he could protect the interests of the Assad family after his death. At the same time it was reported that, as a result of divisions within the Assad regime, the authorities had decided not to continue with negotiations with the exiled leadership of the Syrian branch of the Muslim Brotherhood. The reports indicated that the rehabilitation of the Brotherhood, although favoured by Vice-President Abd al-Halim Khaddam in order to promote national unity against Israel, was opposed by senior members of the security forces. In February 1998 President Assad dismissed his brother Rifaat from his position as one of Syria's three Vice-Presidents, a post which he had held since 1984. For much of this period, however, Rifaat had been out of favour and living in exile, but he had been allowed to return to Syria in 1992 for the funeral of his mother and had remained in the country. There were reports that Rifaat and his son Sawmar had recently become more active in politics and business and that Rifaat still enjoyed a measure of popularity with some sections of the armed forces. This may explain President Assad's decision to remove him. In early July Maj.-Gen. Hikmat ash-Shehabi retired as Chief of Staff of the Armed Forces, a post that he had held since 1973. He was replaced by his deputy, Maj.-Gen. Ali Aslan. There was speculation that ash-Shehabi, for many years a close associate of President Assad, might be appointed Vice-President. At the same time the head of the General Intelligence Directorate, Bashar an-Najjar, was dismissed from his post for unspecified irregularities and replaced by Gen. Mahmoud ash-Shaqqa, a former chief of military intelligence in the Quneitra region and commander of the Syrian troops sent to Saudi Arabia during the 1991 Gulf War. These changes prompted speculation regarding the possible appointment of Bashar Assad to a senior political post and a cabinet reshuffle that would bring economic reformers into the Government. In mid-June 1998 it was reported that some 225 political prisoners had been released since the beginning of the month, including leading members of the Muslim Brotherhood, communists and associates of Salah Jadid, the leader of the civilian branch of the Baath party ousted from power by Assad in 1970.

Elections to the People's Assembly were held on 30 November and 1 December 1998, and, as in the 1994 election, the NPF, led by the ruling Baath Party, won 167 of the 250 seats. In late January 1999 a report by Amnesty International demanded the release of more than 300 Lebanese, Palestinian and Jordanian political prisoners (many of whom, the organization alleged, were prisoners of conscience) from Syrian jails. The report claimed that fundamental human rights were being consistently abused by the Syrian authorities. In the same month the incoming People's Assembly voted unanimously to nominate President Assad for a fifth term in office. Assad's re-election was confirmed in a national referendum held on 11 February. There was widespread speculation that the President would begin his new term of office by forming a new Government, and that possible changes might include the promotion of Bashar to the vice-presidency. (The President's son had already been promoted to the rank of army colonel in January, and it was reported that he had also been granted new powers over the management of state finances and other important domestic matters.) By appointing his son as Vice-President, Assad would confirm the growing speculation both in Syria and elsewhere that he was accelerating the process of preparing Bashar for succession. Although no government reorganization had been announced by mid-1999, it was reported that the President was holding intensive talks with his Council of Ministers. In mid-June Bashar was believed to be instructing the Ministry of Information on ways to improve Syria's image abroad. At the end of June it was reported that the Syrian authorities were carrying out an 'unprecedented' campaign to counter corruption in public office. In mid-July President Assad issued a general amnesty for prisoners convicted of 'economic crimes' prior to 11 March (when he was sworn in for a fifth term), as well as for army deserters and those who had evaded military service. The amnesty was to affect hundreds (some reports claimed thousands) of prisoners, including a number of Muslim Brotherhood activists. (However, despite suggestions that a reconciliation between the Syrian Government and the Muslim Brotherhood might be imminent, this did not materialize.) In late September details emerged of a huge wave of arrests being carried out by the authorities in Damascus and Latakia against supporters of President Assad's brother, Rifaat. The crackdown was believed to be linked to the succession issue, since Rifaat is also considered to be a possible successor to Assad. The Minister of Information, Muhammad Salman, had, in early August, reportedly expressed his doubts that Bashar had been chosen by President Assad as his successor (a subject rarely discussed publicly by Syrian officials).

Economy

Revised for this edition by ALAN J. DAY

The Syrian economy must be viewed against a background of regional geopolitics and the internal political developments that have taken place since the Baath Party came to power in 1963. As a 'confrontation state', a portion of whose land has been under Israeli occupation since 1967, Syria bears a heavy burden of defence expenditure, which consumes more than one-half of current spending under the annual budget. At the same time, its position as a regional power has encouraged Syria to intervene elsewhere in the area, notably in Lebanon, where it has had a costly military presence since 1976. The continuing involvement in Lebanon, combined with the threat of outright war with Israel and the history of bad relations with neighbouring Iraq (which have, in turn, influenced relations with the moderate Arab states of the Persian (Arabian) Gulf), all affect the Syrian economy. In 1976–77, for example, Iraq decided to stop pumping petroleum through Syria to the Mediterranean coast, thus depriving the Government in Damascus of valuable transit revenues and the benefits of easily accessible petroleum supplies at a favourable price. The pipeline was closed again in 1982, but Syria was subsequently able to buy oil from Iran at concessionary rates. (An agreement to reopen the pipeline was reached between Syria and Iraq in July 1998.)

The internal political upheavals of the past three decades have also profoundly affected the Syrian economy and disrupted attempts at sustained development. During the three-year union with Egypt (the United Arab Republic—UAR) from 1958 to 1961, agrarian reform and nationalization were introduced. The country's first Five-Year Plan was inaugurated during the union, and covered the period 1961–65. The nationalization programme was reversed after the dissolution of the union, and the land reform law was amended in favour of the landowners. However, in June 1963, following the Baath-dominated coup, all amendments to the agrarian reform law were abrogated, and the law itself was made even stricter. The banks were nationalized in that year, and a rigorous nationalization of industry and trade was begun in 1965. By the time that Hafiz al-Assad seized power in November 1970, there had been a radical transformation of the country's economic structure, with the economic power of the landowners, merchants and industrialists greatly weakened, and the public sector dominant.

President Assad relaxed the economy somewhat after coming to power, partly in an attempt to widen his power base: he introduced some liberalization of foreign trade early in his presidency; a foreign investment law was promulgated in 1971; and this was followed by several related articles of legislation.

The Arab–Israeli war of October 1973 caused damage to Syria estimated at US $1,800m. Latakia port, the Banias and Tartous oil terminals and the huge Homs complex in central Syria, which then housed the country's only petroleum refinery and generated more than 40% of its power needs, were virtually destroyed. The reconstruction effort necessary to restore the Syrian economy was immense, but the Government acted swiftly, introducing measures of economic liberalization, to encourage investment, in early 1974. Business confidence gradually began to return, to the extent that the third Development Plan (1971–75) ended with a flourish of unprecedented growth. This, in turn, prompted the Government to reinforce investment incentives in certain sectors and to initiate an ambitious fourth Development Plan for the period 1976–80, only to find itself confronted, once again, with the economic repercussions of regional political problems.

The fifth Development Plan (1981–85) and its successor (1986–90) concentrated on trying to finish projects already under way rather than launching ambitious new schemes. The growth targets set by the fifth Plan were noticeably more modest than those in the fourth, but even these were not achieved.

In the late 1980s, the economy was in a state of crisis, with the population suffering increasing hardship. According to the IMF, Syria's total reserves minus gold in mid-1986 stood at only US $10m., although by the end of 1987 reserves had risen to $223m., the highest end-of-year total since 1984. At the end of 1988 reserves of foreign exchange amounted to $191m. The scarcity of foreign exchange caused a shortage of spare parts and raw materials for industry, and production was substantially below capacity, with some factories ceasing production altogether. Corruption and mismanagement in the state industrial and agricultural sectors also affected output. The economic crisis led to the imposition of strict curbs on the 'black market' and on the issuing of import licences, which created difficulties for the private sector. Budget expenditure was reduced in real terms during the late 1980s, and zero or negative economic growth rates were recorded from 1986 to 1988.

In the absence of a Middle East peace settlement, Syria's best hope for economic progress lies in diversification of its sources of development finance and export revenues and in improved economic management to restore confidence in investment. The 1980 friendship treaty with the USSR and Syria's alleged links with international terrorism affected US aid to the country. In 1983 such aid was halted altogether. Syria's alleged involvement in international terrorism also affected the flow of aid from the EC and from individual European countries. Lending by multinational institutions, meanwhile, has been hampered by the slow rate of project implementation and, more recently, by Syria's debt arrears. Syria does, however, enjoy considerable support from the various Arab aid organizations.

Participation in the US-led multinational force against Iraq in 1990/91 was calculated to increase Syria's access to aid from the USA, the EC and the 'moderate' Arab states, among other diplomatic benefits. In the event, Syria was widely regarded as the main regional beneficiary of the war, particularly in the economic sphere. Bolstered by higher world oil prices, GDP grew by more than 5% in real terms in 1991 and the trade balance went into healthy surplus. At the same time there was a major influx of aid from various sources, while economic deregulation and new tax incentives helped to stimulate private investment by local and foreign businesses. On the negative side, the collapse of the USSR in 1991 presaged economic problems for Syria, to the extent that large sectors of its economy had been oriented towards exporting low-quality goods to the USSR.

Syria's leading exports remain petroleum, cotton and phosphates, which depend on the fickle world commodity markets and, in the case of cotton, on agricultural policies and the unreliable rainfall in much of the country. The services sector, dependent on tourism and transit trade, remains extremely vulnerable to the political situation in the region.

In the first half of the 1990s, the main constraints on Syria's economic development were the poor condition of much of the physical infrastructure and the inefficient administration within highly centralized public-sector organizations. The disbursal of available funding for important public-sector projects was frequently delayed for long periods by procedural obstacles, while the financing of some private-sector projects was greatly complicated by Syria's complex foreign-exchange rules and limited banking services. Despite these and other impediments, the rate of real economic growth was estimated to have averaged 6% per annum over the five year period 1991–95. Over the same period Syria received about US $2,500m. of project aid from abroad (including $855m. of loans from the Kuwait Fund for Arab Economic Development—KFAED) and obtained provisional offers of up to $1,000m. of additional aid for proposed future projects. According to official figures, real economic growth slowed to 2.2% in 1996, and trade figures published for the first half of 1997 suggested a further decline in the growth rate for that year.

Japan's Overseas Economic Co-operation Fund lent more than US $800m. between 1991 and 1995 for power-generation projects. However, US aid to Syria (halted for political reasons in 1983) remained suspended, while Syria's access to up to $472m of EU aid funds was largely blocked because of disputes over Syria's debt arrears to certain EU member states. (At the end of 1995 only ECU 7.9m. in grants – for banking reforms

and electricity sector management – had been extended to Syria under current EU aid protocols covering a total of ECU 354m., the bulk of this total being European Investment Bank funding blocked by the freeze on new EU lending to Syria.) The Arab donors which provided the bulk of project aid to Syria in 1991–95 included the national development funds of Kuwait, Saudi Arabia and Abu Dhabi and various Gulf-based multilateral agencies, notably the Arab Petroleum Investments Corpn and the Arab Fund for Economic and Social Development. As well as extending development aid, Saudi Arabia reportedly provided substantial financial backing for Syrian purchases of Russian weapons after the 1990/91 Gulf crisis.

In September 1997 Syria made its largest ever single repayment of foreign debt, having reached an agreement with the World Bank to settle arrears accumulated since the 1980s (see below under Finance). An important bilateral debt settlement agreement had earlier been negotiated with France, bringing Syria closer to an unblocking of multilateral EU funds (In mid-1998 Germany was the only EU member with an unresolved Syrian debt dispute). At that time, the US legislature voted to curb the US President's discretionary powers, under a 1996 law, on the regulation of US companies' conducting business with countries accused of sponsoring international terrorism. As a result, such companies faced an increased risk of sanctions under US law. The pace of economic reform and government decision-making within Syria remained chronically slow in 1996 and 1997, prompting public criticism from several quarters. In April 1997 the Arab Fund for Social and Economic Development made it clear that Syria could not expect long-standing offers of project aid to be held open indefinitely. In the same month prominent members of the Syrian business community estimated that projects worth up to US $1,300m. had been lost in recent years because prospective Arab investors had encountered severe difficulty conducting business in Syria. According to the World Bank, GNP in 1997 was $16,600m. ($1,120 per head) on a conventional exchange-rate basis, equivalent to $45,000m. ($3,000 per head) on a 'purchasing-power parity' (PPP) basis. Official Syrian statistics gave the country's nominal 1997 GDP as £S728,794m.; real GDP (measured at constant 1995 prices) was given as £S604,354m. in 1997, having grown by 1.3% in that year, after increasing by 5.8% in 1995 and 4.5% in 1996. GDP increased at an average annual rate of 6.3%, in real terms, in 1990–97. The average annual rate of inflation was 9.5% in 1990–97. Consumer prices increased by an average of only 2.3% in 1997, and fell by 1.2% in 1998.

AREA AND POPULATION

Syria covers an area of 185,180 sq km (71,498 sq miles), of which about 45% is considered to be arable land. The remainder consists of bare mountain, desert and pastures capable of sustaining only nomadic populations. Of the total cultivable area of 8.7m. ha, little more than about 70% is under cultivation. The average annual increase in Syria's population between 1980 and 1990 was estimated to be 3.6%. Census totals in September 1970, September 1981 and September 1994 were 6,304,685, 9,052,628 and 13,812,284 respectively. By mid-1997, according to UN estimates, the population had increased to 14,951,000.

There has been a continuing movement from village to town. In 1965 about 40% of the population were classified as urban. By 1990 the proportion had risen to 50%. The urban population increased at an annual rate of 4.4% in 1980–90, almost identical to the 4.5% of 1965–80. The process of urbanization has put a strain on services in the cities. One of the achievements of President Assad's regime, however, has been to extend development projects to rural areas, notably through the ambitious rural electrification programme. The population of Damascus and its surrounding province approximately doubled between 1959 and 1973, from more than half a million to an estimated 1.46m. At the census of September 1994 the city had a population of 1,394,322. The population of Aleppo, estimated at 466,026 in 1959, had risen to 1,582,930 by 1994, while Homs had a population of 540,133. The distribution of employment changed markedly between the mid-1960s and the late 1980s, reflecting industrial growth and the expansion of the service sector. In 1989, of a total economically active population of 2,951,100, 23% were employed in agriculture, forestry and fishing, compared with 52% in 1965, while manufacturing and construction employed 28.8% in 1989, compared with 20% in 1965. It was estimated in 1993 that the public sector (excluding the armed forces) employed about 31% of the Syrian labour force, and that the total number of Syrians supported by public-sector employment (including employees' dependants) was approaching 6m.

AGRICULTURE

Agriculture retains its position as a mainstay of the Syrian economy, despite the existence of a traditionally strong trading sector and partially successful attempts at industrialization. The agricultural sector employed about 32% of the economically active population in 1996. The main areas of cultivation form a narrow strip of land along the coast, from the Lebanese to the Turkish frontiers, which enjoys a Mediterranean climate, is exceedingly fertile and produces fruit, olives, tobacco and cotton. East of this strip lies the northward continuation of the Lebanon range of mountains, which falls sharply on the east to the Orontes river valley, whose marshes have been reclaimed to form one of Syria's most fertile areas. In central Syria this valley joins the steppe-plain, about 150 km wide, which runs from the Jordanian borders north-eastward towards the Euphrates valley. The plain is traditionally Syria's major agricultural area, with cereals as the principal crops. Also in this region are the country's main cities, Damascus, Homs, Hama and Aleppo. The importance of this plain is now being rivalled by a fourth area, the Jezira, which lies between the Euphrates in Syria and the Tigris in Iraq. Although fertile lands along the banks of the Euphrates and its tributaries had previously been cultivated, the Jezira's value was recognized only in the early 1950s, when large-scale cotton cultivation was introduced in former pasture lands. It is now vastly increasing its output with the development of the Euphrates Dam, and the Government has made efforts to promote the social and economic development of this previously neglected area.

One of the chief characteristics of Syria's agricultural performance, in the absence of any established large-scale irrigation system, has been an extreme fluctuation in annual output, owing to wide variations in rainfall. Dependence on rainfall for good harvests is illustrated by the Central Bureau of Statistics' general indices for agricultural production, which show fluctuations from 78 in 1979 to 109 in 1983, to 99 in 1984, to 104 in 1985 and to 110 in 1986 (1980 = 100). In 1989 agricultural output by value fell by nearly 20%. By the early 1990s, however, the implementation of irrigation schemes and investment in modern techniques had begun to yield results in the shape of higher and more consistent output, especially of cereal crops. Between 1990 and 1993 the annual value of Syrian agricultural output increased by 27% in real terms, while the agricultural sector's share of GDP rose from 28.5% in 1990 to 30% in 1995; by 1997 its share had fallen to 25.9% of GDP. Agriculture was highlighted as the Government's top development priority in a 1994 economic policy statement. Agricultural GDP increased by an annual average of 7.6% in 1990–96, but fell by 3.2% in 1997.

An earlier prolonged decline in agriculture's share of GDP (which had stood at 32.2% in 1962) had stemmed initially from under-use of potential, caused by the discouraging effects of the 1958 agrarian reform law on investment and the removal of the large rural landowners and urban money-lenders who had formerly provided the traditional channels of credit. The area of unused cultivable land (excluding fallow) increased from 1,892,000 ha in 1963 to 2,825,000 ha by 1970. Suspicion of government intentions was gradually tempered, however, by the relaxation of the reform law and, under the post-1970 Assad administration, by a number of significant amendments. Agriculture, forestry and fishing contributed £S10,935m. to GDP in 1980 and the annual growth rate for this sector was projected at 7.8% under the fifth Five-Year Development Plan (1981–85), which allocated £S17,200m. to its development. Agriculture's share of total investment in the sixth Plan (1986–90) was projected to rise to 18.9%, compared with 16.9% in the fifth Plan. Under the Government's 1992 budget, 26% of investment expenditure was allocated to agriculture and irrigation.

Extensive irrigation programmes, now under way, should eventually have the effect of steadying agricultural output as well as increasing it. It was with this in mind that, out of agricultural investments accounting for a sizeable 35% of total

investment under the third Five-Year Plan (1971–75), the Government devoted the largest share to the Euphrates dam project (see below under Economic Development). The main task for the fourth Development Plan, which ran from 1976 to 1980, was to put the dam's stored waters to work and to irrigate an additional 240,000 ha of land in the Euphrates basin by the end of the decade. However, statistics for 1984 showed that only some 60,000 ha had actually been irrigated, which means that it will be a very long time before the final Euphrates irrigation target of 640,000 ha (which, it was originally intended, would be achieved by the end of the century) is reached. In the mean time, emphasis has been placed not only on the Euphrates, but also on other irrigation schemes, including those on the Yarmouk river (on which three pumping stations and 400 km of canals are being constructed to irrigate about 300 ha of farmland) and in the Ghab, in order to increase the area available for the cultivation of cereals, sugar beet and cotton. In September 1987 Jordan and Syria signed an agreement on the use of the waters of the Yarmouk, whereby the countries undertook to share irrigation systems and the power from a hydroelectricity plant associated with the al-Wahdeh dam, which was to be built on the Yarmouk in Jordan.

With the Euphrates scheme having produced somewhat disappointing results, the Government gave increasing attention to the rain-fed areas, which account for 84% of the total cultivated area. In the southern provinces of Dera'a and Suweidiya a US $76.3m. project began in the mid-1980s to increase food production and improve living standards on 25,400 ha of rain-fed land. The project was funded by the World Bank ($22m.), the International Fund for Agricultural Development (IFAD, $18m.), and the UN Development Programme ($2.2m.). Syria has benefited from the presence near Aleppo of the International Centre for Agricultural Research in the Dry Areas (ICARDA), one of the 13 centres throughout the world of the Consultative Group on International Agricultural Research (CGIAR). ICARDA is attempting to improve yields and farming systems in areas of low and medium rainfall throughout the Middle East.

In January 1993 the European Investment Bank agreed to finance the construction of the 65m. cu m ath-Thawra earthfill dam on the Snobar river, designed to irrigate 10,500 ha of land in the Latakia area. Scheduled for completion in 1994, the project would stimulate cultivation of market-garden crops, mainly for local consumption, and would facilitate tree planting to combat soil erosion. Later in 1993, bids were invited from Western consultants for the redesign of unimplemented irrigation schemes originally drawn up by East European firms in the mid-1980s. The main redesign contract (to be funded by the KFAED) related to a proposed 5-km dam on the Khabour river, which formed part of a scheme to irrigate 40,000 ha of farmland in north-eastern Syria. The unimplemented designs for this scheme had been prepared by a Bulgarian firm in 1985.

Although medium-staple cotton had been grown in Syria for many years, it was the high prices prevalent after the Second World War and during the Korean War that provided the greatest impetus to cotton production. In the early 1950s the previously neglected Jezira area was opened up for large-scale agriculture on a new capital-intensive basis, relatively free from traditional agricultural relations, still semi-feudal in the rest of the country. Syria's output of unginned cotton increased from 38,000 tons in 1949 to 220,800 tons in 1954. The area under cotton increased from 25,300 ha in 1949, to 78,000 ha in 1950 and to 250,000 ha in 1971/72. By 1987/88, this area had declined to 128,000 ha, but in the following year it increased to 165,000 ha, and the area designated for cotton in 1989/90 was 170,000 ha.

Petroleum overtook cotton as Syria's most valuable source of export earnings in 1974, as cotton exports (raw, yarn and textiles) declined, both in value and volume. Output of cotton lint was 200,000–250,000 metric tons per year in 1968–73, but by the 1980/81 season it had declined to 117,800 tons. Production subsequently recovered, and in 1983/84 a record cotton crop of 523,418 tons yielded 194,000 tons of cotton lint, although there was a decline in cotton output, to 125,931 tons of lint in 1986/87. Cotton export earnings rose from £S453m. in 1982 to £S1,076m. in 1984, but dropped to £S391m. in 1986. The 1987/88 crop was affected by bad winter weather, and this, combined with the decrease in area, yielded only 95,000 tons of lint. The 1988/89 crop yielded 116,000 tons of lint, and total cotton production rose to 441,000 tons in 1989/90 and to 555,000 tons in 1990/91. The official prices payable to Syrian farmers for their cotton have been progressively increased in recent years, but the sector has suffered to some extent from competition from other major crops. The local textile industry (historically one of the Syrian economy's leading sectors) uses an appreciable proportion of the cotton crop, averaging about 50,000 tons a year in the early 1990s. Syria's cotton crop totalled 600,000 tons in 1995, 760,000 tons in 1996 and a record 1m. tons in 1997 (when it accounted for some 6.3% of export earnings). The volume of ginned cotton reached 350,000 tons in 1997. In 1998 Syria produced 327,000 tons of cotton lint. A 21% tax on cotton and cotton textile production was abolished in June 1999, in order to stimulate production and exports. It was, however, expected that the volume of cotton production would fall by over 10% in 1999, as a result of drought in the growing areas.

One of the crops that has competed with cotton is sugar beet. The Government has been keen to foster a domestic sugar industry, and the area planted with beet rose from 22,000 ha in 1980 to 35,700 ha in 1984. However, the failure of the domestic refining industry to perform as planned has led to a drastic reduction in the beet area, to 13,200 ha in 1986. The harvest of sugar beet declined from 1.3m. tons in 1984 to 412,000 tons in 1985, rising to 440,000 tons the following year. Production rose again, to 457,000 tons, in 1987, but declined to 222,000 tons in 1988. It rose again to 412,000 tons in 1989, to 422,000 tons in 1990 and to 637,000 tons in 1991. In 1992 production reached 1.4m. tons, declining slightly, to 1.2m. tons in 1993, and rising again, to 1.4m. tons, in 1994. Production rose to 1.4m. tons in 1995, then fell sharply to 974,000 tons in 1996, before recovering to 1.1m. tons in 1997 and again in 1998. Production of refined sugar by local factories reached a peak of 206,000 tons in 1983 but dropped to 54,000 tons in 1985, rising only marginally to 57,000 tons in the following year. The decline in the sugar industry was partly the result of the fall in the world price of sugar. In the mid-1970s, when Syria started to develop the industry, prices were high, while those of cotton were low. Imports of sugar fluctuated during the 1980s. Those of raw sugar rose from 96,600 tons in 1985 to 261,200 tons in 1986, while those of refined sugar declined from 321,700 tons to 268,200 tons. In 1994 the state sugar refining company was obliged to import 128,000 tons of raw sugar, in order to fulfil its 1994 production target of 260,000 tons of refined sugar (about 48% of current consumption). Construction of a new 129,000 tons-per-year sugar refinery was scheduled to begin in 1995. The Government gave its approval in 1995 to proposals to build Syria's first privately-owned sugar refinery, with an output capacity of 100,000 tons per year. The refinery would be sited at Tartous and would process imported raw sugar.

Syria's cereal crop is also of prime importance, accounting in 1993 for nearly 80% of the £S45,000m. spent on crop purchases by the agricultural marketing authorities. Wheat and barley together occupied 2.65m. ha in 1985, two-thirds of the total cropped area. Output of both crops has varied considerably from year to year, depending on the rainfall. In 1987/88 the cereal harvest more than doubled, to almost 5m. tons, including more than 2m. tons of wheat. However, low rainfall in early 1989 adversely affected the harvest, leading to substantial decreases. Wheat production was 2m. tons in 1990, 2.1m. tons in 1991 and 3m. tons in 1992. Barley production was 1m. tons in 1990, after which efforts were made to stabilize yields in marginal growing areas. (During the 1980s the average annual barley yield had ranged from as little as 235 kg per ha to as much as 1,044 kg per ha.) The Government's 1994 barley production target of 1.5m. tons was underfulfilled by 50% because of weather-related crop damage. About 300,000 tons of corn (sufficient to supply 60% of the state fodder company's requirement) were produced in 1993.

In 1993 the wheat harvest reached 3.6m. tons, placing a severe strain on available storage space despite the construction of 15 additional grain silos over the previous year. The state grain marketing authorities launched an emergency programme to build 13 more silos during 1994 and to expand local flour-milling capacity, which fell far short of current requirements. The main reasons for the strong upturn in wheat production in 1993 were favourable rainfall, improved cultivation techniques,

and increases in areas planted (attributable partly to price liberalization to improve the financial returns to farmers). Syria's annual wheat consumption was around 2.2m. tons in the early 1990s, while national flour-milling capacity was around 1.35m. tons, necessitating a heavy reliance on Lebanese mills to process part of the Syrian wheat harvest. Despite some weather damage, the 1994 wheat harvest totalled 3.7m. tons. Wheat production in 1995 was just under 4.2m. tons. Contracts were awarded in late 1994 for the construction of five new flour mills to increase Syria's annual milling capacity by 750,000 tons by 1998. In 1996 the wheat harvest totalled almost 4.1m. tons and the barley harvest was 1.5m. tons. Up to 5.3m. tons of wheat were held in storage in 1996, when Syria exported cereals to the value of US $150m. It was reported in May 1997 that Syria was to export $14m. worth of wheat to Bulgaria in settlement of debts owed to Bulgarian state enterprises. Cereal production declined in 1997, owing to low rainfall in the traditional wheat-growing areas. Wheat output was some 3m. tons, while that of barley fell to just under 1m. tons. It was reported in December 1997 that the OPEC Fund for International Development had agreed to provide a loan of $6m. to help finance the construction of four new grain silos, each with a capacity of 100,000 tons. In 1998 an area of over 1.7m. ha was planted to wheat, yielding a harvest of 4.1m. tons and permitting exports of 600,000 tons. Barley production in 1998 was around 1.6m. tons. A serious drought during the opening months of 1999 was expected to reduce Syria's total crop production by about 30%, with the wheat harvest being forecast at around 2.3m. tons (44% less than in 1998). Exports were expected to cease, while Syria's stockpile of wheat was expected to fall to 2.7m. tons by mid-2000, as stores were drawn down to cover domestic demand.

There are several other actual and potential agricultural exports. Tobacco production averaged around 15,000 tons per year, and exported about 3,000 tons per year, during the early 1990s; production has risen in recent years, now averaging some 23,000 tons. There is also considerable scope for expansion in the production of fruit and vegetables. The fruit harvest in 1997 included 452,000 tons of grapes, 35,000 tons of apricots, 356,000 tons of apples and 23,000 tons of plums. Syria has embarked on a project to double production of citrus fruit. In 1990 it produced 171,000 tons of oranges. By 1996 production had risen to 373,000 tons (although it fell to 236,000 tons in 1997). The production of tomatoes and onions in 1997 totalled 405,000 tons and 108,000 tons, respectively. Demand for fruit and vegetables is necessitating imports from other sources, including Lebanon. In recent years there have, at times, been shortages of fruit and vegetables, partly as a result of the official curbing of imports in general. Syria does export a certain amount of fruit and vegetables, and in 1986 such exports included 33,512 tons of potatoes, 415 tons of onions, 5,935 tons of lentils, 1,788 tons of dried figs and 4,183 tons of watermelons. Fruit growers who had expanded production for export to guaranteed markets in the former Soviet Union suffered some losses when trade was cut back after the late 1980s. Production of grape and apple juice was due to start in 1995 at a new processing plant near Damascus which aims to provide growers with an assured outlet for a proportion of these crops. In 1998 Syria produced around 2.21m. tons of vegetables (compared with 2.15m. tons in 1997). Fruit crops in 1998 included 273,000 tons of apples, 93,000 tons of apricots and 43,000 tons of peaches.

Stockraising is another important branch of agriculture. In 1996 there were 810,000 cattle, 1.1m. goats and 13.1m. sheep. Almost 1.8m. tons of milk was produced in 1997. The Government announced in March 1999 that livestock farming would be relatively unaffected by the current drought because plentiful fodder stock had been set aside for use in such circumstances.

PETROLEUM AND GAS

Syria was formerly thought to have no petroleum. The Iraq Petroleum Co group had rights throughout Syria but abandoned them in 1951 after failing to find petroleum in commercial quantities. Concessions were granted to an independent American operator in 1955 and to a West German-led consortium in 1956. These led to the discovery of petroleum, first of the Karatchouk field, in the north-eastern corner of the country, then of the Suweidiya field and finally of the field at nearby Rumelan. However, in addition to the cost of extraction being high, the petroleum from all three oilfields was of low quality. The petroleum which was found at Karatchouk had a density of 19° API and a sulphur content of 4.5%, while that found at Suweidiya had a density of 25° API and a 3.5% sulphur content. In 1964, several years before any of the three fields had begun production on a commercial basis, Syria became one of the first Arab states to discard the notion of petroleum concessions and to nationalize its petroleum operations. Even at that early stage, Syria's industrial planners were anxious to use the country's petroleum not only for export in its crude state, but also as a raw material for domestic industry. For the next 10 years all exploration and exploitation was conducted solely by the state-owned General Petroleum Authority and its offshoot, the Syrian Petroleum Co (SPC), with Soviet assistance.

Output from Suweidiya started in July 1968 and totalled 1m. tons in the first year, of which 833,000 tons were exported. Output in 1969, when the Karatchouk field began to produce, failed to reach expectations, totalling only 3.2m. tons, of which 2.3m. tons were exported. The October war in 1973 reduced production from a level of 6.3m. tons in the previous year to just 5.4m. tons, recovering in 1974 to 6.2m. tons. Production remained at about that level in the late 1970s; by the early 1980s, with oil prices falling and its known petroleum reserves being exhausted, Syria was actually a net importer of petroleum. From the mid-1980s, however, the petroleum industry was transformed by the discovery of large reserves of high-quality crude oil near Deir ez-Zor by a consortium of foreign oil companies.

The new discoveries were the result of the reversal of the Government's 'no-concessions' policy in the mid-1970s. In May 1975 the first Syrian concession to be won by any Western company for over 15 years was awarded to a US group, on production-sharing terms heavily tilted in the Government's favour and stipulating that US $20m. be invested in exploration off shore. In June 1975 the Government took its new policy one stage further by offering a dozen onshore oil concessions for international bidding. Altogether, 50,000 sq km were to be made available. The oil companies' response to the invitation was initially slow and, when the first US group, Tripco, relinquished its concession in March 1976, no other company had come forward to join the search. In July 1977, however, a US-Syrian consortium called Samoco took up a concession in the Deir ez-Zor area, and in December another concession, in Raqqa province, was taken by Shell subsidiaries, Syria Shell Petroleum Development and Pecten Syria Co. Both Shell and Samoco insisted on a larger share of eventual petroleum production than was agreed between the Government and Tripco. This softening of terms reawakened the interest of other firms, including Chevron of the USA.

By 1983, however, Samoco, Chevron and Rompetrol of Romania (which was exploring west of Hassakeh) had all followed Tripco in relinquishing their concessions, leaving Pecten and Marathon of the USA as the only foreign operators in the country. In early 1983 Pecten, together with Royal Dutch Shell and Deminex of the Federal Republic of Germany, assumed control of Samoco's concession area. At the end of 1984 it was revealed that the consortium had discovered reserves of high-quality crude oil at ath-Thayyem, near Deir ez-Zor. In 1985 the three foreign partners and the SPC formed the Al-Furat Petroleum Co (AFPC) to develop the concession. Full commercial production began in September 1986, adding an initial 60,000 b/d (3m. tons per year) to Syria's total production capacity. Because the oil from the field is light crude (36° API), with a very low sulphur content, it has considerably reduced the need to import light crudes for blending with heavy Syrian ones at Syrian refineries. Previously Syria had imported between 5m. and 6.6m. tons of oil every year. Related to the main ath-Thayyem field are the later discoveries of the al-Ward, al-Asharah, ash-Shula and al-Kharata fields. In May 1989, it was reported that ath-Thayyem was producing 65,000 b/d, with output from the related fields bringing the total output of this system to 100,000 b/d out of total Syrian production in 1989 of 15.2m. tons (310,000 b/d).

Marathon had discovered gas reserves capable of producing 450m. cu m per day at a well named Cherrife 2 in 1982, and had made a further gas and condensate discovery in mid-1985, at ash-Shair. In December 1988, after a long period of resisting

government pressure to develop gas reserves, Marathon agreed to a production-sharing scheme, with investment of up to US $20m. in converting the oil-fired Muhardeh and Banias power stations to gas. The agreement was the first in Syria to include a gas sales clause. Turkey has expressed an interest in developing Syrian gas reserves (which were estimated to total 225,000m. cu m in 1992) with a view to possible export to Turkey.

Syria's crude oil production reached 21m. tons (400,000 b/d) in 1990, 24.5m. tons (465,000 b/d) in 1991 and 25.2m. tons (475,000 b/d) in 1992, about two-thirds of the latter total being light crude and the balance heavy crude. Syria's proven oil reserves totalled 2,500m. barrels at the end of 1998, sufficient to maintain the previous year's rate of production for a further 12.2 years. Syrian oil output averaged 570,000 b/d in 1994, rising to 600,000 b/d in 1995. Average oil output subsequently fell to 590,000 b/d in 1996, 580,000 b/d in 1997 and 565,000 b/d in 1998.

While AFPC continued to widen the scope of its own development programme (which included increasing use of water-injection techniques to maintain production from 'mature' oilfields), Elf Aquitaine was preparing to increase or commence production from new wells in the Atallah North and Jafra areas of the Deir ez-Zor field in 1993, while the Shell, Tullow Oil, Unocal and Occidental companies were engaged in active oil exploration programmes in other parts of the country. During the third quarter of 1994 Syrian oil output reached 615,000 b/d following the completion of current oilfield development programmes. Oil exploration activity was very limited and was currently yielding disappointing results. In late 1994 Shell (whose investment in Syria over the previous decade totalled about $3,000m., 90% of which had so far been recouped) signed a new exploration agreement covering areas previously relinquished by BP and Total. Unocal had ceased exploration in Syria by the end of 1994. Tullow Oil was in mid-1996 preparing to develop a small Euphrates Basin oilfield (the Kishma field) discovered in 1995. In mid-1996 about 66% of Syria's oil output was produced by AFPC, 24% by SPC and 10% by Elf Aquitaine. In February 1997 MOL was awarded a 5,000 sq km oil exploration block east of Palmyra. In March 1997 an exploration and production agreement covering a five-block exploration area totalling 4,201 sq km was concluded with a consortium made up of subsidiaries of France's Elf Aquitaine (40%), Japan's Sumitomo Development Co (30%) and Malaysia's Petronas (30%). In May 1997 Syria Shell Petroleum Development was granted a new exploration block in the Euphrates basin. At the end of 1997 the Government concluded two new agreements with international companies, Croatia's INA—Naftaplin and Sweden's Svenska Petroleum Exploration, to explore in the Palmyra and Deir ez-Zor areas, and was reported to be negotiating as many as three further such agreements. Government plans were subsequently revealed in June 1998 to invite companies to explore for oil and gas for the first time off shore in the Mediterranean. In November 1998 Tullow Oil, which had experienced a major fall in output from its Syrian oilfield during the course of the year, announced that it was abandoning its Syrian operations because they were no longer commercially viable.

Major gas development projects in progress or under active planning in 1993/94 included: the expansion of productive capacity in the Omar Field in the Deir ez-Zor region from 4.5m. cu m per day to about 7m. cu m per day, and the construction of pipelines to convey the Omar field's supplies to the 400-MW Tishrin power station in Damascus, the 650-MW Mhardeh power station near Homs and the 600-MW Jandar power station to be built also near Homs; a US $300m.-programme for the Palmyra region fields designed to achieve production of 6m. cu m per day; and a $50m.-extension of the Jbeissa gas treatment plant, using gas from the SPC's Audeh field and aimed at increasing capacity from 1.7m. cu m per day to 3.5m. cu m per day (which was completed in early 1998); and a $200m.-programme to gather and treat gas from three fields in the Suweidiya region for use in a planned 150-MW power station in Suweidiya. By mid-1994 Syrian production of natural gas totalled 6.94m. cu m per day. It was scheduled to exceed 16.5m. cu m per day by the middle of 1995 on completion of current expansion projects. The actual output level attained by mid-1996 was estimated to be around 11.3m. cu m per day. Three new fields, with a combined output of 3m. cu m per day, were brought into production in mid-November 1996. Gas production is planned to increase to 18m. cu m per day by 2000. Output in 1998 was estimated to be around 14m. cu m per day. In November 1998 Conoco and Elf Aquitaine, bidding in partnership, were awarded a contract (which was ratified by the Syrian legislature in April 1999) to develop gas resources in the Deir ez-Zor area. Costing an estimated $430m., this project entailed the gathering and processing of associated gas currently being flared off in existing oilfields, and the bringing into production of the hitherto undeveloped Tabiyeh gas condensate field. Conoco (the lead partner) and Elf Aquitaine were to act as service contractors to the Syrian Petroleum Co during the project's development phase and its first four years of production (at a target rate of 4.2m. cu m per day), after which SPC would take over as operator of the production facilities.

The generally poor quality of Syrian petroleum until the late 1980s, together with opposition on the part of some of the major oil companies to Syria's nationalization experiment, combined, at the outset of the country's petroleum development, to cause considerable marketing difficulties. However, with increasing sales (particularly to Greece, France, Italy and the USSR), crude petroleum became Syria's most important export. The value of exports of petroleum and petroleum products soared from £S291.2m. in 1972 to £S1,607.5m. in 1974 and to £S6,253m. in 1980, but it fell subsequently as a result of the slump in world oil prices. In 1981 Syria became a net importer of petroleum by value for the first time since petroleum exports began in the mid-1970s, recording a deficit on its trade in petroleum of £S262m. There was a surplus of £S189m. in the petroleum account in 1982, although deficits of £S123m. and £S767m. were recorded in 1983 and 1984. In 1986 oil imports were halved, from 5.4m. tons in 1985, to 2.7m. tons, while exports fell from 7.4m. tons to 6.3m. tons—an oil trade surplus of 3.7m. tons, worth £S346m. (compared with a surplus of £S315m. in 1985). In 1986 sales of oil and oil products accounted for 42% of total exports by value, compared with 74% in 1985, the decline being caused by lower oil prices. By 1990 oil and other minerals accounted for 45% of Syria's merchandise exports by value, and in 1991 exports of oil were valued at £S17,218m. The volume of oil exports fluctuated within the range of 300,000 b/d to 360,000 b/d in early 1994, at which point the state marketing company had 21 term customers abroad and was seeking to conduct an increasing proportion of its business through term contracts rather than sales on the spot market. In mid-1995 the estimated volume of Syria's oil exports was 320,000 b/d. The country's oil export earnings totalled £S21,007m. (nearly 60% of total merchandise exports by value) in 1993 and £S20,190m. in 1994. Oil exports were worth US $2,499m. in 1995, $2,748m. in 1996 and $2,509m. in 1997, equivalent, respectively, to 64.7%, 65.7% and 61.8% of total merchandise exports. In 1998, a year of severely depressed world oil prices, Syria earned an estimated $1,700m. from oil exports (70.8% of estimated merchandise exports).

The capacity of petroleum refineries in Syria totalled 11.4m. tons per year (228,000 b/d) at 1 January 1988, comprising 5.4m. tons per year (102,000 b/d) at the Homs refinery and 6m. tons per year (126,000 b/d) at the Romanian-built refinery at Banias, which came 'on stream' in 1980. For a long time, however, the Banias plant operated at considerably below capacity, owing to repeated shortfalls in deliveries of crude petroleum. It was this problem which delayed construction of the refinery, as its specifications had to be altered to enable it to process different grades of crude and thus reduce its dependence on uncertain Iraqi supplies, which were subsequently discontinued by Syria's closure of the Kirkuk–Banias pipeline, which had a capacity of 500,000 b/d. The sixth expansion of the Homs refinery was carried out by Technoexport of Czechoslovakia. The seventh expansion was to have entailed construction of a base lube oil complex with a capacity of 100,000 tons per year (t/y) but, owing to Syria's budgetary constraints, this project was replaced by one for a plant to process used lubricating oils, with a capacity of 30,000 t/y, to be increased to 40,000 t/y. In 1994 the Government accepted the recommendations of a 1992 study by a US consultancy which advocated a major restructuring of both existing refineries in order to boost their output of light products. About half of the current refining capacity was devoted to the produc-

tion of heavy fuel oil, Syrian demand for which was due to fall substantially in coming years as new gas-fired power stations were constructed. Also in 1994, a private-sector business backed by Saudi Arabian and other Gulf region investors announced plans (approved in principle by the Government) to build a new oil refinery in Syria with a capacity of about 100,000 b/d, while the Government put forward unrelated proposals for a new 60,000 b/d refinery near the Deir ez-Zor oilfields.

Royalties for the transit of foreign crude petroleum through Syrian territory were, for many years, more valuable than indigenous production. Two pipelines carry petroleum from the Kirkuk oilfield, in Iraq, through Syria. One, built in 1934, leads on to a terminal at Tripoli in Lebanon. The second, completed in 1952, branches off at Homs to the Syrian terminal at Banias. A third pipeline, belonging to the Trans-Arabian Pipeline Co (Tapline) which used to carry 24m. tons of Saudi crude petroleum per year to a terminal near Sidon in Lebanon, crosses about 150 km of Syrian territory, much of which was occupied by Israel in 1967. After nationalizing the Iraq Petroleum Company in June 1972, the Iraqi Government took over payment of royalties to Syria and in January 1973, after lengthy negotiations, Syria and Iraq signed a transit agreement which provided both for transit dues and the supply of petroleum for Syria's own domestic use. However, the flow of petroleum through the Kirkuk–Banias pipeline has been interrupted more than once since then. Throughput was suspended in 1976, when negotiations between Iraq and Syria on renewing the financial clauses of the transit agreement broke down, with Iraq demanding higher prices for its petroleum (to match the 1973–74 increases) and Syria seeking a proportionate increase in transit fees. For more than two years, Iraq refused to use the pipeline, instead directing its petroleum southwards to the Gulf and also via Turkey, through a pipeline that came 'on stream' in 1977. The short-lived improvement in Iraqi–Syrian political relations in late 1978, combined with the world shortage of petroleum arising from the Iranian revolution, brought a resumption of pumping from Kirkuk to Banias in 1979, but this was halted yet again in September 1980 at the start of the Iran–Iraq War. When, despite the continuation of the war, Iraq recommenced exports of petroleum on a limited scale, the situation in the Gulf put Syria in a relatively stronger position and the Iraq–Syria pipeline came into use again in February 1981. However, Syria remained dissatisfied with the transit royalties, stating that in 1981 the pipeline cost US $31m. to operate but brought revenues of only $25.7m. In April 1982, having signed an agreement to buy 8.7m. tons of petroleum per year from Iran, Syria closed the Kirkuk–Banias pipeline to Iraqi petroleum. With the closure of the pipeline, concessional supplies from Iran played an important part in fulfilling Syria's oil import needs. From 1982 onwards, yearly agreements were negotiated with Iran for the supply of oil; typically, 1m. tons supplied free to the Syrian army and the rest at a discount. The oil agreements were, however, plagued by political disagreements between the two countries, and by Syria's mounting oil debt to Iran, which was reported in mid-1986 to be at least $1,500m. For some periods Iranian oil supplies were halted altogether. In April 1987, 12-month agreements were signed for the supply of 1m. tons of oil free of charge to the Syrian army, and 2m. tons at OPEC prices on a cash-payment basis. A new one-year agreement, allowing for the supply of 1m. tons of free oil was reached in April 1988. The smaller quantity of oil involved in the recent agreements reflected the impact that the Deir ez-Zor production has had on Syria's oil import needs. In mid-June 1989, the Syrian Minister of Petroleum stated that Iran had made no deliveries of 'free' oil since the end of 1988.

From the late 1980s the Government's desire to maximize oil output was apparent in the easing of state bureaucratic constraints on the sector. Nevertheless, foreign companies continued to be deterred by the difficulties they experienced in Syria, added to which the prospects of major new discoveries were seen as limited. Against this background, the appointment in June 1992 of the AFPC Chairman, Nadir an-Nabulsi, as Minister of Petroleum and Mineral Wealth was seen as signalling a new commitment to commercial principles and to removing obstacles to oil development. An estimated 65% of Syria's geological structures remained unexplored in 1993, when the Government's policy on oil development terms was broadly based on prevailing Egyptian practices. According to a comparative survey of 101 oil-producing countries, published in February 1995 by the Swiss company Petroconsultants, Syria had the least attractive fiscal climate for oil exploration companies. The foreign oil companies operating in Syria in 1995 were understood to have urged the Government to allow 40% recovery of development costs (compared with Syria's existing 25% cost-recovery allowance) and to introduce accelerated cost-recovery procedures for existing operators (i.e. by allowing production from established wells to be offset against the development costs of new wells).

INDUSTRY AND TRANSPORT

A remarkable industrial boom, mainly based on textiles, occurred in Syria shortly after independence and was the principal cause of the dissolution of the customs union with Lebanon in 1959, since the protectionist policies which were adopted by the Syrian Government to safeguard this growth came into direct conflict with Lebanon's free-trade tradition. Since then the industrial (manufacturing and mining) sector has grown steadily. In 1971, for the first time, it replaced agriculture as the main generator of wealth, accounting for 19.5% of Syria's GDP, compared with 19.1% for agriculture. Manufacturing output expanded strongly in the early 1980s, with the index of production rising from 108 in 1982 to 167 in 1983 (1980 = 100). Until the early 1990s, however, production stagnated, with the industrial index standing at 163 in 1986. In some sectors, there was a marked decline in 1986: the wood and furniture index fell from 80 to 14; that for paper, printing and binding from 252 to 165; and that for the main mineral industries from 175 to 132. The target for average annual industrial growth under the 1976–80 Development Plan was an ambitious 15.4%, while the investment allocation for the industrial sector was £S11,289m., representing 20.8% of the total. There has been something of a change of heart since then, however, partly because of disappointing growth rates in this sector, and industry's allocation under the 1981–85 Plan fell to 16.6% of the total, or £S16,899m. In Syria's national accounts, the industrial sector comprises manufacturing, with mining, electricity, gas and water. In terms of GDP at constant 1980 prices, the value of mining, manufacturing and utilities fell by 17% in 1984, to £S7,622m. In 1985 it rose by 5%, to £S7,997m. Figures showed a further increase of 33% in 1986, to £S10,767m. However, this is likely to have been caused by increases in the output of oil and phosphates, rather than the result of an improvement in the performance of the manufacturing sector in general. According to the World Bank, in 1992 the industrial sector contributed 23% of GDP, compared with the agricultural sector's 30% and the service sector's 48%. In 1994, according to official sources, the industrial sector contributed 13.3% of GDP, compared with the agricultural sector's 28.4% and the service sector's 43.4%. In 1997, according to official sources, the industrial sector provided 27.2% of GDP, while the agricultural and service sectors provided 25.9% and 46.9% respectively. The real GDP of the industrial sector increased by an annual average of 5.7% during 1990–96, and by 2.8% in 1997.

Production of phosphates started from mines in the Palmyra area in 1972. A sudden rise in world phosphate prices in 1974 took the price of Syrian rock up to US $53 per metric ton, despite its high chlorine content and low quality. Prices and production subsequently fluctuated. Under the provisions of the 1981–85 Plan, phosphate production was expected to reach 5m. tons per year by 1985, but actual output was considerably less than this figure. Production declined from 1.46m. tons in 1982 to 1.23m. tons in 1983. It rose to 1.51m. tons in 1984 but fell to 1.2m. tons in 1985. In 1986 production rose to 1.6m. tons, and exports increased from 694,000 tons, worth £S75.6m., in 1985, to 1.3m. tons, worth £S150m. Production in 1987 amounted to almost 2m. tons. In 1997 phosphate output was expected to total 2.6m. tons, about 80% of which would be exported (mainly to Europe). Government planning targets advocated the modernization of equipment and the adoption of more efficient processing methods in order to increase annual output to 4m. tons by 2000. Syria's phosphate reserves have enabled the establishment of a phosphatic fertilizer industry. Production at a Romanian-built triple superphosphate (TSP) plant at Homs, costing $180m., began in 1981 with an annual capacity of 450,000 tons of TSP.

Production of phosphatic fertilizers rose from 68,333 tons in 1981 to 192,720 tons in 1986. An ammonia urea plant was completed at Homs in 1979, with a daily capacity of 1,000 tons of ammonia, of which 600 tons was to be used to manufacture 1,050 tons of urea per day. Production of nitrogenous fertilizers increased from 59,607 tons in 1981 to 116,543 tons in 1982. In 1984 and 1985 production was 110,206 tons and 104,000 tons, respectively, rising to 109,919 tons in 1986. In December 1986 Syria and the USSR signed a protocol on co-operation in the phosphate industry, providing for the annual volume of Syrian phosphate exports to the USSR to rise to 6m. tons by 2000. (After the collapse of the USSR in 1991, Syria sought to renegotiate such contracts with the Russian Government and other successor republics.) Plans for the construction of a new TSP plant near Palmyra, which have been under study since the 1980s, were reported to have been revived in 1997. Estimated to cost between $350m. and $450m., the plant would have a capacity of 500,000 tons per year. In March 1998 international bids were invited for another long-delayed project for the construction of an ammonia and urea plant (with a daily production capacity of 1,000 tons and 1,750 tons respectively).

The iron and steel industry, centred on Hama, comprises a smelter (capacity 120,000 tons per year), a rolling mill and a steel pipe plant, built by firms from West Germany and Switzerland. The potential for developing Syria's own deposits of iron ore, estimated at about 530m. tons, has been studied by Indian consultants. After the 1990/91 Gulf crisis, Saudi Arabia pledged funding for a new US $1,000m.-iron and steel complex at az-Zara (near Hama), which would have an annual capacity of 700,000 tons and specialize in coils, bars and industrial sections. The original proposal was shelved in 1994, but in October 1998 the Syrian Government made it known that the project was once again under active consideration. Syria's cement output (once targeted to reach 6m. tons by 1980) amounted to 2.85m. tons in 1982. However, completion of a big cement works at Tartous in 1983, together with other factories at Adra, Hama, Musulmiya and Aleppo, brought output to 4.3m. tons in 1985. In 1993 Syrian cement demand was expected to total 5m. tons, which was roughly in balance with the country's current production capacity. An import requirement emerged again in 1994, when Jordan was among the sources of supplies to meet the shortfall. In 1995 Syria's estimated cement demand was between 6m. and 6.5m. tons, while local cement production was around 3.2m. tons. Annual demand was forecast to reach 10m. tons by the end of the century. Having allocated a total of £S1,810m. to modernize, expand and refurbish existing state-owned cement plants, the Government was in mid-1996 evaluating bids for a project to add 1m. tons per year of new capacity at Hama. By early 1998 the award of the construction contract for the Hama cement plant was thought to be imminent. The KFAED was to provide $71m. towards the project, the total cost of which was estimated at between $160m. and $200m. In 1998 demand for Syrian cement was depressed by the slowdown in economic activity resulting from the slump in oil export prices, causing a substantial fall in cement imports from Jordan. Syria's seven sugar refineries supplied nearly one-half of local demand of 550,000 tons in 1994, when plans were announced to build an eighth plant which would raise the country's total sugar refining capacity to 389,000 tons per year. Export sales by the state-owned General Establishment of Food Industries (including, notably, olive oil) averaged around $1.5m. per month in 1998, more than double the average for 1997. In early 1999 a Saudi Arabian company was granted approval to establish a new olive-pressing plant in Syria, with a capacity of 15,000 tons of olive oil per year.

Other established industries include the manufacture of textiles, rubber, glass and paper, and the assembly of tractors, refrigerators and television receivers (including colour sets). Plans for a motor car assembly plant were postponed following the financial difficulties of 1976, and cars have since been imported in large numbers from Japan. However, a new private-sector scheme to assemble pick-up trucks, jeeps and small passenger vehicles was approved in principle by the Government in August 1994. To be based on the import of kits supplied by the US manufacturer General Motors, the proposed plant would begin production within two years of final approval for the project and would reach its full capacity of 30,000 vehicles per year within seven years. Food processing industries have also been developed. In April 1992 Alfamatex of Spain won a US $125m.-contract to build a new textiles mill at Idleb, with Kuwait and Islamic Development Bank financial aid. At the same time, bids were invited for a $150m.-textiles mill at Latakia, to be funded in part by the Abu Dhabi Fund for Arab Economic Development and with a projected output of 150,000 tons a year of cotton products.

Despite the dominance of large-scale state industries, the private sector has continued to play an important role in industrial manufacture. In 1986 the private sector accounted for 56% of the production of refrigerators, 62% of paints, 23% of biscuits, 100% of olive oil and 34% of detergents. Under Law 10 of May 1991, encouragement was given to Syrian and foreign investment in industrial ventures, particularly in the light industry sector. To qualify for 'Law 10' status, a project had to involve investment of more than £S10m. and had to secure the approval of the Higher Council for Investment, whose project evaluation criteria took particular account of the amount of foreign capital to be invested; compatibility with national development plans; utilization of advanced or innovatory technology; the amount of new employment to be created; and the utilization of locally available resources. Approved projects were entitled to five or more years' exemption from profit, dividend and real-estate taxes and were subject to a liberalized regime of import regulations and exchange controls (including unrestricted repatriation of profits for foreign investors). At the start of 1995 the total number of approved 'Law 10' projects was 1,251, involving projected investment of £S232,800m. and the creation of up to 87,346 new jobs. Inward transfers of funds were expected to cover nearly 77% of the average amount invested, with expatriate Syrians providing much of this 'foreign' investment. (It was generally believed that a significant proportion of private capital investment from abroad was in reality a repatriation through legitimate channels of undeclared wealth that had originally left Syria through clandestine channels.) The transport sector accounted for nearly 53% of all projects approved (although only 25% of projected total investment), with car import schemes predominating. The agricultural sector accounted for just 26 projects costing an estimated £S17,800m. Some 565 projects, involving projected investment of £S155,300m., were approved in production industries, including food processing (217 projects worth £S45,900m.), metal goods and construction materials (146 projects worth £S69,400m.), chemical goods (104 projects worth £S14,300m.) and textiles and clothing (75 projects worth £S21,600m.). By early 1995 a total of 65 'Law 10' manufacturing enterprises had started production and a further 135 manufacturing projects were under active development. The generally slow implementation of approved manufacturing projects stemmed in part from the need to raise equity finance (often on a large scale) as a substitute for commercial loan finance, which was virtually unobtainable within Syria and very difficult to obtain from abroad. The first 'Law 10' project financed in part by a commercial loan was a chemicals plant (25% owned by the Syrian Ministry of Industry) that was due to start production in early 1997. A $4.4m. seven-year loan for this project was granted in August 1996 by the German investment agency DEG. One of the first 'Law 10' projects under majority foreign ownership (a food and beverages plant, 60%-owned by Nestlé of Switzerland) went into production in May 1997. In September 1994 the management of public-sector enterprises was placed on a new footing under the terms of a legislative decree empowering the directors of such enterprises to operate 'on a commercial basis' without the need to seek government approval for their business plans.

In 1998 a number of amendments were made to 'Law 10', in order to improve the incentives to investment. These included the removal of a 75% limit on the proportion of output that could be exported; an increase in the permissible level of foreign representation on company boards; additional tax incentives for projects outside Damascus and Aleppo; and the extension of 'Law 10' benefits to holding companies. Further amendments under discussion in mid-1999 included a provision that foreign investors should be allowed to own the land on which their projects were sited. It was also proposed to liberalize the rules that applied to foreign-exchange transfers.

Infrastructural improvement to aid commercial activity included a plan to install 600,000 new telephone lines (double the existing number), for which a contract was awarded to Siemens of Germany in mid-1991. International telecommunications sevices were upgraded in December 1994 with the inauguration of a new submarine cable linking Syria and Lebanon with Cyprus. In 1996 Syria had an efficient modern telephone system with a total of over 2m. lines installed and was planning to establish a GSM (global standard for mobiles) system in the near future. In mid-1998, as part of a new programme to expand the telephone system by 1.65m. lines, Ericsson of Sweden signed a contract valued at US $120m. for the supply and installation of digital switching systems for 1m. new lines. Samsung Electronics of South Korea was reported to have secured the contract for rural fibre optic links. The expansion programme was being financed by loans from the Arab Fund for Economic and Social Development, KFAED and the Abu Dhabi Development Fund. In mid-1999 three companies were finalizing plans to begin separate GSM pilot schemes in Syria.

Since its inauguration in 1978, the Euphrates Dam, with its eight 100-MW turbines, has made an important contribution to power generation in Syria. However, from an early stage extensive Turkish exploitation of the Euphrates waters often reduced the level of water in Lake Assad to such an extent that only three turbines could operate. In July 1987 Turkey undertook to use 500m. cu m of water from the Euphrates per year for irrigation until agreement was reached with Syria and Iraq on the use of the river's waters. Syria has considered various ways of overcoming its power shortage. There has long been talk of a nuclear power plant, possibly using uranium obtained from local phosphate deposits. Four Western companies were short-listed to carry out the pilot study for a 1,200-MW station in 1979/80, but none was ever given the go-ahead. In mid-1983 Syria and the USSR signed a protocol whereby both sides were to study the construction of Syria's first nuclear power station, but little progress appeared to have been made in this direction before the disintegration of the USSR in 1991. In 1995 Syria opened discussions with Argentina with a view to purchasing a 3-MW research reactor.

In recent years Syria has suffered frequent interruptions in the supply of electric power. Electricity demand soared, owing to rapid industrialization in the 1970s, and the Euphrates Dam (see above) did not, as was hoped, meet Syria's growing needs, as shortfalls in its water supply due to erratic rainfall and Turkish offtake upstream were compounded by an almost total lack of maintenance of the dam and its generating plant. By early 1993 the generating capacity of the dam was thought to be barely 150 MW, while its actual output fell below 100 MW at some points, contributing to chronic power shortages which led to electricity supplies being cut off for seven or more hours per day. Many Syrian businesses relied on diesel generators to keep factories running. An ambitious programme of power station construction, launched in the 1980s, was increasingly geared to the exploitation of local natural gas resources as a fuel source, but failed to keep pace with the growth of demand because of chronic delays between the planning and construction stages. (Only three contracts were finalized between 1983 and 1992.) In 1993 Syria was estimated to have a total of 1,900 MW of operational generating capacity (10.5% hydro, 63% thermal and 26.5% gas-turbine) out of a theoretical installed capacity of 3,002 MW (30% hydro, 51% thermal and 19% gas-turbine), while the minimum operational capacity needed to meet current demand was estimated to be 2,500 MW. Demand was officially projected to rise to 3,284 MW in 1995 and 4,882 MW in 2000. In a bid to rectify the situation, the authorities approved heavy, aid-financed investment in electricity generation in the early 1990s. Work has since been completed on the 600-MW Jandar plant, financed by Japan, and is continuing on the Saudi-financed 1,000-MW plant in Aleppo. Another important generating project carried out in recent years has been the installation of eight 128-MW turbines in various locations by an Italian company, with finance from Kuwait. In early 1997 Mitsubishi Heavy Industries of Japan was awarded the contract to construct a 600-MW plant at Az-Zara. In August 1995 the Arab Fund for Economic and Social Development extended a US $100m. loan for a project to link the Syrian and Jordanian electricity networks, and in June 1996 it made a further $86.7m. available to finance a link between the Syrian and Turkish electricity networks. It was reported in March 1998 that Siemens of Germany had secured the contract to construct two sub-stations serving the grid interconnection with Jordan. Earlier, at the end of 1997, the Government issued a decree allowing Syria's first independent power project to proceed as a 100% private venture. The developers, a Belgian/Syrian partnership, plan to build a 600-MW plant at al-Bardeh, 150 km north of Damascus. In mid-1999 the developers were conducting detailed discussions with the Government regarding the tariffs to be charged for electricity supplied from the proposed plant. It was reported in 1999 that the Government had deferred plans to build six new electricity sub-stations, having experienced problems over the procedures for financing them from 'surplus' Saudi Arabian aid funds remaining from the Aleppo power station project.

The regional political situation has not helped Syria in encouraging private investment or in developing its ports. Free zones which were set up in the 1970s in Damascus, Aleppo, Homs, Latakia and Tartous, with the aim of attracting foreign investment in light industries, assembly plants and warehouses, failed to have the desired effect. Jordan's support for Iraq in the Iran–Iraq War compounded the discord between Syria and Jordan, and although in 1985 there was a dramatic improvement in relations, plans for a joint industrial free zone south of Dera'a had been undermined. Operations at the ports of Latakia and Tartous (both equipped to handle transit traffic bound for the Gulf) were adversely affected by the closure of the border with Iraq in 1982. The volume of goods handled at the two ports declined markedly after 1981, when it totalled 7.63m. tons. In 1985 the total was 5.5m. tons, and in 1986 4.37m. tons. In mid-1996 the Government announced plans for a major expansion of port capacity, as recommended in studies submitted by the Japan International Co-operation Agency. Total port capacity in Syria was targeted to reach 19.3m. tons per year by 2003 (6.2m. tons at Latakia, 5.4m. tons at Tartous and 7.7m. tons at a new port to be developed near Tartous), rising to 29.1m. tons per year by 2010 (11.4m. tons at Latakia, 7.7m. tons at Tartous and 10m. tons at the proposed new port). Existing port capacity in 1996 was 9.5m. tons per year (4.4m. tons at Latakia and 5.1m. tons per year at Tartous) and in that year, Latakia handled just under 3m. tons of cargo, and Tartous 4.14m. tons. In mid-1997 Tartous had two Finnish straddle carriers and four British dockside cranes on order, while Latakia (currently lacking specialized container-handling equipment) was negotiating to buy four ship-to-shore gantry cranes. The reopening of Syria's land border with Iraq at the start of June 1997 was followed by a Syrian request to the United Nations that Syrian seaports be added to the list of approved transit points for Iraq's humanitarian imports under the UN-administered 'oil-for-food' scheme.

At the start of 1997 the national airline, Syrian Arab Airlines, had a 16-strong fleet comprising two Boeing 747s, six Boeing 727s, three Tupolev 154s, two Tupolev 134s and three Caravelles. No new aircraft had been purchased since the early 1980s, although some Boeings had been obtained as gifts from Kuwait and Abu Dhabi. Six Airbus A320 aircraft were ordered from Airbus Industrie at the end of 1996, the first of these aircraft being delivered in October 1998 and the second in April 1999. In 1997 Syrian Arab airlines carried 614,517 passengers on international routes and 76,347 passengers on domestic routes, representing a load factor of 54.8%.

In June 1997 the General Establishment for Syrian Railways signed a contract to purchase 30 new diesel locomotives from the Anglo-French company GEC Alsthom. Separate negotiations were in progress with other Western companies bidding for a contract to refit 32 of Syria's existing fleet of 140 (mainly Soviet-built) diesel locomotives. In 1997 Iranian consultants began an outline study of proposals to build a metro system in Damascus. Similar proposals had been studied by Soviet consultants in the early 1980s.

TRADE AND TOURISM

Commerce has traditionally been a major occupation of Syria's towns, especially of Damascus and Aleppo which lie on the main east-west trade route. There have been, however, some radical changes in both the direction and the composition of Syria's trade over the years. During the mid-1960s Syria's principal

suppliers were among the Eastern European bloc. In 1968 the USSR and Czechoslovakia together provided more than 20% of all imported goods. In 1974, although the value of their supplies had increased, those two countries accounted for just under 7.2% of the total. Meanwhile, the value of Syria's imports over the six-year period had risen nearly four-fold, reaching £S4,571m. in 1974, and the bulk of the increase had resulted from flourishing trade ties with Western Europe. In the 1980s, the pendulum swung back in favour of the Eastern bloc again. The trend towards the East was reinforced during this period by trade agreements with Eastern bloc countries and by the willingness of some of these to accept barter deals and thereby accommodate Syria's shortage of foreign exchange. Yugoslavia, for example, agreed in 1985 to take almost one-third of Syrian phosphate exports in return for construction machinery, iron and steel, timber, pharmaceuticals and medical equipment. Czechoslovakia also agreed to exchange engineering equipment for phosphates and farm produce, while Romania was a close trading partner for some years. The USSR, after signing a friendship treaty with Syria in 1980, followed this up with an agreement to boost bilateral trade to the equivalent of some US $2,600m. in the five years up to 1985. This was renewed for a further five years in 1985. The fields in which Soviet companies were active in Syria included transport, the oil industry, the phosphate industry, agriculture, power generation, and the search for reserves of water. Another friendship and co-operation treaty, this time with Bulgaria, was signed in May 1985. In 1980 socialist countries took 16.1% of Syria's exports, and in 1986 the proportion rose to 46.4%. The proportion of Syria's imports supplied by socialist countries rose from 14.6% in 1985 to 20.2% in 1986. However, the EC's share also increased, from 29.9% to 34.8%, while that of Iran declined from 17.8% to 6.8%, as a result of the fall in Iranian oil imports. After the post-1989 changes in Eastern Europe and the disintegration of the USSR in 1991, the pendulum swung again towards trade with the West. Exports to the USA increased to $206.6m. in 1991 (from $150.4m. in 1990), while imports fell from $52.1m. to $27.1m.

Syria's exports increased dramatically during the 1970s, mainly owing to large increases in the value of petroleum sales. Largely as a result of the decline in oil prices and the volume of exports, Syria's export earnings declined every year between 1980 and 1986. From £S8,273m. in 1980, the value of exports fell to £S6,427m. in 1985 and £S5,199m. in 1986. Exports in 1987 nearly trebled, in terms of local currency, to £S15,200m., although these figures used an exchange rate of US $1 = £S11.20, which did not replace the former rate of US $1 = £S4.05 until early 1988. In terms of US dollars, the value of exports in 1987 increased by only 6%, to $1,356m.

In view of the country's alarming shortage of foreign exchange, there have been strict curbs on imports (although large amounts of goods are smuggled into the country). In 1981 the value of imports totalled £S19,781m. In 1985 the figure was £S15,570m., and in 1986 there was a drop of 31.9%, to £S10,611m. The change in the exchange rate affected import figures, in local currency, with an almost three-fold increase in 1987 to £S27,900m. In terms of US dollars, however, there was a 6% drop, to US $2,492m. The trade deficit declined from $1,360m. in 1986 to $1,136m. in 1987. The USSR was Syria's leading trade partner in 1986, taking 29.7% of Syria's exports, and providing 10.1% of its imports. Syria's second biggest customer was Italy (12.1%), followed by Romania (9.4%) and the Federal Republic of Germany (4.1%). Its second biggest supplier was the Federal Republic of Germany (9.1%), followed by France (8.7%) and Italy (7.5%). Iran, previously Syria's largest supplier, fell to fifth place, with a 6.8% share.

In March 1990 the Government announced a trade surplus of £S10,430m. for 1989. The value of exports was reported to have totalled £S33,740m., while that of imports amounted to £S23,310m. However, local analysts cast doubt upon the accuracy of these figures, observing that few of the goods smuggled into Syria from Lebanon were recorded in trade statistics. Furthermore, it was noted that at least three exchange rates applied to imports: the official fixed rate of US $1 = £S11.225; an 'incentive' rate of $1 = £S20.22; and a free market rate of $1 = £S45. Since it was unclear on which rate the calculation of the trade balance had been based, it was impossible to ascertain the accuracy of the Government's figures in hard currency terms. The IMF estimated Syria's 1990 trade surplus as $2,094m. (exports $4,156m., imports $2,062m.). According to official statistics, a 1991 trade surplus of £S7,438m. (exports £S38,504m., imports £S31,066m.) was followed by a deficit of £S4,459m. in 1992 (exports £S34,719m., imports £S39,178m.) and a further deficit of £S11,151m. in 1993 (exports £S35,318m., imports £S46,469m.). Within the overall trade balance for 1991 there was a public-sector trade surplus of £S10,364m. and a private-sector deficit of £S2,926m. In 1992 public-sector trade was in surplus by £S12,713m. while private-sector trade was in deficit by £S17,172m. In 1993 the public-sector surplus fell to £S8,761m. while the private-sector deficit increased to £S19,912m. Law 10 of May 1991 (see above under Industry) was an important factor in a sharp rise in private-sector imports from £S16,575m. in 1991 to £S28,752m. in 1993. In June 1992 the Minister of Economy and Foreign Trade stated that there was a need to set up a special Syrian export bank. Five years later the Government was still 'studying the possibility' of such a step. IMF statistics gave Syria's 1993 visible trade deficit as $273m. (exports $3,203m., imports $3,476m.), the 1994 deficit as $1,275m. (exports $3,329m., imports $4,604m.), the 1995 deficit as $143m. (exports $3,858m., imports $4,001m.) and the 1996 deficit as $338m. (exports $4,178m., imports $4,516m.). In 1997 Syria recorded a trade surplus of $454m. (exports $4,057m., imports $3,603m.). IMF figures for 1998 showed that the value of Syrian exports had fallen by some 23%, to $3,135m. (the main factor being a 32% decline, to $1,700m., in oil export earnings during a year of depressed world prices). Spending on imports (which in 1997 had been sharply reduced in response to restrictive government policies) decreased further to total $3,307m., resulting in a visible trade deficit of $172m. In that year the principal source of imports was Germany (7.1%), followed by Italy (6.5%) and France (5.5%). The main market for exports was Italy (21.7%), followed by France (17.6%) and Turkey (10.3%). The principal exports in 1998 were crude petroleum, vegetables and fruit, and textiles, while the principal imports were machinery, base metals and manufactures, and foodstuffs. During the first half of 1999 the value of oil exports improved as world oil prices recovered, while the balance of Syria's non-oil trade was affected by drought problems in the agricultural sector.

In May 1993 the Government launched an unprecedentedly thorough clampdown on smuggling across the Lebanese border, causing the black-market price of illegally imported American cigarettes (the main indicator of the level of smuggling activity) to triple within a month. The Government subsequently announced that a state trading organization would in future import foreign cigarettes for sale at the prices which smugglers had been charging before the clampdown (when the trade in illegal cigarette imports had been worth an estimated US $1m. per day).

Syria's entire system of foreign trade, based on laws dating back to 1952, was under review in 1993 as the Government studied the extent to which current import and export controls were hampering the growth of private-sector enterprises. In September 1997 the Government removed a £S300,000 ceiling on the total value of approved locally produced goods which Syrian travellers were permitted to carry abroad. This was interpreted as a move to encourage the growth of 'informal' trade across the recently reopened border with Iraq. It was reported in June 1998 that an agreement had been reached with Saudi Arabia to establish a free-trade regime under the Arab League free-trade protocol (which calls on Arab states to reduce tariffs on mutual trade by 10% per year from 1998). Earlier in 1998 the Syrian Government had agreed to establish a free-trade regime with Lebanon. Exports to Lebanon totalled US $326m. in 1997, compared with imports of just $38m.

Tourist traffic declined from 774,500 tourists in 1979 to 346,800 in 1982, though it rose to 565,000 in 1984, largely because of an arrangement whereby Iranians visited Syria in part-payment for Iranian oil supplies. The number of Iranian visitors dropped from 157,200 in 1984 to 132,600 in 1985, and there was a decline in the overall number of tourists to 486,700. In 1986, however, the number of Iranian tourists rose to a record 174,000 and the total number of tourists reached 567,700. The number of tourists from Western Europe has remained modest—by far the largest number in 1986 came from West

Germany (17,100) and France (14,800), followed by the United Kingdom and Italy, each with 5,600. Western tourists are doubtless deterred by the instability in the region and by fear of terrorist attacks. Since 1978, a number of joint public/private sector companies, in which the Government has a minority interest, have been set up.

In 1993 Syria was visited by 2.9m. tourists who generated US $700m. of tourism revenue. A joint private and public sector consortium was in 1994 preparing to invite construction bids for a $70m. resort development near Tartous, to include hotel and bungalow accommodation, sports facilities, restaurants and shops. Work on this project had still to start in mid-1996 because of difficulties in arranging financing. Construction of a $10m. tourism complex in the Shabaa area (south of Damascus) began in early 1996. The main shareholder in the Shabaa complex was a Saudi Arabian company. The construction, with Saudi investment, of a 350-room five-star hotel and assocated facilities in Damascus was to proceed, and international contractors were expected to be invited to bid in early 1999. The first stage of the $25m. Happy Land amusement park opened near Damascus in April 1998. In 1998 Syria was visited by 2.5m. tourists (mainly from other Arab countries), generating an estimated tourism revenue of $1,250m.

FINANCE

The sudden increase in Syrian exports from 1972 onwards was one of the major results of a reform in the country's regulations on foreign exchange. The method of valuing exports, other than cotton and crude petroleum, was transferred from the official exchange rate (then US $1 = £S3.80) to the 'parallel' (free) market rate ($1 = £S4.30), which meant a *de facto* devaluation of Syrian currency in relation to most transactions. The 'parallel' market was discontinued in July 1973 and remained suspended for nearly eight years. In April 1981, in an attempt to mobilize remittances to finance imports by the private sector and thereby reduce pressure on the Syrian pound, the Government announced that remittances from abroad and other private sector 'invisible' earnings would be convertible into Syrian currency at a freely floating 'parallel' rate. At the same time, it imposed very tight restrictions on private businesses wishing to open letters of credit for imports. These were not eased until late 1984, and, even then, importers were advised that suppliers might have to wait nearly a year to receive payment. In late 1984 there was also an official reduction in the Syrian currency's value in terms of the tourist exchange rate, which was adjusted from $1 = £S7 to $1 = £S8. From September 1985, resident Syrians were permitted to open accounts in foreign currency at the Commercial Bank of Syria, to be used for imports. In the previous year this concession had been granted to foreigners and non-resident Syrians. In early 1986 there was a major currency crisis, with the value of the Syrian pound on the 'black' market dropping to $1 = £S17, or more. There were widespread arrests of currency dealers, and large quantities of gold and foreign currency were seized. The effect of these measures was to bring about a short-term appreciation in the value of the currency, but it soon began to depreciate once more, weakened by Syria's shortage of reserves of foreign exchange. Between October 1985 and October 1986 the Syrian pound lost 50% of its value against the US dollar. In August 1986 one of Syria's five exchange rates was devalued from $1 = £S11.75 to $1 = £S22, a level more comparable with the 'black' market rate, which fell to $1 = £S24–£S25 at the end of 1986, when the tourist exchange rate stood at $1 = £S9.75. The fixed official rate for government accounts and strategic imports remained at $1 = £S3.925, as it had been since April 1976. Decree 24 of September 1986 rendered currency smugglers liable to prison terms of 15–25 years, and smugglers of precious metals to terms of three to 10 years. Possession of hard currency was classed as a criminal offence punishable by imprisonment. Although it was rarely enforced, the latter provision was seen by Syrian businesses as a disincentive to legitimate trading activity and demands for its repeal were repeatedly made in the first half of the 1990s by advocates of economic liberalization. In September 1987 the Syrian pound, according to the official exchange rate, was devalued from $1 = £S3.925 (a level maintained since 1976) to $1 = £S11.20–£S11.25—a move that many observers considered to be long overdue.

Subsidies have been paid to Syria by other Arab countries since the Khartoum summit meeting of 1967. They were reinforced at the Rabat summit of 1974, which resulted in the promise of an annual US $1,000m. to Syria in its capacity as a 'confrontation state'. The Baghdad summit of 1978 pledged to increase these subsidies to $1,800m. per year for a period of 10 years. The amount of Arab aid which Syria actually received reached $690m. in 1975 but dropped to only $355m. in 1976. The amounts received in 1979 and 1980 were estimated at $1,600m. and $1,400m., respectively, but donations were adversely affected by the Iran–Iraq War (in which Syria's former backers provided financial support to Iraq, while Syria sided with Iran) and by the erosion of the financial surpluses that OPEC countries accumulated before the decline in oil prices. Aid to Syria from the Gulf states was estimated to have dropped to $600m.–$700m. in 1986, although it has been difficult to gauge with any true accuracy the amount of aid from Gulf states under the Baghdad summit agreement. Saudi Arabia has been the most consistently conscientious of the Arab states in meeting its aid commitments to Syria.

Syrian political actions that have met with the approval of 'moderate' Arab states are often accompanied by reports of large sums being channelled from Saudi Arabia. Thus it was widely believed that Syria received a substantial 'reward' for attending the Arab summit held in Amman in November 1987, which was critical of Iran's actions in the Iran–Iraq War. Moreover, Syria's participation in the US-led multinational force which defeated Iraq in the Gulf War of 1991 led to further 'rewards' in the form of special aid totalling over $1,000m.

Syria also obtains considerable sums from multilateral and bilateral development aid sources, its receipts of official development aid (ODA) being in the US $600m.–$700m. range in 1984–87, falling to $191m. in 1988 and to $127m. in 1989, rising to $650m. in 1990 (when ODA represented 4.4% of GNP) and falling to $373m. in 1991. Syria's debt arrears to funding institutions, particularly the World Bank, have, however, created problems. The arrears to the World Bank led to disbursements of new loans being 'frozen' in late 1986; in mid-1991 Syria's debt to the Bank was estimated at more than $300m. Political events have at times cast a shadow over Western governmental aid. In November 1983 the US Congress voted for US economic aid to Syria to be terminated; already in 1981 Congress had decided to 'freeze' $138.2m. in aid instalments totalling $227.8m. The Federal Republic of Germany cut off aid in late 1986, after two Jordanians were sentenced for a bomb attack in Berlin in which Syria was implicated—a line of credit suspended since 1980 had only been restored in 1985. In 1987 aid was restored. The EC imposed a *de facto* 'freeze' on its aid to Syria in late 1986, but aid was resumed after the visit of the EC's North-South commissioner, Claude Cheysson, to Damascus in September 1987. In the third EC protocol, which came into effect at the start of 1993, Syria was allocated ECU 146m. A fourth EC protocol, providing for an allocation of ECU 158m., failed to gain the necessary support when it was submitted to the European Parliament for approval in March 1993. Syria's total external debt (including military debt to the former Soviet bloc countries of about $10,000m.) was estimated by the World Bank to have been $16,815m. at the end of 1991, compared with $3,549m. in the early 1980s. However, the debt-service ratio as a percentage of exports was reduced from 15.6% in 1986 to 3.9% in 1990. The World Bank's estimate of Syria's end-1993 external debt was $19,975m. (over 70% of which was classified as 'bilateral concessional'), while total debt service paid during 1993 was estimated as $283m. Nearly $4,000m. of the end-1993 debt consisted of arrears to official creditors, about 10% of these arrears being owed to the World Bank, about 30% to OECD creditors and the balance to the former Soviet Union and other East European countries.

In May 1994 the Minister of Economy and Foreign Trade said that Syria was currently making interest payments of US $6m. per month on its World Bank debt of about $500m., and was seeking to negotiate arrangements whereby the Government would pay off one-third of the debt while a 'friends of Syria' donor group would pay off the remainder. He ruled out the option of a formal IMF/Paris Club arrangement as 'unacceptable in our political climate'. He said Syria was currently settling its outstanding debts to the export credit agencies of several West

European states; that it had reduced its indebtedness to commerical banks to about $500m. through repayments and restructuring agreements; and that it regarded its military debt to the former Soviet Union as a matter for discussion 'in its proper context as a mutual obligation'. It had been reported in April 1994 that Syria had sought an 80% write-off of military debt during exploratory talks with Russian officials. Sweden and Belgium were among the OECD countries whose export credit agencies reached agreements with Syria in 1994 in respect of relatively minor debts. However, Syria's main OECD bilateral creditors (among which France, Japan and Germany were each owed arrears of more than $100m.) were still seeking settlements in mid-1995. Negotiations with Germany were complicated by the inclusion of an estimated $500m. of Syrian debt to former East Germany within Syria's total debt of around $640m. to the unified state. The World Bank estimated Syria's end-1994 external debt as $20,557m., including arrears of principal totalling $4,563m. and arrears of interest totalling $1,400m. The Bank estimated that Syria paid $398m. in debt service in 1994 (out of a total of $1,530m. due for payment in that year).

In October 1996 France announced a debt settlement agreement involving the 'forgiving' of a reported 900m. French francs (US $175m.) of arrears of interest and the rolling-over of a further 1,000 French francs ($195m.) of debt. In July 1997 the Syrian Government signed an agreement to settle its debt to the World Bank. Arrears of principal totalling $269.5m. were repaid in full on 1 September 1997, while arrears of interest totalling $256.9m. were to be repaid in instalments over five years from 1 October 1997. It was reported in September 1997 that Syria was negotiating with the Islamic Development Bank to settle around $300m. of payments arrears. By mid-1998 Syria's only remaining unresolved debt problems of significance were with Germany and Russia. In November 1998 Italy (currently Syria's largest export market and second largest import supplier) agreed an aid programme for the years 1999–2001, under which loans and grants totalling as much as $65m. were to be made available for agricultural, energy, health, agro-industrial, environmental and scientific projects.

After the October 1973 war, state expenditure also clearly reflected the inflow of foreign funds. The general budget soared from a total of £S6,976m. in 1974 to £S16,564m. in 1976. The events of 1976, however, caused the authorities to reconsider and in 1977 and 1978 overall budget expenditure increased by only about 5% in absolute terms over each of the previous years. In 1979, as a result of the pledges made at the Baghdad summit, a big increase in defence spending raised total budget expenditure to £S22,600m. By 1985 the total had increased to £S42,984m. (US $10,950m.), with defence, at £S13,000m., continuing to take a major share of current spending. The 4% nominal increase in total expenditure compared with an annual rate of inflation estimated at 10%. Investment expenditure under the 1985 budget was estimated at only £S19,436m., compared with £S17,886m. in 1984 and £S17,981m. in 1983. In the 1986 budget total spending amounted to £S37,091m., a substantial drop in real terms, taking inflation into account. In the 1987 budget, expenditure was cut by 4.4% to £S35,443m. Current expenditure was reduced by 14.1% to £S23,029m. Defence received the largest single allocation (£S14,327m., accounting for 62.2% of current expenditure), while agriculture was allocated about 20% (£S3,500m.) of total investment spending, compared with almost 25% in 1986. The 1988 draft budget was the first for a number of years to feature a substantial increase in spending. Total expenditure was raised by more than one-fifth to £S51,545m., compared with actual spending of £S35,443m. in 1987. Current expenditure rose from £S23,029m. to £S29,665m., and investment spending from £S12,414m. to £S21,880m. Of revenues of £S51,545m., taxes, aid and services were budgeted to provide £S34,848m. and the state sector surplus £S16,697m. The 1989 and 1990 budgets provided for expenditure of £S57,413m. and £S61,875m. respectively. The 1991 budget set expenditure at £S84,690m. and envisaged an effective deficit of £S13,676m., although this was treated as exceptional financing in order to achieve a technical balance. The 1992 budget was also technically balanced, providing for expenditure and revenue of £S93,043m.; this represented a nominal spending increase of almost 10% over 1991, although after allowing for inflation of 20% budgeted spending was lower in real terms. The 1992 expenditure total consisted of £S56,793m. in current spending and £S36,250m. in investment, with defence accounting for 26% of current spending (considerably less than in previous years), education 20% and health 5%. The largest allocation in the investment budget, some 26%, was for agriculture and irrigation. The effective deficit in the 1992 budget was equivalent to 20.9% of total revenue, to be funded by concessional loans totalling £S13,904m. and other foreign loans totalling £S5,607m.

The 1993 budget provided for total expenditure of £S123,018m., including £S27,869m. for defence (up 2.5% on 1992) and £S12,671m. for electricity, water and gas (up 157% on 1992). Overall, investment spending was nearly twice as high as in 1992, and represented about half of total budgeted spending for 1993. The effective deficit was equal to 34.9% of the total budget in Syrian pounds, the borrowing elements on the revenue side being concessional loans of £S9,000m., other foreign loans totalling £S22,868m. and domestic loans of £S11,026m. (compared with a zero requirement for domestic loans in the 1992 budget). The real increase in foreign borrowing between 1992 and 1993 was estimated to be around 6.5% in dollar terms after allowance was made for the Government's use of an exchange rate of US $1 = £S43 (rather than the official accounting rate of $1 = £S11.2) to calculate this component of the 1993 budget. The overall size of the deficit was nevertheless criticized by several deputies during the budget debate in the Syrian legislature (which formally adopted the Government's proposals on 9 May 1993). The 1994 budget provided for total expenditure of £S144,162m. (17.2% higher than in 1993) and total revenue of £S106,890m., leaving a deficit of £S37,272m. Current spending accounted for 53% of the 1994 expenditure total. Public-sector wages were raised by 30% in May 1994, while price increases were announced for electricity, petrol and many other items. In the same month the currency exchange rate used to levy customs duties on items other than basic commodities and most industrial raw materials was changed from $1 = £S11.2 to $1 = £S23. (The former rate continued to apply to the 'basic' import category.) There was a further selective modification of exchange-rate policy at the start of 1995, when the rate applicable to most sales or purchases of foreign currency through the Syrian banking system was changed from £S23 to £S42 per dollar. The free-market exchange rate for the Syrian pound (as determined by informal currency trading in Lebanon) averaged $1 = £S49 in the first half of 1995, having remained fairly stable for more than two years. From October 1995 the exchange rate of $1 = £S42 was applied to the prices charged to foreign visitors for hotel accommodation. It was estimated that four-fifths of all officially sanctioned foreign-exchange transactions in Syria were based on this rate of exchange at the end of 1995. The oil industry (hitherto required to use a rate of $1 = £S11.20) was permitted to switch to a rate of $1 = £S22.95 from January 1996 and to the main rate of $1 = £S42 from August 1996.

Syria's 1995 budget, approved by the legislature in April 1995, provided for expenditure of £S162,040m. (12.4% higher than in 1994) and revenue of £S125,718m. (17.6% higher than in 1994), leaving a deficit of £S36,322m. (2.5% less than the 1994 deficit). Recurrent items made up 54.3% of expenditure in the 1995 budget. The 1996 budget provided for total expenditure of £S188,049.9m. A budgetary deficit of £S1,577m. was recorded in that year. Recurrent spending totalled £S95,977m. (51.2% of total expenditure), including £S36,463m. (19.5% of total expenditure) for defence. Syria's 1997 budget provided for total expenditure of £S211,125m. and a supplementary allocation of £S10,200m. was announced in August 1997 to cover payments connected with Syria's debt settlement agreement with the World Bank.The 1998 budget provided for total expenditure of £S237,300m. (£S117,700m. for current expenditure and £S119,600m. for investment expenditure). This was 12.4% higher than in 1997, although 5.7% of that increase was the result of an adjustment to the exchange rate of the Syrian pound against the dollar. The 1999 budget provided for total expenditure of £S255,000m. (representing a nominal increase of 7.5% on the 1998 budget).

In October 1996 the exchange rate applicable to most foreign exchange transactions was devalued from US $1 = £S42 to $1

= £S43.50, and decreased further to $1 = £S45 in July 1997; the Government stated that it intended to use the latter rate to calculate the 1998 budget (previous budgets were based on multiple exchange rates). The free-market value of the currency in the latter part of 1997 averaged around $1 = £S50, having shown little variation over a long period of stable trading. From October 1996 Syrians were permitted to open hard-currency deposit accounts in Syria without declaring the origin of their funds, but there was no formal repeal of the 1986 law forbidding possession of hard currency and no measures were introduced to make it possible to buy hard currency through the Syrian banking system. In these circumstances, Syrians continued to rely on the Lebanese banking system for most foreign exchange transactions: the total amount of hard currency held in private foreign exchange accounts in Syria in early 1999 was only $6.5m. In August 1998 the principal exchange rate used by Syrian banks was slightly devalued to $1 = £S46. The free-market value of the currency at this time was around $1 = £S52.

The current account of Syria's balance of payments was US $896m. in surplus in 1979. In 1980 the surplus fell to $251m., and there was a deficit in every subsequent year until 1989. In that year a surplus of $1,222m. was recorded, followed by surpluses of $1,762m. in 1990, $699m. in 1991 and $55m. in 1992, when increased spending on imports coincided with reduced revenue from oil exports. Remittances from Syrians working abroad were estimated at $550m. in 1992, while capital inflows through government channels totalled $313m. In 1993 there was a current-account deficit of $579m. Inward official transfers in 1993 totalled only $40m. In 1994 Syria recorded a current-account deficit of $791m. There were current-account surpluses of $367m. in 1995, $81m. in 1996 and $483m. in 1997. IMF figures for 1998 indicated a surplus of $59m.

Total official reserves (excluding gold) fluctuated considerably in the 1980s. At the end of the first half of 1986 they declined to only US $10m., but by the end of 1988 they had increased to $191m. Net foreign assets rose from $2,000m. at the end of 1989 to $3,700m. at the end of 1990. At the end of 1996 Syria's net foreign assets totalled $8,901m., having risen by more than 50% since 1994, as world oil prices improved.

The Government was in mid-1994 finalizing a draft law to establish a stock market in Syria in order to facilitate a structured transition to a market economy. The Government was also coming under increasing pressure from the private business sector to relax the state monopoly on banking. Savers had recently been depositing funds with unlicensed finance houses, several of which had collapsed in circumstances which prompted the passage of legislation to shut down the remaining such operations in June 1994. Business customers' criticisms of the Commercial Bank of Syria focused mainly on the bank's negligible provision of loan finance for private businesses and its insistence on 100% cash cover for letters of credit. In 1998 the stock market law was still awaited (the Government was advising Syrian companies to apply to the Beirut stock exchange if they wanted market listings for their shares) and Western banking experts were conducting detailed appraisals of the Commercial Bank of Syria and the Central Bank of Syria as part of an EU-funded banking reform initiative. In December 1998 a delegation from the Federation of Syrian Chambers of Commerce visted Pakistan's Karachi Stock Exchange (KSE), whose chairman declared that the KSE was willing to assist in the establishment of a Syrian capital market.

In 1998 deposits in local currency in the state post office's savings accounts increased substantially after being declared exempt from inheritance tax. It was reported in late 1998 that the Government had authorized the post office to invest as much as one-half of its deposits in investment projects, a move which would potentially channel more than £S12,000m. into productive investment. In March 1999 it was announced that the Government was finalizing plans to establish an export bank with a capitalization of £S1,000m.

ECONOMIC PLANNING

The most ambitious of the projects contained in the third Five-Year Plan (1971–75) was the Euphrates dam project, on which construction work began in 1968. Most of the country's future industrial and agricultural development depends on this scheme, and nearly one-quarter of public investment over the Plan period was earmarked for its implementation, with £S950m. allocated for the dam itself and £S643m. for land reclamation and development in the Euphrates basin. The project involved the construction of a dam 4.6 km long and 60 m high, with a width of 500 m at the bottom. The reservoir thus created, Lake Assad, was designed to hold 12,000m. cu m of water, operating eight turbines and enabling the long-term irrigation of 640,000 ha of land, including 550,000 ha by 1990. The scheme was undertaken with the help of 1,200 Soviet technicians and about £S600m. in Soviet financial assistance, under an agreement reached with the USSR in April 1966. By 1977, however, only 100 Soviet experts remained on the site. In the spring of 1978 the entire project was formally opened, although the dam's first turbines had started to operate, ahead of schedule, in early 1974. Despite its advantages, the dam has exacerbated friction between Syria and Iraq, which also relies on water from the Euphrates river. Disputes over water rights reached a crisis point in 1974–75, when Turkey started to fill the reservoir behind its Keban dam, also on the Euphrates, at the same time as Syria started to fill Lake Assad, leaving Iraq with much less water than usual. Tension over this issue subsided in 1977–78, but resurfaced in 1984 between Syria and Turkey after the latter had started work on its new Atatürk dam. It is thought that the Atatürk dam and the associated South East Anatolian project (GAP) could remove 5,000m. cu m of water per year, or more, from the Euphrates, once they are completed, in or around 2015.

The fourth Five-Year Plan started in 1976 but was interrupted by the events of that year and was reissued in 1977. It envisaged expenditure of nearly £S53,000m., comprising £S27,000m. for projects already under way, £S17,600m. for new projects and £S8,000m. to be held in reserve. Mining and manufacturing were to take 22% of the £S44,600m. allocated to specific projects, followed by energy and fuel development (17.8%) and Euphrates projects (16.6%). The target for the average annual growth of GDP during the Plan period was 12%, compared with 8.2% under the previous Plan. One important aspect of the Fourth Plan, in its original form, was its emphasis on tourism, which was expected to become the country's third main source of foreign currency, after petroleum and cotton, by 1980. This objective was not achieved, however, partly because of political factors.

Like its predecessor, the fifth Five-Year Plan (for 1981–85) started late, and details of its targets did not become available until 1982. Its main features included a decisive shift in investment from industry to agriculture, with the agricultural sector receiving a provisional allocation of £S17,200m., or 16.9% of the overall £S101,493m. spending target. The annual growth rate target for agriculture was set at 7.8%, compared with a projected 8% under the previous Plan and an average annual growth rate target of 7.7% for the economy as a whole.

The role that the private sector should play in the economy has been subject to debate. Private sector funding for the Fifth Plan was set at £S23,351m., compared with £S68,705m. from the public sector and £S59,437m. from foreign sources. However, the Baath Party Congress of January 1985 criticized public sector performance and specifically encouraged private sector investment. In 1986 the first joint public/private sector company in agriculture was established, 75% owned by the private sector and 25% by the state. Several other such ventures were subsequently created. Previously, these joint ventures had been found only in the tourist industry.

Few details on the Sixth Plan (1986–90) were released and, in view of Syria's economic constraints, five-year plans have tended to be a somewhat academic exercise anyway. Like its predecessor, the Plan concentrated on completing projects in hand and making those already complete operate efficiently, rather than embarking on a series of new projects. Syrian officials revealed that the share of agriculture in proposed investment was projected to increase from 16.9% to 18.9%, and that of industry from 12.2% to 13.7%. In real terms, spending under the Plan was to be only slightly more than under the fifth Plan. From 1991 onwards, Syria's economic policy was officially described as 'pluralist', a term indicating 'equal co-existence' of the public, private and mixed sectors of the

economy. The Government's annual budgets for the years 1991 to 1994 provided for a total of £S42,000m. of public capital investment in public-sector production industries (equal to 27% of the projected private-sector investment in 'Law 10' production industries approved over the same period—see above under Industry.)

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units

100 piastres = 1 Syrian pound (£S).

Sterling, Dollar and Euro Equivalents (30 April 1999)

£1 sterling = £S18.100;
US $1 = £S11.225;
€1 = £S11.895;
£S1,000 = £55.25 sterling = $89.09 = €84.07.

Exchange Rate

Between April 1976 and December 1987 the official mid-point rate was fixed at US $1 = £S3.925. On 1 January 1988 a new rate of $1 = £S11.225 was introduced. In addition to the official exchange rate, there is a promotion rate (applicable to most travel and tourism transactions) and a flexible rate.

Directory

The Constitution

A new and permanent Constitution was endorsed by 97.6% of the voters in a national referendum on 12 March 1973. The 157-article Constitution defines Syria as a 'Socialist popular democracy' with a 'pre-planned Socialist economy'. Under the new Constitution, Lt-Gen. al-Assad remained President, with the power to appoint and dismiss his Vice-President, Premier and government ministers, and also became Commander-in-Chief of the armed forces, Secretary-General of the Baath Socialist Party and President of the National Progressive Front. Legislative power is vested in the People's Assembly, with 250 members elected by universal adult suffrage (84 seats are reserved for independent candidates).

The Government

HEAD OF STATE

President: Lt-Gen. HAFIZ AL-ASSAD (elected 12 March 1971 for a seven-year term; re-elected 8 February 1978, 10 February 1985, 2 December 1991 and 11 February 1999).

Legislature

MAJLIS ASH-SHA'AB

(People's Assembly)

Speaker: ABD AL-QADIR QADDURAH.

Election, 30 November and 1 December 1998

Party	Seats
Baath Party	135
Communist Party	8
Arab Socialist Unionist Party	7
Syrian Arab Socialist Union Party	7
Arab Socialist Party	6
Socialist Unionist Democratic Party	4
Independents	83
Total	250

Political Organizations

The **National Progressive Front (NPF)**, headed by President Assad, was formed in March 1972 by the grouping of the following five parties:

Arab Socialist Party: Damascus; a breakaway socialist party; contested the 1994 election to the People's Assembly as two factions; Leader ABD AL-GHANI KANNOUT.

Arab Socialist Unionist Party: Damascus; Leader SAMI SOUFAN; Sec.-Gen. SAFWAN QUDSI.

Baath Arab Socialist Party: National Command, BP 849, Damascus; Arab nationalist socialist party; f. 1947; result of merger of the Arab Revival (Baath) Movement (f. 1940) and the Arab Socialist Party (f. 1940); brs in most Arab countries; in power since 1963; supports creation of a unified Arab socialist society; Sec.-Gen. Pres. HAFIZ AL-ASSAD; Asst Sec.-Gen. ABDULLAH AL-AHMAR; Regional Asst Sec.-Gen. Dr SULEIMAN QADDAH; more than 800,000 mems in Syria.

Communist Party of Syria: Damascus; tel. (11) 448243; f. 1924; until 1943 part of joint Communist Party of Syria and Lebanon; Sixth Party Congress January 1987; contested the 1994 election to the People's Assembly as two factions; Sec.-Gen. YOUSUF FAISAL.

Syrian Arab Socialist Union Party: Damascus; tel. (11) 239305; Nasserite; Sec.-Gen. SAFWAN KOUDSI.

A sixth party, the **Socialist Unionist Democratic Party**, contested the elections held to the People's Assembly in May 1990 and August 1994 as a member of the National Progressive Front. There is also a **Marxist-Leninist Communist Action Party**, which regards itself as independent of all Arab regimes.

An illegal Syrian-based organization, the **Islamic Movement for Change (IMC),** claimed responsibility for a bomb attack in Damascus in December 1996.

Note: Syria and Lebanon have very close relations but do not exchange formal ambassadors.

Judicial System

The Courts of Law in Syria are principally divided into two juridical court systems: Courts of General Jurisdiction and Administrative Courts. Since 1973 the Supreme Constitutional Court (Damascus; tel. (11) 3331902) has been established as the paramount body of the Syrian judicial structure.

THE SUPREME CONSTITUTIONAL COURT

This is the highest court in Syria. It has specific jurisdiction over: (i) judicial review of the constitutionality of laws and legislative decrees; (ii) investigation of charges relating to the legality of the election of members of the Majlis ash-Sha'ab (People's Assembly); (iii) trial of infractions committed by the President of the Republic in the exercise of his functions; (iv) resolution of positive and negative jurisdictional conflicts and determination of the competent court between the different juridical court systems, as well as other bodies exercising judicial competence. The Supreme Constitutional Court is composed of a Chief Justice and four Justices. They are appointed by decree of the President of the Republic for a renewable period of four years.

Chief Justice: NASRAT MOUNLA-HAYDAR.

COURTS OF GENERAL JURISDICTION

The Courts of General Jurisdiction in Syria are divided into six categories: (i) The Court of Cassation; (ii) The Courts of Appeal; (iii) The Tribunals of First Instance; (iv) The Tribunals of Peace; (v) The Personal Status Courts; (vi) The Courts for Minors. Each of the above categories (except the Personal Status Courts) is divided into Civil, Penal and Criminal Chambers.

(i) **The Court of Cassation:** This is the highest court of general jurisdiction. Final judgments rendered by Courts of Appeal in penal and civil litigations may be petitioned to the Court of Cassation by the Defendant or the Public Prosecutor in penal and criminal litigations, and by any of the parties in interest in civil litigations, on grounds of defective application or interpretation of the law as stated in the challenged judgment, on grounds of irregularity of form or procedure, or violation of due process, and on grounds of defective reasoning of judgment rendered. The Court of Cassation is composed of a President, seven Vice-Presidents and 31 other Justices (Councillors).

(ii) **The Courts of Appeal:** Each court has geographical jurisdiction over one governorate (Mouhafazat). Each court is divided into Penal and Civil Chambers. There are Criminal Chambers which try felonies only. The Civil Chambers hear appeals filed against judgments rendered by the Tribunals of First Instance and the Tribunals of Peace. Each Court of Appeal is composed of a President and sufficient numbers of Vice-Presidents (Presidents of Chambers) and Superior Judges (Councillors). There are 54 Courts of Appeal.

(iii) **The Tribunals of First Instance:** In each governorate there are one or more Tribunals of First Instance, each of which is divided into several Chambers for penal and civil litigations. Each Chamber is composed of one judge. There are 72 Tribunals of First Instance.

(iv) **The Tribunals of Peace:** In the administrative centre of each governorate, and in each district, there are one or more Tribunals of Peace, which have jurisdiction over minor civil and penal litigations. There are 227 Tribunals of Peace.

(v) **Personal Status Courts:** These courts deal with marriage, divorce, etc. For Muslims each court consists of one judge, the 'Qadi Shari'i'. For Druzes there is one court consisting of one judge, the 'Qadi Mazhabi'. For non-Muslim communities there are courts for Roman Catholics, Orthodox believers, Protestants and Jews.

(vi) **Courts for Minors:** The constitution, officers, sessions, jurisdiction and competence of these courts are determined by a special law.

PUBLIC PROSECUTION

Public prosecution is headed by the Attorney-General, assisted by a number of Senior Deputy and Deputy Attorneys-General, and a sufficient number of chief prosecutors, prosecutors and assistant prosecutors. Public prosecution is represented at all levels of the Courts of General Jurisdiction in all criminal and penal litigations and also in certain civil litigations as required by the law. Public prosecution controls and supervises enforcement of penal judgments.

ADMINISTRATIVE COURTS SYSTEM

The Administrative Courts have jurisdiction over litigations involving the state or any of its governmental agencies. The Administrative Courts system is divided into two courts: the Administrative Courts and the Judicial Administrative Courts, of which the paramount body is the High Administrative Court.

MILITARY COURTS

The Military Courts deal with criminal litigations against military personnel of all ranks and penal litigations against officers only. There are two military courts; one in Damascus, the other in Aleppo. Each court is composed of three military judges. There are other military courts, consisting of one judge, in every governorate, which deal with penal litigations against military personnel below the rank of officer. The different military judgments can be petitioned to the Court of Cassation.

Religion

In religion the majority of Syrians follow a form of Islamic Sunni orthodoxy. There are also a considerable number of religious minorities: Shi'a Muslims; Ismaili Muslims; the Ismaili of the Salamiya district, whose spiritual head is the Aga Khan; a large number of Druzes, the Nusairis or Alawites of the Jebel Ansariyeh (a schism of the Shi'ite branch of Islam, to which President Assad belongs, who comprise about 11% of the population) and the Yezidis of the Jebel Sinjar, and a minority of Christians.

The Constitution states only that 'Islam shall be the religion of the head of the state'. The original draft of the 1973 Constitution made no reference to Islam at all, and this clause was inserted only

as a compromise after public protest. The Syrian Constitution is thus unique among the constitutions of Arab states (excluding Lebanon) with a clear Muslim majority in not enshrining Islam as the religion of the state itself.

ISLAM

Grand Mufti: AHMAD KUFTARO.

CHRISTIANITY

Orthodox Churches

Greek Orthodox Patriarchate: His Beatitude IGNATIUS HAZIM, Patriarch of Antioch and all the Orient; BP 9, Damascus; has jurisdiction over Syria, Lebanon, Iran and Iraq.

Trade and Industry

STATE ENTERPRISES

Syrian industry is almost entirely controlled and run by the State. There are national organizations responsible to the appropriate ministry for the operation of all sectors of industry, of which the following are examples:

Cotton Marketing Organization: POB 729, rue Bab al-Faraj, Aleppo; tel. (21) 238486; telex 331210; fax (21) 218617; f. 1965; governmental authority for purchase of seed cotton, ginning and sales of cotton lint; Pres. and Dir-Gen. Dr AHMAD SOUHAD GEBBARA.

General Organization for Food Industries: BP 105, Damascus; tel. (11) 225290; telex 419154; food-processing and marketing; Dir AAED AL-AMEER.

General Organization for Phosphate and Mines (GECOPHAM): BP 288, Homs; tel. 20405; telex 441000; production and export of phosphate rock.

General Organization for the Exploitation and Development of the Euphrates Basin (GOEDEB): Raqqa; telex 31004; Dir-Gen. Dr Eng. Dr AHMAD SOUHAD GEBBARA.

General Organization for the Textile Industries: BP 620, rue Fardoss, Damascus; tel. (11) 116200; telex 411011; control and planning of the textile industry and supervision of textile manufacture; 13 subsidiary cos.

Syrian Petroleum Company (SPC): BP 2849, rue al-Moutanabbi, Damascus; tel. (11) 3119994; telex 411031; f. 1958; state agency; holds the oil and gas concession for all Syria; exploits the Suweidiya, Karatchouk, Rumelan and Jbeisseh oilfields; also organizes exploring, production and marketing of oil and gas nationally; Dir-Gen. Dr Eng. ALI JEBRAN.

Al-Furat Petroleum Company: f. 1985; owned 50% by SPC and 50% by a foreign consortium of Syria Shell Petroleum Development B.V. and Deminex Syria GmbH; exploits oilfields in the Euphrates river area; Chair. JABER GHZAYYEL.

DEVELOPMENT ORGANIZATIONS

State Planning Commission: Parliament Square, Damascus.

Syrian Consulting Bureau for Development and Investment: Damascus; independent; Chair. NABIL SUKKAR.

CHAMBERS OF COMMERCE

Federation of Syrian Chambers of Commerce: BP 2908, rue Mousa Ben Nousair, Damascus; tel. (11) 3335920; telex 411194; fax (11) 3331127; f. 1975; Chair. Dr ABD AR-RAHMAN ATTAR; Gen. Sec. Dr RATEB ASH-SHALLAH.

Aleppo Chamber of Commerce: BP 1261, rue al-Moutanabbi, Aleppo; tel. (21) 238236; telex 331012; fax (21) 213493; f. 1885; Pres. M. SALEH AL-MALLAH; Sec. MUHAMMAD MANSOUR.

Alkalamoun Chamber of Commerce: BP 2507, rue Bucher A. Mawla, Damascus; telex 411061; fax (11) 778394; Pres. M. SOUFAN.

Damascus Chamber of Commerce: BP 1040, rue Mou'awiah, Damascus; tel. (11) 2211339; telex 411326; fax (11) 2225874; e-mail dcc@syriatel.net; f. 1890; 11,000 mems.; Pres. Dr RATEB ASH-SHALLAH; Gen. Dir HISHAM AL-HAMWY.

Hama Chamber of Commerce and Industry: BP 147, rue al-Kouatly, Hama; tel. (33) 233304; telex 431046; fax (33) 517701; f. 1934; Pres. ABD AS-SALAM SABEH; Dir ABD AR-RAZZAK AL-HAIT.

Homs Chamber of Commerce and Industry: BP 440, rue Abou al-Of, Homs; tel. (31) 469440; telex 441025; fax (31) 464247; e-mail hcc-i@syriatel.net; f. 1938; Pres. Eng. WALID TULEIMAT; Dir M. FARES AL-HUSSAMY.

Latakia Chamber of Commerce: rue al-Hurriyah, Latakia; Pres. JULE NASRI.

CHAMBERS OF INDUSTRY

Aleppo Chamber of Industry: BP 1859, rue al-Moutanabbi, Aleppo; tel. (21) 339812; telex 331090; f. 1935; Pres. MUHAMMAD M. OUBARI; 7,000 mems.

Damascus Chamber of Industry: BP 1305, rue Harika Mou'awiah, Damascus; tel. (11) 2215042; telex 411289; fax (11) 2245981; Pres. Dr YEHYA AL-HINDI; Dir-Gen. Dr ABD AL-HAMID MALAKANI.

EMPLOYERS' ORGANIZATIONS

Fédération Générale à Damas: Damascus; f. 1951; Dir TALAT TAGLUBI.

Fédération de Damas: Damascus; f. 1949.

Fédération des Patrons et Industriels à Lattaquié: Latakia; f. 1953.

UTILITIES

Electricity

Public Establishment for the Generation and Transmission of Electricity (PEGTE): rue Nessan 17, Damascus; tel. (11) 2129795; telex 411057; fax (11) 2229062; f. 1965; state-owned; opertes eight power stations through subsidiary companies; Dir-Gen. ZAKI ODEH.

TRADE UNIONS

Ittihad Naqabat al-'Ummal al-'Am fi Suriya (General Federation of Labour Unions): BP 2351, rue Qanawat, Damascus; f. 1948; Chair. 'IZZ AD-DIN NASIR; Sec. MAHMOUD FAHURI.

Transport

RAILWAYS

In 1998 the railway system totalled 2,450 km of track.

Syrian Railways: BP 182, Aleppo; tel. (21) 2213900; telex 331009; fax (21) 2228480; f. 1897; Pres. and Dir-Gen. MUHAMMAD GHASSAN AL-KADDOUR.

General Organization of the Hedjaz-Syrian Railway: BP 134, place Hedjaz, Damascus; tel. (11) 2215815; fax (11) 2227106; f. 1908; the Hedjaz Railway has 347 km of track (gauge 1,050 mm) in Syria; services operate between Damascus and Amman, on a branch line of about 24 km from Damascus to Katana, and there is a further line of 64 km from Damascus to Serghaya; Dir-Gen. S. AHMED.

ROADS

Arterial roads run across the country linking the north to the south and the Mediterranean to the eastern frontier. At 31 December 1997 there were 877 km of motorways, 29,215 km of main or national roads and 9,585 km of secondary or regional roads. In 1996 work was scheduled to commence on the first stage of a project costing £S1,800m. to improve the road linking Rakka with Deir ez-Zor. In January 1999 the Syrian Government signed a loan agreement with the Kuwaiti-based Arab Fund for Economic and Social Development (AFESD) to finance the construction of a 100-km. highway, connecting the eastern port town of Latakia with Ariba in the northern governorate of Aleppo, at an estimated cost of US $297m

General Co for Roads: BP 3143, Aleppo; tel. (21) 555406; telex 331403; f. 1975; Gen. Man. Eng. M. WALID EL-AJLANI.

PIPELINES

The oil pipelines that cross Syrian territory are of great importance to the national economy, representing a considerable source of foreign exchange. In the late 1990s a number of gas pipelines, linking gas fields in the Palmyra area to Aleppo and Lebanon, were under construction.

Syrian Co for Oil Transport (SCOT): BP 13, Banias; tel. (43) 711300; telex 441012; fax (43) 710418; f. 1972; Dir-Gen. MUHAMMAD DOUBA.

SHIPPING

Latakia is the principal port; the other major ports are at Banias and Tartous. A project to expand the capacities of Latakia and Tartous, and to construct new port facilities near Tartous, commenced in 1997.

Syrian General Authority for Maritime Transport: BP 730, 2 rue Argentina, Damascus; tel. (11) 226350; telex 411012.

Abdulkader, Abu Bakr: Arwad, Latakia; telex 470056; operates a fleet of 5 general cargo vessels.

Ismail, A. M., Shipping Agency Ltd: BP 74, rue Marilyas, Tartous; tel. (43) 220543; operates 1 tanker and 9 general cargo vessels; Man. Dir MAHMOUD ISMAIL.

Muhieddine Shipping Co: BP 779, rue du Port, Tartous; tel. (43) 220510; telex 470127; fax (43) 317139; operates 8 general cargo ships.

Samin Shipping Co Ltd: BP 315, rue al-Mina, Tartous; tel. (43) 318835; telex 470133; fax (43) 318834; operates 12 general cargo ships.

Syro-Jordanian Shipping Co: BP 148, rue Port Said, Latakia; tel. (41) 471635; telex 451002; fax (41) 470250; f. 1976; operates 2 general cargo ships; transported 70,551 metric tons of goods in 1992; Chair. OSMAN LEBBADY.

Riamar Shipping Co Ltd: Al Kornish ash-Sharki, BP 284, Immeuble Tarwin, rue du Port, Tartous; tel. (43) 314999; telex 470030; fax (43) 314888; operates 5 general cargo vessels; Chair. and Man. Dir ABDAL -KADER SABRA.

CIVIL AVIATION

There is an international airport at Damascus, and the upgrading of Aleppo airport, to enable it to handle international traffic, is planned.

Directorate-General of Civil Aviation: BP 6257, place Nejmeh, Damascus; tel. (11) 3331306; telex 411928; fax (11) 2232201.

Syrian Arab Airlines (Syrianair): BP 417, 5th Floor, Social Insurance Bldg, Youssef al-Azmeh Sq, Damascus; tel. (11) 2220700; telex 411593; fax (11) 224923; f. 1946, refounded 1961 to succeed Syrian Airways, after revocation of merger with Misrair; domestic passenger and cargo services (from Damascus, Aleppo, Latakia and Deir ez-Zor) and routes to Europe, the Middle East, North Africa and the Far East; Chair. Brig. OMAR ALI REDA

Tourism

Syria's tourist attractions include a pleasant Mediterranean coastline, the mountains, the town bazaars and the antiquities of Damascus and Palmyra, as well as hundreds of deserted ancient villages in the north-west of the country. In 1998 2.5m. tourists visited Syria, generating estimated revenues of US $1,250m.

Ministry of Tourism: rue al-Kouatly, Damascus; tel. (11) 2210122; telex 411672; fax (11) 2242636; f. 1972; Dir of Tourist Relations and Ministerial Adviser Mrs SAWSAN JOUZY.

Middle East Tourism: BP 201, rue Fardoss, Damascus; tel. (11) 2211876; telex 411726; fax (11) 2246545; f. 1954; Pres. MUHAMMAD DADOUCHE; 7 brs.

Syrian Arab Co for Hotels and Tourism: BP 5549, Mezzeh, Damascus.

Defence

Commander-in-Chief of the Armed Forces: Lt-Gen. HAFIZ AL-ASSAD.

Minister of Defence and Deputy Commander-in-Chief of the Armed Forces: Maj.-Gen. MUSTAFA TLASS.

Chief of Staff of the Armed Forces: Maj.-Gen. ALI ASLAN.

Deputy Chief of Staff: Maj.-Gen. HASAN AT-TURKMANI.

Air Force Commander: Gen. MUHAMMAD AL-KHOULI.

Special Forces Commander: Gen. ALI HABIB.

Defence Budget (1998): £S39,500m. (US $1,700m.).

Military Service: 30 months (Jewish population exempted).

Total Armed Forces (August 1998): (estimated) 320,000 (army (estimated) 215,000, air defence command (an army command; estimated) 60,000, navy (estimated) 5,000, air force 40,000); reserves 500,000.

Paramilitary Forces: 8,000 Gendarmerie (under control of Ministry of Interior).

Education

Primary education, which begins at six years of age and lasts for six years, is officially compulsory. In 1996/97 there were 2,690,205 pupils in primary education, equivalent to 91% of children in the relevant age-group. Secondary education, beginning at 12 years of age, lasts for six years, comprising two cycles of three years each. In 1996/97 there were 957,664 pupils in secondary education, equivalent to 38% of children in the relevant age-group.

There are agicultural and technical schools for vocational training, and higher education is provided by the universities of Damascus,

Aleppo, Tishrin (the October University, in Latakia) and Homs (the Baath University, formerly the Homs Institute of Petroleum). There were some 167,000 students enrolled at the universities in 1995. The main language of instruction in schools is Arabic, but English and French are widely taught as second languages. In 1995, according to official estimates, the average rate of illiteracy among the population aged 10 years and over was 20.6%. Expenditure on education by all levels of government in 1996 amounted to £S25,555m.

TUNISIA

Physical and Social Geography

D. R. HARRIS

Tunisia is the smallest of the countries that comprise the 'Maghreb' of North Africa, but it is more cosmopolitan than Algeria or Morocco. It forms a wedge of territory, 163,610 sq km (63,170 sq miles) in extent, between Algeria and Libya. It includes the easternmost ridges of the Atlas Mountains but most of the country is low-lying and bordered by a long and sinuous Mediterranean coastline that faces both north and east. Ease of access by sea and by land from the east has favoured the penetration of foreign influences and Tunisia owes its distinct national identity and its varied cultural traditions to a succession of invading peoples: Phoenicians, Romans, Arabs, Turks and French. It was more effectively arabized than either Algeria or Morocco and remnants of the original Berber-speaking population of the Maghreb are confined, in Tunisia, to a few isolated localities in the south.

At the April 1994 census the population was 8,785,364 and the overall density was 57.9 per sq km. Most of the people live in the more humid, northern part of the country, and at the 1994 census about 7.7% (674,100) lived in Tunis. Situated where the Sicilian Channel links the western with the central Mediterranean and close to the site of ancient Carthage, Tunis combines the functions of capital and chief port. No other town approaches Tunis in importance, but on the east coast both Sousse (population 125,000 in 1994) and Sfax (population 230,900) provide modern port facilities, as does Bizerta (population 98,900) on the north coast, while some distance inland the old Arab capital and holy city of Qairawan, now known as Kairouan (population 102,600), serves as a regional centre. Other sizeable towns include Ariana (152,700), Ettadhamen (149,200) and Gabès (98,900). Provisional estimates indicated that the population had reached 9,214,900 by mid-1997.

The principal contrasts in the physical geography of Tunisia are between a humid and relatively mountainous northern region, a semi-arid central expanse of low plateaux and plains, and a dry Saharan region in the south. The northern region is dominated by the easternmost folds of the Atlas mountain system which form two separate chains, the Northern and High Tell, separated by the valley of the River Medjerda, the only perennially flowing river in the country. The Northern Tell, which is a continuation of the Algerian Tell Atlas, extends along the north coast at heights of between 300 m and 600 m. South of the Medjerda valley lies the broader Tell Atlas, which is a continuation of the Saharan Atlas of Algeria, and comprises a succession of rugged sandstone and limestone ridges. Near the Algerian frontier these reach a maximum height of 1,544 m at Djebel Chambi, the highest point in Tunisia, but die away eastward towards the Cap Bon peninsula which extends north-east to within 145 km of Sicily.

South of the High Tell or Dorsale ('backbone') central Tunisia consists of an extensive platform sloping gently towards the east coast. Its western half, known as the High Steppe, comprises alluvial basins rimmed by low, barren mountains, but eastward the mountains give way first to the Low Steppe, a gravel-covered plateau, and ultimately to the flat coastal plain of the Sahel. Occasional watercourses cross the Steppes, but they flow only after heavy rain and usually fan out and evaporate in salt flats, or sebkhas, before reaching the sea.

The central Steppes give way southward to a broad depression occupied by two great seasonal salt lakes or shotts. The larger of these, the Shott Djerid, lies at 16 m below sea-level and is normally covered by a salt crust. It extends from close to the Mediterranean coast near Gabès almost to the Algerian frontier and is adjoined on the north-west by the Shott ar-Rharsa, which lies at 21 m below sea-level. South of the shotts Tunisia extends for over 320 km into the Sahara. Rocky, flat-topped mountains, the Monts des Ksour, separate a flat plain known as the Djeffara, which borders the coast south of Gabès, from a sandy lowland which is partly covered by the dunes of the Great Eastern Erg.

The climate of northern Tunisia is Mediterranean in type, with hot, dry summers followed by warm, wet winters. Average rainfall reaches 150 cm in the Kroumirie Mountains, the wettest area in north Africa, but over most of the northern region it varies from 40 cm to 100 cm. The wetter and least accessible mountains are covered with forests in which cork oak and evergreen oak predominate, but elsewhere lower rainfall and overgrazing combine to replace forest with meagre scrub growth. South of the High Tell rainfall is reduced to between 20 cm and 40 cm annually, which is insufficient for the regular cultivation of cereal crops without irrigation, and there is no continuous cover of vegetation. Large areas of the Steppes support only clumps of wiry esparto grass, which is collected and exported for paper manufacture. Southern Tunisia experiences full desert conditions. Rainfall is reduced to below 20 cm annually and occurs only at rare intervals. Extremes of temperature and wind are characteristic and vegetation is completely absent over extensive tracts. The country supports only a sparse nomadic population except where supplies of underground water make cultivation possible.

History

Revised for this edition by RICHARD I. LAWLESS

EARLY HISTORY

By 550 BC Carthage had achieved a position of commercial and naval supremacy in the Mediterranean. The empire reached its height in the course of the fourth century BC but was later challenged by the Roman Republic. The Punic Wars (264–241 BC, 218–201 BC and 149–146 BC) ended in the total destruction of the Carthaginian Empire and its incorporation within the empire of Rome. Carthage was rebuilt by the Emperor Augustus and intensive colonization brought a new prosperity. During the first two centuries AD Carthage was accounted the empire's second city but, with the decline of Rome's power, the city was lost to the Vandals (AD 439), to be recovered for the Byzantine Empire in 533–34. Byzantine rule was by no means secure: the tendency of the local governors to reject the control of Constantinople was compounded by religious dissent among the native Berber population, who adopted Christian heresies in opposition to imperial rule. It was, however, the rise of Islam in Arabia and its rapid expansion after the death of the Prophet (632) that led to the destruction of Byzantine power and to the Arab invasion of North Africa. Arab control was finally established there with the conquest of Carthage in 698 and the foundation of Tunis. Islam spread rapidly among the Berbers, but they adopted Kharijite heresies; the eighth century was dominated by Berber-supported risings, manifestations of militant Islam against the central Government, and constant revolts among the occupying Arab forces. In the last years of the Umayyad dynasty (overthrown 748–50) Tunisia escaped completely from imperial control: the new dynasty of the Abbasids, ruling from Iraq, retook Qairawan, the centre of Arab rule in the Maghreb, but lost it in 767, and a period of complete anarchy ensued. Tunisia was restored to Abbasid control in 800 and Ibrahim ibn Aghlab was appointed tributary ruler of Ifriqiya—corresponding roughly to present-day Tunisia.

For most of the ninth century the country was relatively prosperous, but the Aghlabid dynasty began to decline from 874 and was finally overthrown between 905 and 909 by the Fatimids, fanatical adherents of the heretical doctrines of Shi'ism, who pursued a vigorous policy of expansion and conquest; by 933 Fatimid rule was established throughout the Maghreb. Between 943 and 947 a Berber revolt took place, but it was effectively suppressed, allowing Tunisia to enjoy a certain amount of prosperity for the subsequent 25 years. In 969–70 the Fatimids gained control of Egypt and Syria: three years later Mahdiya was abandoned for the new capital of Cairo, and the Government of Tunisia was handed over to the Berber Zirid family. The golden age of Zirid rule was brought to an end in 1050 when the dynasty transferred its allegiance to the orthodox caliph at Baghdad. The economy crumbled and the country lapsed into political fragmentation. In 1087 Italian forces from Pisa and Genoa took Mahdiya, allowing the Zirids to continue as its rulers. Early in the 12th century the Zirids renewed their loyalty to Cairo, but were expelled by the Normans in 1148. Norman rule in Tunisia was over by 1160, and for the next 50 years Tunisia formed part of the empire of the caliphs of Marrakesh (the Almohads). In the 13th century the authority of Baghdad was briefly restored over Tunisia: a strong provincial government was established in 1207 under the Berber family of the Hafsids, who had held the governorship of Tunis since 1184. For most of the 13th century they ruled over North Africa from Tripoli to central Algeria but, in the face of tribal and Arab unrest, the town of Jerba fell into Christian hands (1284–1337). In the reign of Abu'l-Abbas (1370–94) the fortunes of the dynasty revived, but by the end of the 15th century the Hafsid Empire was disintegrating and Tunisia had become involved in the struggle between the Spanish and Ottoman forces for control of the Mediterranean.

By 1520 Bougie, Tripoli and Jerba had fallen to Spain; then in 1534 Khair ed-Din (Barbarossa), high admiral of the Ottoman fleet, drove the Emir al-Hasan from Tunis. In 1535 a great Spanish naval expedition recaptured the town, and al-Hasan was returned as the Emperor's vassal. In 1542 he was deposed by his son Ahmad, who made a final attempt to reunite Tunisia against Spain. The defeat of Ahmad at the siege of Malta (1565) which, together with the Spanish naval victory of Lepanto six years later, ended the struggle for maritime supremacy. The Pasha of Algiers stationed a garrison in Tunis in 1564, only to be expelled briefly (1572) in the aftermath of Lepanto; but in 1574 an Ottoman expedition put an end to Spanish power in Tunis and to the Hafsid dynasty itself.

Direct Ottoman rule was brief, a military revolt in Tunisia in 1591 reducing the power of the Pasha, the representative of the sultan, to a cypher. State affairs were assumed by one of the 40 deys, or high officers of the Ottoman army of occupation. By about 1600 the diwan, or governing council, shared a pre-eminent place with the taifa, or guild of corsair chiefs. By about 1606 the *de facto* independence of Tunisia had been recognized, although it was to remain nominally part of the Ottoman Empire for more than 250 years.

In the first half of the 17th century trade and commerce flourished, but from about 1650 the deys' power declined, authority passing to the beys, originally subordinate in rank. Hammuda, bey from 1659–63, became master of the entire country, and his family—the Muradids—retained power until 1702. This was a period of decline, with tribal unrest and incursions from Algiers. With the accession of Hussain Ali Turki in 1705, a new line of beys brought some semblance of order. The remainder of the 18th century passed fairly uneventfully, with some prosperity, despite uncertain relations with Algeria and the growth of European naval power in the Mediterranean.

After the Napoleonic Wars the European powers forced the bey, Mahmud (1814–24), to suppress the activities of the corsairs, which had provided a considerable part of state revenues. The French occupied Algiers in 1830, and reduced Algeria to colonial status; for the next 50 years Tunisia desperately tried to avoid the same fate. Increasingly the influence of France and Britain, and later Italy, became apparent through the activities of their consuls. The beys Ahmad (1837–55) and Muhammad (1855–59) attempted reforms, but merely intensified dependence on France. The next bey, Muhammad as-Sadiq (1859–82), promulgated a constitution (suspended 1864). Increased taxes, however, provoked tribal rebellion, and in 1869 the bey was obliged to accept financial control by France, Britain and Italy. Imminent financial collapse prompted France to intervene, and French forces invaded Tunisia in April 1881. They encountered little resistance and the Treaty of Kassar Said was signed, under which the bey remained the nominal ruler, while French officials administered military, financial and foreign affairs.

FRENCH PROTECTORATE

The Treaty of Mersa (1883) formally established a French protectorate over Tunisia and brought the actual Government of the country under French control, effective power passing to the French Resident-General. The international control commission was abolished in 1884, the currency was reformed along French lines in 1891, and the extra-territorial privileges of other Europeans were abrogated. Encouraged by large-scale grants of land, there was a considerable influx of settlers from France, and also from Italy, especially after 1900. Besides being confronted with the task of sustaining the economy, which they tackled by investment in the development of the country's resources, the French encountered rivalry from Italy and a rise of Tunisian nationalism.

Tunisian cultural and political life absorbed many French ideas, but was also influenced by movements in other parts of the Islamic world. An attempt to emulate the Young Turk reformers in the Ottoman Empire was the foundation, in 1908, of the Young Tunisian Movement, which demanded the restoration of the authority of the bey together with democratic reforms. The achievement of independence in eastern Arab countries after the First World War, and the example of the nationalist movement in Egypt, inspired Tunisians with a greater national

consciousness, and in 1920 the Destour (Constitution) movement was formed under the leadership of Sheikh ath-Tha'libi, one of the founders of the Young Tunisians.

The Destour appealed for a self-governing constitutional regime with a Legislative Assembly. French attempts to conciliate opinion by administrative reforms, dating from 1920 with the formation of economic councils on which Tunisians were represented, failed to satisfy the more radical elements, and, confronted with further nationalist activity, the French administration resorted to repressive measures. Sheikh ath-Tha'libi was exiled in 1923, and in 1925 the Destour movement was dissolved. It was revived in the early 1930s but soon split, the former leaders of the Destour being accused of collaboration with France by younger members eager for political action on a broad front. In 1934 the Néo-Destour (New Constitution) Party was formed, led by Habib Bourguiba, a Tunisian lawyer. The party employed methods of widespread political agitation as a result of which Bourguiba was exiled. After the victory of the Popular Front in France in 1936 he returned to Tunisia, but little was achieved in direct negotiations with the new French Government. The Néo-Destour became a powerful organization, its influence extending to all parts of the country, and its strength was proved in a successful general strike in 1938. Widespread clashes with the police followed, martial law was proclaimed, some 200 nationalists were arrested, and both the Destour and Néo-Destour parties were dissolved.

At the outbreak of the Second World War Tunisian opinion rallied in favour of France, and when Italy entered the war some 23,000 Italians in Tunisia were interned. With the fall of France Tunisia came under Vichy rule, and Bizerta, Tunis and other ports were used by Germany and Italy to supply their armies in Libya until the defeat of the Axis forces by the Allies in 1943 restored French authority. The bey, Muhammad al-Monsif, was accused of collaboration with the Axis powers and deposed; he was replaced by his cousin, Muhammad al-Amin.

GROWING AUTONOMY

The virtual restoration of peace in 1944 brought a relaxation of political restrictions and during the following years there was renewed agitation for political change. As a result of subsequent French repression, Habib Bourguiba went into exile in Cairo in 1945 but his chief lieutenant, Salah Ben Yousuf, remained in Tunisia. The French authorities turned their attention to political reforms, and by beylical decrees in 1945 the Council of Ministers and the Grand Council (an elected body with equal French and Tunisian representation) were reorganized, the authority of the latter being extended. These measures did not satisfy the nationalists, who demanded complete independence. Later in 1946 a government was formed under Muhammad Kaak, which included an increased number of Tunisians (moderate leaders being appointed after the Destour and Néo-Destour had refused to participate); the French, however, retained ultimate control.

Bourguiba returned to Tunisia in 1949. In April 1950 the Néo-Destour proposed the transfer of sovereignty and executive control to Tunisian hands, under a responsible government with a Prime Minister appointed by the bey and an elected National Assembly which would draft a democratic constitution. Local French interests would be protected by representation on municipal councils, and Tunisia would co-operate with France on equal terms. These proposals received a reasonable response in France, and a new Tunisian Government was formed in August 1950, composed of an equal number of Tunisian and French ministers, with Muhammad Chenik as Prime Minister and Salah Ben Yousuf as Minister of Justice. The object of the new Government was stated to be the gradual restoration of Tunisian sovereignty, in co-operation with France. Despite strong opposition to these developments from the European settlers (some 10% of the population), further reforms were effected in September 1950 and February 1951, when French advisers to the Tunisian ministers were removed and the Resident-General's control over the Council of Ministers was diminished.

Peaceful progress towards autonomy came to a halt, however, owing to growing settler opposition, procrastination on the part of the French Government and consequent alienation of the nationalists. Tunisian resentment erupted in strikes and demonstrations in early 1952. The Néo-Destour had formed an intimate alliance with the influential trade union movement, and many leaders held office in both organizations. In February Bourguiba and other Néo-Destour leaders were arrested on the order of the new Resident-General, Jean de Hauteclocque, and a wave of violence spread throughout the country, culminating in the arrest and removal from office of the Prime Minister, and the imposition of French military control.

A new Government was formed under Salaheddine Baccouche, and a French-inspired scheme designed to lead to eventual internal autonomy was announced in April 1952. Meanwhile, the now-proscribed Néo-Destour took its case to Cairo and the UN General Assembly. Against a background of increasing terrorism, countered by French repressive action, and in the face of opposition from both the Néo-Destour and the settlers, little in the way of reform could be achieved. The bey at first refused to sign French reform decrees, and when he yielded in December under the threat of deposition, the proposals were promptly repudiated by the Néo-Destour.

Terrorist activities continued and a settler counter-terrorist organization, the 'Red Hand', came to prominence. The situation approached civil war in 1953, with bands of *fellagha* active in the western highlands and around Bizerta and terrorism and counter-terrorism in the towns. In July 1954 the newly-formed French Government, led by Pierre Mendès France, offered internal autonomy for Tunisia, with France retaining responsibility only for defence and foreign affairs. The French proposals were accepted, and in August a new Tunisian Government was formed, headed by Tahar Ben Ammar and containing three members of the Néo-Destour as well as moderate nationalists. Negotiations with the French Government opened in Carthage in September. The talks had reached deadlock when the Mendès France Government fell in February 1955, but they resumed in March and a final agreement was signed in Paris on 2 June.

The accord granted internal autonomy to Tunisia while protecting French interests and preserving Tunisia's close links with France. France retained responsibility for foreign affairs, defence (including the control of frontiers) and internal security. Although the agreement was supported by a majority of the Néo-Destour, the extremist wing, headed by the exiled Salah Ben Yousuf, and the old Destour and Communist elements, opposed it, as did the settlers' organizations. An all-Tunisian Council of Ministers was formed in September 1955 by Tahar Ben Ammar, with members of the Néo-Destour holding six of the 12 posts.

Habib Bourguiba had returned from three years' exile in June 1955, to be followed by Salah Ben Yousuf in September. In October Ben Yousuf was expelled from the Néo-Destour for opposition to the recent agreement and for 'splitting activities'. A Néo-Destour party congress at Sfax in November endorsed the agreement, but reaffirmed that the party would be satisfied only with independence and demanded the election of a constituent assembly. Clashes between 'Bourguibist' and 'Yousufist' factions followed, and in December a conspiracy to create a terrorist organization to prevent the implementation of the agreement was discovered. Ben Yousuf fled to Tripoli in January 1956, and many suspected 'Yousufists' were placed in detention. At the same time *fellagha* activity revived, rebel bands became active in the remoter parts of the country and acts of terrorism were committed against both French settlers and members of the Néo-Destour.

INDEPENDENCE

On 27 February 1956 a Tunisian delegation led by Bourguiba began independence negotiations with the French Government in Paris. In a protocol signed on 20 March, France formally recognized the independence of Tunisia and its right to exercise responsibility over foreign affairs, security and defence, and to raise a national army. A transitional period was envisaged during which French forces would gradually be withdrawn from Tunisia, including Bizerta.

Elections for the Constituent Assembly, held on 25 March 1956, resulted in all 98 seats being won by candidates of the National Front, all of whom acknowledged allegiance to the Néo-Destour. The elections were boycotted by the 'Yousufist' opposition. Habib Bourguiba became Prime Minister on 11 April, leading a Government in which 16 of the 17 ministers belonged to the Néo-Destour.

In the early years of independence Tunisia's relations with France were dominated by the question of the evacuation of French forces. A Tunisian demand for their withdrawal was rejected in July 1956 by the French Government, which was preoccupied with the deteriorating situation in Algeria. Bourguiba visited Paris in September in an attempt to promote a mediated settlement in Algeria based on French recognition of Algeria's right to independence, but hopes of progress in this direction were shattered by the French kidnapping in October of five leading Algerian nationalists. Tunisia immediately severed diplomatic relations with France, anti-French riots erupted, and there were clashes between French troops and Tunisian demonstrators resulting in deaths on both sides.

Measures were taken in early 1957 to strengthen Tunisia's relations with its neighbours. In January a treaty of good-neighbourliness was signed with Libya, as a step towards establishing a 'Great Arab Maghreb', and in March a 20-year treaty of friendship was concluded with Morocco.

The bey, Muhammad al-Amin, had been the object of constant criticism from Tunisian nationalist leaders, who accused him of reluctance to participate actively in the struggle for independence. After independence his remaining powers were eroded and on 25 July 1957 the Constituent Assembly voted to abolish the monarchy, proclaim Tunisia a republic and invest Bourguiba with the powers of Head of State.

RELATIONS WITH FRANCE

Although diplomatic relations with France had been resumed in January 1957, differences between the two Governments concerning the Algerian revolt persisted. The most serious Franco-Tunisian incident during the Algerian war occurred in February 1958, when French aircraft from Algeria attacked the Tunisian border village of Sakhiet Sidi Yousuf, the scene of several clashes the previous month. The Tunisian Government's reaction was to sever diplomatic relations with France, to forbid all French troop movements in Tunisia, to demand the immediate evacuation of all French bases, including Bizerta, and to take the matter before the UN Security Council. French troops were blockaded in their barracks, and the extra-territorial status of Bizerta, from which French warships were banned, was abolished. In addition some 600 French civilians were expelled from the frontier area and five of the seven French consulates were closed.

British and US mediation was accepted, and on 15 April 1958 it was agreed that all French troops would be evacuated and Tunisian sovereignty over Bizerta recognized; at the same time the French consulates would be reopened and the cases of the expelled French civilians examined. When further clashes between Tunisian and French forces occurred in May, a state of emergency covering the whole country was proclaimed and Tunisia again took the matter to the UN Security Council.

A new phase in Franco–Tunisian relations began with the accession to power of Gen. de Gaulle in June 1958. An agreement was concluded on 17 June under which French troops stationed outside Bizerta were to be withdrawn during the next four months, while negotiations for a provisional agreement on Bizerta were to follow. Restrictions on French troops were removed and diplomatic relations resumed. By October the only French troops remaining in Tunisia were in Bizerta.

The eradication of French interests had meanwhile commenced. In June 1958 the French-owned transport services and in August the electricity services of Tunis were nationalized. In November President Bourguiba announced proposals for the purchase of all agricultural land in Tunisia owned by French citizens by 1960, and for its redistribution to landless Tunisians.

POLITICAL CONSOLIDATION

With the improvement of relations with France, the Tunisian Government was able to consolidate its internal position, by restructuring the Néo-Destour Party and by instituting court proceedings against members of the former regime and 'Yousufist' opponents. Prince Chadli, the eldest son of the bey, and former Prime Ministers Tahar Ben Ammar and Salaheddine Baccouche were among those tried in late 1958 on charges that included the misuse of public funds and collaboration with the French authorities; sentences imposed ranged from heavy fines to imprisonment and loss of civic rights. Salah Ben Yousuf (*in absentia*) and 54 of his supporters were charged with plotting to assassinate President Bourguiba, smuggling arms from Libya, and aiming to overthrow the Government. Ben Yousuf and eight others were sentenced to death, with most of the remainder receiving long prison sentences.

This trial widened the breach between Tunisia and the United Arab Republic (UAR—Egypt), from where Ben Yousuf had been conducting his activities. In October 1958 Tunisia had joined the Arab League, only to withdraw from a meeting of its council 10 days later, after accusing the UAR of attempting to dominate the organization. Diplomatic relations with the UAR were severed later in the month on the grounds of its alleged complicity in the 'Yousufist' attempt to assassinate President Bourguiba. On the eve of Ben Yousuf's trial, Bourguiba announced the capture of Egyptian officers who had secretly entered Tunisia to assist subversive elements to overthrow his Government.

On 1 June 1959 a new Constitution was promulgated, providing for the election of a President with a five-year mandate (renewable three times consecutively). The President was empowered to formulate the general policy of the state, choose the members of the Government, hold supreme command of the armed forces and make all appointments to civil and military posts. The Constitution also provided for the election of a national assembly for five years and required the approval of the assembly for the declaration of war, the conclusion of peace and the ratification of treaties. In elections which followed on 8 November President Bourguiba was elected unopposed, and all 90 seats in the new National Assembly were won by the Néo-Destour, their only opponents being the Communists.

THE BIZERTA CRISIS

The forging of cordial relations with France continued during 1959–60. A trade and tariff agreement was signed in September 1959, and further agreements on technical co-operation and the transfer of property of the French State in Tunisia to the Tunisian Government were concluded. In October President Bourguiba announced his support for President de Gaulle's offer of self-determination for Algeria, and Tunisia subsequently acted as intermediary between France and the Algerian rebels in moves towards a negotiated settlement.

None the less, Tunisia continued to press for the return of the Bizerta base, and in July 1961 President Bourguiba made a formal demand for its return and repeated the claim (first made in 1959) to Saharan territory in Algeria adjacent to the south-western part of Tunisia. Demonstrations ensued against the continued French occupation of Bizerta, and fighting between Tunisian and French troops began around the Bizerta base and in the disputed area of the Sahara. In mid-July diplomatic relations were again severed, and Tunisia requested a meeting of the UN Security Council. The fighting ended on 22 July with the French in firm control of the base and town of Bizerta, more than 800 Tunisians having been killed. In the south a Tunisian attempt to seize the fort of Garat el-Hamel also failed. A subsequent visit to Bizerta by the UN Secretary-General, Dag Hammarskjöld, in an attempt to promote a settlement, was unsuccessful. According to a French statement released in late July, France wished to continue to use the base while a state of international tension persisted but was prepared to negotiate with Tunisia over its use during this period.

The immediate results of the Bizerta crisis were a *rapprochement* between Tunisia and other Arab states, a deterioration in relations with the West and an improvement of relations with the communist bloc. The final settlement of the dispute occupied the remainder of 1961 and much of 1962. The Algerian ceasefire in March 1962 benefited Franco-Tunisian relations, and the French installations at Menzel Bourguiba, near Bizerta, were handed over to Tunisia on 30 June. In March 1963 agreement was reached on the transfer of some 370,000 acres of French-owned agricultural land to the Tunisian Government. Other agreements, on trade and finance, were reached, in order to reduce Tunisia's balance-of-payments deficit with France.

Although Algerian independence had been warmly welcomed by Tunisia, the extremist doctrines of the new state conflicted with Tunisian moderation and relations quickly deteriorated. In January 1963 the Tunisian ambassador was recalled from Algiers on the grounds of alleged Algerian complicity in a recent unsuccessful attempt on the life of President Bourguiba, in

which 'Yousufists' in Algeria, as well as supporters of the old Destour and army elements, were implicated. Moroccan mediation facilitated a conference of the Maghreb states in Rabat in February, at which the Tunisians demanded the cessation of 'Yousufist' activities in Algeria. After further negotiations a frontier agreement between Tunisia and Algeria was signed in July.

EXPROPRIATION

In May 1964 the Tunisian National Assembly enacted legislation which authorized the expropriation of all foreign-owned lands (some 300,000 ha). The French immediately suspended, then cancelled, all financial aid. This nationalization of foreign-owned land was a step towards the development of socialism in the agrarian sector of the economy. The Néo-Destour's commitment to 'Tunisian socialism' was emphasized in the change of the party's name to the Parti socialiste destourien (Destour Socialist Party—PSD) prior to the presidential and general elections in November 1964, in which President Bourguiba was again elected unopposed and the PSD, the only party to present candidates, won all 90 seats in the National Assembly. Subsequent cabinet changes included the appointment of the President's son, Habib Bourguiba, Jr, as Minister of Foreign Affairs.

From 1964 onwards, domestic politics became more settled and the Government concentrated its attention on economic development. The hold of the PSD on the country was strengthened and President Bourguiba's position was unchallenged.

FOREIGN POLICY

After 1964 Tunisia's relations with the world beyond the Arab states and Africa were influenced by the need for foreign aid, most of which was received from Western countries where the moderation of Tunisian policies inspired confidence. Tunisia also made cautious overtures towards the communist bloc. Some economic assistance was obtained from the USSR while Tunisia maintained its non-aligned position. Diplomatic relations with the People's Republic of China were established, following a visit to Tunisia by the Chinese Premier, Zhou Enlai, in January 1964. Nevertheless, President Bourguiba publicly criticized Chinese policies, in particular the policy of encouraging revolution in Africa.

Relations with the rest of the Arab world continued to be the focus of President Bourguiba's attention and the source of bitter controversy. In April 1965 he openly attacked Arab League policy on Palestine and advocated a more flexible approach, including direct negotiations with Israel over the UN partition plan of 1948. This provoked severe criticism from the Arab states (excepting Morocco, Libya and Saudi Arabia). After violent demonstrations in Cairo and Tunis, the UAR and Tunisia withdrew their respective ambassadors. Tunisia's refusal at the end of April to follow the example of other Arab League states in severing relations with the Federal Republic of Germany, which had exchanged ambassadors with Israel, widened the rift. A conference of Arab Heads of State at Casablanca in May, at which Tunisia was not represented, categorically rejected Bourguiba's proposal that Israel should be asked to cede territory to the Palestinian refugees in return for recognition by the Arab states, and reaffirmed their determination to effect the complete overthrow of Israel. In an open letter to those attending, Bourguiba accused the Egyptian President, Gamel Abd an-Nasser, of attempting to use the Arab League as an instrument of UAR national policy and of interfering in the affairs of every Arab state; Tunisia was not prepared to take part in the debates of the Arab League under such circumstances. In October 1966 Tunisia announced the complete severance of diplomatic relations with the UAR.

The Six-Day War between Israel and the Arab states in June 1967 led to immediate reconciliation in the Arab world. Tunisian troops were dispatched to the front, but the Israeli success was so swift and the cease-fire came so soon that they were recalled before they had reached the scene of the fighting. Diplomatic relations between Tunisia and the UAR were restored, and Tunisia was represented at the Arab summit meeting in Khartoum in September, when Arab nations agreed to neither recognize nor negotiate with Israel.

In May 1968, however, following criticism of President Bourguiba by the Syrian Prime Minister, who charged him with having betrayed the Arab struggle in Palestine, the Syrian chargé d'affaires and his staff in Tunis were accused of inciting subversive activities and expelled. At a meeting in Cairo in September, the Arab League refused to hear a statement from the Tunisian delegate criticizing the Arab attitude, particularly that of the UAR, towards Israel. Tunisia subsequently announced its intention to boycott future meetings of the League. Nevertheless, Tunisia reaffirmed its support for the Palestine Liberation Organization (PLO).

An exchange of visits by the Ministers of Foreign Affairs of Tunisia and Algeria in early 1969 resulted in an improved climate for negotiation on the demarcation of their common frontier and on economic matters, especially those arising from the nationalization by each country of property owned by nationals of the other. In January 1970 the two countries signed a treaty of co-operation and friendship.

THE FALL OF AHMAD BEN SALAH

During 1964–69 the chief issue in internal affairs was the campaign to collectivize agriculture, implemented under the leadership of Ahmad Ben Salah, Minister of Finance and Planning. The programme encountered widespread opposition in affected areas and disagreement within the ruling party itself. In September 1969 the policy was abandoned; Ben Salah was stripped of all office, arrested, tried and sentenced to 10 years' hard labour. However, he escaped from prison in February 1973 and took refuge in Europe, from where he issued statements condemning President Bourguiba for acting against the people in the interests of a privileged class, and became the leader of the radical Mouvement de l'unité populaire (Popular Unity Movement—MUP), which was declared illegal in Tunisia.

Ben Salah was the first of several ministers to experience a sharp reversal of fortune. In November 1969 President Bourguiba appointed Bahi Ladgham as Prime Minister, but in October 1970 replaced him by Hédi Nouira. A year later the President declared that Nouira would be his successor. In March 1973 Ladgham resigned from all his political posts. Mahmoud Mestiri was the next minister to fall into disgrace. As Minister of the Interior in 1970 and 1971, he demanded the liberalization of the Government. Consequently he was dismissed from the Council of Ministers in September 1971, expelled from the party in 1972 and from the National Assembly in May 1973. When a revision of the Constitution was finally proposed in March 1973, it included almost none of the measures suggested by Mestiri to modify the presidential nature of the Government. Indeed, during the next two years Bourguiba and Prime Minister Nouira consolidated their power. In September 1974 the ninth party congress of the PSD elected Bourguiba as President-for-life of the party and confirmed Nouira in the post of Secretary-General. Bourguiba appointed a new political bureau of 20 members, including 14 ministers, confirming a tendency to draw the PSD and the Government closer together. In November Bourguiba was re-elected unopposed as President of Tunisia, and in the National Assembly elections all 112 PSD candidates were returned, also without opposition. The Assembly voted amendments to the Constitution, designating the Prime Minister as the President's successor and allowing for the appointment of a President-for-life, a post to which the Assembly elected Bourguiba in March 1975. Constitutional reforms in December 1975 increased presidential powers still further.

UNION WITH LIBYA

In June 1970 the President's son, Habib Bourguiba, Jr, was replaced as Minister of Foreign Affairs by Muhammad Masmoudi. From that date relations with the more radical Arab states and with extremist powers outside the area improved. Normal relations were resumed with the UAR and Syria, and Tunisia rejoined the Arab League.

In January 1974, after a meeting between President Bourguiba and Col Muammar al-Qaddafi, the Libyan leader, on the island of Djerba, it was announced that Tunisia and Libya had agreed to form a union. The Djerba Agreement was greeted with general surprise for, despite an improvement in relations between the two countries in previous years, Bourguiba had always shown himself to be hostile to such a union. Bourguiba was to be president of the new state, with Qaddafi as his deputy. It would seem that the Djerba Agreement was managed by

Muhammad Masmoudi, without the consent of Prime Minister Nouira, who was out of the country at the time. Nouira returned swiftly to Tunisia, and Masmoudi was dismissed from his post in the Government and the PSD.

In the aftermath of this confused affair, relations with Libya were tense. The Libyans continued to urge fulfilment of the Djerba Agreement, and in 1975 Bourguiba expressed concern at the increase in strength of the Libyan army. Another source of contention between the two countries was the delimitation of their respective sectors of the continental shelf, in which important deposits of petroleum were to be found. In June 1977 both sides agreed to submit to arbitration by the International Court of Justice (ICJ) and agreement was finally reached in February 1982. In October 1977 a joint statement was issued, saying that Tunisia and Libya had agreed to 'reactivate mutual co-operation' and establish a scheme to link the electricity networks of the two countries, while experts were to discuss the possibility of other joint ventures. Relations with Algeria also improved in 1977, after Tunisia had abandoned its attempts at conciliation in the Western Sahara dispute (in which it sided with Morocco): a co-operation agreement was signed in July by the respective Ministers of the Interior.

DOMESTIC UNREST

By 1977, with President Bourguiba in his seventies and in poor health, there was growing uncertainty over the future of the system of government which he had dominated for so long. Hédi Nouira, his designated successor, appeared to lack the powerful personality which had kept Bourguiba in command of the country, and there were signs of a succession struggle in the increasing demands for the free development of a pluralist democracy from, among others, former ministers Ahmad Ben Salah, in exile, and Ahmad Mestiri, leader of the unofficial Mouvement des démocrates socialistes (Social Democrats—MDS). The arrest and trial (in mid-1977) of 33 members of the MUP, on charges of threatening state security and defaming the President, indicated the continuing hostility of the Government to any form of organized opposition.

Meanwhile, however, a more effective political force was beginning to make itself felt. After a number of strikes by workers in 1976, a 'social contract' was formulated in early 1977 between the Government and the Union Générale des Travailleurs Tunisiens (General Union of Tunisian Workers—UGTT) under the leadership of Habib Achour, involving inflation-linked pay rises for the duration of the 1977–81 Development Plan. In spite of this agreement there were further strikes in various sectors of industry in late 1977, in demand of better pay and conditions, and backed by the UGTT, which was becoming (particularly through its weekly newspaper *Ach-Cha'ab*) an increasingly vocal critic of government policy and an outlet for political dissenters. In December Muhammad Masmoudi, the former Minister of Foreign Affairs, returned from exile in Libya and declared his support for the UGTT, thereby underlining its potential as a political force. Tahar Belkhodja, the Minister of the Interior, was dismissed in late December, after having suggested that the unrest should be attributed to social and economic problems, such as a rapidly increasing population and severe unemployment. Six other moderate members of the Council of Ministers resigned in sympathy, but President Bourguiba reaffirmed his support for Nouira by forming a new Government in which the dissidents were replaced mainly by civil servants and technocrats, all of whom could be expected to accept Nouira's tough policy; in addition, Bourguiba appointed his son, Habib Bourguiba, Jr, as special adviser.

In January 1978 Achour resigned from the political bureau and central committee of the PSD after pressure from members of the UGTT who felt that his dual role had become unacceptable. The UGTT national council appealed for urgent changes in the method of government and an end to the use of 'intimidation' in suppressing strikes and demonstrations. In late January the union organized a general strike as a warning to the Government and in retaliation for attacks on union offices. Rioting ensued in Tunis and several other cities, the army intervened and at least 51 people were killed, while hundreds more were injured; a state of emergency was declared and a curfew imposed. Hundreds of demonstrators were arrested, tried and imprisoned, and Achour and other members of the UGTT executive were also taken into custody and charged with subversion. The Government accused the UGTT of a long-standing conspiracy against the State and hinted at foreign backing, presumably from Libya.

There was considerable international criticism of the irregular conduct of the trial of Achour and 30 other union leaders, which began in August 1978. Nevertheless, Achour was sentenced to 10 years' hard labour, and prison sentences were also passed on all but six of the other defendants. Under a new Secretary-General, Tijani Abid, the UGTT expressed regret at the recent events and declared its willingness to co-operate with the Government. Although Achour was pardoned by President Bourguiba in August 1979, he remained under house arrest; 263 others serving prison terms for their involvement in the riots had been pardoned in May, but it was nevertheless clear that the power of the UGTT as a source of opposition had, for the moment, been crushed.

In July 1979 the National Assembly approved an amendment to the electoral code, allowing, for the first time, the number of candidates in legislative elections to be twice the number of seats although it remained unclear whether members of parties other than the PSD would be permitted to stand. At the PSD congress in September, the need to 'open up' the party to new adherents and original ideas was emphasized, but the Prime Minister rejected the idea of a multi-party system and a 'national pact' proposed two years previously by the MDS. The main opposition groups—the MUP, the MDS and the Parti communiste tunisien (PCT—the Communist Party)—declared that they would boycott the legislative elections in November, since participation would indicate support of the present system (and would presumably not have been permitted in any case, since none of the groups had official party status). The rate of participation in the elections was substantially lower than on previous occasions, reaching only 81%, compared with an average of 95%.

In January 1980 there was an attack on the town of Gafsa in western Tunisia by guerrillas, originally estimated to number 300, although only 60 were later brought to trial. The Tunisian armed forces quickly regained control of the town, but 41 deaths were reported. Responsibility for the attack was claimed by a hitherto unknown group, the Tunisian Armed Resistance, which declared that it aimed to free Tunisia from the 'dictatorship' of the PSD. The Tunisian Government claimed that the attackers were Tunisian migrant workers who had been trained in Libya and encouraged to make the attack in order to destabilize the Bourguiba administration: diplomatic relations with Libya were suspended. Libya expressed its incredulity at these allegations, and referred to the incident as a 'popular uprising'. Nevertheless, the attack caused international concern, particularly in France, which sent military transport aircraft to Gafsa and naval vessels to the Tunisian coast, while the USA also offered to expedite military supplies. The Gafsa attack was condemned by the more established opposition groups within Tunisia, engendering a temporary national solidarity, although the same groups condemned the execution of 13 of the guerrillas which took place in April.

MOVES TOWARDS POLITICAL LIBERALIZATION

The sudden illness of Hédi Nouira in February 1980 renewed political uncertainty. The Minister of Education, Muhammad Mzali, was appointed as temporary government co-ordinator and in April as Prime Minister, thereby becoming Bourguiba's successor under the terms of the Constitution. The new Government headed by Mzali included a member of the MDS and three of the ministers who had resigned in 1977 in protest at the harsh measures taken against strikers. In December Tahar Belkhodja, the former Minister of the Interior who had been dismissed in 1977, was readmitted to the Government. Most political prisoners were released during 1980, and in January 1981 a pardon was granted to nearly 1,000 members of the UGTT who had been convicted of involvement in the 1978 riots. Greater tolerance was also shown towards opposition parties: in mid-1980 permission was granted to the MDS to publish two weekly periodicals, and in the following February an amnesty was granted to all members of the proscribed MUP, except its leader-in-exile, Ahmad Ben Salah. In April 1981 President Bourguiba declared that he saw no objection to the emergence

of political parties provided that they rejected violence and religious fanaticism and were not dependent 'ideologically or materially' on any foreign group (which suggested that Islamic fundamentalists would not be welcome candidates). The congress elected a new PSD central committee of 80 representatives, some 75% of whom had not previously been members of the committee.

An extraordinary congress of the UGTT was also held in April 1981, the first since the riots of January 1978. Of the 13 members of the executive committee elected by the congress, 11 were former committee members who had been imprisoned in 1978. The new Secretary General—Taieb Baccouche—was the first non-PSD member to be elected to this post. Habib Achour was released in December 1981 and allowed to reassume his position as leader of the UGTT.

The process of installing a multi-party system continued with the announcement of legislative elections for November 1981; Bourguiba promised that any participating group which gained a minimum of 5% of the votes cast would be officially recognized as a political party. Several parties refused to take part in the elections under these conditions. In July the one-party system ended with the official recognition of the PCT. As a former officially recognized political party (banned since 1963), the PCT was not required to fulfil the 5% condition laid upon the other groups. In contrast to this apparent political liberalization, as many as 50 leading members of the Mouvement de la tendance islamique (Islamic Tendency Movement—MTI) were arrested and given prison sentences in September. The Government continued to regard the MTI, a relatively moderate Islamic group, as a dangerous influence.

Although the PCT, the MUP and the MDS presented candidates in the November 1981 legislative elections, the result was an emphatic victory for the Front national, a joint electoral pact formed by the PSD and the UGTT, which gained 94.6% of votes cast and won all 136 seats in the new Assembly. The other parties all failed to win 5% of the vote, and consequently none was given official recognition. Formal protests of electoral irregularities were made by the three opposition groups. The MDS and the MUP were finally accorded official status in November 1983.

FURTHER UNREST

In January 1984 widespread rioting and looting broke out. The immediate cause was a substantial increase in the price of bread and the abolition of government subsidies on flour and other staple foods, but the disturbances were also linked to long-standing grievances, including the high level of unemployment (particularly among the young), and to unrest amongst Islamist groups. Rioting started in the south of the country, but spread to the northern cities of Sfax, Gabès and Tunis. On 3 January the Government declared a state of emergency, and troops were brought in to control street demonstrations. The resulting clashes between troops and demonstrators left 89 people dead and 938 injured, according to official figures, and more than 1,000 people were arrested. After a week of disturbances President Bourguiba personally intervened to reverse the price rises, and order was re-established.

An official inquiry into the cause of the riots accused the Minister of the Interior, Driss Guiga, of exploiting the violence for his own political ends and of failing to inform the President of the magnitude of the disturbances. Guiga had been dismissed by President Bourguiba in January 1984 and subsequently left the country. The vacant portfolio was granted to Prime Minister Mzali, whose position was considerably strengthened by the downfall of his former rival for the presidential succession. In June Guiga was tried *in absentia* for high treason and sentenced to 15 years' imprisonment.

Throughout 1984 and in early 1985 Tunisia was troubled by a series of strikes in the public sector. The strikers demanded increases in public-sector salaries, which had been frozen for two years. In April 1985 riot police surrounded the UGTT headquarters, after the union urged a general strike in support of the demands of public-sector strikers. The UGTT subsequently postponed the strike, pending talks with government negotiators. However, in early May, the UGTT announced that negotiations had collapsed and that it would refuse to participate in the municipal elections later that month. The MDS, the PCT and the MUP also boycotted the elections. Nevertheless, there was a turn-out of 92.8% (compared with only 66.8% for the equivalent elections in 1980), which the PSD interpreted as a vote of support for its policies. In July the UGTT declared the start of a campaign of renewed strike action. In the same month the union's newspaper, *Ach-Cha'ab,* was suspended by the Government for six months. In October the police occupied the UGTT headquarters and arrested union leaders. Local UGTT committees were dissolved and replaced by pro-government committees. By early November about 100 UGTT leaders had been arrested, including the union's Secretary-General, Habib Achour, but many were released later in the month. In December the UGTT executive committee agreed to replace Achour with a provisional Secretary-General, on condition that the Government released the union members who were still in detention and reinstated workers who had been dismissed for taking industrial action. In January 1986 the UGTT's administrative commission, considering that these conditions had not been met, voted to reinstate Achour as Secretary-General. In the same month, however, Achour was imprisoned on a charge of theft, dating from 1982. (In April he was sentenced to a further two years' imprisonment for alleged mismanagement of union funds, and in December his sentence was extended by another four years.) In May the UGTT elected a 'moderate', Ismaïl Lajeri, as Secretary-General.

The Tunisian Government's refusal to condemn the US raid on Libya in April 1986 prompted considerable popular disquiet, and anti-US sentiment was suppressed by the authorities. Ahmad Mestiri, leader of the MDS, was jailed for organizing a demonstration, and several magazines (including the MDS weekly and two PCT periodicals) were seized by the Government. The authorities suspended publication of three magazines for six months. The appointment of Gen. Zine al-Abidine Ben Ali, who was regarded as immoderate, as Minister of the Interior, in late April, was considered a significant change in domestic policy.

BOURGUIBA ATTEMPTS TO TIGHTEN HIS GRIP ON POWER

In early 1986 Habib Bourguiba, Jr, was suspended from his post of special adviser, owing to his opposition to the series of arrests in late 1985. In the following months President Bourguiba announced several ministerial reshuffles, which gradually weakened the position of Muhammad Mzali, the Prime Minister, who had been regarded as Bourguiba's potential successor. During the 12th congress of the PSD in June, Bourguiba apparently confirmed Mzali's position as Secretary-General of the PSD, yet he dispensed with the ballot to elect the members of the PSD central committee, and personally appointed 90 members, none of whom was an associate of Mzali. In July Mzali was replaced as Prime Minister by Rachid Sfar (previously Minister of Finance), and was dismissed as Secretary-General of the PSD. Mzali subsequently fled to Algeria, and was later sentenced *in absentia* to one year's imprisonment for crossing the border illegally, to a further three years' imprisonment for defamatory comments against Tunisian leaders, and to 15 years' hard labour for mismanagement of public funds.

A general election for a new National Assembly was held in November 1986, but was boycotted by the opposition parties. The PSD won all 125 seats, opposed by only 15 independent candidates. There was a high level of participation (82.9% of the electorate), according to official figures, although these were disputed by the opposition.

By 1987 the Government had consolidated its control over the UGTT, and left-wing militancy was no longer perceived as a threat. In December 1986 the UGTT elected a new 18-member executive bureau, and an apparently moderate Secretary-General, Abd al-Aziz Bouraoui. In January 1987 Bourguiba presided over the opening of an extraordinary congress of the UGTT, during which the union confirmed its support of the PSD and approved a new union charter. Habib Achour was released on humanitarian grounds in May. In the same month, Bourguiba pardoned 13 members of the Rassemblement socialiste progressiste (RSP), who had been sentenced to six months' imprisonment for illegal assembly.

SUPPRESSION OF ISLAMIST ACTIVISTS

Meanwhile, President Bourguiba had become increasingly concerned that 'Islamic fundamentalism' was a threat to his regime, and attempts were made to suppress Islamist activity. In July 1986 four Islamist activists were sentenced to death, and some 22 others were imprisoned, for a series of offences. Numerous arrests were reported by human rights organizations, following clashes between Islamists and left-wing students at the University of Tunis in early 1987. In March 1987 the Secretary-General of the MTI, Rached Ghanouchi, was arrested on charges of violence and collusion with foreign powers to overthrow the Government. Later in the month, Tunisia severed diplomatic relations with Iran, after Tunisians, suspected of terrorist offences, were arrested in France and Djibouti. The Tunisian Government accused Iranian diplomats in Tunis of subversive acts, including the recruitment of Tunisian Islamists to perpetrate terrorist acts abroad, and thus undermine Tunisia's relations with friendly states. The Government also claimed to have evidence of an Iranian plot to overthrow Bourguiba, and to establish a pro-Iranian fundamentalist administration in Tunisia. On this pretext, a series of arrests of Islamists ensued. According to the authorities, 1,500 people were detained, although opposition parties estimated that the total reached more than 3,000. The arrests were condemned by the Ligue tunisienne des droits de l'homme (Tunisian League of Human Rights—LTDH), and in April the opposition parties issued a communiqué, warning against a return to repressive practices and demanding guarantees for the freedom of the trade unions and the universities. There were further arrests after clashes between police units and Islamists during an anti-government demonstration in April. Later in the month, the Secretary-General of the LTDH, Khemais Chamari, was arrested and accused of disseminating false information and defaming the State. (Chamari was later released on parole, and was acquitted in January 1988.) In May the Government approved the creation of the Association for the Defence of Human Rights and Public Liberty, as a rival to the LTDH, which the Government accused of being pro-MTI. In June 37 Islamists, mostly students, were sentenced to terms of imprisonment of between two and six years for taking part in illegal demonstrations in April and for defaming Bourguiba. In August 13 foreign tourists were injured by bomb explosions, and the Government promptly insisted that the MTI was responsible, despite the publication of a statement from a radical group, Islamic Jihad, claiming responsibility. Six young Tunisians later confessed to planting the bombs, and stated that they were members of the MTI. They alleged that the bombings were part of an operation to damage the tourist trade on which Tunisia depended. In September the trial opened of 90 Islamists, accused of threatening state security and of plotting against the Government. The conduct of the trial was criticized by opposition parties and human rights groups. Despite the prosecution's demand that all 90 defendants should receive the death penalty, only seven were sentenced to death, five of them *in absentia*. Fourteen defendants were acquitted, and 69 (including Rached Ghanouchi) received prison sentences.

FOREIGN RELATIONS IN THE 1980s

In the 1980s President Bourguiba continued to pursue a moderate, pro-Western foreign policy. After the attack on Gafsa in January 1980, Tunisia strengthened its links with the USA and the two countries established a US-Tunisian military commission in November 1981.

Tunisian relations with other Maghreb countries improved considerably in the early 1980s. In March 1983 a meeting was held in Tunisia between President Bourguiba and President Ben Djedid Chadli of Algeria. Discussions on the normalization of relations between the two countries, the demarcation of the frontier and common industrial projects resulted in the drafting of the Maghreb Fraternity and Co-operation Treaty. At the subsequent ratification of the treaty by the Tunisian National Assembly, appeals were made for closer relations between the Maghreb states of Algeria, Libya, Mauritania, Morocco and Tunisia, and the introduction of a common political structure. Mauritania signed the treaty in December 1983.

However, relations with Libya reached a dangerously low ebb in August 1985 after Tunisia expelled 283 Libyan nationals, including most of the Libyan diplomats in Tunis, on charges of spying, in retaliation against Col Qaddafi's decision to expel some 30,000 Tunisians working in Libya. Qaddafi threatened to use military force to resolve the dispute, and Tunisia's armed forces were placed on alert before Morocco offered to mediate between the two countries. In September Tunisia severed diplomatic relations with Libya, following the expulsion of four Libyan diplomats who had been accused of sending letter-bombs to Tunisian journalists.

In response to the Libyan military threat, Tunisia's links with the USA were strengthened. However, in October 1985 relations between the two countries were soured, following the bombing by Israeli aircraft of the headquarters of the PLO, near Tunis. At the UN Security Council, the USA abstained on a Tunisian resolution condemning the raid, but resisted Israeli pressure to veto the motion. By March 1986 relations between the USA and Tunisia had improved, following a visit by US Vice-President George Bush. However, the US raid on Libya in the following month proved to be a further source of embarrassment for the Tunisian Government, which refused to condemn or to approve the US action and thus angered members of opposition parties and Islamists. Demonstrations ensued and many opposition figures were arrested (see above).

Meanwhile, there was growing Tunisian ambivalence over the PLO presence in Tunis. Following the Israeli raid on the PLO headquarters, a group of Palestinians 'hijacked' an Italian cruise liner, the *Achille Lauro*, off the Egyptian coast. The USA made it clear that it would not allow the hijackers to return to the PLO headquarters in Tunis, and the Tunisian authorities refused to let the Egyptian aircraft carrying the hijackers and a PLO official land in Tunisia (see chapter on Egypt). Although there was speculation in late 1986 that the PLO would move its headquarters out of Tunisia, as a result of increasing restrictions imposed on its activities by the Tunisian Government, in October the organization decided to remain in Tunisia but with a considerably reduced number of staff.

Relations with Libya began to improve in March 1987, when President Bourguiba met a representative of the Libyan Government to discuss the issue of compensation for Tunisian workers, and the restoration of capital to companies expelled from Libya in 1985. In early 1987 Libya produced a written undertaking not to interfere in Tunisia's internal affairs. In July flights were resumed by Tunisia's national airline, TunisAir, to Tripoli. Following Col Qaddafi's proposals to unify Libya and Algeria, Bourguiba and President Chadli of Algeria issued a joint communiqué in July, announcing that discussions had taken place on how to develop the unity of the Maghreb region, although it seemed that Bourguiba had agreed to increased co-operation between the Maghreb states, rather than merger. In September Tunisia announced that the dispute with Libya over the expulsion of the Tunisian workers had been resolved, and consular ties were resumed in the following month, when the border between the two countries was reopened.

BOURGUIBA'S DECLINE

In the second half of 1987 President Bourguiba's behaviour became increasingly erratic. In September the appointments were announced of a new Minister of Cultural Affairs, Director of the PSD Political Bureau, Director-General of the Tunisian broadcasting company, and editor of the state-owned newspaper, *al-Amal*. A few days later, in early October, Bourguiba revoked the appointments and dismissed Rachid Sfar from the premiership. Ben Ali was appointed Prime Minister, with responsibility for internal affairs, and Secretary-General of the PSD. A few weeks later, a new director of the PSD was appointed. In late October Bourguiba carried out a minor cabinet reshuffle in which the Ministry of Finance was divided into two portfolios and a Ministry of the National Economy was created.

Meanwhile, ministers, concerned about Bourguiba's behaviour, began to examine provisions in the Constitution which would allow for the retirement of the President. Reports emerged that Bourguiba was demanding a retrial of the Islamists who had been sentenced in September 1987 (see above), with the aim of having the death sentence imposed on all 90 defendants. A disagreement about the fate of the Islamists allegedly ensued between Bourguiba and Ben Ali, and it was rumoured in early November that Bourguiba intended to dismiss Ben Ali. Mean-

while, a plot to overthrow Bourguiba was disclosed, allegedly involving about 150 people, both military and civilian.

BEN ALI TAKES OVER

On 7 November 1987 seven doctors declared that President Bourguiba was unfit to govern, owing to senility and ill health, and, in accordance with the Constitution, the Prime Minister, Zine al-Abidine Ben Ali, was sworn in as President. There was no apparent opposition to Ben Ali's takeover, which had been approved in advance by the majority of ministers and senior military officers. President Ben Ali declared that he would continue to implement existing foreign and economic policies, but announced plans to revise the Constitution and to permit greater political freedom. He appointed Hedi Baccouche as Prime Minister, and a new Council of Ministers was announced, which omitted four ministers closely associated with Bourguiba. Later in November, Ben Ali formed a National Security Council (comprising himself, the Prime Minister, the Minister of State for Defence, the Minister of Foreign Affairs and the Minister of the Interior) to safeguard internal security. The Council subsequently announced that 76 people, including members of the army and national guard, police, customs officers and members of the MTI, had been arrested on suspicion of plotting against the State.

On assuming power, President Ben Ali immediately began to effect a policy of national reconciliation. The publication was permitted of opposition newspapers which had been suspended by the Bourguiba administration, although radio and television networks continued to be controlled. In late November 1987 the National Assembly approved legislation which limited to four days the length of time during which a person could be held in police custody without the authority of the public prosecutor: the length of time during which a person could be held on remand was limited to six months for most offences. In December the State Security Court was abolished, along with the post of Prosecutor-General. In the same month, 2,487 political and non-political detainees were released, including 608 MTI members and Ahmad Mestiri, the leader of the MDS. In January 1988 405 political prisoners were released, and in March Ben Ali granted amnesty to a further 2,044 political and common-law detainees.

Ben Ali also initiated attempts to normalize relations between the Government and the UGTT, as a result of which the two rivals for the leadership of the UGTT, Habib Achour and Abd al-Aziz Bouraoui, agreed to renounce their union responsibilities as a first step towards the reconciliation of the 'radical' and 'moderate' factions of the union. In May 1988 Ben Ali ordered the release of Rached Ghanouchi, the leader of the MTI. Ahmad Ben Salah, the exiled leader of the MUP, was also pardoned, and he returned to Tunisia in June.

Meanwhile, the new Government continued to consolidate its power. The size of the PSD political bureau was reduced from 20 to 13 members in December 1987. Nine new members were appointed, including seven members of the Council of Ministers formed in November, all of whom were close associates of President Ben Ali. In January 1988 the PSD won all the seats at five by-elections to the National Assembly with a comfortable majority, although the PCT alleged electoral malpractice. In a government reorganization in the following month, Ben Ali assumed the defence portfolio and appointed a Secretary of State for Security Affairs.

POLITICAL LIBERALIZATION

In accordance with his promises after assuming power, President Ben Ali introduced proposals to increase political freedom and to introduce a more democratic system of government. In February 1988 the central committee of the PSD announced that the party's name had been changed to the Rassemblement constitutionnel démocratique (Democratic Constitutional Assembly—RCD). In July the National Assembly approved a series of proposals to reform the Constitution. Under the amendments, the post of President-for-life was abolished, and the President was to be elected by universal suffrage every five years, and limited to two consecutive terms in office. A maximum age of 70 years was to be introduced for presidential candidates. If the presidency fell vacant before the end of the term of office, the President of the National Assembly, rather than the Prime Minister, was to assume presidential powers until elections were held, but was himself prohibited from becoming a candidate. The reforms also redefined the role of the Prime Minister as a co-ordinator of government activities rather than as leader of the government.

In April 1988 legislation was passed by the National Assembly instituting a multi-party system, although, in order to gain legal recognition, political parties had to uphold the aims of, and work within the Constitution, and were not to be permitted to pursue purely religious, racial, regional or linguistic objectives. Gifts and donations to political parties were to be supervised by the Minister of the Interior, in order to prevent foreign interference. In July the National Assembly modified the Press Code, relaxing its repressive tendencies. In the same month, Tunisia became the first Arab nation to ratify the UN convention against torture and other inhumane or degrading treatment. In late July, as part of an amnesty extended to 932 detainees, Tunisia's remaining 180 classified political prisoners were released, and a further 1,075 people charged with political crimes or under police surveillance had their civil liberties restored. The beneficiaries of this amnesty included 50 Islamists arrested in 1987; members of the UGTT; Tunisians involved in the attack on Gafsa in 1980; and supporters of Salah Ben Yousuf, who had been arrested in 1963. (However, about 170 prisoners accused of terrorist acts remained in detention.)

In a major ministerial reshuffle in July 1988, seven ministers who had served under Bourguiba were dismissed, leaving Hedi Baccouche, the Prime Minister, as the only prominent member of the Council of Ministers to have served under the two Presidents. In an apparent move to separate the RCD from the state apparatus, as a prelude to a multi-party system, the Director of the RCD Political Bureau lost his right to sit in the Council of Ministers and the public health portfolio was allocated to Saadadine Zmerli, the President of the LTDH, who was not a member of the RCD. Ben Ali also divided the Ministry of Economy into a Ministry of Trade and Industry and a Ministry of Energy and Mines.

At the first congress of the RCD in late July 1988, President Ben Ali pledged that he would establish a multi-party system with fair elections and freedom of expression. In accordance with Ben Ali's appeal for pluralism, Ahmad Mestiri, the leader of the MDS, and Muhammad Belhadj Amor, the leader of the Parti de l'unité populaire (PUP), were invited to address the congress, and both endorsed the policies of the Ben Ali Government. Ben Ali was re-elected as president of the RCD, despite speculation, following the recent cabinet reshuffle, that he would relinquish his party post. The perpetuation of ties between the RCD and the Government was also reflected in the appointments of Hedi Baccouche, the Prime Minister, as Vice-President of the party, and of the Minister of Foreign Affairs, the Minister of the Interior and the Governor of the Central Bank (who held cabinet rank) as members of the new streamlined seven-member political bureau. There was also concern over the disclosure that Ben Ali had personally appointed 122 members of the RCD's enlarged 200-strong central committee.

Ben Ali restated his desire to 'open a new page of pluralism and democracy' at the beginning of consultations held in September 1988 on a Tunisian 'National Pact' to present the aims and values of the administration. Participants in the consultations included representatives from national organizations (the UGTT, employers' organizations, youth and womens' groups, etc), the Secretary-Generals of the RCD, the MDS, the PCT and the PUP, and the leaders of the unofficial political parties (the leftist RSP, the liberal Parti social pour le progrès—PSP, the MUP and the MTI). Later that month, the RSP and the PSP were granted legal recognition. Earlier in August, Rached Ghanouchi had announced that the MTI accepted the law on political parties and respected the Constitution, especially the personal status code enshrining womens' rights.

Ben Ali was faced with the problem of integrating the Islamists into the political system without totally abandoning the secularism of the Bourguiba regime, and he succeeded in establishing good relations with their leader. Following the release of leading fundamentalists in September and November 1988, Ghanouchi stated that the era of injustice was over. Stress was laid upon the Arab and Islamic identity of Tunisia, the *Azzan* and prayers were broadcast on television, *Hijri* dates appeared

on official documents, and the seventh-century religious college, the Zeitouna, was given the status of a university. The MTI, transformed into a political party (Hizb an-Nahdah or Parti de la renaissance), was, none the less, denied official status.

On the first anniversary of his rise to power Ben Ali announced a National Pact, which was designed to show Tunisia as a country ready for democracy. Basic freedoms were guaranteed, although political parties could be formed only with the approval of the Minister of the Interior. Elections, not due until 1991, were brought forward to April 1989. In November 1988 a new political party, the Union démocratique unioniste (UDU), was legalized, and began to develop Arab nationalist and unionist policies.

During this period old associates of Bourguiba were indicted for corruption and embezzlement of considerable sums: Mahmoud Skhiri was sentenced to five years' imprisonment, Tahar Belhodja (*in absentia*) to five years, Mahmoud Belhassine to 10 years and a heavy fine, while Mzali's request, from abroad, for rehabilitation was refused. Moreover, Ben Ali dismissed Habib Ammar, one of his oldest and closest associates (whose son had been involved in a smuggling case), from the Ministry of the Interior.

THE APRIL 1989 ELECTIONS

In February 1989, in an attempt to establish national consensus and also to guarantee the election of some non-RCD candidates, Ben Ali invited the leaders of the six opposition parties to present themselves to the electorate as a coalition. The offer was rejected, although the parties had previously agreed to support Ben Ali as sole candidate for the presidency. In a drastic purge conducted at local level, the RCD readopted only 20 of its 125 retiring members. The Communists, fearing humiliation at the polls, declined to participate. Hizb an-Nahdah, forbidden from campaigning as a party, presented 'independent' candidates in 19 of the 25 constituencies, in which a total of 480 candidates contested 141 seats. The National Assembly elections were the first multi-party elections in Tunisia since 1981; the level of participation was 76% of the 2,700,000 eligible voters. The RCD won all 141 seats, with 80% of the votes cast, while the Islamist independents replaced the MDS as the main opposition force, taking 13% of the total votes and 25% of votes in many constituencies. Opposition allegations of widespread electoral fraud were denied by the RCD. Ben Ali was confirmed as President by 99% of voters.

On 11 April 1989 a new Council of Ministers of 32 members was announced. Although the leading members, headed by Baccouche, were retained, the cabinet represented a new political generation. With an average age of 48 years, most ministers were too young to have taken part in the struggle for independence, and 28 of them had not held any office under Bourguiba. In addition, they were drawn from the whole country (one-third from the deprived south) rather than predominantly from Bourguiba's own Sahel area. Technocrats were given portfolios to address what Ben Ali defined as the main problems: foreign debts, expensive subsidies, a cumbersome and expensive public sector, unemployment and regional policies. As a conciliatory gesture to the opposition, the liberal Mohammed Charfi, a leading member of the LTDH, was placed in charge of education and scientific research, while Daly Jazi, a founding member of the MDS, was appointed as Minister of Public Health.

POLITICAL DEVELOPMENTS

However, the National Pact failed to curb political dissent in the country, and tensions were exacerbated by the imposition of essential economic reforms. In April 1989 Ben Ali announced a general amnesty, which restored civil and political rights to 5,416 people condemned by the former regime, many of whom were Islamist activists. The remaining 48 Islamist prisoners, sentenced in 1987 for plotting against Bourguiba, were released in May 1989. In September Ben Ali dismissed his Prime Minister, Hedi Baccouche, following a disagreement over economic policy; Baccouche was replaced by Hamed Karoui, hitherto Minister of Justice. In November a further 1,354 people, including Bourguiba's close associates Mahmoud Skhiri and Tahar Belkhodja, were granted amnesty. In one of the few political trials, the leader of a breakaway faction of the MUP was sentenced in August to one year's imprisonment for defamation of the President (but was released in November); six communists were later imprisoned for similar offences. In May 1990 an Islamist leader, Professor Moncef Ben Salem, was sentenced to three years' imprisonment for criticizing the Government in an Algerian fundamentalist newspaper.

In late 1989 taxes were lowered in an attempt to reduce evasion, and Ben Ali announced a 10% increase in wages. However, the President failed to gain popular support and appeared increasingly autocratic, declaring that he alone would decide the pace and course of reform. The conflict between the country's need for reform and modernization and the traditional Islamic values held by certain factions was seemingly insoluble. The Government was also concerned that Islamists were receiving financial aid from foreign sources. After the April 1989 elections, Rached Ghanouchi went into voluntary exile in Paris, and a lawyer, Abd al-Fatha Mourou, assumed the leadership of an-Nahdah within Tunisia. In June official recognition of an-Nahdah was refused, on the grounds that 15 of its leaders had not yet regained their civil rights. Ben Ali also demanded that an-Nahdah clarify its position on the rights of women, and reiterated his opposition to the concept of a religious political party. In December a second application for registration was refused, although an-Nahdah was permitted to publish a weekly journal, *al-Fajr*. (The an-Nahdah weekly, *al-Moustaqbal*, had been closed down in the previous year.)

Following their failure to secure legal recognition, the Islamists increased their political agitation and gained support among students. In December 1989 96 students began a hunger strike after the Government tried to divide its opponents by dissolving the Theological Faculty of the Zeitouna University. A campus police station in Kairouan was ransacked, and casualties were reported on the campus at Sfax. In February 1990 the protests culminated in clashes between police and students belonging to the Union Générale des Etudiants Tunisiens (UGET), an organization allied to an-Nahdah. About 600 student activists were detained, and some were briefly drafted into the army. The Government accused an-Nahdah of exploiting the students and of inciting unrest among the work-force, including a strike by 10,000 municipal workers. Political tension increased following severe floods in late January 1990, which killed 30 people and caused damage to property totalling more than US $400m. Some 800 demonstrators, incited by Islamist leaders who condemned the Government's dilatory relief efforts, attacked government offices in Sidi Bou Zid, and 26 were arrested. Ben Ali subsequently pledged $445m. towards relief work. (In April five men were sentenced to three months' imprisonment for leading the riots.) In a reshuffle of some prominent government posts in March, Abd al-Hamid Escheikh, hitherto Minister of Foreign Affairs, was appointed Minister of the Interior.

The Government was keen that municipal elections, due to be held in June 1990, should be viewed as a serious stratagem towards multi-party democracy. In January Prime Minister Karoui invited opposition leaders for discussions on the amendment of the electoral code and access to the media. However, the discussions were boycotted by three of the recognized opposition parties and by an-Nahdah, and little progress was made. In May the electoral law was amended to introduce a form of proportional representation in the forthcoming municipal elections. The winning party was to gain only 50% of the seats, while the remaining seats were to be divided between all the parties, according to the number of votes received. However, the six legal opposition groups and an-Nahdah boycotted the elections, held on 10 June, on the grounds that they were neither free nor fair. The RCD won control of all but one of the 245 municipal councils, taking 3,750 council seats. The remaining 34 seats were won by independent candidates, many of whom were former members of the RCD. According to official sources, an estimated 79.3% of the electorate voted. In the same month publication of *al-Fajr* was suspended, following an article by exiled leader Rached Ghanouchi which strongly criticized the Tunisian Government.

Disagreement over government policy regarding the Gulf crisis, and in particular the stance adopted concerning Iraq, was the apparent cause of the replacement, in late August 1990, of the Minister of Foreign Affairs, Ismaïl Khelil, by Habib Boulares (a prominent journalist and a former Minister of Culture and Information under Bourguiba).

In October 1990 it was reported by the human rights organization Amnesty International that although more than 10,000 common-law and political prisoners had benefited from amnesty measures since Ben Ali's accession to the presidency, human rights abuses, of which members of unregistered political groups were often the victims, continued. In the following month Ben Ali pardoned 113 prisoners, and announced the formation of a national commission on human rights (to be known as the Comité supérieur des droits de l'homme et des libertés fondamentales—CSDHLF). In March 1991 an amnesty was announced for a further 836 prisoners. The human rights commission was inaugurated in April.

In November 1990 several members of an-Nahdah were arrested, following the discovery of explosives which were allegedly to have been used for terrorist activities. An-Nahdah's senior officials denied that the movement was involved in terrorism. In the same month it was announced that the authorities had dismantled an 'Islamic network' that had allegedly been planning an Islamist revolution. In late December senior officials of an-Nahdah were arrested, together with more than 100 other people, and accused of attempting to establish an Islamic state. The arrests provoked demonstrations by Islamist militants in January 1991, and in the same month thousands of Tunisians took part in pro-Iraqi demonstrations, following the outbreak of war between Iraq and the US-led multinational force. In February further demonstrations by Islamists were violently suppressed. In the same month the co-ordinator of the MUP, Brahim Hayder, was sentenced to three months' imprisonment on a charge of attempting to disturb public order (after having condemned the Government's banning of a pro-Iraqi demonstration in January).

In February 1991 the Minister of the Interior, Abd-al Hamid Escheikh, whose attitude towards recent Islamist manifestations of support for Iraq had apparently been regarded by his government colleagues as insufficiently uncompromising, was replaced by Abdallah Kallel, hitherto Minister of Defence. Habib Boulares assumed the defence portfolio. Escheikh's dismissal was announced within hours of an armed attack, allegedly by an-Nahdah supporters, on RCD offices in Tunis, as a result of which one person was said to have been burned to death. In March Abd al-Fatha Mourou and the two other members of the an-Nahdah executive committee who were still at liberty in Tunis (four members were reported to be in detention at this time, two had fled the capital to evade arrest, while Rached Ghanouchi remained in exile) responded to government pressure, denouncing violent acts committed in the name of an-Nahdah and 'freezing' their activities within the movement. However, tensions persisted, and in May two students were killed in a clash with the police. The students' union, UGET, was disbanded by the authorities after the police claimed to have found weapons and subversive material linked to an-Nahdah, and riot police were posted outside centres where the annual baccalaureate examinations were being held. Also in May some 300 people, including about 100 members of the security forces, were arrested in connection with an alleged Islamist plot: the Government claimed that it had been planned to assassinate Ben Ali and other government members in October. In June five Islamists were sentenced to death (two *in absentia*) for their part in the attack on the RCD headquarters. The executions of the three who were in detention took place in October, this reportedly being only the second occasion on which death sentences had been implemented since Ben Ali's accession to power.

In July 1991 Amnesty International reported that it had received accounts of the systematic torture of more than 100 prisoners, most of whom were suspected members of an-Nahdah. The Government requested the newly-created CSDHLF to investigate, and its findings, published in October, showed that there had indeed been abuses, but concluded that these had not been officially sanctioned. About 140 prisoners, many of them political, were released in November (on the anniversary of the President's accession to power), and the sentences of more than 900 other detainees were reduced. In March 1992 a further report by Amnesty International, which detailed the arrests of some 8,000 people—mostly suspected members of an-Nahdah—over an 18-month period, and cited 200 cases of the torture and ill-treatment of detainees, as well as the deaths in custody of at least seven Islamists, was immediately condemned by the Tunisian authorities as 'baseless'. However, the Government, while denying that any detainee in Tunisia could be classified as a prisoner of conscience, later conceded that some violations of human rights had been committed, and announced that it would investigate allegations of the abuse of detainees. Meanwhile, new restrictions were imposed on organizations such as the LTDH, which in July 1991 had criticized restrictions on press freedom. In June 1992 the LTDH was dissolved by its leadership, following the introduction of legislation which, in establishing new distinctions between the competences of political parties and hitherto quasi-political associations such as the LTDH, effectively banned members of the latter from participation in political life.

In addition to an apparently unsuccessful attempt to persuade Abd al-Fatha Mourou and his supporters to form a 'moderate' Islamic party, Ben Ali began to court the legalized opposition. In March 1991 he received opposition leaders and ordered that they should receive funds for party expenses and propaganda and that the police should not harass their activities. Ben Ali also appeared anxious to end the RCD's monopoly of power in the National Assembly, and offered not to present RCD candidates for nine by-elections pending to the legislature. However, the opposition, demanding a wider reform of the electoral system, boycotted the elections, and the vacant seats were taken by RCD candidates. The relatively high level of participation by voters, ranging from 69.5% to 92.4%, was interpreted as an indication of popular support for the Government's uncompromising attitude towards an-Nahdah. In December Ben Ali announced that changes to the electoral code, to be formulated in co-operation with opposition parties, would be implemented during 1992, with the aim of ensuring greater representation at the national level for parties other than the RCD. The opposition resumed a dialogue with the Government in January 1992, although its cohesion was undermined by a number of incidents: Ahmed Ben Salah and Muhammad Mzali, both still in exile, were reported to have declared support for an-Nahdah, and Ahmad Mestiri resigned from the MDS in early 1992, apparently in response to internal party differences which resulted in the 'suspension' of the activities within the MDS of three members of the party's political bureau.

Government changes in October 1991 resulted in the promotion of Abdallah Kallel to the rank of Minister of State. At the same time Ben Ali appointed a close associate, Abd al-Aziz Ben Dhia, to replace Habib Boulares at the Ministry of Defence. (Boulares was subsequently appointed President of the National Assembly.) In March 1992, at the beginning of the Islamic month of Ramadan, a new Ministry of Religious Affairs was created. Further government changes in June included the creation of a Ministry of International Co-operation and Foreign Investment, as well as the appointment of Ben Ali's adviser on human rights, Sadok Chaabane, as Minister of Justice. In the following month the composition of the Council of Ministers was again modified.

Suppression of an-Nahdah continued, with widespread arrests and a large security presence on the streets. In July 1992 more than 100 people, said to belong to the Islamist terrorist group 'Commandos du sacrifice', were put on trial at the Tunis military tribunal. The accused, who included army, police and customs officials, were charged with conspiring to take power by force and plotting to assassinate the President. During the trial, an-Nahdah's official spokesman insisted that the Commandos du sacrifice were not part of the an-Nahdah movement and denied the existence of any plot to overthrow the State. Habib Laasoued, alleged to be the leader of the Commandos, also denied any link with an-Nahdah, which he described as a rival movement. At the same time, almost 200 alleged an-Nahdah members were put on trial for plotting to take power by force. Throughout both trials there were allegations of irregularities in the conduct of the hearings and of human rights abuses. Many of the accused claimed that torture had been used to extract a confession. In August the courts announced long prison sentences for the defendants. Among those receiving life sentences were three exiled an-Nahdah leaders, Rached Ghanouchi, Salah Karkar and Habib Moknil. It was claimed that Ghanouchi had received funds from the Governments of Iran, Sudan and Saudi Arabia to overthrow the

Tunisian regime and was organizing violent Islamist revolution. These mass trials were seen as the culmination of the Tunisian Government's long campaign against an-Nahdah, whose organizational structures within the country were largely destroyed and its leaders imprisoned or forced into exile. Abdallah Kallel claimed that 'a Tunisian terrorist network' had been completely dismantled. Some members of opposition parties accused President Ben Ali of using the threat of 'Islamic fundamentalism' as an excuse to delay long-promised democratic reforms.

FOREIGN POLICY UNDER BEN ALI

President Ben Ali continued to pursue a moderate, pro-Western foreign policy. Relations with the USA remained cordial, and, during discussions on political and economic issues in March 1988 with the Tunisian Government, the US Secretary of State, George Shultz, announced US support for Ben Ali's political reforms. In April the US Secretary of Defense, Frank Carlucci, visited Tunis to discuss Tunisia's military debt to the USA, which totalled US $400m. In June the Tunisian administration authorized two US banks to refinance the debt. The Tunisian Government attempted to improve relations between the USA and Libya after the shooting down of two Libyan aircraft in January 1989. It was hampered by the strength of popular sentiment, with anti-US demonstrations occurring across the country. During an official visit to the USA in May 1990, Ben Ali met the US President, George Bush, to discuss the issue of peace in the Middle East. He also urged continued economic support from Western nations and an increase in US investment.

However, the new Tunisian Government was also interested in extending its co-operation with other Western nations. A military co-operation accord was reached with Spain in December 1987 and adopted by the Tunisian National Assembly in May 1988. Under the terms of the accord, the two countries were to establish joint ventures for the research, development and production of military equipment, to exchange military personnel and to conduct joint military exercises on each other's territory. Earlier, in January, the United Kingdom announced that it was willing to assist in the training and equipping of Tunisian security forces. In April the Tunisian Government received a military delegation from the Federal Republic of Germany, with the intention of gaining German military co-operation. In September Ben Ali discussed economic co-operation with President François Mitterrand, during a state visit to France. Co-operation between France and Tunisia was strengthened following visits by Laurent Fabius, the President of the French National Assembly, in December, and by Roland Dumas, the Minister of Foreign Affairs, in May 1989. During a state visit to Tunisia in June President Mitterrand promised greater investment in Tunisia; in August four agreements concerning financial aid were reached. The Turkish Prime Minister, Turgut Özal, also visited Tunisia. Although the two countries reached some trade agreements, Tunisia refused a request to recognize the 'Turkish Republic of Northern Cyprus'. In March 1990 a military co-operation agreement was signed with Turkey.

Following Iraq's invasion of Kuwait in August 1990 (see chapter on Iraq), President Ben Ali condemned the deployment of a US-led multinational force in the Gulf region, arguing that it was neither in the interests of Arabs nor of world peace. He refused to attend an emergency summit meeting of the Arab League, held in Cairo, and, in an apparent attempt to undertake a central mediatory role, asked that the meeting be postponed while he visited Baghdad to persuade the Iraqi President, Saddam Hussain, of the need for a settlement. His official pronouncements against intervention by Western nations were apparently influenced by the growing Arab nationalist support for Iraq within Tunisia. This solidarity was reflected in the formation of a new political organization, the National Committee for Support to Iraq, which comprised most opposition parties and professional associations. The Committee demanded a suspension of diplomatic relations with countries, such as Egypt and Saudi Arabia, which supported intervention in the Gulf region, and the enlistment of Tunisian volunteers to be sent to Iraq. In late August Ben Ali sent a number of emissaries to Arab and Western nations, as part of a diplomatic initiative to prevent war in the Gulf. In September Tunisia restored diplomatic relations with Iran, which had been suspended in 1987 after Tunisia had accused Iran of supporting fundamentalist opponents of then President Bourguiba.

RELATIONS WITHIN THE MAGHREB

Under the Ben Ali administration, relations with Libya improved dramatically, with the result that Tunisia was able to play a more active role in the development of Maghrebin unity. In December 1987 full diplomatic relations were resumed with Libya, after Libya had agreed to pay US $10m. in indemnities to the Tunisian workers expelled in 1985 and to reimburse Tunisian assets, which had been frozen in Libya. Subsequently the Tunisian, Algerian and Mauritanian ministers responsible for foreign affairs met to discuss the possibility of Libya becoming a signatory to the Maghreb Fraternity and Co-operation Treaty of 1983, as a prelude to the creation of a Great Arab Maghreb. In January 1988 President Chadli of Algeria visited Tunisia and held further discussions with Ben Ali on the issues of the Great Arab Maghreb, bilateral co-operation and a lasting settlement for the Moroccan-occupied Western Sahara. Ben Ali discussed these matters again with the Moroccan Prime Minister, Az ad-Dine Laraki, at the beginning of February.

In January 1988 Col Qaddafi postponed a scheduled visit to Tunisia to demonstrate his displeasure at the Tunisian Government receiving the commanders of the US and French navies. In February, however, the visit took place, and, following talks, Ben Ali and Col Qaddafi stated that they had agreed to abolish entry visas for Tunisians and Libyans crossing the Tunisian–Libyan border, and to abide by the judgment of the ICJ concerning the delineation of their respective sectors of the continental shelf in the Gulf of Gabès. Several days later, Ben Ali, Col Qaddafi and President Chadli of Algeria met and expressed their determination to encourage co-operation between the Maghreb countries. In June Ben Ali attended the first summit meeting of the five heads of the Maghrebin countries in Algiers (for further details, see Algeria, History). In May Ben Ali and Col Qaddafi had held an unscheduled summit on the island of Djerba. The two leaders signed an agreement providing for a social and economic union of the two countries, the free movement of people and goods across their common frontier, the establishment of a common identity card system and the freedom to live, work and own property in the respective countries. A number of joint industrial, economic and cultural projects were initiated immediately after the summit. In August Ben Ali visited Col Qaddafi in Libya and signed a series of co-operation agreements and an agreement concerning the settlement of the dispute over the continental shelf in the Gulf of Gabès. During the visit, a technical commission was established to examine means of accelerating co-operation and merger between Tunisia and Libya. In September an agreement was signed establishing a joint Tunisian-Libyan company, which would exploit the '7 November' oilfield on the continental shelf in the Gulf of Gabès. An agreement to link the two countries' electricity grids was signed.

Taking advantage of the open frontier, an estimated 1m. Libyan tourists visited Tunisia, spending so much money that shortages of goods in the shops were reported. A new motorway from the frontier to Sfax was constructed to facilitate their entry. At least 30,000 Tunisians found employment in Libya. During a visit to Tunisia in December 1988, Col Qaddafi addressed the National Assembly, stating that he favoured 'constitutional unity' between the two countries but would not try to impose it. He returned with President Chadli of Algeria in February 1989.

Ben Ali was influential in the movement towards Maghreb unity, by convincing President Chadli that unity would be impossible without the participation of Morocco; he had no wish to continue in a subordinate role in the Maghreb Fraternity and Co-operation Treaty. Tunisia was put in charge of the working party dealing with human and social affairs and security, and played a significant role in all the meetings of ministers and heads of state, arguing for gradual progress towards unity.

Tunisia initially seemed the most committed member of the newly-created Union of the Arab Maghreb (UAM), while Col Qaddafi appeared reluctant to implement agreements, such as the joint exploration of the Gulf of Gabès and the financing of infrastructure programmes in Tunisia. The Tunisian Prime

Minister, Hedi Baccouche, visited Tripoli in July 1989, in an attempt to promote economic co-operation, although little practical progress was achieved. During a preliminary meeting of ministers responsible for foreign affairs in January 1990 the Tunisian minister proposed a series of measures, all of which were approved, including the creation of a permanent secretariat (preferably based in Tunis), the expansion of the Consultative Council to 100 members, the establishment of commissions to examine joint projects in food production, economy and finance, infrastructure and human resources, and negotiations with other groups, particularly the European Community (EC).

In February 1990 the Minister of the Economy proposed a single energy market for North Africa, with free trade in electricity, petroleum and natural gas, the linkage of grids and extension of pipelines. In the same month the first meeting of the Human Resource Committee, attended by ministers of education, was held, and special passport controls were provided for North African visitors at Tunis airports. In March a television service, broadcast throughout North Africa, was established in Tunis. Also in March the newly-appointed Tunisian Minister of Foreign Affairs, Ismail Khelil, proposed that the EC should reschedule debts to provide for training and the creation of jobs in North Africa, with the aim of reducing emigration to Europe. Official sources estimated that 1.8m. Maghrebis worked in Europe (with a further 600,000 working illegally), while the number of unemployed within the UAM totalled at least 2m. The UAM also raised the issue of racial attacks upon their citizens in the EC. In June 1990 President Ben Ali proposed an agreement between the EC and UAM, which would guarantee the rights of North Africans working in Europe.

RELATIONS WITH OTHER ARAB NATIONS

Tunisia's status as a moderate Arab state was maintained under Ben Ali. Following discussions with PLO representatives and members of the Egyptian Government, the Tunisian Government announced in January 1988 that it would be resuming diplomatic relations with Egypt. (Relations had been severed by Tunisia in 1979 after Egypt signed the Camp David Agreement with Israel.) Meanwhile, Hedi Baccouche, the Tunisian Prime Minister, toured the Arab Gulf states, which ranked among Tunisia's major sources of economic aid, to explain to Arab leaders the new administration's domestic and foreign policies. Baccouche reaffirmed Tunisia's support for the Gulf states, which feared an extension of the Iran–Iraq War, thus seeming to rule out the possibility that the Ben Ali Government would restore diplomatic relations with Iran in the near future. In April Baccouche visited Egypt and concluded several bilateral agreements. In January 1989 Dr Boutros Boutros-Ghali, then Minister of State for Foreign Affairs, became the first Egyptian minister to visit Tunisia for 10 years.

Meanwhile, Tunisia was the scene of another Israeli operation against the PLO. In April 1988 'Abu Jihad', the military commander of the PLO, was assassinated at his home near Tunis in a combined operation by the Israeli secret service, Mossad, and Israeli army and naval commando forces. The Israeli operation was a source of embarrassment for the Tunisian authorities, as it was revealed that Mossad operatives had been based in Tunisia for some time before the assassination was carried out. After discovering evidence that an Israeli military aircraft (apparently carrying sophisticated equipment with which to 'jam' telecommunications) had passed close to Tunisian airspace when 'Abu Jihad' was killed, the Tunisian Government lodged a complaint with the UN Security Council. Later in April, the Council adopted a resolution condemning 'the Israeli aggression against Tunisian territory'.

In March 1990 Ben Ali made the first visit to Cairo by a Tunisian President since 1965, and signed several agreements on bilateral co-operation with Egypt. Relations with Saudi Arabia also remained cordial; in March the Saudi-Tunisian Joint Commission met to discuss eight projects, financed by Saudi Arabia, and in July the Saudi Arabian Minister of Defence visited Tunis. Despite the high level of co-operation between the two countries, the Tunisian Government was concerned about the extent of Saudi support for Tunisian Islamists. In April the Iraqi Deputy Prime Minister visited Tunis, where he signed a bilateral trade agreement. In September a majority of members of the Arab League decided to move the League's headquarters from Tunis (where it had been 'temporarily' established in 1979) back to its original site in Cairo. The Tunisian Government protested at the decision and the League's Tunisian Secretary-General, Chedli Klibi, resigned.

RELATIONS WITH THE ARAB WORLD SINCE THE GULF WAR

After the cease-fire in the Gulf War in February 1991, Tunisia sought to restore links that had been strained by its support for Iraq (a policy which probably prompted the replacement of the pro-Baathist Habib Boulares as Minister of Foreign Affairs by the less abrasive Habib Ben Yahia). Although Kuwait had withdrawn its ambassador from Tunis, Ben Ali sent a cordial message to the Amir, congratulating him upon regaining his sovereignty. Ben Ali undertook a tour of the Gulf region in November. Soon after his appointment Ben Yahia went to Cairo in an attempt to re-establish cordial relations. The Egyptian and Tunisian ministers responsible for the interior met twice to discuss the problems posed by Islamist activists, and made arrangements for the exchange of intelligence. A trade pact was signed with Syria in August 1991, following an earlier visit to Damascus by Ben Yahia. In February 1992 further bilateral agreements covered co-operation in education and other fields.

Conversely, when in April 1991 the Iraqi Deputy Prime Minister, Tareq Aziz, visited the Maghreb, Ben Ali, alone among the regional heads of state, refused to receive him, claiming fatigue and the need to prepare for a visit to the People's Republic of China. The Iraqi aircraft that had taken refuge in Tunis during the crisis were not returned, but Tunisia did join the other UAM countries in appealing for the ending of sanctions against Iraq. Sudan had co-operated closely with Tunisia in the attempt to prevent the outbreak of war in the Gulf region, and Lt-Gen. Omar Hassan Ahmad al-Bashir, the Sudanese Head of State, visited Tunis in March 1991. However, in October Tunisia withdrew its ambassador from Khartoum, alleging that Sudan had been supporting Islamist terrorists. In July 1992 Sudan announced the closure of its embassy in Tunis, in protest against the Tunisian authorities' alleged suppression of the Islamist movement. In December a series of agreements was signed with Oman and relations between the two countries were described as exemplary. In mid-1993 there were signs that relations with Kuwait, badly strained during the Gulf crisis, might improve. In June Habib Ben Yahia made his first visit to Kuwait since the crisis, and President Ben Ali, in a letter to the Amir of Kuwait, sought improved relations. After a hostile reception from Kuwaiti politicians and from the press, Ben Yahia was forced to cut short his visit. However, after a visit to Tunis in April 1994 by the Kuwaiti Minister of Foreign Affairs and First Deputy Prime Minister, Sheikh Sabah al-Ahmad al-Jaber as-Sabah, it was reported that normal diplomatic relations would be restored. Later in 1994 the first co-operation agreement with Kuwait since the Gulf crisis was signed during a visit to Tunis by the Kuwaiti Minister of Education. In early 1996, during a visit to Kuwait by Sadok Rabah, the Tunisian Minister of Social Affairs, to encourage more investment in Tunisia, Kuwait's Minister of Foreign Affairs spoke of his pleasure at the continuing improvement in relations between the two countries. Efforts to improve relations with Kuwait were finally rewarded in April 1996 when bilateral co-operation was restored during a visit to Tunis by a high-level Kuwaiti delegation led by Sheikh Saad al-Abdullah as-Salim as-Sabah, the Crown Prince and Prime Minister. During the visit agreements were signed with the Kuwait-based Arab Fund for Economic and Social Development (AFESD) for loans worth US $45m., the first to Tunisia since the Gulf crisis. At the same time, Tunisia continued to maintain good relations with Iraq. In September 1995 Ben Ali had visited Jordan, Syria and Qatar as part of the Government's efforts to improve relations with other Arab states. In early 1997 the Egyptian Prime Minister, Kamal Ahmad al-Ganzouri, visited Tunis where he signed several economic and cultural co-operation agreements. Both countries pledged to work together to increase bilateral trade, and agreement was reached in principle on the creation of a free-trade zone. In early 1998 the two countries signed an agreement in Cairo at a meeting of the Tunisian-Egyptian Joint Higher Committee to dismantle customs duties over the next 10 years. A state visit to Tunis by the Amir of Qatar, Sheikh Hamad bin Khalifa ath-Thani, in June

1997, provided further evidence of the gradual improvement in Tunisia's relations with the Gulf states since the 1991 Gulf War. In January 1998 two small opposition parties, the RSP and the UDU, with the support of the UGTT, organized a meeting to express support for Iraq in its dispute with the UN. The Tunisian Government has regularly urged the UN to lift sanctions against Iraq. Also in January the Council of Arab Interior Ministers, meeting in Tunis, approved the draft of an Arab anti-terrorism agreement. In mid-1998 Tunisia and Jordan agreed to establish a free-trade zone and to work to increase commercial relations which at present remain very limited. The new King of Jordan, Abdullah II, visited Tunis in June 1999 and shortly afterwards Prime Minister Karoui held talks in Amman with his Jordanian counterpart. American and British air strikes against Iraq in December were strongly criticized by the Government, and condemned by the Chamber of Deputies and by several opposition parties. However, there were no street demonstrations in support of Iraq, although security around the US embassy in Tunis was increased. In January 1999 President Ben Ali repeated his appeal for the lifting of sanctions against Iraq, in order 'to end the suffering of the Iraqi people'. The Iraqi Minister of Foreign Affairs, Muhammad Saeed as-Sahaf, visited Tunis in February. Tunisia was reported to have signed a trade agreement with Iraq in May.

Tunisia claimed to have played a leading role, together with Norway, in the secret talks between the PLO and Israel which led to the signing of the Declaration of Principles on Palestinian Self-Rule in September 1993. At that time the PLO headquarters had been based near Tunis for more than 10 years. Tunisia welcomed the breakthrough in PLO-Israeli relations, and shortly afterwards an Israeli delegation arrived in Tunis for talks with Tunisian and PLO officials. Salah Masawi, the director-general of foreign relations, declared that there was no obstacle to Tunisia's establishing diplomatic relations with Israel, but that the Tunisian Government was waiting for another North African state to make the first move; it was assumed that he was referring to Morocco, which had maintained contacts with Israel through the Moroccan Jewish community for some years (see chapter on Morocco). After meeting Ben Yahia in Tunis in December, Warren Christopher, the US Secretary of State, announced that progress was being made in the normalization of relations between Tunisia and Israel. The Tunisian Ministry of Foreign Affairs welcomed the PLO-Israeli Cairo Agreement of May 1994 on implementing Palestinian self-rule in Gaza and Jericho. The PLO offices in Tunis were closed in June, as Yasser Arafat and the Palestinian leadership prepared to move to Gaza, where the newly-appointed Palestinian National Authority (PNA) was to be established. At a meeting with President Ben Ali at the end of June Chairman Arafat thanked Tunisia for the 'warm hospitality' the PLO had received since its offices were transferred from Beirut to Tunis in 1982. The official farewell ceremonies for Arafat in July were attended by Ben Ali.

As the Palestinians departed, Tunisia made new moves towards the normalization of relations with Israel. The first party of Israeli tourists to visit Tunisia since independence arrived in June 1994 (following an agreement made in October 1993 with Yossi Beilin, the Israeli Deputy Minister for Foreign Affairs—the first senior Israeli to visit Tunisia), and direct telephone links were established with Israel in July. In October the Tunisian and Israeli ministers responsible for foreign affairs met at the UN General Assembly in New York and agreed in principle to open interests sections (which Tunisia referred to as 'economic channels') in the Belgian embassies in Tunis and Tel-Aviv. At a meeting at the US State Department in Washington, DC, with Warren Christopher and the Israeli Minister of Foreign Affairs, Shimon Peres, Habib Ben Yahia stated that this was the first step towards full diplomatic relations. In October an agreement on co-operation in environmental affairs was signed between the two countries during a visit to Tunis by the Israeli Minister of the Environment. In December Haim Madar, the Grand Rabbi of Tunisia's small Jewish community, made his first visit to Israel. In February 1995 Tunisia, together with Israel, Morocco, Mauritania and Egypt, took part in talks with NATO in Brussels, Belgium, on security co-operation. Before the talks the Secretary-General of NATO, Willy Claes, had made the controversial statement that he saw Islamist extremism as the biggest single threat to the West since the collapse of communism. In March Tunisia participated in naval exercises off the Tunisian coast with Israel, Canada, Morocco, Algeria, Egypt and four of the Arab Gulf states. These attempts to co-operate with Israel provoked criticism from some Arab quarters. In April a Tunisian liaison office was opened in the Gaza Strip; a second office was expected to be installed in Jericho. In October Yasser Arafat met President Ben Ali in Tunis to review progress made on the implementation of Palestinian self-rule. After the Palestinian elections in January 1996, Tunisia indicated that it was satisfied that progress had been made in the peace process and an agreement was reached with Israel to proceed with low-level diplomatic relations from April. Tunisia thus became the fourth Arab state to establish diplomatic relations with Israel, after Egypt, Jordan and Morocco. The move, agreed in principle in October 1994, was opposed by only one of the six legal opposition parties, but strongly condemned by Rached Ghanouchi, the exiled leader of an-Nahdah. At the same time Tunisia agreed to recognize passports issued by the PNA. In April 1996 Israel opened an interests office in the Belgian embassy in Tunis; however Tunisia delayed sending its own representative to Tel-Aviv in response to Israeli attacks on southern Lebanon. Nevertheless, some contacts between the two countries were made. However, after the victory of Binyamin Netanyahu in the Israeli elections in May and the formation of a right-wing Government, the process of normalization was expected to decelerate. President Ben Ali attended the emergency Arab summit meeting in Cairo in June and, as current Chairman of the Arab League, made one of the two keynote speeches. After the conference he defended the actions of those countries that had taken steps to normalize relations with Israel, stating that they were intended 'to push the peace process forward'. However, in November the Tunisian leadership condemned Israeli intransigence towards the peace process and criticized the building of Jewish settlements in the occupied territories. The normalization of relations was suspended, the head of the Tunisian interests office in Tel-Aviv departed in August 1997 and the only remaining Tunisian diplomat returned to Tunis early in 1998. The Israeli interests office in Tunis remained open, but received only minimal co-operation from the Tunisian authorities after the Netanyahu Government took office.

Within the UAM, Tunisia was chosen as the site of the new Maghreb Investment and Foreign Trade Bank. A Tunisian diplomat, Muhammed Amamou, was appointed UAM Secretary-General and represented the UAM at the opening session of the Middle East peace conference in Madrid, Spain, in October 1991. Tunisia was the only UAM member to contribute personnel to the UN monitoring body, MINURSO, in Western Sahara (see chapter on Morocco). In January 1993 Tunisia assumed the annual presidency of the UAM. The Government emphasized its determination to reactivate the process of Maghreb union, as well as dialogue with the EC. However, according to a statement made by the Moroccan Minister of Foreign Affairs, Abd al-Latif Filali, in February 1993, following a meeting of the five UAM member states in Tunis, it had been decided to allow a 'pause' for reflection in the process of developing Maghreb union. Tunisian officials stressed that Ben Ali's presidency had been a success and that 11 co-operation agreements had been signed during his one-year term of office, including plans for a Maghreb free-trade zone. Yet, in reality, he failed to give new impetus to the organization, largely because two of its members, Algeria and Libya, remained preoccupied with their own problems: Algeria plunged into civil war by escalating Islamist violence, and Libya subjected to even tighter UN sanctions. The summit meeting that should have marked the end of Tunisia's presidency was delayed three times and did not take place until April 1994. At the meeting, Ben Ali handed over the presidency to Liamine Zéroual, the new Algerian Head of State. Neither King Hassan of Morocco nor Col Qaddafi of Libya were present. Although at least 40 accords had been adopted by the UAM, only five had been ratified by all five member states, indicating that little progress had been made in translating rhetoric into reality in developing a unified Maghreb. During 1994 tensions between Tunisia and Morocco (see below) and between Morocco and Algeria merely added to the problems affecting the UAM. There were reports that Tunisia was hostile to Egypt's request

in November to join the UAM, and would oppose Egyptian membership. In February 1995 Ben Ali sent a letter to the leaders of the other four member states urging them to try to overcome the obstacles facing the UAM by joint action. However, little progress was made, and in late 1995 Morocco blocked UAM activities because of alleged Algerian interference in the Western Sahara dispute. Tunisia regretted Morocco's action and continued its diplomatic efforts to revive the Union. During 1996 Tunisia concentrated on attempting to engender a reconciliation between Algeria and Morocco. Its efforts appeared to have met with some success when in October Algeria proposed a new UAM summit and Morocco was reported to have agreed in principle to the meeting. At the end of 1996 both Algeria and Morocco appealed for a revival of the UAM. On a visit to Tunis in October Col Qaddafi also expressed renewed interest in the UAM. Nevertheless, the UAM remained virtually moribund although Tunisia continued to insist that the organization could be revived. During a state visit to Morocco in March 1999, President Ben Ali and King Hassan agreed to work to resuscitate the UAM, which Ben Ali refered to as 'an irreversible fateful choice' for Tunisia. Following the suspension of UN sanctions against Libya in April, some tentative moves were made to revive the organization. In May Tunisia was represented at the first session of the UAM Follow-up Committee to be held for more than three years. All five member states attended and plans were made to hold the first heads-of-government meeting for five years before the end of 1999.

The decision by the UN Security Council in April 1992 to impose sanctions against Libya over the Lockerbie affair (see chapter on Libya) was reluctantly accepted by Tunisia. Although flights to and from Libya were suspended, Tunisia acknowledged popular feeling and the close economic ties between the two countries by insisting that land and sea links would remain open. The Libyan sanctions created a mini-boom in southern Tunisia, amid a sharp increase in cross-border trade and in transit traffic, but relations deteriorated sharply in September, when the Libyan leader remarked that Tunisia had no future and was doomed to unite with either Libya or Algeria. This outburst provoked an indignant response from President Ben Ali, who drew attention to Tunisia's achievements and commented that the Libyan people were suffering from the consequences of a crisis for which they were not responsible. Despite these differences, the Tunisian Government made efforts to negotiate a solution to the Lockerbie affair. In April 1993 Ben Ali visited Libya and consulted with President Mubarak of Egypt in a further attempt to resolve the deadlock between Libya and the West in the approach to the UN Security Council's sanctions review. Failure to resolve the Lockerbie affair also frustrated Ben Ali's efforts to forge closer relations between the UAM and the European Union (EU). On a visit to Tunis in December 1993, the French Minister of Defence left the President in no doubt that Libya's membership of the UAM was a serious impediment to closer relations between the UAM and the EU. There were reports of a flourishing black market as Tunisian traders took advantage of the overvalued Libyan dinar and heavily subsidized prices to import cheap food into southern Tunisia. In July 1993 representatives of some 250 Libyan and Tunisian companies met in Tripoli to examine ways of strengthening business relations in the formal sector of the economy. As a result of UN sanctions, Tunisia became the main point of entry for international companies working in Libya—international flights to Tunis link with Djerba, from where there are ferry services to Libya. But a new dispute occurred in October 1994 when Libya claimed that cholera had broken out in Tunisia and stated that all travellers from Tunisia would be vaccinated at the border if they did not possess a vaccination certificate. Tunisia retaliated by stating that bubonic plague had broken out in Libya and that anyone entering the country from Libya had to present a hospital certificate confirming that they did not have the disease. Some hundreds of travellers were stranded at the border with both countries blaming the other for the disruption. It was not until late November that the travel restrictions were lifted. There was speculation that Libya's actions in this affair may have been a response to Tunisian moves towards the normalization of relations with Israel announced in October. Discussions on economic co-operation resumed in July 1995 and relations improved in the second half of 1995. In September Tunisia appealed for the lifting of UN sanctions against Libya and also supported Libya's request to take part in the Euro-Mediterranean summit held in Barcelona, Spain, in November. A series of economic agreements were signed in October when the Tunisian Prime Minister met the Secretary-General of the Libyan General People's Committee. President Ben Ali held talks with Col Qaddafi in January 1996. However, relations between the two countries became strained after Libya criticized Tunisia's decision to establish low-level diplomatic relations with Israel. Nevertheless, a Tunisian delegation led by the Prime Minister attended a meeting in Tripoli in July, and relations between the two countries improved after a visit to Tunis by Col Qaddafi in October where he addressed the National Assembly. Several agreements on investment, trade and co-operation were signed subsequently and progress was made on a number of joint economic projects during 1997. Trade and economic co-operation increased during 1998, although a number of joint projects remained at the planning state. Towards the end of the year President Ben Ali visited Tripoli and invited Col Qaddafi to visit Tunisia. The Libyan Secretary for Foreign Liaison and International Co-operation, Omar al-Muntasir, visited Tunis in February 1999 at the same time as the US Secretary of Defense, William Cohen, who asked President Ben Ali to show more support for UN sanctions against Libya and to use his influence with Qaddafi to persuade Libya to surrender the two suspects in the Lockerbie affair. In January, however, Ben Ali had repeated an appeal for the lifting of sanctions against Libya 'to end the suffering of the Libyan people', arguing that sanctions had also aggravated regional tensions and undermined Tunisia's own economic development plans. Nevertheless, Tunisia did not follow some sub-Saharan African states in openly flouting the air embargo.

Tunisia's relations with Algeria continued to be dominated by the Islamist issue. In December 1991 Rached Ghanouchi and other senior an-Nahdah members were reportedly expelled from Algeria to Sudan. Relations with Algeria improved appreciably after the second round of Algerian elections were suspended in January 1992, and Tunisia welcomed the appointment of Muhammad Boudiaf as Chairman of the High Council of State, as well as the suppression of Algeria's Islamist movement. In February 1993 Boudiaf's successor, Ali Kafi, visited Tunis. During his stay he exchanged letters with President Ben Ali to ratify the official demarcation of the 1,000-km border between Tunisia and Algeria. Ben Ali and Kafi also expressed their determination to work together to counter the threat of terrorism in the region. In December the Algerian and Tunisian ministers responsible for foreign affairs met at Tabarka, Tunisia, to celebrate the final demarcation of the frontier between the two countries, the precise line of which had been disputed for some years after independence. The new Algerian Head of State, Liamine Zéroual, visited Tunis for the UAM summit meeting in April 1994 and held further talks with Ben Ali after the meeting ended. The two leaders issued a statement expressing their commitment to democracy, pluralism and the promotion of human rights; and condemning fanaticism and extremism. Zéroual's appeals for dialogue with Algeria's banned Front islamique du salut (FIS) seem certain to have alarmed Ben Ali, who had rejected any negotiations with the Tunisian Islamist opposition. During 1994 there were reports that several thousand Algerians, mainly professionals, had taken refuge in Tunisia since the conflict began in Algeria, many of whom had experienced difficulty in finding jobs. After the attack by Algerian Islamist militants against a Tunisian frontier post in February 1995, security along the border was strengthened and no further incidents were reported. The Tunisian Government welcomed Zéroual's victory in the Algerian presidential elections in November and the press hailed it as a triumph against terrorism and extremism. President Ben Ali continued to urge the Algerian Government to take decisive action against Islamist extremists. Some difficulties that had arisen over the employment of Algerians in Tunisia and over trade relations between the two countries appeared to have been resolved when Prime Minister Karoui visited Algiers in June 1996. The Algerian Prime Minister, Ahmed Ouyahia, made a reciprocal visit to Tunis in December and indicated his support for Tunisia's efforts to revive the UAM.

Tunisia's normally good relations with Morocco were strained in May 1994 after Tunisia expelled some 600 Moroccans who the authorities claimed were living there without permission or had broken Tunisian laws. Towards the end of the year the Tunisian authorities expelled several hundred Moroccans, claiming that they were trying to enter Italy as illegal immigrants. The Moroccan Government protested that some of its nationals had been maltreated by the Tunisian police. Relations remained strained during 1995 as a result of further expulsions of Moroccan workers and students. In early 1996 Tunisia condemned Morocco for trying to block UAM activities in retaliation for alleged Algerian interference in the Western Sahara dispute. Relations were further strained by criticism from Moroccan non-governmental organizations of the prison sentences imposed on opposition politicians Muhammad Mouada and Khemais Chamari (see below). However, after a visit to Rabat by Karoui in September, a commitment was made to improve economic and political co-operation. In November both countries appealed for the revival of the UAM. This message was repeated in March 1999 when President Ben Ali made a state visit to Rabat. During the visit a free-trade agreement was signed between the two countries as part of a plan to increase bilateral trade.

RELATIONS WITH THE NON-ARAB WORLD SINCE THE GULF WAR

For a brief period in the aftermath of the Gulf War, Tunisia's stance during the crisis was seen to have damaged relations with those countries that had participated in the effort to liberate Kuwait, while reports, most notably by Amnesty International, of abuses of human rights in Tunisia continued to cause international disquiet. In February 1991 the USA reduced the level of economic aid to Tunisia (see Economy), and military aid was entirely discontinued, although subsequent investment agreements with the USA indicated a rapid improvement in relations. A visit by François Mitterrand in July 1991 (the French President's first visit to an Arab country since the end of the Gulf War) was interpreted as a sign of French support for the Ben Ali administration's campaign against Islamist extremists. In December 1992 considerable anger was provoked in Tunisia by the trial, in Paris, of a group of mainly Tunisian suspects. Among these was the brother of President Ben Ali, who was sentenced *in absentia* to 10 years' imprisonment for drugs-trafficking offences. In February 1993 the Tunisian Minister of the Interior, Abdallah Kallel, during a visit to Paris, criticized the French authorities for granting asylum to Tunisian Islamist militants. The election of a new French Government in March 1993 was, however, well received in Tunisia. The French Minister of Foreign Affairs, Alain Juppé, visited Tunisia in June 1994 and after talks with Ben Ali, he stated that relations between the two countries were good, but that he was anxious that Tunisia should resolve the remaining cases of compensation to former French residents for property left behind in Tunisia after independence. When the French Minister of the Interior, Charles Pasqua, visited Tunis in October for a meeting on security co-operation, he pledged that the French Government would not allow France to become a base for Islamist activists. In January 1995 the French and Tunisian ministers responsible for the interior met in Tunis with their counterparts from Italy, Spain, Portugal, Algeria and Morocco to discuss security matters arising from Islamist militancy. They condemned 'terrorism, fundamentalism and every form of extremism and fanaticism' and agreed to exchange information on a regular basis. In their declaration at the end of the meeting the ministers sought to link illegal immigration into Europe and the growing traffic in drugs and arms to the rise in 'Islamist extremism'. Jacques Chirac's election to the French presidency was welcomed by the Tunisian authorities and it was hoped that the new French administration would support Tunisia in its negotiations with the EU and maintain an unyielding policy towards Islamist militants in France. In June the French police arrested a number of Tunisians and Algerians living in France who, it was alleged, were part of a network providing arms to Islamist groups in Algeria and to the Front islamiste tunisien, described as a splinter group of an-Nahdah. The new French Minister of the Interior, Jean-Louis Debré, visiting Tunis in September, urged all Mediterranean states to form a common front against 'these terrorists'. In October President Chirac made a state visit to Tunisia during which he praised Ben Ali for his achievements in promoting modernization, democracy and social harmony in the country. He promised that French aid to Tunisia during 1995 would be increased to 1,100m. French francs. In April 1996 the second Franco–Tunisian parliamentarians' conference met in Paris at which delegates discussed bilteral relations and EU co-operation with the Mediterranean states. However, Ben Ali's state visit to France, which should have taken place in September, was cancelled amid speculation that the President feared public criticism of Tunisia's human rights record. There had been widespread criticism in France of the arrest and imprisonment of Mouada and Chamari (see below). Mouada had been arrested only three days after Chirac's visit to Tunis. The release of the two politicians in December, together with promises of political reforms, helped to improve relations, and during a visit to Tunis in February 1997 by the French Minister of Defence, Charles Millon, agreement was reached on further military co-operation to include joint military manoeuvres, arms supply and the training in France of Tunisian army officers. In May Karoui held talks with Chirac in Paris, and in August the new French Minister of Foreign Affairs, Hubert Védrine, on his first visit to Tunis, stated that relations between the two countries remained close and that the French administration would continue to assist the Tunisian Government's political and economic reform programme. Ben Ali's state visit to Paris finally took place at the end of October. French leaders acknowledged Tunisia's difficult regional position and pledged continued support for economic reforms, but appealed for further progress in democracy and human rights. Although the French press was highly critical of the Ben Ali regime, there were no hostile street demonstrations and during the visit two economic agreements were signed, providing additional French financial support for the Tunisian economy. The long-standing dispute over French-owned property in Tunisia was also resolved. Towards the end of 1998 the Chamber of Deputies passed a law enabling French owners to sell properties acquired in Tunisia during the colonial period and to repatriate the proceeds without restrictions. At a meeting of the Franco-Tunisian inter-governmental commission in Tunis in January 1999 the two countries agreed to promote French investment in small and medium-sized Tunisian companies.

Robert Pelletreau, the US Assistant Secretary of State, visited Tunis in December 1995 for talks with President Ben Ali and leading ministers. He praised the country's economic reforms, stated that military co-operation between the two countries would continue and announced that any threat to Tunisia would be viewed 'with concern' by the US administration. In May 1997 a senior-level delegation, led by Tunisia's Minister of National Defence, visited Washington, DC, to attend a meeting of the joint committee for military co-operation. Reports, in early 1998, that Tunisia's close relations with Libya and Iraq (see above), and its refusal to host the next economic conference on the Middle East and North Africa, had caused a rift in relations with the USA, appeared to have been exaggerated. In June, during a visit to Tunis, the US Under-Secretary of State, Stuart Eizenstat, praised Tunisia as a 'model for the developing world' and proposed a new economic partnership with the USA to encourage structural change and to promote greater US investment. Although a Tunisian request for US military aid was not granted, the meeting of the Tunisian-American military committee, postponed in May, took place in September, attended by the US Under-Secretary of State for the Middle East and North Africa, Ronald Neumann, and the US Under-Secretary of State for Defense, Walter Slocombe. At the same time, Tunisia's Minister of International Co-operation and Foreign Investment, Muhammad Ghannouchi, led a high-level delegation to Washington where two new trade agreements with the USA were drawn up. In early April 1999 the US First Lady, Hillary Clinton, visited Tunisia as part of a North African tour promoting women's rights.

President Oscar Luigi Scalfaro of Italy visited Tunis in November 1993 for a two-day visit to boost bilateral trade and to discuss Mediterranean security issues. Italy is Tunisia's second largest trading partner (after France) and the third biggest source of foreign investment. Italy was anxious to ensure the continued co-operation of the Tunisian authorities in trying to curb illegal immigration from Tunisia. During 1994 the Tu-

nisian authorities made several well-publicized arrests of groups of illegal emigrants—including Tunisians, Moroccans and Libyans—who were trying to enter Italy from Tunisia. However, the arrival in Tunisia of former Italian Prime Minister, Bettino Craxi, sentenced *in absentia* by the Italian courts to serve 18 years in prison for corruption, proved embarrassing for the Tunisian authorities. Craxi, who maintained close links with the Tunisian leadership, was reported to be too ill to leave his villa near Hammamet. The Italian authorities also began investigations into the Italian export credit agency's relations with the Maghreb states, which caused delays in Italian trade credits for Tunisia. In June 1995 Italy requested that Tunisia extradite Craxi; however, the matter proved complicated because the extradition agreement between the two countries excluded political offences. When the new Tunisian Minister of Foreign Affairs, Abd ar-Rahim Zouari, visited Rome in March 1997, Italian officials appealed for an agreement between the two countries on the repatriation of illegal immigrants from Tunisia. In May Tunisia and Italy signed a co-operation agreement following a meeting held in Rome between the two Heads of State. Later in the year relations became strained when Tunisia seized several Italian boats which it claimed were fishing illegally in Tunisian waters. Problems over fishing zones and illegal immigration continued to cause friction with Italy in 1998. After meeting President Ben Ali in Tunis in June, the Italian Prime Minister, Romano Prodi, insisted that these were minor problems and could easily be resolved. In July, however, a sharp increase in illegal immigrants from Tunisia provoked an angry rebuke from the Italian Minister of Foreign Affairs, who accused the Tunisian authorities of not doing enough to stem the flow. The row quickly subsided, and in August the two countries signed an accord under which Tunisia agreed to do more to prevent Tunisians from entering Italy illegally and to take back those illegal immigrants apprehended by the Italian authorities in exchange for a substantial aid package. Later in the year the two countries agreed to promote greater maritime co-operation, in order to improve detection of illegal immigrants into Italy from Tunisia, and to reduce illegal fishing by Italian vessels in Tunisian waters. In April 1996 Pope John Paul II visited Tunis where he celebrated mass in the cathedral and met President Ben Ali. President Kravchuk of Ukraine signed a treaty of friendship and co-operation with Tunisia during a visit in December 1993. Ukraine plans to open an embassy in Tunis with responsibility for all the Maghreb states and the EU through the creation of a free-trade zone. Relations with Spain were strengthened in October 1995 when a treaty of friendship and co-operation was signed during a visit to Tunis by the Spanish Prime Minister, Felipe González. King Juan Carlos of Spain had visited Tunisia in November 1994 and President Ben Ali had made an official visit to Spain in May 1991. The first annual meeting between leaders of the two countries, as agreed under the 1995 treaty of friendship and co-operation, was held in Madrid in January 1997 and attended by the Tunisian Prime Minister, Hamed Karoui. Although the meeting dealt with economic co-operation, the Spanish Prime Minister, José María Aznar, appealed for a further improvement in Tunisia's record on human rights. Karoui insisted that there were no political prisoners in Tunisia, only Islamist militants convicted of terrorist acts. The issue of human rights and political freedoms had also been raised when the Tunisian Minister of Foreign Affairs held talks with his Spanish counterpart in Madrid in July 1996. Prime Minister Aznar again visited Tunis in May 1998 for the annual meeting between senior officials and urged Spanish firms to take greater advantage of investment opportunities in Tunisia. He held talks with President Ben Ali on a number of foreign policy issues. In March 1995 Mário Soares, the President of Portugal, made a state visit to Tunisia, and in talks with Ben Ali discussed Maghreb-Europe relations and ways of containing Islamist extremism. Soares stated that the main source of 'Islamic fundamentalism' was to be found in economic and social imbalances and that Portugal wanted the EU to provide Tunisia and its neighbours with more aid to help maintain social stability. Ben Ali had made a state visit to Portugal in 1993. Germany's Minister of Defence visited Tunis in April 1996 and described Tunisia as a stabilizing influence in the region. In November Ben Ali paid a state visit to Germany in order to strengthen economic links between the two countries. However, the German President, Prof. Dr Roman Herzog, reminded Ben Ali that democracy, political tolerance and respect for human rights were the major characteristics of a modern state. During 1998 the Austrian Federal Chancellor, Viktor Klima, and President Demirel of Turkey visited Tunis for talks with Tunisian officials on economic co-operation.

In December 1993 the EU's Council of Ministers mandated the European Commission to begin talks with Tunisia on a new partnership agreement to replace the co-operation agreement signed in 1976. The Tunisian Ministry of Foreign Affairs welcomed the talks, which it described as 'a political signal' marking European approval of Tunisia's progress towards political pluralism and its respect for human rights. During talks with the EU which began in Brussels in March 1994, Tunisian negotiators expressed their support for free entry of European goods into Tunisia, but wanted tariffs to be lowered gradually, additional financial assistance to make its industries more competitive with their European counterparts and higher guaranteed quotas for its olive oil exports to Europe. The European Commission was reported to have impressed on EU governments that a new partnership agreement with the Maghreb states was essential, since strengthening their economies would lessen Islamist violence and stem the flow of emigrants to Europe. Negotiations were not completed until July 1995 when Tunisia became the first southern Mediterranean country to sign a new economic association agreement as part of the EU's plan for a 'Euro–Mediterranean partnership'. The agreement involves the gradual removal of tariffs on industrial imports from the EU, a high-risk strategy for the country's vulnerable manufacturing sector (see Economy). In May 1996 the European Parliament had for the first time passed a resolution condemning Tunisia's treatment of opposition politicians and strongly criticizing its human rights record. The resolution reiterated that the 1995 association agreement required Tunisia to respect democratic principles and human rights and urged the European Commission to persuade the Tunisian Government to meet these obligations. The resolution was greeted with an indignant response from the Tunisian Government and from several opposition parties. The association agreement was formally implemented in March 1998 after it had been ratified by all EU member states. At the first meeting of the EU–Tunisia Association Council in July, the Austrian Minister of Foreign Affairs, Wolfgang Schüssel, raised EU concerns over civil liberties in Tunisia and stated that the EU would wish to discuss such issues without restrictions. In November 1996 the establishment of Eurofor, the rapid action force for the southern Mediterranean region, by France, Italy, Spain and Portugal, was criticized by the Tunisian authorities. Despite assurances that the force was for defence, peace-keeping and humanitarian missions, Tunisia's Minister of Foreign Affairs declared that it was incompatible with the tradition of dialogue his country had sought to create between the northern and southern shores of the Mediterranean.

In November 1993 Tunisia hosted a meeting of the ministers responsible for foreign affairs of the members of the OAU. Shortly before the meeting, Tunisia invited the South African Minister of Foreign Affairs, Pik Botha, to make an official visit, at the end of which both countries agreed to establish diplomatic relations. In May 1994 Tunisia announced that diplomatic relations with South Africa would soon be established and ambassadors exchanged. In April President Ben Ali assumed the presidency of the OAU for 12 months and in June Tunis hosted the 30th annual summit meeting of the OAU. South Africa attended for the first time. As Chairman of the OAU, Ben Ali appealed for a new partnership between Europe and Africa and urged industrialized nations to assist African countries by improving their terms of trade and through debt rescheduling. Ben Ali made a state visit to South Africa in April 1995 where he had talks with President Nelson Mandela and addressed the South African Parliament. With Tunisia holding the chairmanship of the OAU, Tunis became the venue for a series of meetings sponsored by that organization in the first half of 1995, including a summit meeting held in April to discuss the prevention, management and solution of conflicts in Africa. In 1998 Tunisia supported the OAU's demand for two permanent seats for Africa on the UN Security Council. Tunisia has repeatedly called

for an enlargement of the Security Council to make it more representative.

In July 1996 President Ben Ali made his first state visit to Japan which has become an important source of financial assistance in recent years. In March 1997 Ben Ali became the first Arab leader to make a state visit to Argentina, during which six co-operation agreements were signed. President Carlos Saúl Menem of Argentina had visited Tunis in 1991 and 1994. A Chinese delegation visited Tunis at the end of 1998 to discuss expanding trade links between the two countries, and to explore the possibility of Chinese firms using Tunisia as a base for the manufacture of goods for export to the EU.

THE ELECTIONS OF 1994

In December 1992 President Ben Ali announced that presidential and parliamentary elections would be held in March 1994. Promising a revised electoral law and an up-to-date voting register, the President predicted that political pluralism in Tunisia would be consolidated. The ruling RCD held its second congress at the end of July 1993 (the first was in 1988, following Ben Ali's takeover and the renaming of the party) and nominated Ben Ali as its candidate for the forthcoming presidential election. The party was reported to have 1.6m. members, including 60,000 elected cadres, linked through 321 federations and 27 co-ordinating committees in Tunisia and one in Paris. Leaders of the legal opposition parties, of which the largest was the MDS, were present at the congress, and Ben Ali used the opportunity to reiterate his commitment to bring the opposition into the new parliament. On 7 November 1993, the sixth anniversary of his takeover, Ben Ali formally announced that he would stand for a second term as President. Once again he was the only candidate and was supported by all the legal opposition parties. The UGTT endorsed the President's candidature at its December congress. Under the terms of the new electoral system, the number of seats to be contested in the National Assembly was increased to 163. Of these, 144 were to be contested according to the existing majority list or 'first past the post' system, which gave all 141 seats in the old chamber to the RCD, but the remaining 19 seats would be distributed at a national level among the parties according to their proportion of the total vote. Ben Ali commended the system as one that would 'achieve pluralism in the National Assembly through the representation of political parties according to their weight and influence in society'. Other reforms to the voting system brought to an end the controversial practice of sponsorship for candidates. The State also agreed to contribute to the election expenses of candidates. Some of the opposition parties felt that the long-awaited electoral reform did not go far enough and that the number of seats allocated on a proportional basis should have been larger. Nevertheless, all six legal parties, the MDS, the Mouvement de la rénovation (MR—which incorporated some of the members of the disbanded PCT), the RSP, the PUP, the UDU and the PSP, which had boycotted all elections since 1989 because they maintained that the results were manipulated by the RCD, accepted the new formula and indicated that they would take part. There were appeals from the opposition for equal access to the state-controlled media during the election campaign and complete freedom to hold public meetings without interference by the authorities. Their acceptance of the extremely modest and largely cosmetic electoral reform measures were regarded by many as a clear indication of the weakness of the legal and secular opposition parties, reduced to an obedient official opposition to the ruling party.

The President continued to reject any dialogue with an-Nahdah, referring to its members as 'enemies of democracy and apostles of sedition and terrorism'. In particular, he condemned those members of an-Nahdah who had obtained political asylum in Europe. In August 1993 it was reported that Rached Ghanouchi, the leader of an-Nahdah (sentenced to life imprisonment *in absentia* in 1992), had been granted political asylum in the United Kingdom despite the Tunisian Government's efforts to obtain his extradition. The British Foreign Office emphasized that the decision to grant Ghanouchi asylum had been taken by the Home Office and was not a matter of foreign policy. In October Salah Karkar, one of the leaders of an-Nahdah who had lived in France since he was sentenced to death *in absentia* by a Tunisian court in 1987, was arrested by French police and served with an expulsion order for supporting a terrorist movement in France and in other European countries. In December, following a request from Tunisia, French police raided the homes of several alleged Tunisian Islamist activists who were suspected of planning attacks on people or property in France.

Despite government claims that an-Nahdah's organization had been destroyed in Tunisia, a high level of security was maintained. In early 1994 Noufal Ziadi, the Secretary-General of the UGET, condemned the permanent presence of police on university campuses and complained about restrictions placed on union activity. The LTDH (dissolved in June 1992) began rebuilding its regional networks in January 1994. In April, in an unusually outspoken declaration, some 200 intellectuals denounced the regime's paranoia about security and alleged a sharp decline in human rights and freedom of speech. In a report published in January Amnesty International had claimed that the Government's prominent role in international human rights organizations served to mask its own serious and systematic violations of human rights. Amnesty reported that, over the previous three years, thousands of suspected political opponents had been subjected to arbitrary arrest, held illegally, incommunicado, in prolonged detention, tortured or ill-treated and imprisoned after unfair trials.

The presidential and legislative elections held on 20 March 1994 brought few surprises. President Ben Ali was re-elected for a second term, winning 99.9% of the vote, according to official sources, which also reported that 94.9% of eligible voters had participated in the election. Abderrahmane el-Hani, a lawyer and leader of a political party not recognized by the Government, and Moncef Marzouki, the former president of the LTDH and a persistent critic of the regime's human rights record, had both been arrested after announcing their intention to stand for the presidency. In the parliamentary elections the RCD swept to victory, winning 97.7% of the vote and taking all 144 seats allocated under the majority list system. The six legal opposition parties secured only 2.3% of the vote, but, under the new electoral formula, the MDS was allocated 10 of the 19 'guaranteed' seats reserved for parties which did not secure a majority in the constituencies, the MR four seats, the UDU three seats, and the PUP two seats. In his address to the new National Assembly in April, Ben Ali proclaimed that Tunisia had achieved political pluralism and declared its commitment to strengthen democracy and human rights.

In contrast to the 1989 election, there were few complaints from opposition parties about the conduct of the 1994 poll. However, the LTDH claimed that secrecy of voting had not always been assured and accused the authorities of interfering with a number of opposition campaign meetings. When Boujamaa Rmili, an official of the MR, condemned the election as 'a scandal', he was quickly arrested and detained for a week. There were few foreign observers because, in the approach to the elections, the regime had moved to control the foreign press and television. Several French and British newspapers were banned, the BBC's correspondent in Tunis was expelled and a French television team deported for their alleged hostile attitude and 'intolerable attacks on Tunisia's dignity'. Local journalists who expressed criticism of the regime suffered harassment, dismissal and even imprisonment.

The opposition parties drawn into the National Assembly by the offer of a handful of seats had little power and did not threaten the dominant position of the ruling party and the President. Supporters of the regime claimed that democracy had to be introduced gradually or Tunisia would suffer the instability and violence that had engulfed neighbouring Algeria. There were appeals for further electoral reform from the leader of the largest opposition party, the MDS, and from the LTDH. Given its overwhelming victory in the elections, there was considerable speculation about why the regime was so unwilling to tolerate any criticism or opposition. Critics pointed, in particular, to the apparently vindictive arrests of el-Hani, Marzouki and Rmili, to the harsh sentence imposed in April 1994 on Hamma Hammani, the leader of the banned Parti des ouvriers communistes tunisiens (POCT), for belonging to an illegal organization, to press censorship and to the continued repression of Islamist sympathizers. Some argued that the Government was afraid to relax its strict controls in case this resulted in a

resurgence of the Islamist threat. Others accused the Government of merely using the threat from militant Islam as an excuse to crush all opposition movements. Some felt that the regime was able to act in an increasingly arrogant manner because it could rely on the support of important foreign investors and the majority of Tunisians who, it was argued, were willing to accept restrictions on political freedoms and human rights in return for stability and economic prosperity. In March 1,793 prisoners were pardoned to mark the anniversary of independence, and a further 762 were released in July.

Criticism of the regime's human rights record continued both at home and abroad. In February 1994 the US State Department referred to continuing widespread human rights abuses in Tunisia, including torture, and deplored the prosecution of critics of the regime and the restrictions imposed on press freedom. In April the LTDH renewed its request for greater freedom of opinion, expression and organization and in May expressed its support for a petition signed by more than 100 Tunisian women, mainly professionals, which deplored 'grave violations' of human rights in Tunisia, 'pressures imposed on the press' and restrictions on freedom of expression. The LTDH appealed for the release of all political prisoners and permission to publish its own annual report on human rights in the country. In July Moncef Marzouki was freed provisionally and there was speculation that his trial might be postponed indefinitely if he withdrew from politics. However, in December he was prevented from travelling to New York to receive an award from the US-based Human Rights Watch. The French Government protested against the ban on the sale of certain French newspapers in Tunisia, and there was also criticism of press restrictions from the Paris-based Reporters sans frontières. The Fédération internationale des ligues des droits de l'homme, which has its headquarters in Paris, strongly denounced the regime's attacks on individual liberty and restrictions on freedom of expression. In reply, the authorities maintained that fundamental liberties were guaranteed in Tunisia, and human rights respected. In November the UN's Commission on Human Rights praised Tunisia for the move to political pluralism and for its achievements in improving women's rights, but expressed disquiet at the harsh treatment of detainees, including the use of torture, the banning of several foreign newspapers and restrictions imposed on the activities of political parties. Also in November, in an address to the UN General Assembly, the US Assistant Secretary of State, Robert Pelletreau (a former US ambassador to Tunisia), appealed for greater political openness and improved human rights in Tunisia so that the political system would correspond more closely to the economic prosperity enjoyed by the Tunisian people.

TUNISIA SINCE THE 1994 ELECTIONS

In August 1994, in interviews with the foreign press, President Ben Ali stated that democracy had to be introduced gradually in Tunisia and that freedom of expression on its own would not bring development or create employment. He renewed his attack on 'Islamic fundamentalists' and argued that religious extremists only found support where there was poverty. His Government sought to achieve political stability by pursuing policies that addressed social and economic problems and that helped the country's poorest regions and sections of society.

Following the transfer of the two leaders of the Algerian FIS from prison to house arrest in September 1994, the leader of an-Nahdah, Rached Ghanouchi, in exile in the United Kingdom, urged the Tunisian Government to follow Algeria's example and open dialogue with the Islamist opposition. In August Ghanouchi himself had been criticized by two senior members of an-Nahdah for favouring a policy of confrontation with the Tunisian authorities which they claimed had led to the imprisonment of large numbers of party members. From exile in Paris, El Azhar Abaab issued a statement urging an-Nahdah to disband and the Government to release imprisoned party activists and allow those living in exile to return to Tunisia. Some days later, another member of the an-Nahdah leadership, Fouad Mansour Kassem, resigned from the party which he claimed was on the verge of collapse. There were reports that another group of activists had established a radical Islamist party, committed to armed struggle against the Tunisian authorities. In early 1995 a Paris court ordered the deportation of Salah Karkar, the co-founder of an-Nahdah 'for active support for a terrorist movement'. Karkar had lived in exile in France since 1988 after being condemned to death *in absentia* by a Tunisian court in 1987.

In February 1995 there were reports of an attack on a Tunisian frontier post at Tamerza, near Tozeur in the south-west of the country, by an Islamist group based across the border in Algeria, in which six Tunisian soldiers were killed. Algeria's radical Groupe islamique armé (GIA) claimed responsibility for the attack. The Tunisian authorities initially denied that the incident had taken place; however, they later conceded that the guards had been killed, most probably by Islamist militants. They also denied a report in the London-based *Al-Hayat* newspaper in March that Tunisian forces were assisting the Algerian Islamist guerrillas. Some observers considered the Tamerza attack as a GIA warning to the Tunisian Government against assisting Algeria in its struggle to destroy the Islamist opposition; others regarded it as an attempt to obtain weapons. Tunisia is known to have co-operated with Algeria on security matters for some years and the co-operation may have extended beyond sharing intelligence.

When the National Assembly reconvened in October 1994 some 14 of the 19 opposition members attending for the first time were elected to parliamentary committees. In January 1995 President Ben Ali made a number of ministerial changes, notably replacing Abdallah Kallel at the Ministry of the Interior with Muhammad Jegham. Kallel, who was given the new post of Minister of State and Special Adviser to the President, had been criticized both at home and abroad for his harsh treatment of opponents of the Government, and there was some speculation that his successor might adopt a more subtle approach, especially in dealing with the secular opposition. The transfer of the influential Sadok Rabah from the Ministry of National Economy to head the Ministry of Social Affairs suggested that the President was giving greater priority to social problems in his efforts to maintain political stability. However, Jegham appeared determined to continue an intransigent policy towards opponents of the regime. In February a number of trade union officials were arrested and detained for several days after a strike by school teachers, and in March Moncef Marzouki was prevented from travelling to Belgium where he was to have delivered a series of lectures. In June it was reported that a court order imposed on Marzouki, refusing him permission to leave the country, had been lifted.

At local elections held in May 1995 the RCD won control of all municipal councils and received 99.9% of the votes cast. Independent candidates and members of five legal opposition parties, represented in 47 of the 257 constituencies, won only six of the 4,090 seats; however, this was the first time since 1956 that the opposition had been represented on municipal councils. The RCD rejected allegations made by the MDS of irregularities in the electoral procedure, including inadequate access for observers. The result highlighted the impotence of the secular opposition parties which failed to offer an attractive alternative to the ruling party. Given the lack of interest in the elections, the official figure of a 92.5% turn-out appeared unrealistically high.

In July 1995 the Government introduced a law imposing strict controls on the use of satellite dishes and in September stopped broadcasts to Tunisia by the Italian television channel Rai Uno. Opposition deputies condemned the law on satellite dishes and accused the Government of imposing even tighter controls on the media. In September President Ben Ali reorganized the Ministry of Economic Development and appointed a new minister, Tawfik Baccar, to replace Mustapha Nabli. The ministry would henceforth concentrate on the country's development plans; responsibility for the investment budget was transferred to the Ministry of Finance, where Mounir Jaidene was appointed to the new post of Secretary of State to the Finance Minister, in charge of the budget (responsible for both the administrative and investment budgets).

In September 1995 Muhammad Mouada, the Secretary-General of the MDS, sent a letter to President Ben Ali expressing disquiet at what he referred to as a return to 'a regime of a hegemonic and dominating single party', and complaining that the repressive measures introduced to control society were more extensive and systematic than under the Bourguiba regime.

Mouada argued that the current climate encouraged public indifference to politics and provided favourable ground for violence and extremism. He proposed a political plan which, he argued, would lead gradually to political pluralism and democracy. Under Mouada's leadership the MDS had agreed to participate in the 1994 legislative elections, and had supported both the regime's intransigent approach to the Islamist opposition and its economic liberalization programme. Mouada's letter was regarded as an expression of the party's frustration at not receiving any reward for supporting the regime. In early October, the day after the MDS made the letter public, Mouada was arrested and charged with maintaining secret contacts with foreign agents, endangering the country's security and accepting money from a foreign country. The security forces claimed to have found documents at his home which indicated that he had received substantial sums of money from Libya. A Libyan informer alleged that the payments were for secret political and military information about Tunisia. In November Khemais Chamari, the deputy leader of the MDS, was stripped of his parliamentary immunity, in order to allow judicial charges (relating to Mouada's trial) to be brought against him. At his trial, Mouada, who was known for his pan-Arab beliefs and sympathy for Libya, insisted that his contacts with Libya had been strictly within bounds acceptable for politicians. His lawyers argued that the incriminating documents found at his home had been falsified.

In November 1995 President Ben Ali promised electoral reform to enable the opposition parties to win more seats at the next municipal elections, and financial subsidies for the four opposition parties represented in the National Assembly. He also pardoned Hamma Hammani and Muhammad Kilani of the POCT, both serving long prison sentences, and in December held talks with the leaders of the two centrist opposition parties represented in the National Assembly, the UDU and the PUP. While these moves were considered to be an attempt to improve relations with the opposition, most observers were convinced that the treatment of Mouada was more indicative of the authoritarian nature of the regime, and its refusal to tolerate criticism or permit genuine political pluralism. In February 1996 Mouada was sentenced to 11 years in prison. Chamari was detained in May, and in July was sentenced to five years' imprisonment for breaching security proceedings relating to Mouada's trial. Both men denied the charges made against them and their harsh sentences were strongly condemned by international human rights organizations and the European Parliament. Mouada's arrest and detention provoked a bitter struggle for leadership of the MDS between supporters of Ismail Boulahya, a critic of Mouada's policies, and a faction led by Muhammad Ali Khalfallah. Boulahya, recognized as the new MDS Secretary-General by the Tunisian authorities, convened an extraordinary party congress in April 1997 at which it was decided to increase the MDS political bureau from nine to 11 members and to require the national council (rather than the congress) to elect future leaders.

In December 1996 President Ben Ali announced plans to amend the electoral law in an attempt to increase the number of opposition deputies in the National Assembly. Political parties would need to win only 3% of the vote to become eligible for parliamentary seats distributed by proportional representation (compared with 5% in the 1994 election). Opposition parties would also be represented in municipal councils owing to a proposed amendment preventing any one party from holding more than 80% of the seats. Ben Ali promised legislation to provide more state funds for recognized political parties. Observers interpreted these moves as an attempt by the Tunisian leadership to improve its image abroad without undermining the ruling party's dominant position in the political system. Ben Ali's announced reforms were followed by the conditional release of Mouada and Chamari at the end of December, together with Muhammad Hedi Sassi, imprisoned for being a member of the POCT. There were rumours that the French Government had made discreet approaches to the Tunisian authorities to grant the two MDS leaders a presidential pardon. Despite their release, Mouada and Chamari remained under police surveillance. Their prison sentences had only been suspended and their civil rights were not restored. In by-elections held at the end of 1996 the seat at Ben Arous (formerly held by Chamari) was won by a candidate presented by the PUP and the UDU, which had formed an alliance earlier in the year, while the seat at Medenine was won by the RCD. Voter turn-out at Ben Arous, which was not contested by the RCD, was less than 5%, demonstrating once again that the opposition parties lacked popular support among an increasingly cynical electorate.

In a reshuffle of the Council of Ministers in June 1996 President Ben Ali appointed Abd al-Aziz Ben Dhia (hitherto Minister of National Defence) as Secretary-General of the RCD, with a mandate to revitalize its structure and make it more attractive to young Tunisians. Neffati (the erstwhile RCD Secretary-General), who became Minister of Social Affairs, was also removed from the RCD's political bureau. Abdallah Kallel, who was known for his intransigence on security issues, was allocated the defence portfolio. The President also carried out a major reshuffle of senior civil servants and directors-general of state companies. In January 1997 Ben Ali again reorganized the Council of Ministers, notably appointing Habib Ben Yahia as Minister of National Defence, Muhammad Ben Rejeb as Minister of the Interior, and Abd ar-Rahim Zouari as Minister of Foreign Affairs. Most of the ministers were technocrats with little political power. Although some observers argued that the cabinet changes were effected in order to give the Government dynamism prior to the implementation of the EU association agreement, others insisted that Ben Ali reshuffled his ministers regularly so as to prevent them from establishing a personal power base in any one ministry. Changes were also made to the composition of the RCD's political bureau and the President sought to invigorate the ruling party by attracting more young people and women. In February a decree was issued giving the Ministry of the Interior greater powers of surveillance over political gatherings, and later in the year it was announced that the law was to be strengthened to restrict the activities of Tunisian critics who spread false information to 'foreign parties', a move clearly directed at Tunisian activists with links to international human rights organizations (see below). In April, when several trade unionists appealed for greater democracy and criticized the UGTT leadership for collaborating with the Government, a number were promptly arrested. In May the Council of Ministers approved draft legislation on constitutional amendments which included proposals to widen the scope of referendums, lowering the minimum eligible age for candidates for the National Assembly (from 25 to 23 years) and obliging political parties to denounce all forms of violence, extremism, racism and segregation. In August, just before the French Minister of Foreign Affairs visited Tunis, the authorities ended the house arrest of Mouada, and lifted police surveillance of him. However, in December, after returning from a visit to France and the United Kingdom, during which he met exiled members of the Tunisian opposition, including some from an-Nahdah, Mouada was arrested again and questioned by the police. He was subsequently charged with attempting to destabilize the regime in alliance with a 'terrorist network'. Meanwhile, the split in the MDS between the faction led by Ismail Boulahya and that led by Muhammad Ali Khalfallah, which was opposed to collaboration with the Ben Ali regime, deepened and virtually paralysed the party. The continuing detention of former Head of State Habib Bourguiba, who remained under effective house arrest and was rarely permitted visitors, led to some public protest in late 1997. A further reshuffle of the Council of Ministers took place in October, with Ali Chaouch (hitherto Minister of Equipment and Housing) taking over as Minister of the Interior and Said Ben Mustapha appointed as Minister of Foreign Affairs. Fouad Mebazaa replaced Habib Boulares as President of the National Assembly. Both Chaouch and Mebazaa took the place of their predecessors on the political bureau of the ruling RCD. Towards the end of 1997 a number of political reforms that had first been announced by Ben Ali in 1996 were approved by the National Assembly and incorporated into the Constitution. The reforms which, according to the Government would 'strengthen democracy', included a guarantee that opposition parties should win at least 20% of the seats in the National Assembly; no party was to be allowed to hold more than 80% of seats on municipal councils; the minimum age of parliamentary candidates was to be reduced from 25 to 23 years; citizens with Tunisian mothers (in addition to those with Tunisian fathers)

were to be allowed to stand for parliament; all political parties would have to respect republican values, human rights and the rights of women and not be based on religion, language, race or region, or have links with foreign countries; and the President was to be allowed to hold a referendum on issues of national importance. In a speech in November, on the 10th anniversary of his takeover, Ben Ali announced further political reforms including a formula to increase the number of candidates at the presidential election scheduled to be held in October 1999; an extension to the powers of the Constitutional Council; and reform of the law on the issue of passports to improve freedom of movement. In the same speech, the President announced that the post of Secretary of State for Information (whose role had been to disseminate government propaganda and censor those who criticized the regime) had been abolished and told journalists that they should abandon self-censorship and help stimulate public debate on political issues. He also urged members of the National Assembly to engage in more vigorous debate in the Assembly on policy issues. Given the strict controls over the press and the regime's intolerance of criticism from opposition politicians, genuine debate either in the press or in the Assembly seemed unlikely. Some commentators dismissed the proposals as a façade created by the authoritarian regime merely to impress Tunisia's European allies, notably France.

In early 1998 reports of high-level government corruption became more widespread and included claims that members of the country's political élite had profited unfairly from the recent privatization of public companies. As some of the reports came from within the Government, there was speculation that they were being spread by people who resented the wealth and privileges acquired by families close to President Ben Ali.

At its congress in July 1998 the RCD endorsed Ben Ali's candidature for a third term of office in the presidential elections due to take place in late October 1999. In his speech to delegates President Ben Ali emphasized his commitment to gradual change and to balancing economic liberalization with social justice and integrating Tunisia into the world economy without destroying its identity. The party congress approved the Government's decision to increase the proportion of seats in parliament allocated to the opposition parties to 20% at the next legislative elections; urged the RCD to develop stronger relations with non-governmental organizations and associations throughout the country; and agreed that it was necessary to press ahead with industrial modernization, reform of the country's financial system and efforts to increase both domestic and foreign investment. The Congress also recommended reform of the welfare system, which would require more affluent families to pay for their own healthcare and for higher education. Support was expressed for the Government's plan to reduce the cost of food subsidies and to ensure that subsidies benefited those in greatest need. The RCD's central committee was enlarged from 200 to 236 members, and the Minister of Foreign Affairs, Said Ben Mustapha, was appointed to the party's political bureau.

In December 1998 university students went on strike in protest at the introduction of new aptitude tests for teacher training. Three university teachers were arrested for being members of the banned POCT. One of them was also accused of being an organizer of the strikes. Demonstrations by high school students occurred in several towns in February 1999, provoked by concerns over the baccalaureate examination, which determines access to higher education. Police arrested many of the demonstrators, several students were injured and there were unconfirmed reports that a number had been killed. The replacement of Ridha Ferchiou as Minister of Education by Abd ar-Rahim Zouari in mid-February was believed to have been prompted by the university and high school disturbances. An underlying cause of the unrest was reported to be the relatively limited number of places currently available in higher education. The Government has announced ambitious plans to increase the number of students in higher education to 205,000 by 2001, and to 300,000 by 2010. However, graduate unemployment is already high and unrest among young Tunisians is likely to remain a serious political problem for the Ben Ali regime.

Early in 1999 parliament approved an amendment to the Constitution, whereby the number of candidates eligible to stand for president was increased. Under the terms of the amendment, leaders of opposition parties may now stand for the presidency provided that they have led their party for five consecutive years, and that their party has at least one seat in the Chamber of Deputies. Previously candidates for the presidency had to obtain the support of 30 members of parliament or mayors, which effectively disqualified all those who were not nominees of the ruling RCD. Muhammad Belhadj Amor, the leader of the PUP, later announced his intention to stand for the presidency and Abderrahmane Tlili, the Secretary-General of the UDU, was also expected to stand. The two men are regarded as close allies of Ben Ali, whose victory in the forthcoming election was not in doubt. Muhammad Harmel, the leader of the MR, was too old to stand (candidates must not be over 70 years of age), and Ismail Boulahya had led the MDS for less than five years. The amendment, however, was valid only for the 1999 presidential elections, suggesting that further changes to the Constitution may be introduced at a later date in order to allow President Ben Ali to stand for a fourth consecutive term of office in 2004. In the approach to the presidential and parlimantary elections the opposition parties remained weak and divided, with little popular support. The largest of them, the MDS, remained split into rival factions and was reported to have been unable to agree on an election manifesto. There were also reports of divisions within the PSL. Efforts by the Secretary-General of the RSP, Nejib Chebbi, to persuade all six legal opposition parties to form an electoral alliance with the trade unions and independent groups failed to win support.

During the first part of 1999 the trial of some 139 Tunisians on charges of drugs-smuggling concluded with many of those convicted being sentenced to between one and 35 years' imprisonment. The defendants included members of the interior ministry's anti-drugs squad, police officers, customs officials, TunisAir stewards and members of prominent families. Lawyers for the defence claimed that some confessions had been obtained under torture and insisted that the leaders of the drugs-trafficking business had escaped prosecution because they had high-level connections. It was Tunisia's biggest drugs trial and was held *in camera*, with no reports appearing in the local media, increasing popular suspicions that the traffickers had connections with senior figures within the regime.

In late April 1999 the President made a number of changes to the Council of Ministers. Muhammad Jeri, who has been one of Ben Ali's close associates for many years, was replaced as Minister of Finance by Tawfik Baccar, the Minister of Economic Development. There were reports that Jeri's efforts to increase tax revenues in order to compensate for a reduction in import duties caused by the implementation of Tunisia's association agreement with the EU had alienated the country's business community. Abd al-Latif Saddam replaced Baccar at the economic development ministry. The Minister of the Environment and Land Planning, Muhammad Medhi Melika, one of Ben Ali's nephews, was replaced by Feiza Kefi, and Mustapha Bouaziz, Minister of State Domains was replaced by Ridha Grira, who had been Government Secretary-General. Despite continued speculation that the President would appoint a new Prime Minister committed to a faster pace of economic reform, the conservative Hamed Karoui retained his post. In June, after three people were killed in violent incidents at a football match in Beja, the President immediately dismissed the regional governor.

At the 19th congress of the UGTT Ismail Sahbani was re-elected Secretary-General for a third five-year term. Under his leaderhsip relations with the government have been relatively harmonious after the confrontations of the 1980s, but Sahbani has faced criticism from within the union for not opposing privatization and reform of the labour law.

The Tunisian authorities continued to maintain that the country was immune to Islamist extremism because of progressive social policies and the strict application of the law. However, they were concerned that networks of Islamist militants still existed abroad, especially in certain European countries, and that these groups were determined to undermine Tunisia's stability. At a meeting in July 1995 with ministers of foreign affairs from several Mediterranean countries, President Ben Ali stated that Islamist militants granted political asylum in Western countries had abused their status, and he appealed for co-operation in containing 'fanaticism, extremism and ter-

rorism'. In January 1996 the Arab League, meeting in Tunis, adopted a proposal sponsored by Tunisia for a 'code of conduct' to combat 'terrorism', referring primarily to Islamist extremism. The Tunisian Minister of Foreign Affairs, Habib Ben Yahia, appealed for an international code of conduct against terrorism at the 'Summit of Peace-makers', hastily convened in Egypt in March after the spate of suicide bomb attacks in Israel, and again criticized countries that gave asylum to Islamist extremists. From his exile in the United Kingdom, Rached Ghanouchi warned that unless all parties were allowed to participate in the political system, Tunisia could experience violent conflict in the future, like its neighbour Algeria. In November 1995 Ghanouchi was one of a group of Tunisian opposition leaders in exile who published a statement in the London-based newspaper *Al-Hayat* petitioning for a return to democracy. In early 1996 Ghanouchi stated that he was working with other opposition leaders, including former Prime Minister Muhammad Mzali, to form an alliance committed to a democratic Tunisia. He declared that all Tunisians, whether or not they held Islamist sympathies, had become the victims of the authoritarian regime, and claimed that an-Nahdah differed from Tunisia's other Islamist groups in that it had rejected armed struggle and favoured peaceful political change. In December Ben Ali once again refused to legalize an-Nahdah and proposed constitutional amendments in order to proscribe political parties based on race, region or religion (see above).

During 1995–96 concern continued to be expressed over human rights violations in Tunisia. The US State Department's report on human rights in Tunisia during 1995 noted that serious problems still remained and that the Government continued to 'stifle freedoms of speech, press and association'. The LTDH's annual report included accounts of violations of the freedom of the press, the illegal detention of suspects, the banning of political parties, and poor conditions inside prisons—despite claims by an internal commission of inquiry into the country's prisons (established by the President) that conditions had greatly improved. In September 1995 the LTDH issued a statement which denounced the deaths in suspicious circumstances of two prisoners. Amnesty International's annual report on Tunisia, published in November, described widespread and systematic human rights abuses and argued that internal commissions of inquiry by the authorities were ineffectual. In January 1996 Najib Hosni, a lawyer who had defended an-Nahdah activists, was sentenced to eight years' imprisonment. It was alleged that he had falsified documents, but Amnesty International insisted that he had been prosecuted for his human rights activities and claimed that he had been tortured during the 18 months that he was detained without trial. In May two other leading human rights activists, Moncef Marzouki, a former President of the LTDH, and Frej Fennich, the Director of the Arab Institute of Human Rights, were arrested. Later that month a court found that, as a private association, the LTDH could continue to select its members. The Ministry of the Interior had insisted that the organization should be open to anyone, leading to fears that it would be infiltrated by political opponents. Meanwhile, the European Parliament passed a resolution in May which strongly criticized Tunisia's human rights record and made special reference to Marzouki's treatment. Several of Tunisia's European allies also openly criticized the country's record on human rights (see above). In December Hosni was granted a presidential pardon at the same time as Mouada and Chamari were released from prison. Their release may have been a response to criticism from abroad, but it did not signal greater tolerance of political opponents. In early 1997 the head of Amnesty International's local branch was arrested and detained for several days, prompting renewed complaints of human rights abuses in Tunisia. In May an-Nahdah announced the death in prison of one of its founder members, Sheikh Mabrouk Zren, and cited other cases of political activists who had died or contracted illnesses while in detention. Ironically, Tunisia was unanimously elected to the UN Human Rights Commission in May, and soon afterwards the Government tried to improve relations with the LTDH, describing the organization as a 'national asset' but urging it to prove its 'patriotism and sense of responsibility'. In a report on Tunisia published in June, Amnesty International stated that while the Government expressed its commitment to human rights, it was guilty of 'a widening circle of repression', affecting families (particularly wives) and associates of political opponents, and that large-scale human rights abuses continued to take place. Amnesty later joined several other international organizations in appealing to the regime to stop its 'campaign of intimidation' against human rights activists. After several Tunisian human rights activists were refused permission to attend a conference at the European Parliament, a group of parliamentary members announced that they planned to introduce another resolution in the Parliament condemning Tunisia for human rights abuses. In July, during a speech to mark the 40th anniversary of the declaration of the Republic, President Ben Ali vigorously denounced critics of his regime, insisting that in every possible way Tunisia was a state of law and a country of human rights. He accused prominent Tunisian human rights activists of spreading lies about their country and stated that they were guilty of 'a form of high treason'. In September Khemais Ksila, the Vice-President of the LTDH, was arrested after publishing a statement attacking the Government and sending it to a French news agency. He was sentenced to three years' imprisonment in February 1998 for divulging false information likely to upset public order. The sentence was later upheld by the appeal court. At the end of March Radhia Nasraoui, a lawyer well-known for defending political and human rights activists, and married to Hamma Hammani of the POCT, was charged with several offences including links with a terrorist organization and incitement to rebellion. Reporting on human rights practices in 1997, the US State Department recorded an improvement in the Tunisian Government's performance, but claimed that it continued to commit serious offences, including the physical abuse of prisoners, harassment of government critics, and significant restrictions on the freedom of speech and press, while demonstrating a pattern of intolerance to public criticism. In a report published in early 1998 the Arab Commission of Human Rights stated that there had been an increase in human rights abuses in Tunisia and claimed to have evidence relating to the torture of political opponents. Human rights activists in France demanded the release of Khemais Ksila, and a Paris-based group set up a defence committee to campaign for his release in the UN, the EU, the Arab League and the OAU. A report by Article 19, a London-based anti-censorship organization, condemned press restrictions imposed by the Ben Ali regime and urged the EU to put pressure on the Tunisian authorities to respect press freedoms. At the first meeting of the EU-Tunisia Association Council in July, Wolfgang Schüssel, the Austrian Minister of Foreign Affairs, indicated that as part of the political dimension of Tunisia's association agreement, the EU would wish to discuss its concerns over civil liberties in Tunisia. In September the Brussels-based Human Rights Watch urged the EU to play a more active role in reducing human rights abuses in Tunisia and sent an open letter to the European Parliament stating that there had been little change in the human rights situation in Tunisia, with hundreds of political prisoners held in custody and many cases of torture during interrogation. At the same time, Tunisia was elected to the Human Rights Committee of the UN for a four-year period. In November three international human rights organizations published reports expressing strong criticism of Tunisia. Amnesty International stated that despite the regime's attempts to improve its human rights image, human rights abuses had in fact escalated. The International Federation of Human Rights Leagues accused the Tunisian authorities of practising torture systematically, and listed 500 specific cases including at least 30 in which prisoners had died. The UN Committee against Torture denounced the security forces and police for their cruel practices, including torture, which had sometimes resulted in death. The Tunisian authorities vigorously deneid the allegations made by the three organizations, claiming that their reports did not represent reality and that Tunisia was a country of 'openness, democracy and tolerance'.

The 50th anniversary of the Universal Declaration of Human Rights was celebrated with meetings, seminars and exhibitions portraying what the authorities claimed to be Tunisia's own achievements in the field of human rights, and emphasizing that the most fundamental rights were to food, health, education and work. At the end of 1998 the Chamber of Deputies resolved that the power to withdraw a citizen's passport should be

transferred from the Ministry of the Interior to the courts, while the Government announced that community service would replace short prison sentences, where appropriate, in accordance with the international Charter for Civil and Political Rights. Reporting on human rights in Tunisia during 1998, the US State Department pointed to the continuance of serious abuses, referring again to the torture and physical abuse of prisoners by the security forces, harassment of government critics, and significant restrictions on freedom of assembly and association, adding that the judiciary remained under Government control and that due process of law was not always observed. Meanwhile, the President announced changes to the penal code in order to improve procedures relating to the arrest and detention of citizens.

Economy

Revised for this edition by RICHARD I. LAWLESS

Tunisia covers an area of 163,610 sq km (63,170 sq miles). At the census of May 1975 the population was 5,572,193, of whom more than one-half were less than 25 years old. At the census of 30 March 1984 the population was 6,966,173. In 1998 the UN Population Fund (UNFPA) reported that the annual rate of increase in the population had averaged 1.8% since 1995, the lowest in the Arab world. By 2000 the Government expects the annual growth rate to fall to 1.5%. The UNFPA also reported that about 50% of Tunisian women use modern methods of contraception, the highest proportion in Africa and the Middle East. The results of a census carried out in April 1994 indicated that the population totalled 8,785,364. By 1997 the population was estimated to have reached 9,200,000, and it was projected to rise to 10,800,000 by 2007. Most of the towns, and also the greater part of the rural population, are concentrated in the coastal areas. In the centre and the south, the land is infertile semi-desert, the population scattered, the standard of living very low, and the rate of growth of the population higher than in the north.

The capital and main commercial centre is Tunis (population 674,100, according to the 1994 census), which, together with the adjacent La Goulette, is also the chief port. There are about 50,000 Europeans in Tunis, mainly French and Italians, their numbers having decreased rapidly since independence. Other towns of importance include Sfax (population 230,900 in 1994), which is the principal town in the south, the second port and the centre for exports of phosphates and olive oil; Ariana (152,700); Ettadhamen (149,200); Sousse (125,000); and Kairouan (102,600). Some 600,000 Tunisians are estimated to reside abroad, relieving the domestic employment situation and providing a source of foreign exchange earnings through workers' remittances from overseas. The Government is trying to encourage Tunisians to work in Saudi Arabia and in other countries bordering the Persian (Arabian) Gulf, in order to offset the reduction in demand for Tunisian workers in traditional markets, especially France. Even greater efforts were needed to accommodate the 30,000 Tunisian workers who were expelled from Libya in 1985.

Tunisia's development record in the 1970s was fairly impressive, with gross domestic product (GDP), measured in current prices, increasing from US $4,339m. ($773 per head) in 1975 to $8,667m. ($1,356 per head) in 1980. In the early 1980s, however, the economy entered a period of turbulence. Output of petroleum reached a peak level in 1980, and the countryside was devastated by a series of droughts. Measured at constant 1980 prices, GDP (in purchasers' values) declined from TD 3,736m. in 1981 to TD 3,718m. in 1982, but growth averaged 5.3% per year in 1983–85. Meanwhile, the deficit on the current account of the balance of payments remained at an unacceptably high level, resulting in a worrying increase in external debt (totalling $4,880m. at the end of 1985). These problems culminated in 1986, when the sudden fall in the international price of petroleum resulted in a balance-of-payments crisis, which forced the Government to seek assistance from the IMF. As agricultural output declined, GDP fell by 1.4%, in real terms, in 1986. With the IMF's assistance, the Government adopted a radical economic programme for the 1987–91 period, designed to provide a secure basis for the economy until the next decade, by which time it was anticipated that Tunisia would have become a net energy importer. The strategy depended on an increase in exports of agricultural and manufactured goods, a rise in revenues from tourism, and severe reductions in the Government's investment budget. Meanwhile, trade was to be liberalized, and the Tunisian dinar was to be devalued, in an attempt to maintain export competitiveness. The economy recovered in 1987, as a result of an increase in the international price of petroleum, an abundant harvest and the success of government measures to control public spending and to encourage higher output, exports and foreign investment. Accordingly, GDP expanded by 5.5%, in real terms, and the current account deficit fell to the equivalent of 0.6% of GDP. However, in 1988 the combined effects of severe drought and locust damage on the harvest, and a fall in the oil price, reduced GDP growth to 1.5%, although the current account of the balance of payments showed an annual surplus (of $216m.) for the first time since 1974. In 1989 GDP increased by 3.5%, with the help of a substantial expansion in the tourism sector and higher remittances from workers abroad, although the current account was in deficit by $160m. (1.6% of GDP). In 1990 an ample harvest of cereals and a rise in the petroleum price contributed to real GDP growth of 6%, but the current account deficit increased to $523m. (4.1% of GDP).

In 1988 the IMF and the World Bank provided financial support for a medium-term adjustment programme for 1988–91. The policies of the 1987–91 programme were continued under the new programme, with emphasis being placed on the acceleration of the process of trade liberalization, the strengthening of the financial sector, the restructuring of state enterprises and the introduction of tax reforms. By 1989 substantial progress had been made and the programme was viewed as highly successful. In March 1991, however, it was announced that austerity measures would have to be adopted in order to counter the effects of the Gulf War on exports, tourism revenues and external funding sources. In protest at Tunisia's ambivalence at the time of the crisis, Kuwait and Saudi Arabia withdrew planned investment and aid totalling US $412m. and $200m. respectively, while the USA reduced aid from $59m. in 1990 to a projected $19m. in 1991. Against this background the Government obtained a one-year extension to its agreement with the IMF and also secured balance-of-payments support from the World Bank and other sources. By the end of 1991 mid-year forecasts of zero GDP growth that year had been revised to projected growth of 3.5%, reflecting a record harvest, a recovery in tourism and an upturn in the industrial sector. As a result, both the trade deficit ($874m.) and the current account deficit ($191m., or 1.5% of GDP) showed improvements in 1991, and GDP growth of 6.5% was forecast for 1992. In July 1992 a new Five-Year Plan (1992–96) was inaugurated, amid optimism that Tunisia was set to become North Africa's leading centre of venture capital and technology. At the same time, it was announced that the Government would not be seeking an IMF facility to replace the extended Fund facility (EFF) which had expired in mid-1992. GDP growth of 7.8% was recorded in 1992, followed by growth of only 2% in 1993, when there were falls in agricultural, mining and oil production. The economy grew by 3.3% in 1994, when the effects of an accelerated decline in agricultural output (due mainly to drought conditions) were offset by strong growth in tourism, transport and industry, including export-orientated manufacturing, and by 2.4% in 1995. GDP grew by 6.9% in 1996, a significant rise which in large part was the result of a good agricultural performance

and, according to official estimates, by 5.6% in 1997, although some independent sources put the figure at just over 5%. GDP grew by 5% in 1998, according to Government figures, and was forecast to grow by 6.3% in 1999, although independent sources were less optimistic that this figure could be achieved. In 1994 the World Bank estimated Tunisia's gross national product (GNP) per head as $1,800 on a conventional exchange-rate basis, or $4,960 using an 'international dollar' calculation based on a current Tunisian rating of 19.2 in the Bank's international 'purchasing power parity' index (USA = 100). The Vice-President of the World Bank praised Tunisia's economic performance in 1997, noting a marked recovery in investment and strong export growth. However, he also observed that investment in the non-energy sector was limited and warned of the serious problem posed by unemployment (15% of the economically active population, according to official figures). He argued that with an annual growth in GDP of at least 5%, more jobs could be created. A senior IMF official, visiting in March 1999, stated that Tunisia could achieve its target of 6% annual growth in GDP by continuing its programme of structural reforms, accelerating privatization, and promoting both domestic and foreign investment. He pointed to rising imports of capital goods and low inflation as positive signs, even though the current account deficit remained high. He urged Tunisia to accept that reform of the financial sector was essential in order to attract foreign investment, and suggested that sectors such as transport should be opened up to foreign investment.

In July 1995 Tunisia signed a new trade agreement with the European Union (EU) under which Tunisian manufacturers would be exposed to increasingly strong competitive pressures from 1996 onwards. It was expected that there would be significant inflows of EU official assistance and European private investment during the 12-year trade liberalization period. According to government officials, Tunisia's closer association with Europe would help to ensure that a critical phase of the industrialization process was realistically planned and adequately funded. The agreement formally came into force in March 1998, although Tunisia began dismantling trade barriers to EU industrial goods in January 1996. In April 1998 it was announced that the EU had agreed to grant Tunisia US $10.7m. to support the Government's privatization programme and assist the Tunisian economy's adjustment to growing competition from the EU under the free-trade agreement. The grant was to be disbursed over five years and was made on condition that the Government accelerated the divestment of state-owned companies. Despite pressure from the World Bank, the IMF and Tunisia's own central bank, over the preceding decade the Government had moved relatively slowly to privatize public companies, fearing that this would lead to reductions in the workforce and aggravate unemployment. According to the Minister of Economic Development an annual average of six firms were privatized in 1987–94, and 15 per year in 1994–97. The Government raised around TD 350m. ($308m.) from the programme during 1987–97. In 1998 the Ministry of Economic Development publicly stated the objectives of the privatization programme: public companies would not simply be sold to the highest bidder and financial offers would be balanced by other considerations, such as investment plans, the number of jobs to be retained, transfer of technology and export plans. The programme would also be carried out with greater 'transparency'. By this time there was some evidence that political resistance to privatization had become weaker and that the Government accepted that an acceleration in the sale of public companies was essential to strengthen the economy. During 1998 the sale of two state-owned cement companies for TD 409m. ($366m.)—slightly more than total receipts from privatization during the previous 10 years—appeared to mark a new phase in the programme. As a result of these sales, Tunisia did not have to seek external commercial funding in 1998. The Government pledged to maintain a faster rate of privatization during 1999, and at the end of 1998 officials stated that 30-40 state-owned companies would be sold in 1999, raising revenues estimated at TD 500m., and that the same amount would be raised during 2000.

AGRICULTURE

About two-thirds of the total area of Tunisia is suitable for farming. For agricultural purposes the country is composed of five different areas: the mountainous north, with its large fertile valleys; the north-east, including the Cap Bon, where the soil is especially suitable for the cultivation of oranges and other citrus fruit; the Sahel, where olives grow; the centre, with its high tablelands and pastures; and the south, with oases and gardens, where dates are prolific. Harvests vary considerably in size, determined by the uncertain rainfall, since cultivation is largely by dry farming and irrigation is, as yet, limited. The main cereal crops are wheat, barley, maize, oats and sorghum. Fruit is also important, with grapes, olives, dates, oranges and figs grown for export as well as for the local market.

In recent years Tunisia has been importing increasing amounts of cereals, as local production has failed to keep pace with population growth. During the 1960s the agricultural sector grew at only about 1.5% per year, but exceptional weather conditions and improved irrigation in 1971 and 1972 resulted in excellent agricultural yields, and during the fourth Plan period (1973–76) good weather, except in 1974, led to an average annual growth rate of 3%. The 1977–81 Plan envisaged annual growth of 3.5% and the 1982–86 Plan projected average annual growth at 5%, as a higher proportion of investment was allocated to the agricultural sector. However, these targets were not reached, owing to poor crop conditions in 1977, 1982 and 1986. The collapse in agricultural output was particularly severe in 1986. The 1987–91 Plan projected annual growth of 6% per year, and directed even more investment to agriculture. In 1988, however, agricultural output declined drastically as a result of drought and a plague of locusts. Agriculture's contribution to GDP declined from 22% in 1965 to 12% in 1990. However, a record cereal harvest reversed the trend in 1991, when agriculture's share of GDP increased to 19.6%. Owing to population increase, the average index of food production per caput fell to 87 in the period 1988–90 (1979–81 = 100). By 1997 the proportion of the labour force engaged in agriculture had fallen to 25.7%, from 49% in 1965. In 1993 agriculture's share of GDP was 16.9%, and the total value of exports from this sector (TD 392.6m.) was some TD 7.4m. more than spending on agricultural and food imports. In 1994 the surplus in agricultural trade amounted to TD 48.4m. (exports TD 526.7m., imports TD 478.3m.). By 1995 agriculture's contribution to GDP had declined to 13.4%, increasing to 15.9% in 1996. During 1980–90 agricultural GDP rose by an annual average of 2.8%; however, agricultural GDP declined by an annual average of 0.1% in 1990–96.

The means by which self-sufficiency should be achieved has been the subject of political debate since the early 1970s. During 1960–69 the basis of the Government's agrarian reform programme lay in the formation of collective 'agricultural units'. These units, consisting of at least 500 ha, were to be operated as collectives in order to consolidate small peasant holdings and, later, to exploit land expropriated from French farmers or acquired from owners of large or medium-sized farms. The system was controlled through credits provided by the Agricultural Bank. By 1968 some 220 state co-operatives were in existence and several hundred more were being created. However, opposition to the scheme was widespread, and there were revelations of unsatisfactory performance, heavy debts and misappropriation of state funds. These discoveries were instrumental in the downfall and disgrace of Ben Salah, whose position was already weakened by the displeasure of foreign aid donors with his agricultural policies.

Following Ben Salah's downfall, farmers were given a chance to opt out of the state co-operatives, which were later dismantled. Meanwhile, the National Assembly approved legislation allowing for the eventual division of large private estates among individual farmers or private co-operatives. The Government also introduced a number of measures to stimulate output, including the provision of funds for mechanization, a reduction in taxes, and the introduction of subsidies for purchases of fertilizers and seed. By 1975 about 50% of the total cultivated area of 9m. ha was privately owned, a further 2.1m. ha were worked by private co-operatives and the remainder was farmed by state or religious institutions. In April 1974 a 'supervised credits scheme' was announced, whereby

small and medium-sized farms could apply for short-term supervised credits to improve farming methods. It was hoped that this would encourage crop diversification.

The Government's agricultural policy subsequently came to reflect several concerns: one was to achieve self-sufficiency, thus saving on expensive food imports which the country could ill afford, and a second was to reduce regional imbalance by developing rural areas. By making funds available for agriculture, the authorities hoped to stem rural depopulation. The 1982–86 Plan allocated about 16% of total investment to agriculture, compared with only 13% in the previous Plan. In the 1987–91 Plan, investment in agriculture increased further, to about 20% of total proposed investment, a particular aim being to increase the role of the private sector in the financing of agriculture.

In June 1989 the World Bank agreed to provide Tunisia with credit of US $84m. to finance the second phase of a seven-year agricultural reform programme launched in 1986. During the second phase of the programme it was intended to increase the share of the private sector in agricultural production, fortify agricultural support services and reform pricing and marketing structures. The need to boost domestic production was regarded as increasingly urgent since, by the mid-1980s, the value of Tunisia's agricultural exports was less than one-half that of its agricultural imports. In June 1990 the Government introduced the first stage of a further reform programme, financed by the World Bank, to improve agricultural extension and research. Under the 1992–96 Plan emphasis was to be given to encouraging private investment in agro-industrial ventures, with a view to maximizing export and food-processing potential.

The fragmentation of land-holdings and the need to consolidate them into larger, more efficient units, remains a major obstacle to increasing the profitability of the agricultural sector. But after the experiences of the 1960s, attempts to consolidate small land-holdings have become a highly sensitive subject for the Government. Nevertheless, speaking in November 1997, President Ben Ali announced that there would be national debate on land reform to find ways of amalgamating small agricultural land-holdings into more efficient units. The scale of the problem was highlighted by the Ministry of Agriculture in early 1998 when it reported that while the area devoted to agriculture–some 5.3m. ha—was beginning to decline as farmland was taken over for urban and industrial uses, the number of land-holders had increased from 326,000 in 1962 to 471,000 in 1995, with the average size of land-holdings declining from 16 ha to 11 ha. According to government estimates, farms on non-irrigated land must be at least 50 ha to be efficient, but the vast majority of land-holdings are well below this threshold and just over one-half are under 5 ha. Consequently many farms are too small to be profitable, and this discourages investment and the use of modern farming methods. One-third of land-owners are part-time farmers and there are many absentee landlords. In January 1998 the Minister of Agriculture announced that state-owned farms would be leased to foreign investors with expertise in livestock and vineyard management. Investment in agriculture was reported to have increased substantially during the first half of 1998. Investment by private companies leasing state land totalled TD 33m., compared with TD 18m. during the corresponding period of 1997.

A major programme of water development, including the construction of a number of dams for irrigation and flood prevention, is being implemented under the supervision of the World Bank. The Sidi Salem dam, with a capacity of 500m. cu m per year, opened in May 1982, and the Sidi Saad dam, near Kairouan, irrigating more than 4,000 ha, formally opened in the following month. Germany is currently financing the construction of the Bou Heurtna dam in Jendouba, which will irrigate 20,000 ha. In 1988 construction was to begin of a pipeline linking the Sidi Salem dam and the partly-built Sejnane dam with the water plant at Mateur. The saline water from Sidi Salem was to be mixed with the water from Sejnane at the plant, and was to be used to supply Tunis and to irrigate the northern cereal- and citrus fruit-growing areas. In the mid-1980s Tunisia's national water storage capacity was 1,500m. cu m and some 80,000 ha of land were irrigated. In mid-1992 two major dam projects, at El-Houareb and Sejnane, were near completion. Plans were also announced to build a dam creating a reservoir with a capacity of 130m. cu m at Zouitine, in the Barbera complex, and one creating a reservoir of 250m. cu m at Sidi El-Barek. Zouitine, Sidi El-Barek and a number of small hill dams constitute the final phase of government plans to utilize all available water resources by the end of the century. Work on the TD 122m. Sidi El-Barek project began in 1994, with a scheduled completion date of 1998. The Ministry of Agriculture has stated that, by 2000, 2,600m. cu m of water will be impounded, mainly in the north-west. Large dams would account for almost 2,000m. cu m, of which about 1,200m. cu m have already been mobilized. After the discovery of a huge underground lake in the Sahara, there were moves to encourage 'desert farming' by developing new land.

Grown in a belt across the northern part of the country, wheat is the most important cereal crop. The Government guarantees the price to the grower and, among other incentives, pays the transport costs of merchants. The Government has encouraged the spread of the Mexican dwarf wheat, and this variety now accounts for more than one-tenth of Tunisia's output. Production of wheat and barley totalled 606,000 metric tons during the disastrous 1985/86 season, but output increased to 1.9m. tons in 1986/87. In 1987/88, however, production fell sharply, to 292,000 tons, as a result of severe drought and the worst plague of locusts to affect the country for 30 years. Total cereal production reached 636,000 tons in 1989, but increased to 1.6m. tons in 1990, despite floods in January 1990, which necessitated the import of large amounts of grain. In 1991 there was a record cereal harvest of 2.6m. tons, falling in 1992 to 2.2m. tons. The 1993 cereal harvest totalled 1.9m. tons, but in 1994 drought conditions reduced the harvest to 650,000 tons. There was another poor harvest in 1995, resulting in a substantial increase in food imports. Spending on imports of cereals was TD 124.1m. in 1990, TD 65m. in 1991, TD 80.1m. in 1992 and TD 95.2m. in 1993. Improved rainfall in the 1995/96 growing season boosted the size of the 1996 cereal harvest to around 2.8m. tons. However, poor rains in 1996/97 reduced the 1997 cereal harvest to just over 1m. tons. As a result of the poor harvest, and increased domestic consumption, some 2m. tons of cereals were imported in 1997 at a cost of TD 347m. The 1998 cereal harvest was estimated at 1.67m. tons. Cereal imports during the first half of 1998 rose to 1.2m. tons, at a cost of TD 233.2m.

Grapes are grown around Tunis and Bizerta. Wine production reached a peak of 1,986,000 hl in 1963. However, annual output had declined to one-third of this amount by the end of the 1970s. Production increased from 513,000 hl in 1982 to 680,000 hl in 1984, but fell to only 210,000 hl in 1988. By the early 1990s average annual output was around 340,000 hl, and there was new investment in vineyards. Some 90,000 hl of wine, worth TD 12.5m., was exported in 1993.

The size of Tunisia's annual harvest of olives fluctuates considerably, owing partly to the two-year flowering cycle of the tree. Tunisia is usually the world's fourth largest producer of olive oil. Production reached a record 180,000 metric tons in 1975/76, but fell to only 80,000 tons in 1978/79. Output of olive oil declined from 145,000 tons in 1980/81 to 80,000 tons in 1981/82. There was another sharp fall in 1982/83, but production reached 150,000 tons in 1983/84, before declining to about 100,000 tons per year in 1984/85, 1985/86 and 1986/87. The value of Tunisia's exports of olive oil has fluctuated dramatically since the late 1960s, reaching a peak of TD 70m. in 1974, but falling steeply in the late 1970s. Exports recovered in the mid-1980s, totalling TD 54m. in 1986, TD 66m. in 1987 and TD 71m. in 1988. Output of olive oil in 1991/92 reached a record 280,000 tons, falling to less than half this tonnage in the following year. Exports of olive oil rose from 96,473 tons (worth TD 158.4m.) in 1992 to 122,630 tons (worth TD 179.1m.) in 1993. Radical reforms of the export marketing system for olive oil included the ending in 1994 of a requirement to negotiate all export contracts through the industry's national marketing board. In the 1993/94 season olive oil production totalled 210,000 tons. It then fell sharply to 75,000 tons in 1994/95 and declined further to between 60,000 and 70,000 tons in 1995/96 because of continuing drought conditions. Olive oil output in 1996/97 reached a record 310,000 tons, and a sharp increase in olive oil exports, to 126,000 tons, worth TD 288m., helped to boost agricultural and food exports during 1997. There had been no exports of olive oil in the first half of 1996 as a result of the poor harvest of 1995/96, and exports for the whole year amounted to

only 29,000 tons. Poor rains in early 1997 reduced olive oil production in 1997/98 to 90,000 tons. Exports in 1998 totalled 124,000 tons, worth TD 226m. Production during the 1998/99 season is estimated at 190,000 tons, with exports during 1999 projected at 120,000 tons, worth TD 226m. Olive oil exports make up about 50% of all food exports and around 5% of total exports. In 1998 the Government abolished export taxes on olive oil and introduced a number of other measures to increase exports and improve the quality of the oil produced. Tunisia's annual export quota to the EU of 46,000 tons was due to be reviewed in 1999. Efforts are being made to find new markets in the USA and Canada, and to increase domestic consumption, which averages around 50,000-60,000 tons annually.

Citrus fruits are grown mainly in the Cap Bon peninsula. Production declined from 220,000 metric tons in 1980/81 to 165,000 tons in 1981/82. The annual crop rose to around 250,000 tons in 1985/86 and 1986/87. In 1992/93 citrus production totalled 281,000 tons, and in 1993 exports totalled 23,640 tons, worth TD 9.6m. Production then declined to 210,000 tons in 1993/94 and 194,000 tons in 1994/95. Although output recovered to 221,000 tons in 1995/96, there was a decline in production to 211,000 tons in the 1996/97 harvest, with exports totalling only 16,100 tons. Output rose to 230,000 tons in 1997/98, but was forecast to decline to 210,000 tons in 1998/99 (including 104,000 tons of oranges, 28,000 tons of clementines, 26,000 tons of mandarins and 17,000 tons of lemons). Citrus exports are forecast to reach 25,000 tons in 1999. There are plans to increase production to 350,000 tons and exports to 50,000 tons by 2001 by creating new citrus groves. Tunisia's production of dates totalled 81,200 tons in 1990, 74,700 tons in 1991 and 74,800 tons in 1992, with average annual exports of 18,200 tons over the same period. Date exports of 18,510 tons in 1993 (in which year production totalled 90,000 tons) were worth TD 47.5m. Date production declined to 86,000 tons in 1994 (worth TD 55.5m.). There was a fall of about 12% in the 1996 date harvest (compared with a 13.5% increase in the previous year), output totalling 74,000 tons. Production in 1997/98 was estimated at 95,000 tons, rising to a record 103,000 tons in 1998/99, with exports forecast at 28,000 tons, worth TD 73m. The increase in production has been achieved as a result of investment in new date plantations and efforts to improve the quality of the crop. Dates are mainly exported to the EU, principally France, but new markets are being developed, especially in South-east Asia. Production of sugar beet was 291,000 tons in 1992 and totalled 300,000 tons in 1996. A sugar refinery at Béja is able to process 1,850 tons per day. A second refinery, at Ben Bechir in Jendouba governorate, was commissioned in 1983, with an annual capacity of 40,000 tons of sugar. Spending on sugar imports totalled US $91.5m. in 1994 and $72.7m. in 1995. Government efforts to increase sugar beet production by persuading farmers to grow the crop in rotation with cereals have not achieved the targets that were hoped for, and less than 3,000 ha of sugar beet was planted in 1998. Production continues to average about 250,000 tons a year. Imports have been increasing and cost TD 92m. in 1997. Other crops include tomatoes, chillies and peppers, melons, watermelons and almonds.

In 1997, according to FAO estimates, Tunisia's livestock included 1.3m. goats, 6.3m. sheep, 700,000 cattle and 36m. poultry (which produced 64,000 metric tons of eggs). During the drought in 1987–88 the Government introduced measures to protect livestock, including the distribution of state-subsidized fodder to farmers, a reduction of the price of animal feedstuffs, a programme to import lucerne and bran, and a vaccination campaign.

The fishing industry employs about 60,000 people. Sfax is the main centre of the industry, which has received substantial state investment in recent years, including finance for the modernization of the fleet, the upgrading of some 30 fishing ports, and for research and training. The Government has also sought to reduce overfishing in the gulf of Gabès by developing fishing grounds in the north. The total catch rose steadily from 31,686 metric tons in 1975 to 102,570 tons in 1988, but declined steadily thereafter to average only 85,000 tons during the late 1990s despite a programme of port and fleet modernization. Production rose to 89,000 tons in 1997, of which 17,000 tons were exported. Among its traded food commodities, the value of Tunisia's fish exports was second only to that of olive oil in 1997. More than two-thirds of fishing vessels are concentrated in the south, along the Gulf of Gabès, but as a result of pollution and overfishing this region produces slightly less than 50% of the country's total catch. Some 42% of the catch is produced from the ports of Sousse, Mahdia and Monastir in the central region, while the northern coastline is underexploited. The modernization of the fishing industry's infrastructure is under way. Fish-processing factories are being brought up to European standards, so as to increase production and improve the quality of fish products. Incentives are being given to develop fishing along the northern coastline and limits have been placed on fishing in the Gulf of Gabès.

A US $69m. forestry development loan was approved by the World Bank in 1993 to finance the planting of trees on 25,000 ha of land, together with related schemes to promote the growth of forestry in Tunisia.

Two institutions have been established to address the problem of Tunisia's insufficient agricultural output. The Agence de Promotion des Investissements Agricoles was created in 1982 to channel funds into productive projects, notably the development of new cash crops. In early 1983 the Banque Nationale du Développement Agricole (BNDA) was founded to ease investment in the agricultural sector. Although fully Tunisian-owned, the BNDA's funds—initially TD 140m.—were subscribed equally by Kuwait and the EC. In 1990 the BNDA and the Banque Nationale de Tunisie (BNT) merged to form a new commercial bank based in the agricultural sector, designated the Banque Nationale Agricole (BNA).

MINERALS

Petroleum, formerly Tunisia's principal source of export earnings, was overtaken as a source of revenue by textiles and agricultural exports in the late 1980s. The collapse of petroleum prices in the mid-1980s resulted in a fall in export earnings from a peak of TD 665m. in 1980 to TD 341m. in 1986, although in 1987 earnings recovered to TD 418m. By 1990 exports of hydrocarbons were worth TD 533.4m. In 1991, despite a 15% increase in oil output, export revenues fell to TD 489.8m., while spending on energy imports amounted to TD 365.8m. (TD 429.4m. in 1990). In 1992 there was a surplus of TD 141.3m. in energy-sector trade (exports TD 538.4m., imports TD 397.1m.), but in 1993 export earnings fell by 19.4% to TD 434.2m., some TD 22.9m. below spending on imports (up 15.1% to TD 457.1m.). Energy exports totalled TD 442m. in 1994, TD 437m. in 1995 and TD 563m. in 1996, when they accounted for 10% of the value of total exports. The Government expected energy exports to remain at around this level until 1999, but to decline to TD 367m. in 2000 and to TD 320m. in 2001, when they were forecast to account for only 4% of the value of total exports. In 1996 imports of petroleum and petroleum products totalled US $482.4m.; imports of gas totalled $148.7m.

Intensive exploration for petroleum has been carried out in Tunisia since the discovery of hydrocarbons in neighbouring Algeria. In May 1964 a subsidiary of Ente Nazionale Idrocarburi (ENI), the Italian state energy enterprise, discovered petroleum at al-Borma, in southern Tunisia, near the Algerian border. When the discovery was announced, the Tunisian Government took a 50% share in the al-Borma operating company. The crude petroleum extracted from the al-Borma oilfield is transported to the terminal at La Skhirra on the Gulf of Gabès via a 'spur' pipeline which links with the pipeline from the oilfields at Zarzaitine and Edjeleh, in Algeria. The crude petroleum is then transported from La Skhirra to the refinery at Bizerta.

In 1968 Tunisia's second oilfield came into operation at Douleb, 200 km north of al-Borma. A pipeline was subsequently built, connecting the Douleb oilfield to the terminal at La Skhirra. Other oilfields include Tamesmida, on the Algerian border south-west of Douleb, which was joined to the Douleb-La Skhirra pipeline in 1969; and Bihrat and Sidi al-Itayem, both of which began producing in 1972. Important discoveries of petroleum were made off shore at Ashtart, east of Sfax in the Gulf of Gabès, and these deposits accounted for more than one-quarter of Tunisia's total output in the mid-1980s. The Ashtart oilfield was originally operated by Elf Hydrocarbures Tunisie (EHT—a wholly-owned subsidiary of Elf Aquitaine of France) and the Tunisian state oil company, Entreprise Tunisienne d'Activités Pétrolières (ETAP), which also operated the Douleb

oilfield. In 1997 EHT was bought by Arco of the USA, which currently has a 50% holding in the Ashtart field. A US $200m. investment programme to halt the decline in production at Ashtart was completed at the end of 1997, and in late 1998 Arco was reported to have plans for a further investment of up to $400m. in the field.

Other new Tunisian oilfields include, in the south, Makhrouga, Larich and Debbech, which are being developed by the Société d'Exploitation des Permis du Sud, FINA of Belgium, and ETAP; the Tazerka field in the Gulf of Hammamet, operated by Shell with AGIP Africa, a subsidiary of ENI, and ETAP; the Isis field in the Gulf of Gabès, for which the concession is held by Shell, Tunirex, Total-CFP and AGIP; the Ezzaouia offshore field, operated by Marathon Oil of the USA; the Rhemoura onshore field, in the Karkemna concession of British Gas (BG) Tunisie; and the Belli field, also operated by Marathon Oil.

A dispute with Libya over demarcation of territorial waters in the Gulf of Gabès, where promising discoveries of petroleum had been made, was settled in February 1982. A ruling by the International Court of Justice (ICJ) delimited the two countries' offshore territories around a boundary approximately 26° east from the land border to latitude 34°10′30″ north, where it deviates 52° east. (In December 1985 Tunisia's application to the ICJ for a revision of its judgment was rejected.) In August 1989 a joint Tunisian-Libyan company was established to exploit the '7 November' oilfield in the Gulf of Gabès. However, this company, known as Joint Oil, failed to attract any foreign partners, prompting the Libyan and Tunisian Governments to conclude a detailed agreement in early 1996 clarifying the legal status of the shared oilfield. After 1980, US oil companies began to obtain permits for drilling rights in Tunisia. Promising discoveries included the offshore Cosmos well, near Hammamet, located by EHT, gas and condensate discoveries in the Douz area, found by the US company Amoco, the el-Bibane well in the extreme south, discovered by Marathon Oil, and the two offshore Maamoura wells, near Hammamet, discovered by the Italian company AGIP. In mid-1991 Marathon Oil was given permission to explore for oil and gas in a new area of 1,760 sq km at Grombalia, which is situated close to the Abiod gas-production structure, south-east of Tunis; Marathon Petroleum Grombalia, a new subsidiary of Marathon Oil, will finance all exploration costs. In 1985 the Government improved the terms of its petroleum exploration law to encourage prospecting companies to develop new discoveries. In 1986, however, the collapse of energy prices prompted many oil companies to reduce the scale of their operations, and the Government was forced to introduce an even more favourable law in April 1987. In 1990 23 foreign companies held permits for drilling rights in Tunisia, attracted by the range of financial incentives offered by the Government to encourage exploration and development. In the late 1990s, despite the absence of a major oil strike for many years, foreign oil companies remained interested in Tunisia and at the end of 1997 Pluspetrol of Argentina, Anadarko Petroleum Corpn of the USA, AGIP of Italy and Mobil of the USA, were among the companies engaged in exploration work. In early 1998 Germany's Preussag Energie announced the discovery of oil in a second well in the Guebiba field in which it had a 49% holding (the remainder being held by ETAP). In 1997 Preussag bought the oil interests of BG Tunisie in Guebiba along with four other small onshore fields, namely Al Ain, Gremda, Rhemoura and El Hajeb, as well as the Cercina offshore field. Production at the offshore al-Biban field began in March 1998, operated by Centurion Energy International of Canada. The field, with estimated recoverable reserves of 6m. barrels of oil, is currently producing 4,000 b/d and crude oil exports began in May. In April Petro-Canada signed a two-year exploration agreement for Tunisia's Berkane basin, working jointly with ETAP. The area is relatively unexplored, but substantial oil discoveries have been made recently in adjacent areas in Algeria. As part of an agreement signed in 1997, Tunisia and Libya were to develop the '7 November' oilfield, which was estimated to contain recoverable reserves of 260m.–300m. barrels. An exploration and production licence for the field was granted to a partnership of the Saudi-owned Nimr Petroleum and Petronas, Malaysia's state oil company. The consortium plans to spend US $30m. developing the field over the next five years.

At the end of 1998 production was reported to have begun at the Didon offshore field in the Gulf of Gabès, operated by a partnership of Medex Petroleum of France and Soco International of the USA. The field was producing 5,000–7,000 b/d, and recoverable reserves were estimated at 6m. barrels. At the same time, Ecumed Petròleum Grombalia, a subsidiary of Centurion Energy International of Canada, announced a small oil strike in its Grombalia concession area in northern Tunisia and CMS Energy of the USA announced a modest oil and gas find in its Baguel concession in southern Tunisia. Early in 1999 MOL of Hungary began oil production from the Sabria West-1 well in the Kebili area in southern Tunisia. A new hydrocarbons law, promised by the Government for over two years, was due to be enacted in 1999 and was reported to include better tax concessions for oil producers.

At 1 January 1998 Tunisia's reserves of petroleum were estimated at 300m. barrels, sufficient to maintain output (at 1997 levels) for 9.4 years. Production has exceeded 4m. metric tons per year since 1970, and reached a peak level of 5.6m. tons in 1980. Production fell to 5.4m. tons in 1981 and to 5.1m. tons in 1982, but rose again to 5.6m. tons in 1983 because of increased production from Ashtart. Production fell to 5.0m. tons in 1987, and declined to 4.5m. tons in 1990. In 1991 production from the Ezzaouia field reversed the downward trend of oil production, which by mid-1992 was running at 120,000 b/d, while domestic consumption amounted to 90,000 b/d. It was hoped that further exploration, and the development of known deposits, might result in an increase in output from the mid-1990s. Total output in 1992 was 5.2m. tons. Tunisia's oil output totalled 4.7m. tons in 1993, 4.4m. tons in 1994, 4.3m. tons in 1995 and 4.2m. tons in 1996. Production fell to below 3.8m. tons in 1997 and was estimated at 3.7m. tons in 1998. However, output was expected to rise slightly, to around 4m. tons, in 1999, as a result of the development of new oilfields.

Tunisia's main petroleum refinery, at Bizerta, has a capacity of 1.7m. metric tons per year. Plans to double the capacity of the Bizerta refinery were abandoned and an alternative project was subsequently conceived: in March 1997 the Government selected the local Offshore-Mediterranean Refining Company (ORC) to establish and operate a new refinery at La Skhirra. The refinery's ultimate capacity will be 6m. tons a year.

Tunisia became a member of the Organization of Arab Petroleum Exporting Countries (OAPEC) in March 1982. In 1986, however, Tunisia withdrew from the organization, owing to the decline in the country's oil output.

In February 1998 an attempt by the Government to sell shares in Tunisia Oil Fields Contractors, in which the state had a majority holding, failed to meet an acceptable price and tenders were reissued in July. The Société d'Assistance et de Ravitaillement Offshore Tunisie and the Société Nationale de Distribution du Pétrole were among other state-owned companies to be offered for sale in 1998 as part of the Government's accelerated privatization programme (see above).

Tunisia's reserves of natural gas are estimated at about 100,000m. cu m. Almost all of the country's gas production came from the al-Borma field until 1995, when the offshore Miskar field was brought on stream by British Gas International Tunisia (BGIT), which invested US $600m. to develop the field, the biggest foreign investment ever made in the country. The Miskar project, completed in early 1997, is now the country's major gasfield, supplying more than 90% of total national production. BGIT is under contract to deliver 4.5m. cu m of gas a day to the Société Tunisienne d'Electricité et du Gaz (STEG) for the first five years, rising to 5.7m. cu m per day thereafter. The 4.5m. cu m daily delivery rate was achieved on a sustained basis from June 1996, and by early 1998 production had reached 5.2 m. cu m per day. In March 1998 it was reported that BGIT was seeking a review of the price formula in its agreement with STEG to supply gas from the Miskar field. The gas price is currently indexed to that of high-sulphur fuel oil, which has fallen sharply along with other oil prices and has reduced BGIT's returns from the Miskar project. BGIT has also announced that it is ready to invest $400m. in the development of a new offshore gasfield, Hasdrubal, located just south of the Miskar field. A new hydrocarbons law to be issued in 1999 is expected to allow gas prices to be set by government decree, taking into account both development costs and international market conditions. A

final decision on the Hasdrubal development was likely to be made after the new law was issued. Initial discoveries suggested that future production from the Hasdrubal field could average 5m. cu m per day. Both the Miskar and Hasdrubal fields are part of BGIT's Amilcar permit, held jointly with ETAP. In early 1999 BGIT awarded a contract to increase the capacity of the Hannibal gas treatment plant near Sfax, which treats gas from the Miskar field, to 5.5m. cu m/d. In 1997 CMS Nomeco International of the USA announced a $30m. investment programme to develop the El Franig and Baguel gasfields in the south-west of the country, where gas and condensates estimated at 1.7m. tons of oil equivalent have been discovered. The development programme included the construction of a 115-km pipeline opened in 1998 to link the fields to the national pipeline system. The fields are owned jointly by Nomeco and ETAP. In early 1998 Preussag Energie of Germany announced that it was to develop the offshore Chergui gasfield in the Gulf of Gabès where recoverable reserves were estimated at 2,000m cu m of natural gas. Tunisia's total gas production rose to 1,300m. cu m during the first six months of 1997, a 19% increase on the corresponding period of 1996. The Transmed gas pipeline constructed to supply Algerian natural gas to Italy crosses Tunisia and became operational in 1983. Tunisia's royalty was equivalent to 5.25% of all gas transported in the pipeline. Liftings from the pipeline became a new source of natural gas for STEG. Work to expand the annual capacity of the Transmed pipeline from 16,000m. cu m to 24,000m. cu m was completed during 1997. As part of an agreement signed in 1997, Tunisia and Libya are to build a gas pipeline to supply southern Tunisia with Libyan gas. Tunisia's gas consumption reached 2.2m. tons of oil equivalent in 1998, 80% of which was used to generate electricity. Demand is expected to rise to at least 5m. tons of oil equivalent by 2020, and possibly as high as 9.5m. The construction of a gas pipeline from Libya, to be completed in 2003, will provide a new source of supply in addition to the gas that Tunisia receives from the Transmed pipeline in the form of dues.

Tunisia is the world's fourth-largest producer of calcium phosphates, which are chiefly mined from six large deposits in central Tunisia. Output of calcium phosphates totalled 5.6m. metric tons in 1994. Phosphates and phosphatic fertilizers have long been an important source of export revenue. After remaining fairly static at 3.0m.–3.8m. tons per year in 1970–78, production of natural phosphates increased steadily after 1979, when it exceeded 4.1m. tons. Annual phosphate output reached a peak of 5.9m. tons in 1983, fell to 4.5m. tons in 1985, but recovered to 5.8m. tons in 1986 and to slightly more than 6m. tons annually in 1987–89. The phosphate sector was affected by low world prices in 1986, and a recovery plan was implemented, aiming to reduce production costs and to increase output to 6m. tons annually in 1986–88. Government policy is to develop new resources and to concentrate efforts on the local manufacture of highly profitable fertilizer and phosphoric acid. Only about 25% of phosphate output is exported as raw phosphate rock, and production of triple superphosphate (TSP) and phosphoric acid increased dramatically in the early 1980s. Output of TSP reached 956,800 tons in 1986, an increase of more than 400,000 tons in 10 years, and 985,800 tons in 1987, while production of phosphoric acid rose from 93,000 tons in 1973—the first year of production—to 593,300 tons in 1987, and to 856,100 tons in 1988. Because the phosphate rock is of low quality, the processing plants use special methods to produce phosphoric acid and phosphatic fertilizers. The Compagnie des Phosphates de Gafsa (CPG), which mines phosphate rock in the Gafsa area, plans to maintain annual production at less than 6m. tons, developing new mines as existing ones become exhausted. Most of the fertilizer plants are at Gabès, but in 1985 a new plant was opened at M'Dilla, near the Gafsa mines. A new plant to produce superphosphoric acid was due to open at La Skhirra in 1987. However, a project to exploit the phosphate reserves at Sra Ouertane, in the north-west, was postponed, owing to the Government's budgetary problems. In July 1989 Tunisia was granted a loan of US $34m. by the Kuwait Fund for Arab Economic Development in order to finance the renovation of its phosphate fertilizer plants.

In 1991 production of raw phosphates fell by 30% compared with 1990, although export revenues fell by only 19%, to TD 14m. Exports of phosphatic fertilizers fell by 4% in 1991, to TD 241m., mainly owing to a 35% decline in sales of ammonium nitrate to the Iraqi market. The value of exports of phosphoric acid, however, increased by 27% to TD 156m. The 1991 results reflected continuing problems in the Tunisian phosphates industry, especially within the CPG, as well as the disappearance of traditional markets in Eastern Europe. In 1992 the CPG doubled the volume of its export sales from 425,888 metric tons to 956,109 tons, while its domestic sales (to the state processing company Groupe Chimique) totalled 5.1m. tons. In 1991 the two companies had recorded combined losses of TD 522m. A government restructuring programme, announced in 1993, envisaged plant closures among other rationalization measures, including an eventual merger of the two companies. The CPG's phosphate production totalled 6.1m. tons in 1992 and 6.4m. tons in 1993 (85% from underground mines and the balance from surface mines). Tunisia's exports of phosphorus pentoxide and phosphoric acid were worth TD 166.2m. in 1994, while exports of phosphatic fertilizers totalled TD 112.1m. Initiatives to gain new export outlets in 1994 included co-operation with Brazil, with a view to increasing that country's imports of Tunisian phosphates from 90,000 tons to 170,000 tons per year. Production of raw phosphate by the CPG reached 7.2m. tons in 1997, of which some 1.3m. tons were exported and the remainder was sold to Groupe Chimique for conversion into phosphoric acid and fertilizers.

Production of iron ore has steadily declined since independence, when it was more than 1m. metric tons per year. Output was 310,000 tons (gross weight) per year during 1984–86, compared with 275,000 tons in 1982 and 400,000 tons in 1981. In 1995 output was 225,000 tons. The ore's iron content is approximately 53%.

Lead is mined in the northern coastal region, and zinc in the north-west. In 1980 the Société Tunisienne d'Expansion Minière announced a US $50m. investment programme to expand production. Output of zinc concentrates totalled 17,400 metric tons in 1989, but fell to 9,400 tons in 1991. Production declined to 4,100 tons in 1992 and 1,300 tons in 1993 before rising to 12,900 tons in 1994, and to 44,200 in 1995. Output of lead concentrates, which totalled 14,000 tons in 1980, has been falling steadily, and reached only 3,100 tons in 1986, increasing to 3,400 tons in 1987 before declining to 1,300 tons in 1991. Production totalled 1,400 tons in 1992 and 500 tons in 1993, increasing to 2,000 tons in 1994, and to 7,000 tons in 1995. The Bougrine lead and zinc mine, operated by the Société Minière de Bougrine (SMB), the country's first private mine, opened in 1994 after an investment of $80m., but was closed in October 1996 as a result of financial problems. In 1997 Inmet Mining Corpn of Canada sold its 49% holding in SMB to Breakwater Resources of Canada, which reopened the mine in May 1998. By the end of 1998 it was operating at full capacity (97,000 tons of zinc and 12,000 tons of lead). Reserves were estimated as sufficient for 10 years' production, and Breakwater Resources announced plans to invest TD 10m. in the mine in 1999.

INDUSTRY

Tunisia's industrial sector ranges from the traditional activities, such as textiles and leather, to 'downstream' industries based on the country's phosphate reserves. During the period of the 1973–76 Plan, the industrial sector grew by 7.4% instead of the 10.2% planned. In 1977 the sector grew by only 4.2%, mainly because of a sharp fall in agri-business and the food processing industries. Apart from a zero rate of growth in the textile industries, the sector's performance improved in 1978, with a 10.6% growth rate, mainly because of higher output in three sectors: construction materials, mechanical and electrical industries. The growth rate of manufacturing industries fell to 3% in 1982, but rose to around 9% per year in 1983, 1984 and 1985, in accordance with the 1982–86 Development Plan. In the late 1980s private sector small and medium-sized businesses became increasingly prominent, and the Government made considerable progress in attracting foreign venture capital to the industrial sector, as well as in promoting Tunisia as a regional centre for high technology. Figures issued by the Société de Participation et de Promotion des Investissements (SPPI) in early 1992 showed that in 1990–91 the SPPI had supported 22 joint venture projects involving total investment of TD 34m. According to the Agence de Promotion des Investissements (API), declarations

of investment intent by local and international companies were 2% higher in 1991 than in 1990, although the impact of the Gulf crisis had contributed to a 20% decline in foreign investment applications in 1991. In June 1992 the new post of Minister of International Co-operation and Foreign Investment was created to signal the Government's commitment to industrial expansion. In 1992 new foreign investment in Tunisian manufacturing industry was estimated at TD 52m., out of total foreign investment of TD 160m. In 1996, however, new foreign investment in manufacturing industry was only TD 48m., out of total foreign direct investment of TD 296m., with the bulk of foreign investment going to the energy sector. In 1997 the Minister of International Co-operation and Foreign Investment reported that total foreign direct investment had risen to TD 379m., and while two-thirds was directed to the energy sector, foreign investment in manufacturing industry had risen significantly. Much of the new investment was reported to be in the high technology sector, particularly electronics. According to the Ministry of International Co-operation and Foreign Investment, foreign direct investment rose sharply, to TD 800m. in 1998, with some TD 409m. accounted for by the sale of two state-owned cement plants to Spanish and Portuguese firms (see below). In 1998 a number of new measures were introduced to encourage private investment in small and medium-sized enterprises, notably by raising the level of contributions made by the Fonds de promotion et de décentralisation industrielle to investment projects, especially in regional development areas.

During the 1982–86 Development Plan period, the Government concentrated on large investment projects, until it was forced by budgetary constraints to alter its strategy in 1986. The 1987–91 Plan reflected this change, with more investment in small projects and a greater emphasis on attracting private investment into industry. Exports of industrial goods (excluding energy) rose steadily in the period of the 1987–91 Plan, reaching TD 1,812.6m. in 1990. Textiles and leather contributed TD 1,325m. to this total, mechanical and electrical items TD 416.4m., and other industries TD 254.7m. Under the 1992–96 Plan, the 6% annual GDP growth target was to be achieved mainly by means of expansion in the manufacturing and services sector. Exports from the manufacturing sector rose from TD 2,240m. in 1992 (out of total exports of TD 3,550m.) to TD 3,794m. in 1996 (out of total exports of TD 5,372m.). In 1992 textiles and leather contributed TD 1,546m., mechanical and electrical goods TD 433m. and other industries TD 261m. In 1996 textiles and leather contributed TD 2,743m., mechanical and electrical goods TD 675m. and other industries TD 376m. During the 1992–96 Plan period industrial production grew by 5.8% a year, according to the Government, although independent sources reported a much lower figure. According to official figures, investment in industry totalled TD 3,100m. during the Plan period. Under the 1997–2001 Development Plan industrial production is projected to grow by 6.9% a year, with investments in industry forecast to reach TD 1,200m. over the five-year period. In 1998 industry was reported to generate some 25% of GDP and to employ about one-quarter of the workforce. Exports from this sector were forecast to grow from TD 3,985m. in 1997 (out of total exports of TD 5,945m.) to TD 6,306m. in 2001 (out of total projected exports of TD 8,803m.).

More than one-half of Tunisia's industry is located in Tunis. Other industrial centres are Sousse, Sfax, Gabès, Bizerta, Gafsa, Béja and Kasserine. Major new industrial estates were under development near Tunis and Sfax in 1994. In the past, manufacturing tended to concentrate on processing raw materials, especially foodstuffs, and was aimed at meeting local demand. In an attempt to attract foreign investment and to promote exports, the Government ratified a new industrial investment code during 1987. This law simplified and extended the provisions in the legislation of 1973 and 1981. A new code, adopted in November 1989, laid down guidelines for the activities of service companies, the aim being to increase private-sector investment; by mid-1992 some 600 new companies had been established in the services sector. Other government initiatives included the approval of special legislation early in 1992 for the creation of 'offshore' free-trade zones for new industries. Site preparation for the 46-ha Bizerta zone began in late 1993, with a view to completing the installation of infrastructure by 1996. The aim of the zone's shareholders (42% banks, 32% public-sector companies, 26% private-sector companies) was to attract TD 60m. of new investment from Europe, North America and South-East Asia and to generate TD 120m. of exports per year. In mid-1996 the Bizerta zone was on course to open by early 1997, initially with 20 businesses (10 industrial companies, four trading companies and six banks) on site. A free-trade zone at Zarzis (near Tunisia's border with Libya) was undergoing expansion from 12 ha to 20 ha in the second half of 1996, in response to strong demand for accommodation from manufacturing, trading and services companies. It was announced in February 1997 that the Government intended to invite private investors to equip and operate three industrial zones at sites in Bizerta, Menzel Bourguiba and M'Saken. The plan was part of a larger programme to establish 26 industrial zones throughout the country under the ninth five-year Plan covering 1997–2001 (see Planning). This would include 16 zones in coastal regions, five in central Tunisia and one in the interior. A shortage of prepared sites for manufacturing industry was reported to have been a factor in discouraging industrial expansion and thwarting efforts to increase foreign investment in this sector.

The textiles sector (including leather) is the most important in manufacturing and exports. By early 1999 there were an estimated 250,000 workers employed by 1,800 firms, 700 of which had foreign owners or partners. Earnings from textile exports in 1998 totalled TD 2,950m., representing 45% of all export earnings. Virtually all textile exports go to the EU, especially to France, Germany, Italy and Belgium. Investment in this sector since 1997, however, has been disappointing and a report commissioned by the Government from a group of consultants estimated that the sector needed investments of TD 3,000m. between 1999 and 2006 if it was to achieve significant expansion. The sector as a whole is poorly integrated and has low value-added. It is primarily a transformation industry, with the cost of imported inputs equivalent to three-quarters of the value of exports. At the beginning of 1999 the Government announced plans to increase investment in the textile sector to promote modernization and to improve productivity and marketing.

In order of importance, the other leading sectors are: construction materials, mechanical and electro-mechanical products, chemicals, and paper and wood. Tunisia also manufactures glass, furniture, batteries, paint and varnish, and rubber goods. Ceramics are made at Nabeul, while sugar is refined at Béja and carpets are hand-woven at Kairouan. A cellulose factory and paper pulp plant at Kasserine uses locally grown esparto grass. The metallurgical, mechanical and electrical industries are expanding steadily. The al-Fouladh steel complex at Menzel Bourguiba, near Bizerta, is supplied with iron ore from Tamera and Djerissa. It has an annual capacity of 175,000 metric tons of iron bars, wire and small sections. Plans were in progress to increase the complex's capacity to 400,000 tons per year. Another steel mill, with a capacity of 100,000 tons per year, is sited at Bizerta.

In 1983 a farm machinery complex, managed by the Complexe Mécanique de Tunisie, began production. A scheme to manufacture tyres for the local market and for export was commissioned in 1986, with the assistance of an Italian company, Pirelli, the Government having nationalized the largest US investment in Tunisia—the Firestone Tyre and Rubber Co's tyre factory at Menzel Bourguiba in 1980. In early 1988 production of diesel engines commenced at a plant at Sakiet Sidi Youssef, on the Algerian-Tunisian border. The plant, managed by the Société Maghrebine de Fabrication de Moteurs Thermiques, had an initial annual capacity of 25,000 diesel engines. Later in 1988 it was announced that joint ventures with Mercedes and Volkswagen would be established to produce car components. In November 1991 General Motors of the USA announced the reopening of its joint venture vehicle assembly plant at Kairouan, which was to produce up to 4,000 light commercial vehicles per year for the North African market. Known as Industries Mécaniques Maghrébines, the joint venture had been launched in 1982, but was suspended in 1988. Also active in vehicle assembly in Tunisia is Saab-Scania of Sweden. Local assembly of Mercedes-Benz buses, imported from Germany in kit form, began in 1994 at the rate of 60 vehicles per year. In 1995 Tunisia had 50 export-orientated automobile components manufacturers whose combined output was worth an estimated TD

22m. in that year. Although the total value of their output in 1996 rose to TD 28m., this still fell well short of the Government's ambitions for a key sector in its industrial strategy. In early 1998 METS, a subsidiary of Germany's Draxlmaier, and Leonische Drahtwerke of Germany both announced plans to expand their production of electrical car components in Tunisia by building new plants at Sousse. In April United Technologies Corpn opened a factory producing wire harnesses for Peugeot's car assembly plant in Spain and announced plans to double output by the end of the year.

In the high technology sector, several computer companies have located operations in Tunisia. Plans for a special 'offshore' high technology zone, to be located in Tunis, were under consideration in mid-1992. By 1993 a 40-ha site near Tunis-Carthage airport had been chosen for development, and financing of up to US $100m. was being sought. Citing successful Malaysian 'technology parks' as its model, the Government regarded the venture as a means of encouraging the transfer of technology, creating jobs for graduates and attracting foreign investment.

Tunisian cement production averaged 4.2m. metric tons per year from 1990 to 1992. Production of cement totalled 4.6m. tons in 1996. Several new cement plants are planned or under construction, while existing ones are being expanded. A cement works at Oum al-Khelil, built by Fives-Cail Babcock of France, started production in 1980. A works at Enifida, constructed by Japan's Kawasaki Heavy Industries, Marubeni Corpn and C. Itoh, was commissioned in 1983. In January 1988 a white cement works at Feriana entered production. The plant, established as a joint project with Algeria, has an annual capacity of 210,000 tons, enough to meet both domestic and Algerian needs. In 1998 two state-owned cement plants were sold as part of the Government's privatization programme: the Société des ciments de Jebel Oust (producing 1.2m. tons a year) to Cimpor of Portugal for TD 241m., and the Société des ciments d'Enfida (producing 1.2m. tons a year) to Uniland of Spain for TD 168m. Cimpor announced plans to expand production at the Société des ciments de Jebel Oust to 1.9m. tons and to export some of the plant's output. The sale of the two plants provided the bulk of revenue obtained from privatization during 1998. Five more cement plants are to be sold, with three plants, Ciments d'Oum el-Khelil (1m. tons a year), Ciments du Gabès (660,000 tons a year) and Ciments artificiels de Tunisie (300,000 tons a year) to be offered for sale in 1999.

The chemical industry is receiving special attention from the Government, its share of industrial output having fallen from 13% in 1970 to 9% in 1989. The principal activity within this sector is the processing of phosphate rock into phosphatic fertilizers and phosphoric acid by the state-owned Industries Chimiques Maghrébines at Gabès and by 'mixed' (partly state-owned) companies at Sfax. In 1988 reforms for the chemical sector were announced, including consolidation of companies' capital, long-term restructuring of their debts and, possibly, plant closures. Paint, glue and detergents are also manufactured. Two works, each producing 650 metric tons of wet lime per day, are to be built at Thala and Mezuna, in the south.

Under the terms of Tunisia's association agreement with the EU, signed in July 1995 and formally implemented in March 1998, Tunisia will dismantle trade barriers to EU industrial goods in stages over a 12-year period; barriers to those products which would be most competitive with Tunisian manufactured goods were to be phased out over the full period. The Ministry of Industry estimated that as many as 2,000 companies could collapse as a result of increased competition from the EU unless efforts were made to improve productivity and the quality of their goods. Almost two-thirds of the 384 firms that applied for help from SOS Entreprise, a government body established in 1995 to assist ailing companies, were in the manufacturing sector. The vast majority were family-run businesses, suffering from poor management, a shortage of capital, low levels of training and outdated technology. The EU pledged to provide financial support to Tunisia for adjustment programmes designed to prepare the manufacturing industry for competition from EU member states. These included a 'mise à niveau' programme of industrial modernization to help private-sector firms reform their management and production processes to become competitive with European manufacturers. The programme planned to modernize 2,000 companies by 2001. In addition to receiving financial support from the EU, the programme was also funded by the World Bank and by two Tunisian state funds, the Fonds de Promotion et de Maîtrise de Technologie and the Fonds pour le Développement de la Compétitivité Industrielle. In April 1998 the EU agreed a grant of TD 12.5m. (US $10.7m.) for the 'mise à niveau' project and a further grant of TD 12.5m. to support the privatization of state-owned companies on condition that the Government's divestment programme is improved and accelerated. By early 1999 some 890 companies were reported to have registered to take part in the 'mise à niveau' programme. Some 401 companies had had their modernization plans approved, involving a total investment of TD 929m.

In early 1998 it was reported that the Government planned to strengthen craft industries, which currently employ some 220,000 workers, account for 3% of GDP and earn TD 177m. in export revenue. A training commission was to be established, and improvements made to the quality and diversity of products, to marketing, and to the provision of loans.

Production of electricity for public use was 4,536m. kWh in 1989, compared with 2,429m. kWh in 1980. Most of this was generated by thermal means; hydroelectric power is of lesser importance. The Government prepared ambitious plans for new generating units in the early 1980s. However, implementation of these plans was postponed, owing to budgetary constraints and a fall in demand, and funding was reallocated to development of the power distribution network. In the light of the economic upturn, which followed the Gulf crisis, the Government confirmed, in June 1992, that the British/French GEC Alsthom group had been contracted to build a 350-MW combined-cycle power station at Sousse, at an estimated cost of US $250m. Completion of this plant would raise Tunisia's total installed capacity to 1,680 MW. At the end of 1997 the General Electric Co of the USA completed the installation of two 120-MW gas turbines at the new Bir M'Cherga power station and won the contract to supply and install a 120-MW gas turbine at the Bouchemma power station near Gabès. At the same time ETAP announced that it was building a 16-MW power station on the Ezzaouia oilfield using gas that is currently flared. The electricity generated would be sold to STEG. The national electricity grid served over 75% of the country in 1994, and was due to provide 90% coverage by 1996 if planning targets for rural electrification were met. In March 1996 legislation was introduced to end STEG's monopoly on power generation, government policy being to open up power-station construction, operation and ownership to private investors. In early 1998 Carthage Power Co, a consortium of Community Energy Alternatives of the USA, Marubeni Corpn of Japan and Sithes Energies, a Franco-Japanese group, was awarded the contract for the country's first private power station at Radès. The 470-MW combined-cycle plant, which will run on natural gas and fuel oil, is due to start production in 2001. Carthage Power will build, own and operate the new plant and sell electricity to STEG, which retains its monopoly on prices and distribution. Complicated negotiations over financing the $236m. project delayed the award of the main construction contract until 1999. The projected growth rate of Tunisian electricity demand in the second half of the 1990s was 7%–8% per annum. Production of electricity in 1996 totalled 7,553m. kWh, 90.7% of which was generated by STEG. Tunisia is already linked to Algeria and Morocco through a 220-kV grid and in early 1999 contracts were awarded for the construction of a 220-kV link between the electricity grids of Tunisia and Libya. The work is being carried out by KEC International of India and Siemens of Germany and is due to be completed in 2000.

In late 1997 the Agence de Maîtrise de l'Energie announced plans to install 1m. sq m of solar panels to generate power equivalent to 120,000 tons of oil by 2010. A pilot project involving the installation of 50,000 sq m of solar panels was being funded by the International Fund for the Environment. In 1998 STEG signed a contract with Endesa of Spain to build a windpower station on Cap Bon at an estimated cost of US $10m. By 2010 Tunisia hopes that about one-quarter of its energy requirements will come from renewable sources. Also in 1998 the European Investment Bank (EIB) announced a loan of $54m. to Tunisia, to help meet the cost of expanding the country's power transmission and supply network during 1998–2001.

TRANSPORT AND COMMUNICATIONS

Tunisia inherited a relatively modern system of road and rail communications from the period of colonial rule. Substantial work is being carried out to modernize and extend the existing highway and railway networks. In mid-1991 it was announced that construction work on the motorway from Hammamet to M'Saken was due for completion by the end of 1993. By mid-1993 some 31 km (out of 90 km) of the road remained to be completed. In 1995 the Government announced a US $88.7m. programme (including $51.5m. loaned by the World Bank) to improve over 1,000 km of rural roads. After 1995 the Government's policy on motorway building was to seek private-sector financing for the construction of toll roads. It was intended that public-sector investment should be channelled into the maintenance and improvement of existing roads, some 500 km of roads being scheduled for upgrading in 1996. In November 1998 the Government announced that construction would begin on two new sections of motorway, one from Tunis to Bizerta and another from Bizerta to Menzel Bourguiba; and that feasibility studies would be carried out on motorways from Tunis west to Mejez el-Bab and from M'Saken to Sfax. Part of the revenue generated from the privatization programme would be devoted to motorway construction. At the same time, it was announced that the Tunisian section of the proposed trans-Maghreb highway would be completed by 2001 rather than 2011, the date announced by the Government two years earlier. It was hoped that much of the construction work would be undertaken by the private sector. By late 1998 there were 776,000 licensed vehicles in the country, including 446,000 private cars and 190,000 transport vehicles. About one-half of the total number of vehicles were owned by people living in the Greater Tunis area. In 1980 work began on the 30-km first phase of the Tunis city railway. A five-line 'metro' transport system was in operation in 1996; further lines were under construction. In early 1998 it was reported that the Government was planning to allow the state railway company, the Société Nationale des Chemins de Fer Tunisiens (SNCFT), to operate under a concession, with the state retaining control over track. SNCFT would be expected to cover its costs and would only receive state subsidies on a limited number of loss-making services. At the same time, the EIB announced a loan of ECU 25m. to help finance the modernization of the country's main railway line linking Tunis to Sfax.

There are international airports at Tunis-Carthage, Djerba-Zarzis, Monastir-Skanès, Sfax-Thyna, Tabarka-7 Novembre, Tozeur-Nefta and Gafsa-Ksar (opened at the end of 1998). The second phase of the Tunis-Carthage airport expansion project, to increase passenger capacity from 3.5m. to 4.5m. per year, was completed in April 1998. The country's airports handled 8.3m. passengers in 1997, an increase of 12.5% over 1996 as a result of a rise in the number of foreign tourists. A further expansion in passenger numbers was forecast for 1998. There are plans to enlarge the capacity of Monastir-Skanès airport to 5m., Djerba-Zarzis to 4m. and Sfax-Thyna to 4.5m. New international airports are planned at Gabès and at Enfida, located some 60 km south of Tunis. The first phase of Enfida airport is due to be completed in 2003 and after further expansion it is to become Tunisia's largest airport, capable of handling 30m. passengers by 2038. The national airline, TunisAir, carried 3.2m. passengers in 1997. In 1995 the state's 85% shareholding in the company was reduced to 45.2% as part of the Government's privatization programme, and in mid-1995 the company announced that it would offer 20% of its capital to public subscription. A further 20% stake in TunisAir was listed for privatization in 1999. The company, which recorded improved profits of TD 27m. (US $24m.) in 1997, brought forward its plans to update its fleet and placed orders for 15 new aircraft with Airbus and Boeing for delivery during 1998–2005. Two Airbus A391 aircraft were delivered in 1998. As well as modernizing its fleet, the company has made efforts to improve passenger services and to reduce operating costs. Nevertheless, net profits fell sharply in 1997 resulting in a fall in the value of the company's shares. In 1998 the Government announced plans to sell the small domestic airline, Tuninter, which has incurred heavy losses. TunisAir owns a 40% stake in the company. The state-owned shipping company, the Compagnie Tunisienne de Navigation (CTN), began operating in 1971 and carried around 25% of total trade in 1985. Although the Government announced in mid-1995 that it wanted to privatize the company, no action was taken. The CTN has not been profitable and in recent years has begun a restructuring programme, abandoning non-profitable routes and offering incentives to reduce the workforce by one-third. It has also started renewing its fleet. In April 1998 it was reported that the Government was considering several ways of opening the CTN to private capital, and was understood to favour the establishment of a holding company in partnership with private investors. In early 1984 a contract was awarded to a Turkish firm for the expansion of the port at Gabès. A new commercial port at Zarzis, near Djerba, was constructed shortly afterwards. In May 1990 the World Bank agreed to provide a loan of $17m. towards rural road improvement, and $80m. towards the development of railways and ports. In March 1992 the Office des Ports Nationaux Tunisiens announced a project to upgrade facilities in the Tunis-Goulette-Radès area. Following criticism from the business community about the inefficiency of Tunisian ports and the consequent long delays in handling cargo, in late 1997 the Government stated that it planned to involve the private sector in port management and cargo handling, thereby ending the monopolies of the state-owned Office des Ports Nationaux Tunisiens and the Société Tunisienne d'Acconage et de Manutention. Under the 1997–2000 Development Plan, investment of TD 4,600m. ($4,000m.) was projected for the transport sector, including finance for the construction of 1,500 km of new roads, the extension of Tunis, Monastir and Djerba airports and the creation of a second railtrack between Tunis and Sousse.

Investment of some TD 1,500m. (US $1,300m.) was allocated to the telecommunications sector under the 1997–2001 Development Plan, with the aim of increasing the number of telephone lines to 1m. In early 1998 the country's first global standard for mobiles (GSM) cellular phone system, installed by Alcatel of France for the state telecommunications company, Tunisie Télécom (at a cost of $20m.), started operating for 30,000 subscribers in the Tunis-Nabeul-Hammamet region. By early 1999 the service had been extended to Bizerta, Nabeul, Sfax and Gabès. At the end of 1998 the country's telephone system had some 734,000 subscribers and the number was projected to rise to 1.4m. by the end of 2001.

The sale of 40.6% of shares in the state-owned Société Tunisienne d'Entreprise de Télécommunications (SOTETEL) began in June 1998 and Siemens of Germany was reported to have bought a 12% stake in the company for some US $1.2m.

FINANCE AND BUDGET

The Banque Centrale de Tunisie (BCT) is the sole bank of issue of Tunisia's national currency, the dinar, and it performs all the normal central banking functions. On 1 March 1994 a new foreign exchange market opened in Tunis, bringing to an end the BCT monopoly on quoting prices for the dinar against hard currencies. In addition to 13 commercial banks, the Government has established eight development institutions to channel aid into the economy. The Banque de Développement Economique de Tunisie (BDET) is the largest development bank. There is also a specialist tourism bank, the Banque Nationale de Développement Touristique (BNDT), and an agricultural bank, the BNA, formed from a merger of the BNDA and the BNT. Other development institutions, such as the World Bank, have established credit programmes with the BDET and the BNDT. A major development since 1981 has been the creation of six joint-venture banks with other Arab countries. These are: Banque Tuniso-Koweitienne de Développement, Société Tuniso-Saoudienne d'Investissement et de Développement, Banque de Coopération du Maghreb Arabe, Banque Tunisienne des Emirats et d'Investissement, Banque Tuniso-Qatarie d'Investissement and the Banque Arabe Tuniso-Libyenne pour le Développement et le Commerce Extérieur. In October 1991 it was announced that Tunis was to be the headquarters of the Banque Maghrebine d'Investissement et de Commerce Extérieur, a development bank established by the five members of the Union of the Arab Maghreb (UAM). The Government introduced legislation in 1994 to tighten the regulation of several areas of banking activity, and (in a separate initiative included in the 1994 budget) ordered Tunisian banks to set aside 50% of their profits to cover an estimated US $3,000m. of bad debts, to

meet a capital adequacy requirement of 5%, to cease making unsecured loans and to reduce their exposure to any single sector to no more than 25% Thereafter, additional efforts were made to increase competition, improve efficiency and to bring the banking system up to international standards. As a result the banking system has become stronger, but competition is still limited in a sector dominated by the state, and the burden of substantial bad debts has made it difficult for the banks to raise money overseas. Further reforms to the banking system in order to increase efficiency and competition are planned by the Government. The Government has also begun to tackle the problem of bad debts. Some TD 1,000m. is owed by state-owned firms and an estimated one in five Tunisians with a bank loan are over a year in arrears. The five main commercial banks, in which the state has either a controlling interest or a major stake, bear most of the burden of bad debts. The number of state-controlled banks is to be reduced to three by mergers and privatizations over the next two years: the Société Tunisienne de Banque which merged with the BNDT in 1998 and is scheduled to merge with the BDET; the BNA; and the Banque de l'Habitat. Already in 1998 it was announced that the Union Internationale de Banques and the Banque Tunisienne et des Emirats d'Investissement would merge and then be privatized. The Banque du Sud is to merge with two development banks, the Banque Tuniso-Koweitienne de Développement and the Banque Tuniso-Qatarie d'Investissement, and it is predicted that the state's 50% stake in these two banks will be sold. The three remaining development banks, the Société Tuniso-Saoudienne d'Investissement, the Banque Arabe Tuniso-Libyenne pour le Développement et le Commerce Extérieur and the Banque de Coopération du Maghreb Arabe, in which the state has a 50% stake, are also likely to be privatized. The World Bank, the African Development Bank and the EU are to provide some $400m. to assist reform of the banking and financial, sector, with the first $200m. to be disbursed in April 1999 and the balance in 2000.

The 'offshore' banking sector was regulated by legislation, enacted in 1976, which placed strict limits on the banks' activities. Offshore banks include Citibank, Tunis International Bank, Union Tunisienne de Banques and Arab African International Bank. Complaints from the offshore banks about lack of business led to reductions in staffing levels and to the withdrawal of National Bank of Abu Dhabi in 1984. These complaints were heeded by the Central Bank and the Ministry of Finance, and in March 1985 they approved the text of a law that was to give offshore banks greater freedom to do business in the local currency and to participate in dinar treasury operations. The law was approved by the National Assembly towards the end of 1985. In June 1995 Tunisia's first merchant bank, International Maghreb Merchant Bank, began operating with a paid-up capital of TD 3m. Shareholders included the International Finance Corpn, French and Austrian banks, the local Maghreb Finance Group and private Saudi Arabian investors, together with the British-based initiator of the project, London Court Securities. The new bank's aim was to specialize in project and corporate finance and in privatization and stock market activities, initially within Tunisia, but with a view to subsequent expansion into the wider Maghreb region. A second merchant bank, the Banque d'Affaires de Tunisie, opened in 1998, with the Société Tunisienne de Banque as the major shareholder, together with the BDET and banks from Morocco, the United Kingdom, Spain, Italy and France. The new merchant bank specialized in privatization and in the restructuring of company finances. In February the Banque Internationale Arabe de Tunisie raised US $40m. through the issue of global depository receipts. This was Tunisia's first international equity offering.

The availability of local savings for investment has meant, firstly, that the need for foreign borrowings to finance development projects has been greatly reduced; and, secondly, that the local financial markets have expanded and become more sophisticated to meet the demand for loans. To encourage domestic savings, interest rates on deposits and loans were raised in September 1977, and the official discount rate increased from 5% to 5.75%. Overall, national savings accounted for about 80% of total investment in the fifth Development Plan (1977–81), compared with a projected 65%. Since the early 1980s, the Government has been studying various proposals for tax reform, and in July 1988 64 taxes on turnover, production and consumer goods were replaced by a new value-added tax (VAT), which by 1991 was yielding 30% of tax receipts. However, with total tax receipts still only equivalent to 2.4% of GDP, the Government, in late 1991, introduced measures to increase the tax base, including a strengthened inspectorate. Other sources of government income include petroleum and gas revenues, profits from state monopolies and, increasingly, the proceeds from the privatization of state assets. In June 1994 the Government issued five- and 10-year treasury bonds which were open to the public for the first time. In 1996 the scope of VAT was extended to cover all retail activities (including those of small shops), and steps were taken to strengthen the tax inspection and enforcement systems. VAT and other indirect taxes were expected to play an increasingly important revenue-raising role as customs tariffs were progressively reduced under the terms of Tunisia's trade agreement with the EU (see External Trade, below).

In November 1994 a law was introduced to convert the state-run Tunis stock exchange, the Bourse des Valeurs Mobilières, (then dealing actively in only 20 companies' shares) into a private company, regulated by an independent monitoring body. The creation of an independently administered exchange with streamlined trading procedures was expected to facilitate the Government's privatization programme. Shares in various transport, hotel and industrial companies were initially scheduled for sale in the second half of 1995 at the rate of one flotation per month, but this timetable was modified when the market showed signs of over-rapid expansion. Regulations were introduced in mid-1995 to make it easier for foreign investors to do business on the Tunis stock exchange, with the proviso that no quoted company's share capital could be more than 10% foreign-owned without the permission of the Tunisian authorities. (The investment regulations allowed foreign ownership of non-quoted companies' shares to reach 30% before permission was required.) In 1997 the limit on foreign ownership of companies was raised to 49.9%. Yet, despite government efforts to stimulate the stock market, by the end of 1998 fewer then 40 firms were listed, many of them banks, and few foreign investors had shown interest. Activity increased during the early part of 1999, partly as a result of indications of an acceleration in the privatization programme. The Government hopes to increase the number of companies listed on the exchange to 100 by the end of 2000.

Tunisia made use of the Eurocurrency market for the first time in 1977 and obtained a US $125m. loan to finance industrial development. In early 1979 a $100m. loan was arranged, through a consortium of international banks, to finance the Tunisian section of the Algeria-Italy gas pipeline. In early 1981 the Compagnie Financière Immobilière et Touristique was able to raise $25m. for seven years at 0.5% above the London inter-bank offered rate—a very low spread for a developing country. During the period of the 1982–86 Development Plan, borrowing remained at a relatively high level, although the Government managed to attract concessionary loans for development projects, especially from France and the Federal Republic of Germany. In May 1986 the Government raised $120m. on the international markets, but this proved to be the last international loan before the balance-of-payments crisis in mid-1986.

Under a medium-term IMF-sponsored programme for 1988–91, the Government committed itself to the reduction of the central government deficit, which was to be achieved by liberalizing external trade and pricing mechanisms, and by restructuring and, in some cases, 'privatizing' state enterprises. In addition, as stated above, the Government attempted to enhance its revenue base by implementing various tax reforms. In 1989 the principal objectives of the IMF's three-year extended programme, including the reduction of the central government deficit, had been, in part, achieved. As a reflection of this success, Tunisia requested that the amount of credit available in the three-year EFF be reduced from US $275m. to $183m. However, the effects of the 1991 Gulf crisis undermined adjustment efforts, and in June 1991 Tunisia became only the second country ever to request an extension of, and restoration of full access to, the IMF's EFF. This was granted, effectively extending the reform programme for a further year. In mid-1992 it was reported that the Government would not be seeking an IMF facility to replace the EFF, which had recently expired.

Following this extension, in December 1991 the World Bank approved a three-year loan of US $250m. in support of Tunisia's restructuring programme, the total cost of which was estimated at almost $400m. In March 1992 a structural adjustment loan of ECU 40m. was granted by the EC, while the balance of funds required was made available by Japan and the Arab Monetary Fund. In addition, in December 1991 the Tunisian Government took the unprecedented step of issuing treasury bills to finance its budget deficit, while in June 1992 Tunisia raised a syndicated loan of $110m. on the international market. In March 1994 a further loan of ECU 20m. was granted by the EU. The World Bank approved a loan of $280m. in 1998, bringing the total value of its loans to Tunisia during 1996–98 to $750m. World Bank funds support projects in agriculture, health, education, transport, tourism and export promotion. Under the terms of the MEDA aid programme, which became available following the signing of the Tunisia-EU association agreement in 1995, loans to Tunisia totalled ECU 380m. ($426m.) by the end of 1998. In addition, Tunisia had received a further ECU 200m. in loans from the EIB.

The Government's 1991 budget provided for a 10% rise in expenditure, to TD 4,080m., and a deficit of TD 410m., which, in the event, widened to over TD 500m. The 1992 budget envisaged an 11.4% increase in expenditure and a reduction in the deficit to TD 320m. The Five-Year Plan for 1992–96 set as a target the reduction of the budget deficit to 1.2% of GDP. The 1993 budget projected expenditure totalling TD 4,950m. Sources of revenue included TD 330m. US ($352m.) in foreign credits, to be extended by the World Bank ($149m.), Japan ($59m.), the African Development Bank ($42.6m.), France ($42.6m.), the USA ($32m.) and Italy ($27m.). The average annual inflation rate in 1987–91 was about 7%, the aim being to reduce the rate to 5% over the period 1992–96. From 8.3% in 1991, the annual rise in the consumer price index fell to 5.8% in 1992 and to 4% in 1993. The 1994 budget provided for expenditure of TD 5,515m., of which 52% was current spending and 19% was capital investment, the remaining 29% being the debt-servicing requirement. Revenue was budgeted at TD 4,312m., leaving a deficit of TD 1,203m. to be financed by government borrowing, 28% of which would come from foreign loans. Over 47% of expenditure was linked to social policy, and spending to alleviate the impact of structural economic reform on the poorer sections of society included TD 230m. in price subsidies for basic commodities. Sectoral spending allocations included TD 304m. for agricultural projects. The 1995 budget provided for total expenditure of TD 6,595m. and total revenue of TD 4,951m., leaving an overall deficit of TD 1,644m. to be financed by government borrowing. Further liberalization measures in 1995 would reduce to 15% the proportion of domestic consumer items subject to retail price control, while there would be a reduction to 9.5% in the proportion of imported goods for which import permits were required. The Government's inflation target for 1995 was 4.5%, compared with recorded inflation of 4.7% in 1994. In May 1995 statutory minimum wages were increased by 4.6%, to TD 132.9 per 40-hour week in industry and to TD 4.5 per day in agriculture. The 1996 budget provided for total expenditure of TD 7,230m. and total revenue of TD 5,235m., leaving a deficit of TD 1,995m. Inflation dropped to 3.7% from 6.3% in 1995. In the budget for 1997, the Government planned a spending increase of 10.8% to TD 8,010m. and a deficit of TD 2,546m. Actual expenditure in 1997 was higher than budgeted (totalling TD 8,200m.) and there was a significant shortfall in revenue. In the budget for 1998 projected spending was increased to TD 9,000m., with revenues forecast to rise to TD 5,700m., leading to an increase in the overall deficit to TD 3,300m. Taxation was expected to account for some 83% of total revenue. Notably, VAT was to be increased by 1%, to 18%, in order to offset the loss of customs revenue following the implementation of Tunisia's trade agreement with the EU. The budget was based on inflation at 3.8% and real GDP growth of 5.4%. The 1999 budget was based on inflation at 3.6% and real GDP growth of 6.3%. Exports of goods and services were projected to rise by 9.7%, with imports rising by only 1.4%. Total investment in the economy was to rise by 14.8% to TD 6,490m.—some 25.8% of GDP. Government spending was forecast to rise to TD 9,590m., with almost two-thirds devoted to social sectors, including training and job creation, and infrastructure. Tighter fiscal policy was expected to reduce the budget deficit to around 3% of GDP.

Tunisia's deficit on its balance of trade (see External Trade, below) was traditionally offset by earnings from tourism and remittances from Tunisians working abroad, so that the overall position on current payments was roughly in balance until 1975. In that year the fall in petroleum prices and the slump in demand for phosphates widened the visible trade gap so seriously, despite continuing good harvests, that the current balance showed a deficit of TD 227.2m., compared with TD 90.9m. in 1974. Over the next decade, the deficit rose steadily, reaching TD 1,076m. in 1984. A severe cutback on imports reduced the deficit to TD 844m. in 1985, TD 50m. in 1986 and TD 78m. in 1987. In 1988 the trade deficit increased substantially as a result of a poor harvest and low oil prices; but, partly owing to a large increase in receipts from tourism, the current account of the balance of payments recorded a surplus of TD 52m. However, in 1989 the current account registered a deficit of TD 312.5m., equivalent to 3.6% of GDP, as a result of an increase in food imports after severe drought, and in capital goods imports, owing to the recovery of foreign investment. In 1990 the current-account deficit widened to TD 580m. because of the negative impact of the Gulf crisis, which also contributed to a further large deficit, of TD 527.3m., in 1991. A deterioration in the country's terms of trade contributed to an increase in the current-account deficit to TD 662.3m. in 1992. A current-account deficit of TD 860m. in 1993 was followed by an estimated deficit of TD 839m. in 1994. The current-account deficit increased by 36.7% in 1995, according to IMF figures, representing 4.3% of GDP. However, as a result of a decline in the trade deficit, together with higher receipts from tourism and worker remittances, the current-account deficit was reduced to TD 554m. in 1996, equivalent to 2.9% of GDP. According to government figures, the current-account deficit was held at 2.9% in 1997 and was forecast to fall to 2.8% in 1998. The Government launched a 30,000m.-yen (US $295m.) placement on the Japanese bond market in early 1994 to help cover Tunisia's balance-of-payments deficit, having chosen to borrow in yen to obtain a favourable interest rate. Part of this yen borrowing was subsequently swapped into French francs. The Government returned to the Japanese bond market in February, April and September 1995 (to bring its cumulative borrowing from this source to 85,000m. yen—about $870m.) and again in October 1996 and August 1997. In September Tunisia launched its first 'Yankee bond' for $400m. In December 1995 Tunisia sought a $100m. syndicated sovereign loan on the international market, where the response was such that the amount borrowed was doubled to $200m. when the loan was finalized in the following month. A further syndicated loan of $150m. (an amount 50% higher than the Government originally asked for) was signed in September 1996. Almost 600,000 Tunisians were resident abroad in 1993, when remittances from migrant workers amounted to TD 600m. ($588m.), some 18% higher than in 1992. Workers' remittances increased from TD 696m. in 1994 to TD 712m. in 1995, TD 798m. in 1996 and TD 846m. in 1997. Some 90% of remittances come from Tunisians working in Western Europe, and 60% from France alone. Remittances grew very slightly during the first seven months of 1998 to TD 456m., compared with TD 450m. during the corresponding period of 1997.

PLANNING

It was not until 1961, when the 10-year perspective plan was formulated, that the Government laid down comprehensive plans for development. The broad lines of policy which had been put forward in the perspective plan were embodied in the first Three-Year Plan (1962–64) and then successive Four-Year Plans (1965–68, 1969–72 and 1973–76). These were followed by successive Five-Year Plans covering 1977–81, 1982–86, 1987–91 and 1992–96. The ninth Development Plan, covering 1997–2001, was approved by the Council of Ministers in June 1997.

Although Tunisia has relied to a considerable extent on petroleum to underpin economic growth, it has to plan for a future in which it is likely to be a net importer of fuel. Because of petroleum, the country's exports during the 1977–81 Development Plan period grew faster, in constant prices, than imports did—by 14.6% per year, compared with import growth of 8.9%.

The 1982–86 Plan was designed to introduce the economic adjustments necessary to prepare Tunisia for an era of reduced income from petroleum. Stringent controls were to be maintained on the external debt and the balance of payments, while non-oil exports were to be encouraged, and various incentives given to increase employment. However, most of the Plan's targets were not achieved. Growth in real GDP averaged about 3% per year, instead of the projected figure of 6% per year, and job creation totalled about 200,000, compared with the Plan's target of 270,000. Investment spending rose above the targeted level, contributing to a worrying rise in the current-account deficit and the external debt. The need for revised measures became apparent in 1986, when the collapse of international petroleum prices coincided with a poor harvest and a bad tourist season. In this situation, the Government brought forward its 1987–91 Plan, which constituted a radical attempt to restructure the economy and to reduce dependence on oil exports. The objectives of the 1987–91 Plan were more modest than those of its predecessors, with annual GDP growth targeted at 4% and job creation at 240,000, compared with total expected demand for about 345,000 jobs during the Plan period. The various structural reforms, to be implemented with the assistance of the World Bank, were intended to promote non-oil exports, which were expected to increase by 8% per year, compared with the 2% growth rate achieved during 1982–86. One of the major instruments of economic reform has been the devaluation of the dinar, which has been maintained at a rate which competes with the currencies of other Mediterranean exporters, such as Greece and Spain, and Portugal. As well as stimulating exports, the depreciation of the currency assists the tourism industry, which has become a major source of foreign exchange.

Investment was estimated to total about TD 10,400m. during the 1987–91 Development Plan, representing a substantial reduction, in real terms, compared with the 1982–86 period. A higher proportion of investment was directed into agriculture (20%, compared with 16% in the 1982–86 Plan). To compensate for reduced state investment, the Government envisaged that 52% of total investment would come from the Tunisian private sector, and also sought to attract TD 6,000m. in external investment support. The 1992–96 Plan was introduced in July 1992 and envisaged total investment of TD 17,400m., of which 52.3% would be generated by the private sector, and the creation of 320,000 jobs. Public expenditure would be focused on health, education, housing and services, with priority for investment in transport and communications; and emphasis would also be placed on regional development, particularly in western Tunisia. Also planned were further reductions in subsidies on consumer and other products; the disposal of all state assets except in strategic sectors, such as electricity generation; the elimination of price controls on manufactured goods; and the introduction of selective charges for health, education and other services. Assuming the implementation of fundamental reforms (the introduction of free-trade zones and a relaxation of exchange controls, leading to full convertibility of the Tunisian dinar), it was projected that an average GDP growth rate of 6% per year could be attained in the period 1992–96. In reality, GDP grew at about 4.5% per year over the period, and the Government is seeking to improve economic performance on all fronts in the 1997–2001 Development Plan (see below).

Since the early 1970s there has been a notable change in Tunisian policy regarding foreign private investment. The law of April 1972 provided a package of incentives to attract foreign and also domestic capital to establish manufacturing industries producing solely for export. By 1980 a total of about 250 export-orientated projects had been established under the 1972 decree, employing some 25,000 people. Companies from Germany, France, Belgium and the Netherlands predominated, with about 65% in the textile sector. In 1973 a special organization, the API, was established to centralize investment activities. Legislation was introduced in 1974 to promote investment in domestic-orientated manufacturing. In 1985 the API approved schemes with a total value of TD 504m., compared with a total of TD 583m. in 1984. Of the 1985 total, the largest single allocation (TD 142m.) was for the manufacture of construction materials, ceramics and glass. Mechanical and electrical industries received TD 123m. during that year, and food industries TD 100m. Investments receiving the API's approval created a total of 27,000 jobs in 1985, compared with nearly 30,000 in 1984. The private sector provided nearly two-thirds of the 1985 investment total, and created nearly 90% of the jobs. In August 1987 the API was merged with the Centre National d'Etudes and the Agence Foncière Industrielle. The revamped API was to conduct feasibility studies, organize industrial training schemes and establish industrial zones. In September 1990 Tunisia created an Employment and Training Bank, financed by the World Bank, to help the country's labour force to adapt to changing patterns in employment.

A revised foreign investment law, which took effect in January 1994, was designed to unify existing sectoral codes, to update legislation relating to investment and to stimulate investment in priority areas, including high-technology and export-orientated industries. Emphasis was placed on the fulfilment of broad policy objectives, such as job creation, decentralization and technology transfer. Drafting of the law began in February 1992 as a condition of Tunisia's structural adjustment loan from the World Bank. In June 1995 the Government announced that major infrastructural projects would in future be open to private-sector investment. The first areas to be opened up would be power-station and motorway construction and management. Other areas listed by the Government included water and sewerage systems; desalination plants; solid waste treatment plants and controlled dumping facilities; land reclamation and pollution control schemes; and large-scale tourism developments. In early 1996 the Government was in negotiation with the World Bank over the conditions for obtaining loans of about $250m. per year over a period of three years. The Bank advocated in particular the early implementation of 'a serious programme of privatization'; a radical reform of the banking sector to improve its competitiveness and flexibility; and the removal of many remaining bureaucratic obstacles to foreign investment in Tunisia. In July the Government drafted a list of 112 companies to be offered for privatization and adopted a target of US $500m. for sales of state-owned assets over the next three years. The World Bank subsequently announced its approval of three loans: $60m. to establish employment and training services for workers affected by economic restructuring; $38.7m. to strengthen institutions supporting private-sector industries; and $75m. to improve the competitiveness of Tunisian companies during the transition to freer trade with the EU.

In December 1996 the Government announced new measures to encourage foreign investment. The measures, to be implemented during the period 1997–2001, include allowing foreign investors to buy up to 49% of any local company without prior authorization (at present the limit is 10% for companies listed on the Tunis stock exchange and 30% for other companies); simplifying procedures for foreign investment in agricultural joint ventures; opening up engineering and technical consulting to foreign investment; and lowering interest rates on business loans and social welfare contributions by employers. The limit on foreign ownership of companies listed on the stock exchange was raised to 49.9% in 1997. Yet, despite efforts to attract foreign investors, the level of investment outside the hydrocarbons sector has proved disappointing. Foreign direct investment fell from TD 544m. in 1994 to TD 313m. in 1995 and to TD 288m. in 1996, of which only TD 92m. was in non-energy sectors. However, in early 1998 the Minister of International Co-operation and Foreign Investment reported that foreign direct investment had increased significantly in 1997, to TD 360m., of which TD 120m. was in non-energy sectors. He predicted a further rise in foreign direct investment in 1998. The Government envisaged that foreign direct investment would total US $2,300m. in 1997–2001, an average of $460m. a year. Foreign direct investment during the first quarter of 1998 was reported to have reached $88.2m., compared with $82.6m. in the corresponding period of 1997.

The 1997–2001 Development Plan has set the following economic targets. GDP is to grow by an average of 6% in real terms each year, a target which implies average annual growth of 7% in manufacturing and services and 4.3% in agriculture. The unemployment rate, at 15.5% in 1996, is to fall to 13% by 2001, while average inflation over the five-year period is targeted at 3.7%, down from 4.8% in 1992–96. The budget deficit is to be reduced to an average of 2.6% of GDP from 3.5% in 1992–96, and the current-account deficit is to narrow to 2.2% of GDP in

2001. External debt (see Foreign Aid) is to increase in absolute terms, but fall as a percentage of GDP (to 40.9%, compared with 51.1% in 1996). The investment plan envisages total spending of TD 42,000m. over the five-year period, of which the government budget will provide TD 33,775m.; the remainder is to be funded by external financing.

EXTERNAL TRADE

Tunisia's trade deficit grew steadily during the 1960s and 1970s. The deficit in 1987 totalled TD 738m., compared with TD 892m. in 1986 and TD 844m. in 1985. In 1988, as a result of severe drought and a plague of locusts, the cost of imports rose by 26.2% (with food imports up by 53% compared with 1987) and the trade deficit increased to TD 1,112m. (imports TD 3,167m., exports TD 2,055m.), despite a 16% rise in export revenues. The trade deficit for 1990 was TD 1,800m., which represented a 29% increase over the 1989 level. In 1991 the trade deficit narrowed to TD 1,372m., but it rose again in 1992, to TD 2,121.8m., primarily because of a rise in imports. According to World Bank estimates, the average annual growth rate of exports by value fell from 10.8% in 1965–80 to 4.8% in 1980–90, while the growth of imports showed a sharper decline, from 10.4% in 1965–80 to 1.1% in 1980–90. Exports in 1990 covered only 64% of imports, compared with 67% in 1989. The ratio of exports to imports has remained close to 60% for most of the period since 1960.

Petroleum and its derivatives were the main source of export earnings from the mid-1970s to the mid-1980s. However, the slump in oil prices in 1986 caused export earnings from petroleum to fall from TD 604m. in 1985 to TD 340m. in 1986. Oil was overtaken as the largest export, in terms of value, by textiles, worth TD 389m. in 1986, compared with TD 283m. in 1985. In 1987 oil prices recovered and Tunisian export earnings from petroleum accordingly increased to TD 418m., although they declined to TD 331m. in 1988. Exports of crude petroleum were worth a total of TD 506m. in 1989, TD 451m. in 1990, and TD 411m. in 1991. Meanwhile, exports of textiles continued to grow, earning TD 511m. in 1987, rising to TD 1,325m. in 1991. Other major exports include agricultural products (such as seafood, olive oil, dates, citrus fruits and vegetables), leather goods and phosphates.

Tunisia's main imports are machinery, raw cotton and cotton yarn, chemicals and related products, food and live animals, crude petroleum (grades not produced locally) and petroleum products, clothing and accessories, iron and steel, and cereals and cereal preparations. In 1986 imports of capital goods were worth TD 505m., while food imports cost TD 288m. Semi-finished products cost TD 557m. in 1986, and energy imports TD 199m., a substantial reduction from TD 308m. in 1985. In 1987 total imports rose slightly, to TD 2,509m., compared with TD 2,308m. in 1986. The value of total imports increased to TD 3,167m. in 1988, to TD 4,151m. in 1989, to TD 4,852m. in 1990 and to TD 4,789m. in 1991.

Under an agreement reached with the EC in January 1976, the import levy on Tunisian olive oil was abolished and tariffs on all other Tunisian agricultural products imported into EC countries were lowered. Nevertheless, Tunisia was disappointed with the way in which the agreement was implemented, in particular with delays in lifting restrictions on imports of olive oil. In June 1977 the EC quota of textiles and clothing imports was reduced. This measure severely affected the Tunisian textile and clothing industries, although Tunisia did not, in fact, fulfil its EC quotas in 1978, as a result of a two-month strike in the industry early in the year. Nevertheless, negotiations on this issue continued into 1979, and in March Tunisia signed an agreement, under pressure from the EC, to limit its textile exports to EC countries in 1979 and 1980. In return, Tunisia sought a five-year freeze on its obligations to eliminate tariff barriers relating to goods imported from the EC. Tunisia registered its anxiety about the possible consequences of the entry of Spain and Portugal into the EC in January 1986, as the two countries are Tunisia's main agricultural competitors. In mid-1985 the European Commission announced a plan to guarantee Tunisian exports to the EC at levels prevailing in the early 1980s. In December 1990 Tunisia was one of the states to benefit from a new 'horizontal' trade and co-operation agreement between the EC and Mediterranean non-Community countries. In September 1990 Tunisia had become a contracting party to the General Agreement on Tariffs and Trade (GATT), in a move designed to increase exports to foreign markets.

In 1995 Tunisia exported goods to the value of US $5,474.6m. (19.4% up on the 1994 total) and imported goods to the value of $7,903.1m. (21.9% more than in 1994), leaving a visible trade deficit of $2,428.5m. (27.9% higher than in 1994). The 1995 import total was boosted by increased imports of foodstuffs (primarily as a result of Tunisia's continuing drought), chemicals and related products, and basic manufactures. The export total was improved by substantial increases in earnings from machinery and transport equipment, clothing and accessories, and chemicals and related products, which rose by 31.2%, 26.2% and 23.4%, respectively, compared to 1994. Exports of agricultural products declined markedly. The sectoral shares of 1995 export earnings were textiles and leather 47.5%; chemicals and related products 11.9%; machinery and transport equipment 9.4%; agriculture and food products 8.7%; and minerals, fuels and lubricants 8.5%. Of Tunisia's three largest trading partners, France had a surplus of $488.2m. in 1995 (exports to Tunisia $2,024.6m., imports from Tunisia $1,536.4m.); Italy had a surplus of $187.6m. (exports $1,209.0m., imports $1,021.4m.); and Germany had a surplus of $132.7m. (exports $993.7m., imports $861.0m.). Overall, the EU supplied 71.5% of Tunisian imports and bought 79.0% of Tunisian exports in 1995. Trade grew strongly in 1997, with total imports rising from TD 7,543m. in 1996 to TD 8,756m. (an increase of 16.1%), while exports increased from TD 5,372m. to TD 6,148m., a rise of 14.4%). In July 1997 the Government abolished its 5% export duty and doubled the term of export licences to two years in order to stimulate exports. The Conseil Supérieur de l'Exportation was created, chaired by President Ben Ali, who stated that it was essential to reduce bureaucratic constraints on exporters. Exports were forecast to rise by an average of 13% a year to total TD 8,803m. ($7,707m.) by 2001, with textiles and leather, together with chemical and phosphate exports, increasing their share of the total and energy exports continuing to decline. Exports rose to TD 6,532m. in 1998, with imports rising to TD 9,476m. Consequently, the trade deficit widened to TD 2,944m., a rise of nearly 13% over 1997. Imports of capital goods and raw materials for the textiles industry increased significantly. Export growth was largely the result of increased sales of manufactured goods, notably textiles, but also of electrical and mechanical goods, together with shoes and leather.

In July 1995 Tunisia signed a free-trade agreement with the EU, scheduled to take effect from the start of 1996. Its main provisions were as follows. EU capital goods and semi-finished goods not manufactured in Tunisia (accounting for 12% of Tunisia's imports from the EU at that time) would be exempt from import duty from the date the agreement entered into force. EU exports of specified goods which were also manufactured in Tunisia (accounting for 28% of Tunisian imports from the EU) would be subject to the progressive elimination of import duties over a period of five years after entry into force. Duties on EU exports of goods which were deemed to be 'more sensitive' in the Tunisian economic context (accounting for 30% of Tunisian imports from the EU) would be phased out over a period of 12 years. Duties on EU exports of goods which were deemed to be 'most sensitive' (29.5% of Tunisian imports from the EU at that time) would be maintained for the first five years of the agreement before being phased out over a seven-year period. Duties on traditional handicraft and textile products (constituting 0.5% of Tunisian imports from the EU) would not be phased out under the agreement. During the 12-year transition period following the agreement's entry into force, Tunisia would have the option of reimposing import duties of up to 25% on EU exports which were considered to threaten emerging industries in Tunisia, provided that such duties did not affect more than 15% of all imports from the EU and were not maintained for more than five years. Tunisia (which already had duty-free access to the EU market for industrial goods) would benefit from a limited relaxation of EU quota and tariff restrictions on some agricultural exports, although olive oil exports to the EU remained subject to existing restrictions. Free trade in agricultural products remained a long-term objective on which the two sides agreed to reopen discussions in 2001.

The Tunisian Government expected that investment of around TD 2,200m. (60% for the restructuring and modernization of businesses and 40% for infrastructural development and other initiatives to improve the business environment) would be required during the first five years of exposure to increased competition. Detailed preparatory studies had indicated that about one-third of Tunisian industrial companies were likely to be put out of business by the new trade measures, while a further third would find the transition difficult. Under the agreement, the EU pledged to provide financial assistance to help the Tunisian economy adjust to growing competition from EU member states, including support for the Government's industrial restructuring programme (see Industry), training and the promotion of the private sector. The EU was to provide ECU 330m. (US $300m.) in loans over the period 1996–99, and by early 1998 it was reported that some ECU 250m. had already been allocated. It took more than two and a half years for all 15 EU member states to ratify the free-trade agreement, which did not come into force formally until March 1998. However, Tunisia began implementing the agreement from 1 January 1996, when import duties on EU capital goods were abolished. By the end of 1998 EU loans to Tunisia under the terms of the free-trade agreement totalled ECU 380m. with a further ECU 200m. in loans from the EIB having been disbursed.

Free-trade agreements were signed with Jordan and Egypt in 1998 and with Morocco in 1999, in the hope of boosting bilateral trade. Trade with Libya has increased in recent years, but represents only a tiny fraction of Tunisia's local external trade.

TOURISM

During 1961–72 total tourist arrivals grew at a rate of 30% annually. Tourism was the nation's principal source of foreign currency from 1968 to 1976 (when it was overtaken by petroleum). In the 1980s the number of annual tourist arrivals fluctuated wildly, owing to the effects of recession in Western European countries on the whole Mediterranean tourist industry. Tunisia has experienced difficulties in competing with other holiday destinations, such as Greece, Spain and Morocco, and foreign tourists have been deterred from visiting Tunisia by terrorist incidents and the bombing of Libya by the USA in 1986. The number of foreign visitors totalled 3.3m. in 1989 and 3.2m. in 1990. The number of tourist arrivals increased steadily thereafter, to 3.9m. in 1994, and 4.1m. in 1995. Although the number of tourist arrivals fell slightly, to 3.9m., in 1996, numbers increased to 4.3m. in 1997, mainly as a result of a rise in arrivals from Europe, and reached a record 4.72m. in 1998. Almost two-thirds of tourists came from Europe, and the remainder from other Maghreb countries. Germany is the main country of origin of tourists, followed by France, Italy and the United Kingdom. There are four main centres for tourists: Hammamet, Sousse, Djerba and Tunis. A major tourist development was built along the coast north of Sousse, and in 1998 work began on the Marina Hammamet-Sud, a new development including a 740-berth marina, hotels and commercial buildings. The BNDT promotes and finances three types of ventures: construction of new hotels; modernization of existing hotels; and other activities related to tourism, such as transport, housing and real estate. The substantial devaluation of the dinar in mid-1986 enabled the Tunisian tourist industry to compete with Mediterranean rivals. In November 1987 the Government announced a series of incentives to encourage the development of tourism in the Sahara, with the aim of attracting tourists, who generally arrive in the summer to stay at the seaside resorts, to Tunisia throughout the year. However, Saharan tourism did not grow as rapidly as expected, with tourists continuing to choose coastal resorts and making only short excursions into the Sahara. As a result, by 1997 hotels in the Saharan region had accumulated debts of TD 35m. (US $30m.). In January 1998 President Ben Ali announced a number of measures to expand tourism in the area, including the rescheduling of hotel debts and an increase in direct air connections from European cities to the regional capital, Tozeur. The 1987–91 Development Plan envisaged that tourism would overtake petroleum as the principal source of foreign exchange, providing Tunisia with an average of TD 600m. per year. In 1988 receipts from tourism amounted to about $1,300m. In 1989 receipts from tourism totalled $951m.; arrivals in 1990 declined slightly and tourist receipts in that year were $900m. Receipts from tourism were estimated at TD 950m. ($1,037m.) in 1992, up from $770m. in the previous year, and reached TD 1,114m. ($1,092m.) in 1993. In 1994 the tourism sector grew by 5.1% and accounted for one-half of all new jobs created in that year. Tourism receipts in 1994 amounted to TD 1,317m. ($1,404m.). In 1995 tourist arrivals rose by 7%, while estimated earnings from tourism increased to TD 1,323m. Tourist revenues grew from TD 1,413m. in 1996 to TD 1,540m. in 1997, an increase of 9%, and to TD 1,710m. in 1998, a rise of 10.3%. The Ministry of Tourism began implementing its own five-year plan in 1998 to improve the training of employees in the tourism sector. During 1999 the Office national du tourisme tunisien began promoting Tunisian tourism using the slogan 'quality and variety', in an attempt to attract wealthier tourists to the Saharan resorts.

FOREIGN AID

The principal sources of economic aid for Tunisia continue to be Western countries and international institutions. The World Bank Group has been the most important multilateral donor, providing loans and credits for investment in a variety of projects—including participation in the BDET and the BNDT. The African Development Bank is another large multilateral donor. Tunisia's largest bilateral donor is France, which provides annual packages of mixed credits. In August 1989 an agreement was signed, under the terms of which France agreed to extend to Tunisia three new credit lines and a grant totalling 1,060m. French francs. In August 1990 Tunisia and France renewed the financial agreement, which comprised a loan of 1,000m. French francs. Protocols signed with France in late 1993 granted Tunisia a total of more than 900m. French francs. One of the agreements, signed in November, granted 277m. French francs for exceptional balance of payments aid. Other important bilateral donors are the USA and the Gulf Arab states, although these countries have reduced lending, owing to recent budgetary constraints. In February 1991 the US Government announced its decision to reduce sharply its aid to Tunisia, owing to the country's muted support for Iraq during the Gulf crisis (1990–91). In recent years Japan has extended substantial credit to Tunisia for the purchase of Japanese goods and services. Tunisia's receipts of official development aid rose from US $178m. in 1984 to $316m. in 1988, $283m. in 1989, $393m. in 1990 and $322m. (2.5% of GNP) in 1991. Germany agreed to provide Tunisia with $33.4m. of development aid in 1994. During the second half of the 1990s Tunisia continued to obtain substantial external funds, principally from the World Bank, the EU and OECD countries. The Ministry of International Co-operation and Foreign Investment reported that 38 financial agreements had been signed in 1998, resulting in TD 1,100m. ($965m.) in foreign aid and loans. An equivalent amount was expected in 1999. The major source of assistance was the World Bank, which is currently providing some $250m. every year.

Tunisia's total foreign debt increased from US $3,526m. in 1980 to $8,475m. in 1992. As a proportion of total exports of goods and services, the cost of debt-servicing rose correspondingly, from 14.8% to 20.6%. During the period of the 1982–86 Development Plan, Tunisia's total debt increased rapidly, owing partly to the appreciation of the US dollar in the early 1980s. As a proportion of Tunisia's GNP, the country's total external debt increased from 41.6% in 1980 to 73.9% in 1987. In 1991 the ratio stood at 66.2%. At the end of 1995 Tunisia's external debt was $9,938m., while the cost of debt-servicing was equivalent to 17.0% of the value of exports of goods and services. Total foreign debt fell to $9,886m. in 1996 and was estimated at $9,418m. in 1997. Most of it was public or publicly guaranteed medium- to long-term debt. Debt-service payments totalled $1,444m. in 1996 when the debt-service ratio stood at 16.1%. Debt-service payments were estimated to have risen to $1,585m. in 1997, with the debt-service ratio increasing to 17.3%.

Directory

The Constitution

A new Constitution for the Republic of Tunisia was promulgated on 1 June 1959 and amended on 12 July 1988. Its main provisions are summarized below:

NATIONAL ASSEMBLY

Legislative power is exercised by the National Assembly, which is elected (at the same time as the President) every five years by direct universal suffrage. Every citizen who has had Tunisian nationality for at least five years and who has attained 20 years of age has the right to vote. The National Assembly shall hold two sessions every year, each session lasting not more than three months. Additional meetings may be held at the demand of the President or of a majority of the deputies.

HEAD OF STATE

The President of the Republic is both Head of State and Head of the Executive. He must be not less than 40 years of age and not more than 70. The President is elected by universal suffrage for a five-year term which is renewable twice, consecutively. The President is also the Commander-in-Chief of the army and makes both civil and military appointments. The Government may be censured by the National Assembly, in which case the President may dismiss the Assembly and hold fresh elections. If censured by the new Assembly thus elected, the Government must resign. Should the presidency fall vacant for any reason before the end of a President's term of office, the President of the National Assembly shall take charge of affairs of the state for a period of 45 to 60 days. At the end of this period, a presidential election shall be organized. The President of the National Assembly shall not be eligible as a presidential candidate.

COUNCIL OF STATE

Comprises two judicial bodies: an administrative body dealing with legal disputes between individuals and state or public bodies, and an audit office to verify the accounts of the state and submit reports.

ECONOMIC AND SOCIAL COUNCIL

Deals with economic and social planning and studies projects submitted by the National Assembly. Members are grouped in seven categories representing various sections of the community.

The Government

HEAD OF STATE

President: ZINE AL-ABIDINE BEN ALI (took office on 7 November 1987; re-elected 2 April 1989 and 20 March 1994).

COUNCIL OF MINISTERS

(September 1999)

Prime Minister: HAMED KAROUI.

Minister of National Defence: HABIB BEN YAHIA.

Minister of the Interior: ALI CHAOUCH.

Minister, Director of the Presidential Office: MUHAMMAD JEGHAM.

Minister of Justice: ABDALLAH KALLEL.

President and Legislature

PRESIDENT

At the presidential election, which took place on 20 March 1994, the sole candidate, Zine al-Abidine Ben Ali, was re-elected to the presidency with 2,987,375 votes, 99.92% of the votes cast.

ASSEMBLÉE NATIONALE

President: FOUAD MEBAZAA.

Election, 20 March 1994

Party	Votes	%	Seats
Rassemblement constitutionnel démocratique	2,768,667	97.73	144
Mouvement des démocrates socialistes	30,660	1.08	10
Mouvement de la rénovation	11,299	0.39	4
Union démocratique unioniste	9,152	0.32	3
Parti de l'unité populaire	8,391	0.30	2
Parti social libéral	1,892	0.07	0
Rassemblement socialiste progressiste	1,749	0.06	0
Independents	1,061	0.04	0
Total	2,832,871*	100.00	163†

* Excluding 8,686 spoilt ballot papers.

† Under the terms of an amendment to the electoral code adopted by the National Assembly in January 1994, 19 of the 163 seats in the National Assembly were reserved for candidates of opposition parties. These were allotted according to the proportion of votes received nationally by each party.

Political Organizations

Mouvement de l'unité populaire (MUP): Tunis; supports radical reform; split into two factions, one led by AHMAD BEN SALAH, living in exile until 1988; the other became the Parti de l'unité populaire (see below); Co-ordinator BRAHIM HAYDER.

Mouvement des démocrates socialistes (MDS): Tunis; in favour of a pluralist political system; participated in 1981 election and was officially recognized in Nov. 1983; Political Bureau of 11 mems, National Council of 60 mems, normally elected by the party Congress; Sec.-Gen. ISMAIL BOULAHYA.

Mouvement de la rénovation (MR): 6 rue Metouia, 1000 Tunis; tel. (1) 246-400; fax (1) 350-748; f. 1993; Sec.-Gen. MUHAMMAD HARMEL.

MUHAMMAD BEN KHALIFA.

Cie des Phosphates de Gafsa (CPG): Cité Bayech, Gafsa; tel. (6) 22022; telex 60007; f. 1897; production and marketing of phosphates; Pres. MUHAMMAD AL-FADHEL KHELIL.

Entreprise Tunisienne d'Activités Pétrolières (ETAP): 27 ave Kheireddine Pacha, BP 367, 1002 Tunis; tel. (1) 782-288; telex 15128; fax (1) 784-092; responsible for exploration and investment in hydrocarbons.

Office des Céréales: Ministry of Agriculture, 30 rue Alain Savary, Tunis; tel. (1) 790-351; telex 14709; fax (1) 789-573; f. 1962; responsible for the cereals industry; Chair. and Dir-Gen. A. SADDEM.

Office National des Mines: BP 215, 1080 Tunis; tel. (1) 787-366; telex 15004; fax (1) 794-016; f. 1963; mining of iron ores; research and study of mineral wealth; Pres. and Dir-Gen. ABD AR-RAHMAN TOUHAMI.

Office National des Pêches (ONP): Le Port, La Goulette, Tunis; tel. (1) 275-093; telex 12388; marine and fishing authority; Dir-Gen. L. HALAB.

Office des Terres Domaniales (OTD): 43 rue d'Iran, Tunis; tel. (1) 280-322; telex 13566; f. 1961; responsible for agricultural production and the management of state-owned lands; Dir BECHIR BEN SMAIL.

Société Générale des Industries Textiles (SOGITEX): Bir Kassaa, Ben Arous, Tunis; tel. (1) 297-100; telex 12444; responsible for the textile industry; Chair. BECHIR SAIDANE.

UTILITIES

Electricity and Gas

Société Tunisienne de l'Electricité et du Gaz (STEG): 38 rue Kemal Atatürk, BP 190, 1080 Tunis; tel.(1) 341-311; telex 14020; fax (1) 349-981; f. 1962; responsible for generation and distribution of electricity and for production of natural gas; Pres. and Gen. Man. MONCEF MOUELHI; 35 brs.

MAJOR COMPANIES

Entreprises Ali Mheni (EAM): 12 bis rue de Russie, BP 609, Tunis; tel. (1) 252-433; telex 12562; f. 1934; construction and civil engineering, public works, building; Chair. ALI MHENI; 3,500 employees.

Bata Tunisienne SA: route de Mornag, Km 7, Ben Arous, Tunis; tel. (1) 380-485; telex 12041; f. 1934; manufacture of shoes and sandals; Dir-Gen. ROGER SICCO.

Compagnie Générale des Salines de Tunisie (COTUSAL): 19 rue de Turquie, Tunis; tel. (1) 347-666; telex 15354; fax (1) 336-163; f. 1949; production of edible and industrial sea salt; Man. Dir NORBERT DE GUILLEBON.

Grands Ateliers du Nord SA: route de Mornag, GP 1 Km 12, az-Zahra Hammam-Lif, Tunis; tel. (1) 482-422; telex 13254; f. 1975; manufacture of agricultural and building equipment; sales TD 10m., cap. p.u. TD 1.4m. (1991); Pres. ABDELAZIZ GUIDARA; 1,000 employees.

Groupe Chimique Tunisien: 7 rue Royaume d'Arabie Saoudite, 1002 Tunis; tel. (1) 784-488; telex 14705; fax (1) 783-485; f. 1952; production of Phosphoric acid and fertilizers; Chair. RAFAA DKHIL.

Industries Maghrébines de l'Aluminium (IMAL): 14 rue 8612 Z.I. Charguia I, 2035 Tunis; tel. (1) 795-979; telex 15376; fax (1) 782-074; f. 1964; manufacture and distribution of aluminium products; cap. p.u. TD 450,000; Chair. MONCEF EL-HORRY; 50 employees.

Industries Mécaniques Maghrébines (IMM): Kairouan; tel. (7) 722-028; fax (7) 722-685; f. 1982; ownership 20% General Motors, 10% Isuzu Motors, 70% local investors; production of light commercial vehicles; Man. Dir TAHAR LATROUS.

Skanes Meubles: route de Sousse, 5000 Monastir; tel. (3) 61390; telex 30734; manufacture of furniture and hotel equipment, toys; Pres. AHMAD TRIMECH.

Société Industrielle de Pêches et de Conserves Alimentaires SA: ave Habib Bourguiba, Megrine-Riadh; tel. (1) 295-500; telex 12240; fish, fruit and vegetable processing and canning; Dir-Gen. ALI MABROUK.

Société Tunisienne Automobile, Financière, Immobilière et Maritime (STAFIM): 85 ave Louis Braille, 1003 Tunis; tel. (1) 785-055; fax (1) 782-467; f. 1932; sales of cars, spare parts, engines and mechanical machinery; Dir-Gen. DOMINIQUE DOUROUZE.

Tunisienne de Conserves Alimentaires (TUCAL): 15 rue Sidi Bou Mendil, Tunis; tel. (1) 241-617; manufacture and distribution of canned food products; Pres. and Gen. Man. AMOR BEN SEDRINE.

TRADE AND OTHER UNIONS

Union Générale des Etudiants de Tunisie (UGET): 11 rue d'Espagne, Tunis; f. 1953; 600 mems; Pres. MEKKI FITOURI.

Union Générale Tunisienne du Travail (UGTT): 29 place Muhammad Ali, Tunis; f. 1946 by FARHAT HACHED; affiliated to ICFTU; mems 360,000 in 23 affiliated unions; 18-member exec. bureau; Sec.-Gen. ISMAIL SAHBANI.

Union Nationale des Agriculteurs (UNA): 6 ave Habib Thameur, 1000 Tunis; tel; (1) 246-920; fax (1) 349-843; f. 1955; Pres. BACHA ABD AL-BAKI.

Union Nationale de la Femme Tunisienne (UNFT): 56 blvd Bab Benat, Tunis; tel. (1) 560-181; fax (1) 567-131; f. 1956; 100,000 mems; Pres. FAIZA KEFI; Vice-Pres. NADHIRA ERRAIES.

Union Tunisienne de l'Industrie, du Commerce et de l'Artisanat (UTICAL): 103 ave de la Liberté, Belvédère, 1002 Tunis; tel. (1) 780-366; telex 18982; fax (1) 782-143; f.1946; mems: 15 national federations and 170 syndical chambers at national levels; Pres. HEDI JILANI.

Transport

RAILWAYS

In 1997 the total length of railways was 2,170 km. A total of 30m. passengers travelled by rail in Tunisia in that year.

Société du Métro Léger de Tunis (SMLT): 60–62 ave Jean-Jaurès, BP 4, 1002 Tunis; tel. (1) 348-555; telex 14072; fax (1) 338-100; f. 1981; operates light railway system in and around Tunis (total length 53 km); Pres. and Dir-Gen. MONCEF KAFSI.

Société Nationale des Chemins de Fer Tunisiens (SNCFT): 67 ave Farhat Hached, 1001 Tunis; tel. (1) 249-999; telex 14019; fax (1) 344-045; f. 1956; state org. controlling all Tunisian railways; Pres. and Dir-Gen. ALI CHEIKH KHALFALLAH.

ROADS

In 1996 there were an estimated 23,100 km of roads. Of these, 6,240 km were main roads and 7,900 km secondary roads.

Société Nationale des Transports (SNT): 1 ave Habib Bourguiba, BP 660, 1025 Tunis; tel. (1) 259-422; telex 15196; fax (1) 342-727; f. 1963; operates 166 local bus routes with 906 buses; Chair. and Man. Dir CHEDLY HAJRI; Gen. Man. HASSINE HASSANI.

Société Nationale de Transport Interurbain (SNTRI): ave Muhammad V, BP 40, Belvédère, 1002 Tunis; tel. (1) 784-433; telex 18335; fax (1) 786-605; f. 1981; Dir-Gen. SLAHEDDINE MZABI.

There are 12 **Sociétés Régionales des Transports**, responsible for road transport, operating in different regions in Tunisia.

SHIPPING

Tunisia has seven major ports: Tunis-La Goulette, Radès, Bizerta, Sousse, Sfax, Gabès and Zarzis. There is a special petroleum port at La Skhirra.

Office de la Marine Marchande et des Ports: Bâtiment Administratif, Port de la Goulette, 2060 La Goulette; tel. (1) 735-300; telex 15386; fax (1) 735-812; maritime port administration; Pres. and Dir-Gen. HICHEM LAJNEF.

Cie Générale Maritime: Résidence Alain Savary, Bloc D7, Apt 74, 1003 Tunis; tel. and fax (1) 711-475; Chair. MOUFID CHIHEB ESSEFI.

Cie Méditerranéene de Navigation: Immeuble BRKD, Tour C, 45ème étage, rue de la Monnaie, Tunis; tel. (1) 331-544; fax (1) 332-124.

Cie Tunisienne de Navigation SA (CTN): 5 ave Dag Hammarskjoeld, BP 40, 1001 Tunis; tel. (1) 341-777; telex 14202; fax (1) 350-976; f. 1959; state-owned; brs at Bizerta, Gabès, La Skhirra, La Goulette, Radès, Sfax and Sousse; Chair. M. YONSAA.

Gabès Chimie Transport: Tunis; tel. (1) 283-174; telex 13323; fax (1) 787-821; transportation of chemicals; fleet of 3 chemical tankers; Chair. HAFEDH EL-MOKHTAR.

Gabès Marine Tankers: Immeuble SETCAR, route de Sousse, km 13, 2034 Tunis; tel. (1) 445-644; fax (1) 454-650; Chair. FÉRID ABBES.

Gas Marine: Immeuble SETCAR, route de Sousse, km 13, 2034 Ez-Zahra; tel. (1) 454-644; fax (1) 454-650; Chair. HAMMADI ABBES.

Hannibal Marine Tankers: 10 rue 8161, Cité Olympique, 1003 Tunis; tel. (1) 807-032; fax (1) 773-805; Gen. Man. AMEUR MAHJOUB.

Société Tunisienne de Navigation Maritime (PETRONAV): Immeuble Saâdi, BP 85, 2080 Ariana; tel. (1) 861-125; fax (1) 861-780; Chair. HICHEM KHATTECH.

SONOTRAK: ave Mohamed Hédi Khafacha, Gare Maritime de Kerkenna, 3000 Sfax; tel. (4) 222-216; fax (4) 298-496; Chair. MUSTAPHA JABEUR.

Tunisian Shipping Transport Co: 9 rue Amilcar, 1001 Tunis; tel. (1) 346-766; fax (1) 345-545; Chair. ABDELHAMID DOUIK.

CIVIL AVIATION

There are international airports at Tunis-Carthage, Sfax, Djerba, Monastir, Tabarka, Gafsa and Tozeur.

Office de l'Aviation Civile et des Aéroports: BP 137, Aéroport International de Tunis-Carthage, 1080 Tunis; tel. (1) 754-000; telex 13809; fax (1) 755-133; f. 1970; air traffic control and airport administration; Pres. and Dir-Gen. HABIB ALLEGUE.

Nouvelair Tunisie: Zone Touristique DKHILA-5065 Skanès-Monastir; tel. (3) 520-600; fax (3) 520-650; f. 1989 as Air Liberté Tunisie; name changed as above in 1995; Tunisian charter co; flights from Tunis, Djerba and Monastir airports to Scandinavia and other European countries; Chair. AZIZ MILAD; Gen. Man. MOHSEN NASRA.

Tuninter: BP 1080, Immeuble Securas ZI Charguia 11, 1080 Tunis; tel. (1) 701-717; fax (1) 712-193; e-mail tuninter@mail.gnet.tn; f. 1992; Tunisian charter co; Man. Dir ABDERRAZAK OUERTANI.

TunisAir (Société Tunisienne de l'Air): blvd du 7 novembre, 2035 Tunis; tel. (1) 700-100; telex 15283; fax (1) 700-897; internet http://www.tunisair.com.tn; f. 1948; 45.2% govt-owned; 20% of assets privatized in 1995; flights to Africa, Europe and the Middle East; Pres. and Dir-Gen. ADELMALEK LARIF.

Tunisavia (Société de Transports, Services et Travaux Aériens): Immeuble Saadi Spric, Tour CD, 1082 al-Menzah, Tunis; tel. (1) 717-600; telex 13121; fax (1) 718-100; f. 1974; helicopter and charter operator; Pres. AZIZ MILAD; Man. Dir JILANI BENM'BAREK.

Tourism

The main tourist attractions are the magnificent sandy beaches, Moorish architecture and remains of the Roman Empire. Tunisia contains the site of the ancient Phoenician city of Carthage. Tourism, a principal source of foreign exchange, has expanded rapidly, following extensive government investment in hotels, improved roads and other facilities. The number of hotel beds increased from 71,529 in 1980 to 180,000 in 1998. In 1997 foreign tourist arrivals totalled 4.3m. (compared with 3.9m. in 1996). Receipts from tourism in 1998 totalled 1,700m. dinars.

Office National du Tourisme Tunisien: 1 ave Muhammad V, 1001 Tunis; tel. (1) 341-077; fax (1) 350-997; e-mail info@tourism tunisia.com; internet http://www.tourismtunisia.com; f. 1958; Dir-Gen. FAKHREDDINE MESSAI.

Defence

Chief of Staff of the Army: Gen. MUHAMMAD SAID AL-KATEB.

Chief of Staff of the Navy: Adm. HABIB FEDHILA.

Chief of Staff of the Air Force: Gen. RIDHA ATTAR.

Defence Budget (1998): 398m. dinars (US $340m.).

Military Service: 1 year (selective).

Total Armed Forces (August 1998): 35,000 (army 27,000; navy 4,500; air force 3,500).

Paramilitary Forces (August 1998): 12,000 National Guard).

Education

Education is compulsory in Tunisia for a period of nine years between the ages of six and 16. Primary education begins at six years of age and normally lasts for six years. Secondary education begins at 12 years of age and lasts for seven years, comprising a first cycle of three years and a second cycle of four years. In 1996 the total enrolment at primary and secondary schools was equivalent to 89% of the school-age population (91% of boys; 87% of girls). In that year an estimated 96% of children in the primary age-group (97% of boys; 95% of girls) were enrolled at primary schools; enrolment at secondary schools included 66% of children in the relevant age-group (67% of boys; 65% of girls). Proposed administrative budget expenditure on education was 1,159.9m. dinars in 1996, representing 18.7% of total government spending.

Arabic is the first language of instruction in primary and secondary schools, but French is also used. French is used almost exclusively in higher education. The University of Tunis was opened in 1959/60. In 1988 the university was divided into separate institu-

tions: one for science, the other for arts. It has 54 faculties and institutes. In 1986 two new universities were opened, at Monastir and Sfax. In 1996/97 a total of 121,787 students were enrolled at universities in Tunisia. Adult illiteracy averaged 62.0% (males 48.9%; females 75.2%) in 1975, but, according to UNESCO estimates, the rate declined to 33.3% (males 21.4%; females 45.4%) in 1995.

TURKEY

Physical and Social Geography

W. B. FISHER

Turkey is, in a remarkable sense, passage land between Europe and Asia, boasting land frontiers with Greece, Bulgaria, Armenia, Georgia, the Nakhichevan Autonomous Republic (part of Azerbaijan), Iran, Iraq and Syria. The west, the richest and most densely populated part of Turkey, looks towards the Aegean and Mediterranean seas and is very conscious of its links with Europe. However, in culture, racial origins and ways of life, there are frequent reminders of Turkey's geographical situation primarily as a part of Asia.

Turkey consists essentially of the large peninsula of Asia Minor, which has strongly defined natural limits; sea on three sides (the Black Sea to the north, the Aegean to the west, and the Mediterranean to the south), and high mountain ranges on the fourth (eastern) side. The small region of European Turkey, containing the cities of İstanbul (Constantinople) and Edirne (Adrianople), is, on the other hand, defined by a purely artificial frontier, the exact position of which has varied considerably since the 19th century, according to the fluctuating fortunes and prestige of Turkey itself. Another small territory, the Hatay, centred on İskenderun (Alexandretta) and lying as an enclave in Syrian territory, was acquired as part of a diplomatic bargain in 1939.

PHYSICAL FEATURES

The geological structure of Turkey is extremely complicated, and rocks of almost all ages occur, from the most ancient to most recent. Broadly speaking, Turkey consists of a number of old plateau blocks, against which masses of younger rock series have been squeezed to form fold mountain ranges of varying size. As there were several of these plateau blocks, rather than just one, the fold mountains run in many different directions, with considerable irregularity, and hence no simple pattern can be discerned—instead, one mountain range gives place to another abruptly, and we can pass suddenly from highland to plain or plateau.

In general outline Turkey consists of a ring of mountains enclosing a series of inland plateaux, with the highest mountains to the east, close to Armenia and Iran. Mount Ararat is the highest peak in Turkey, reaching 5,165 m, and there are neighbouring peaks almost as high. In the west the average altitude of the hills is distinctly lower, though the highest peak (Mount Erciyas or Argaeus) is over 3,900 m. The irregular topography of Turkey has given rise to many lakes, some salt and some fresh, and generally more numerous than elsewhere in the Middle East. The largest, Lake Van, covers nearly 4,000 sq km (1,100 sq miles).

Two other features may be mentioned. Large areas of the east and some parts of the centre of Asia Minor have been covered in sheets of lava which are often of such recent occurrence that soil has not yet been formed—consequently wide expanses are sterile and uninhabited. Secondly, in the north and west, cracking and disturbance of the rocks has taken place on an enormous scale. The long, indented coast of the Aegean Sea, with its numerous oddly shaped islands and estuaries, is due to cracking in two directions, which has split the land into detached blocks of roughly rectangular shape. Often the lower parts have sunk and been drowned by the sea. The Bosphorus and Dardanelles owe their origin to this faulting action, and the whole of the Black Sea coast is due to subsidence along a great series of fissures. Movement and adjustment along these cracks has by no means ceased, so that at the present day earthquakes are frequent in the north and west of Turkey.

Because of the presence of mountain ranges close to the coast, and the great height of the interior plateaux (varying from 800 m to 2,000 m), Turkey has special climatic conditions, characterized by great extremes of temperature and rainfall, with wide variation from one district to another. In winter, conditions are severe in most areas, except for those lying close to sea-level. Temperatures of −30°C to −40°C can occur in the east, and snow lies there for as many as 120 days each year. The west has frost on most nights of December and January, and (again apart from the coastal zone) has an average winter temperature below 1°C. In summer, however, temperatures over most of Turkey exceed 30°C, with 43°C in the south-east. There can hence be enormous seasonal variations of temperature—sometimes over 50°C, among the widest in the world.

Rainfall, too, is remarkably variable. Along the eastern Black Sea coast, towards the Georgian frontier, over 2,500 mm (100 ins) fall annually; but elsewhere, amounts are very much smaller. Parts of the central plateau, being shut off by mountains from the influence of sea winds, are arid, with annual totals of under 250 mm, and expanses of salt steppe and desert are frequent. Like Iran, Turkey also has a 'dead heart', and the main towns of Anatolia, including Ankara, the capital, are placed away from the centre and close to the hills, where rainfall tends to be greater and water supplies better.

It is necessary to emphasize the contrast that exists between the Aegean coastlands, which, climatically, are by far the most favoured regions of Turkey, and the rest of the country. Round the Aegean, winters are mild and fairly rainy, and the summers hot, but tempered by a persistent northerly wind, the Meltemi, or Etesian wind, which is of great value in ripening fruit, especially figs and sultana grapes.

ECONOMIC LIFE

The variety of geographical conditions within Turkey has led to uneven development, intensified by poor communications, due to the broken nature of the topography. Roads are relatively few, railways slow and often circuitous, and whole districts—sometimes even considerable towns—are accessible only by unsurfaced track. Many rivers flow in deep gorges near their sources and either meander or are broken by cascades in their lower reaches, so that none are navigable.

Thus, we find that the west of Turkey, situated close to the Aegean Sea, is by far the most densely peopled and the most intensively developed. Since 1923, however, attempts have been made to develop the Anatolian plateau and the districts in the extreme east, which, following the expulsion and massacre of the Armenians in 1914–18, for a time supported only a very scanty population. Development in the central plateau has been aided by the exploitation of several small, but on the whole valuable, mineral deposits, and by irrigation schemes to improve agriculture. A certain degree of industrialization (mainly undertaken by state-sponsored and -owned organizations) has also grown up, based on Turkish-produced raw materials—cotton, wool, mohair, beet-sugar, olive oil and tobacco. The eastern districts present a more intractable problem, and development so far has been slower.

The considerable increase of population in recent years (an annual average of 2.2% in 1985–90 and 1.5% in 1990–98) has led to intensification of settlement and to an increase in the use of available land for cultivation. Henceforth an important task for Turkey must be to improve yields from agriculture and industry. Because of the strategic importance of the country, there has been a considerable programme of road-building, largely financed by the USA. Until recently, the absorption of Turkish labour in Western Europe (chiefly Germany) provided useful extra revenue from remittances. With the repatriation of

many of these *gastarbeiter* during the recession of the last few years, however, there have been problems of reabsorption (the returning workers have higher expectations), together with the need to find other sources of revenue.

Latterly, Turkey has experienced severe economic crises, compounded by political uncertainty and social instability. In 1980 there were severe shortages, due to rampant inflation and the inability to finance necessary imports. Inflation, however, has fluctuated since 1981, while 'black market' activities have reduced, confidence has increased, export performance has improved and, most importantly, the country has returned to civilian rule. This has allowed the start of reform of the tax system, and a limited plan for land reform. Nevertheless, social problems (in part due to widespread unemployment, low creditworthiness and the effects of military government) remain considerable handicaps, and doubts persist as to the real extent of civilian control and the ability of the Government to free itself from the legacy of the military regime. Corruption and bureaucratic inefficiency remain perennial problems.

RACE AND LANGUAGE

Racially, the bulk of the Turkish people show an inter-mixture of Mediterranean and Armenoid strains. In the western half of the country Mediterraneans and Armenoids are more or less equally represented; but further east the proportion of Armenoids steadily increases until, towards the former Soviet and Iranian borders, they become almost universal. Much of south-eastern Turkey is inhabited by Kurds, a people of Indo-European descent; estimates of their number range from 3m. to more than 8m. Turkey also has less important racial elements; there would seem to be small numbers of proto-Nordics in the north and west, and some authorities suggest a racial relationship between Galatia (the modern district of Ankara) and ancient Gaul. The Ottoman Turks were, in the main, of Turki (western Mongoloid) ancestry but, in the view of some authorities, their contribution to the ethnic stocks of Turkey was small, since they were really an invading tribal group that became an aristocracy and soon intermarried with other peoples. There are also numbers of Caucasians—particularly Circassians and Georgians—who have contributed to the racial structure of Turkey; and during 1951 a further element was added by the arrival of many thousands of Bulgarian Muslims who had been deported from their own country.

The Turkish language, which is of central Asiatic origin, is spoken over most, but by no means all, of the country. This was introduced into Turkey in Seljuq times, and was written in Arabic characters, but, as these are not really well adapted to the sound of Turkish, Roman (i.e. European) script has been compulsory since 1928. In addition, there are a number of non-Turkish languages. Kurdish is widely spoken in the south-east, along the Syrian and Iraqi frontiers; and Caucasian dialects, quite different from either Turkish or Kurdish, occur in the north-east. Greek and Armenian were once widespread but, following the deportations which began in the 1920s, both forms of speech are now current only in the city of İstanbul, where considerable numbers of Greeks and Armenians still live.

History

Revised for this edition by Alan J. Day

ANCIENT HISTORY

The most ancient written records so far found in Asia Minor date from the beginning of the second millennium BC. They are in Assyrian, and reveal the existence of Assyrian trading colonies in Cappadocia. These documents, together with a growing amount of archaeological evidence, show an important Copper Age culture in Central Anatolia in the third and early second millennia. Later in the second millennium the greater part of Asia Minor fell under the rule of the Hittites, whose empire flourished from about 1600 BC to about 1200 BC, and reached its apogee in the 14th and 13th centuries, when it became one of the dominant states of the eastern Mediterranean. After the break-up of the Hittite Empire, Asia Minor was split up among a number of dynasties and peoples—Phrygians, Cimmerians, Lydians and others—about whom not very much is known. Towards the end of the Hittite period the Greeks began to invade the Aegean coast, and entered on a long struggle with the native states that is reflected in the story of the Trojan War. Greek culture spread in western Anatolia, which was gradually incorporated into the Hellenic world. A series of political changes, of which the most important are the Persian conquest in 546 BC, the conquest of Alexander in 334 BC, and the constitution of the Roman province of Asia in 133 BC, did not impede the steady spread of Greek language and culture in the cities.

In AD 330, the Emperor Constantine inaugurated the new city of Constantinople, on the site of the old Greek trading settlement of Byzantium. This city at once became the capital of the East Roman and then of the Christian Byzantine Empire. Asia Minor was now the metropolitan province of a great empire, and grew in wealth, prosperity and importance. Under Byzantine rule Greek Christianity, already firmly established in Roman times, spread over most of the peninsula.

SELJUQS AND OTTOMANS

At the beginning of the 11th century a new conquest of Anatolia began—that of the Turks. The early history of the Turkish peoples is still obscure. Some references in the ancient biography of Alexander show them to have been established in Central Asia at the time of his conquests, and Turkish tribal confederacies played an important part in the invasions of Europe from late Roman times onwards. The name 'Turk' first appears in historical records in the sixth century AD, when Chinese annals speak of a powerful empire in Central Asia, founded by a steppe people called Tu-Kiu. It is from this state that the oldest surviving Turkish inscriptions have come. From the seventh century onwards the Central Asian Turks came into ever closer contact with the Islamic peoples of the Near East, from whom they adopted the Islamic faith and the Arabic script, and with them much of the complex civilization of Islam. From the ninth century Turks entered the service of the Caliphate in increasing numbers, and soon came to provide the bulk of its armies, its generals and, eventually, its rulers.

From the 10th century whole tribes of Turks began to migrate into Persia and Iraq, and in the 11th century, under the leadership of the family of Seljuq, the Turks were able to set up a great empire comprising most of the eastern lands of the Caliphate. The Muslim armies on the Byzantine frontier had long been predominantly Turkish, and in the course of the 11th century they began a great movement into Anatolia which resulted in the termination of Byzantine rule in most of the country and its incorporation in the Muslim Seljuq Sultanate. A Seljuq prince, Süleyman ibn Kutlumush, was sent to organize the new province, and by the end of the 12th century his successors had built up a strong Turkish monarchy in Anatolia, with its capital in Konya (the ancient Iconium). Under the rule of the Anatolian Seljuqs, which in various forms lasted until the 14th century, Anatolia gradually became a Turkish land. Masses of Turkish immigrants from further east entered the country, and a Turkish, Muslim civilization replaced Greek Christianity.

In the late 13th century the Sultanate of Konya fell into decay, and gradually gave way to a number of smaller principalities. One of these, in north-western Anatolia, was ruled by a certain Osman, or Othman, from whom the name Ottoman is derived. The Ottoman state soon embarked on a great movement of expansion, on the one hand in Anatolia, at the expense of its Turkish neighbours, on the other in the Balkans. Ottoman armies first crossed to Europe in the mid-14th century, and by

1400 they were masters of much of the Balkan peninsula as well as almost all of Anatolia. The capital was moved first from Bursa to Edirne and then, in 1453, to Constantinople, the final conquest of which from the last Byzantine emperor completed the process that had transformed a principality of frontier-warriors into a new great empire. Constantinople, called İstanbul by the Turks, remained the capital of the Ottoman Empire until 1922. The wave of conquest was by no means spent. For more than a century Ottoman arms continued to advance into Central Europe, while in 1516–17 Sultan Selim I destroyed the Mamluk Sultanate and incorporated Syria and Egypt into the Empire. During the reign of Sultan Süleyman I (1520–66), known as the Magnificent in Europe, the Ottoman Empire was at the height of its power. In three continents the Sultan held unchallenged sway over vast territories. A skilled and highly-organized bureaucracy secured for the peoples of the Empire peace, justice and prosperity; literature, scholarship and the arts flourished; and the Ottoman armies and fleets seemed to threaten the very existence of Western Christendom.

The decay of the Empire is usually dated from the death of Süleyman. In the West great changes were taking place. The Renaissance and the Reformation, the rapid development of science and technology, the emergence of strong, centralized nation states with constantly improving military techniques, the deflection of the main routes of international trade from the Mediterranean to the open seas, all combined to strengthen Turkey's Western adversaries while leaving her own resources unchanged or even diminished, and helped to relegate her into a backwater of cultural and economic stagnation. An imposing military façade for a while masked the internal decay that was rotting the Empire, but by the end of the 17th century the weakness of the Ottoman state was manifest. Then began the struggle of the powers for pickings of Turkish territory and for positions of influence in the Empire. During the 18th century it was Austria and Russia that made the main territorial advances in the Balkans and in the Black Sea area, while Britain and France were content with commercial and diplomatic privileges. In a succession of wars one province after another was lost, while internal conditions went from bad to worse. During the 19th century Britain and France began to play a more active role. British policy was generally to support the Turks against their impatient heirs. In 1854 Britain and France went to war at the side of Turkey in order to check Russian ambitions and in 1877–78 British diplomatic intervention was effective to the same end. Meanwhile the ferment of nationalist ideas had spread from the West to the subject peoples of the Empire, and one by one the Serbs, Greeks, Romanians and Bulgarians succeeded in throwing off Ottoman rule and attaining independent statehood.

The first stirrings of a new spirit among the Turks themselves, and the first serious attempts at reform, occurred during the reign of Selim III (1789–1807), and during the 19th century a series of reforming sultans and ministers worked on a programme of reform and modernization which, though it fell short of its avowed objectives, nevertheless transformed the face of the Ottoman Empire and began a process of change, the effects of which are still visible. In 1878 the reforming movement came to an abrupt end, and from that year until 1908 the Empire was subjected to the iron despotism of Abd al-Hamid II, who ruthlessly repressed every attempt at liberal thought and reform. In 1908 the secret opposition group known as the Young Turks seized power, and in a wave of revolutionary enthusiasm inaugurated a constitution, parliamentary government, and a whole series of liberal reforms. Unfortunately the Young Turks had little opportunity to follow up their promising start. First internal dissension, then foreign wars, combined to turn the Young Turk regime into a military dictatorship. In 1911 the Italians suddenly started a war against Turkey which ended with their gaining Libya and the Dodecanese Islands; in 1912–13 a Balkan alliance succeeded in wresting from the Empire most of its remaining possessions on the continent of Europe. Finally, in October 1914, Turkey entered the war on the side of the Central powers. During the reign of Abd al-Hamid, German influence had been steadily increasing in Turkey, and the process continued under the Young Turks. It was certainly helped by the growing friendship between the Western powers and Russia, which threw the Turks into the arms of the only power that seemed ready to support them against Russian designs. German officers reorganized the Turkish army; German businessmen and technicians extended their hold on the economic resources of the country, and German engineers and financiers began the construction of the famous Baghdad railway which was to provide direct rail communication between Germany and the Middle East.

The Turkish alliance was of immense military value to the Central powers. The Turkish armies, still established in Syria and Palestine, were able to offer an immediate and serious threat to the Suez Canal and to the British position in Egypt. By their dogged and successful defence of the Dardanelles they prevented effective co-operation between Russia and the Western powers. Their position as the greatest independent Muslim state and their prestige among Muslims elsewhere created a series of problems in the British and French Empires.

Despite their weakness and exhaustion after two previous wars, the Turks were able to wage a bitter defensive war against the Allies. At last, after two unsuccessful attempts, one on the Dardanelles and the other in Mesopotamia, a new British attack from Egypt and from India succeeded in expelling the Turks from Palestine, Syria, and most of Iraq. Defeated on all sides, cut off from their allies by the Salonika expedition, the Turks decided to abandon the struggle, and signed an armistice at Mudros on 30 October 1918. French, Italian and British occupation forces moved into Turkey.

For some time the victorious powers were too busy elsewhere to attend to the affairs of Turkey, and it was not until the San Remo Conference of April 1920 that the first serious attempt was made to settle the Turkish question. Meanwhile the victors were busy quarrelling among themselves. Partly, no doubt, with the idea of forestalling Italian ambitions, the British, French, and US Governments agreed to a Greek proposal for a Greek occupation of İzmir (Smyrna) and the surrounding country, and on 15 May 1919 a Greek army, under cover of Allied warships, landed there. The integrity of this move later became a cause for concern within the Allied camp, and in October the Inter-Allied Commission in İstanbul condemned it as 'unjustifiable' and as 'a violation of the terms of the Armistice'. The consequences of the invasion for Turkey were momentous. Now, it was no longer the non-Turkish subject provinces and the Ottoman superstructure of the Turkish nation that were threatened, but the Turkish homeland itself. Moreover, the Greeks, unlike the Western Allies, showed that they intended to stay, and that they were aiming at nothing less than the incorporation of the territories they occupied into the Greek kingdom. The Turkish reaction to this danger was vigorous and immediate. The Nationalist movement, hitherto limited to a small class of intellectuals, became the mass instrument of Turkish determination to preserve the integrity and independence of the homeland. A new leader appeared to organize their victory.

THE RISE OF ATATÜRK

Mustafa Kemal, surnamed Atatürk in 1934, was born in Salonika, then an Ottoman city, in 1880. After a promising career as a regular army officer, he achieved his first active command in Libya in 1911, and thereafter fought with distinction in the successive wars in which his country was involved. After his brilliant conduct of the defence of Gallipoli, he fought on various fronts against the Allies, and at the time of the Armistice held a command on the Syrian front. A month later he returned to İstanbul, and at once began to seek ways and means of getting to Anatolia to organize national resistance. At length he was successful, and on 19 May 1919—four days after the Greek landing in İzmir—he arrived at Samsun, on the Black Sea coast, ostensibly in order to supervise the disbanding of the remaining Turkish forces. Instead he set to work at once on the double task of organizing a national movement and raising a national army.

Meanwhile the Allied powers were at last completing their arrangements for the obsequies of the Turkish Empire, which had long been known as 'the Sick Man of Europe'. After a series of conferences, a treaty was drawn up and signed by the Allied representatives and those of the Sultan's Government at Sèvres, on 10 August 1920. The Treaty of Sèvres was very harsh—far harsher than that imposed on Germany. The Arab provinces were to be placed under British and French Mandates, to

prepare them for eventual independence. In Anatolia, Armenian and Kurdish states were to be set up in the east, the south was to be divided between France and Italy, and a truncated Turkish Sultanate confined to the interior. The Straits were to be demilitarized and placed under Allied administration, with a Turkish İstanbul surrounded by Allied forces. The rest of European Turkey was to be ceded to Greece, while the İzmir district was to be under 'Ottoman sovereignty and Greek administration'.

This treaty was, however, never implemented. While the Allies were imposing their terms on the Sultan and his Government in İstanbul, a new Turkish state was rising in the interior of Anatolia, based on the rejection of the treaty and the principles on which it was founded. On 23 July 1919 Mustafa Kemal and his associates convened the first Nationalist congress in Erzurum, and drew up a national programme. A second congress, held in September, was attended by delegates from all over the country. An Executive Committee, presided over by Kemal, was formed, and chose Ankara, then a minor provincial town, as its headquarters. Ankara soon became the effective capital of the Nationalist movement and forces. It was there that they issued the famous National Pact, the declaration that laid down the basic programme of the Kemalist movement, renouncing the Empire and the domination of the non-Turkish provinces, but demanding the total and unconditional independence of all areas inhabited by Turks. This declaration won immediate support, and on 28 January 1920 was approved even by the legal Ottoman Parliament sitting in İstanbul. The growth of the Nationalist movement in İstanbul alarmed the Allies, and on 16 March British forces entered the Turkish part of the city and arrested and deported many Nationalist leaders. Despite this setback, followed by a new anti-Nationalist campaign on the part of the Sultan and his political and religious advisers, the Kemalists continued to advance. On 19 March Kemal ordered general elections, and at the end of April a National Assembly of 350 deputies met in Ankara and voted the National Pact. The Sultan and his Government were declared deposed, a provisional constitution promulgated, and a government set up with Mustafa Kemal as President.

There remained the military task of expelling the invaders. The Greco-Turkish war falls into three stages, covering roughly the campaigns of 1920, 1921 and 1922. In the first campaign the Nationalists, hopelessly outmatched in numbers and material, were badly defeated, and the Greeks advanced far into Anatolia. Turkish resistance was, however, strong enough to impress the Allies, who, for the first time, accorded a certain limited recognition to the Nationalist Government and proclaimed their neutrality in the Greco-Turkish war. The second campaign began with Greek successes, but the Turks rallied and defeated the invaders first at İnönü—from which İsmet Pasha, who commanded the Turkish forces there, later took his surname—and then, on 24 August 1921, in a major battle on the Sakarya river, where the Turkish forces were under the personal command of Mustafa Kemal. This victory considerably strengthened the Nationalists, who were now generally realized to be the effective Government of Turkey. The French and Italians withdrew from the areas of Anatolia assigned to them, and made terms with the new Government. The Soviets, now established on Turkey's eastern frontier, had already done so at the beginning of the year.

A period of waiting and reorganization followed, during which the morale of the Greek armies was adversely affected by political changes in Greece. In August 1922 the third and final phase of the war of independence began. The Turkish Army drove the Greeks back to the Aegean, and on 9 September reoccupied İzmir. Mustafa Kemal now prepared to cross to Thrace. To do so he had to cross the Straits, still under Allied occupation. The French and Italian contingents withdrew, and, after a menacing pause, the British followed. On 11 October an armistice was signed at Mudanya, whereby the Allied Governments agreed to the restoration of Turkish sovereignty in Eastern Thrace. In November the Sultan's Cabinet resigned, and the Sultan himself went into exile. Turkey once more had only one Government, and İstanbul, the ancient seat of empire, became a provincial city, ruled by a governor appointed from Ankara.

The peace conference opened in November 1922. After many months of argument the treaty was finally signed on 24 July 1923. It recognized complete and undivided Turkish sovereignty and the abolition of the last vestiges of foreign privilege. The only reservation related to the demilitarization of the Straits, which were not to be fortified without the consent of the powers. This consent was given at the Montreux Conference in 1936.

THE TURKISH REPUBLIC

The military task was completed, and the demands formulated in the National Pact had been embodied in an international treaty. There remained the greater task of rebuilding the ruins of long years of war and revolution—and of remedying those elements of weakness in the Turkish state and society that had brought Turkey to the verge of extinction. Mustafa Kemal saw the solution of Turkey's problems in a process of Westernization—in the integration of Turkey, on a basis of equality, in the modern Western world. To do this it was necessary to change the very basis of society in Turkey, and to suppress, ruthlessly if need be, the opposition that was bound to come from the entrenched forces of the old order. Between 1922 and 1938, the year of his death, Kemal carried through a series of far-reaching reforms.

The first changes were political. After the deposition of Sultan Vahdeddin in November 1922, a brief experiment was made with a purely religious sovereignty, and Abd al-Mejid was proclaimed as Caliph but not Sultan. The experiment was not successful. Abd al-Mejid followed his predecessor into exile, and on 29 October 1923 Turkey was declared a Republic, with Kemal as President. The Kemal regime was effectively a dictatorship—though without the violence and oppression normally associated with that word in Europe. A single party—the Cumhuriyet Halk Partisi (CHP—Republican People's Party)—formed the main instrument for the enforcement of government policy. The Constitution of 20 April 1924 provided for an elected parliament which was the repository of sovereign power. Executive power was to be exercised by the President and a cabinet chosen by him.

The next object of attack was the religious hierarchy already weakened by the removal of the Sultan-Caliph. In a series of edicts the Ministry of Religious Affairs was abolished, the religious orders disbanded, religious property sequestrated and religious instruction forbidden. With the religious leaders in retreat, the attack on the old social order began. Certainly the most striking reforms were the abolition of the fez and the Arabic alphabet, and their replacement by the hat and the Latin alphabet. But these were probably less important in the long run than the abrogation of the old legal system and the introduction of new civil and criminal codes of law adapted from Europe. In 1928 Islam itself was disestablished, and the Constitution amended to make Turkey a secular state.

Not the least of the problems that faced Mustafa Kemal was the economic one. Turkey needed capital. Rather than risk the independence of Turkey by inviting in foreign capital at a time of weakness, Kemal adopted the principle of *étatisme*, and made it one of the cardinal doctrines of his regime. From 1923 to 1933 the State's main achievement was in railway construction, nearly doubling the length of line in that period. At the same time efforts were made towards establishing other industries. While often wasteful and inefficient, state-sponsored industry was probably the only form of development possible at the time without recourse to foreign aid. The progress achieved stood Turkey in good stead in the critical years that were to follow.

The foreign policy of the Republic was, for a long time, one of strict non-involvement in foreign disputes, and the maintenance of friendly relations with as many powers as possible. In 1935–36, however, Turkey co-operated loyally in sanctions against Italy, and thereafter the growing threat of German, and more especially Italian, aggression led to closer links with the West. In 1938 steps were taken to strengthen economic links between Turkey and the United Kingdom. A British credit of £16m. was granted to Turkey, and a number of contracts given to British firms by Turkey.

The establishment of the Republic also put an end to the prospect of Kurdish independence offered by the Treaty of Sèvres. The Kurds were opposed to Kemal's secularist and nationalist policies and in 1925 rose up in revolt after the abolition of the Caliphate. They were ruthlessly crushed. A more nationalist uprising in 1930 and a further revolt against the repressive actions taken by the Government were also

suppressed. The Kurdish provinces remained rigorously policed, garrisons were established in larger towns and Kurdish leaders were exiled. The Kurdish language was made illegal and the Government refused to recognize any aspect of the Kurds' separate ethnic identity, calling them 'mountain Turks'.

The death of Kemal Atatürk in November 1938 was a great shock to Turkey. He was succeeded as President by İsmet İnönü, who announced his intention of maintaining and carrying on the work of his predecessor. The new President was soon called upon to guide his country through a very difficult time. As early as 12 May 1939 a joint Anglo-Turkish declaration was issued, stating that 'the British and Turkish Governments, in the event of an act of aggression leading to war in the Mediterranean area, would co-operate effectively and lend each other all the aid and assistance in their power'. This prepared the way for the formal Anglo-French-Turkish Treaty of Alliance, signed on 19 October. It had been hoped that this Treaty would be complemented by a parallel treaty with the USSR, but the equivocal attitude of the Soviet Government, followed by the Stalin-Hitler Agreement of August 1939, made this impossible, and the Turks proceeded with the Western alliance in the face of clearly expressed Soviet disapproval. They protected themselves, however, by Protocol II of the treaty, stipulating that nothing in the treaty should bind them to any action likely to involve them in war with the USSR.

TURKEY DURING THE SECOND WORLD WAR

The fall of France, the hostile attitude of the Soviet Government, and the extension of German power over most of Europe led the Turkish Government to the conclusion that nothing would be gained by provoking an almost certain German conquest. While continuing to recognize the Alliance, therefore, they invoked Protocol II as a reason for remaining neutral, and in June 1941, when German expansion in the Balkans had brought the German armies within 100 miles of İstanbul, the Turks further protected themselves by signing a friendship and trade agreement with Germany, in which, however, they stipulated that Turkey would maintain her treaty obligations to Britain.

The German attack on the USSR, and the consequent entry of that country into the Grand Alliance, brought an important change to the situation, and the Western powers increased their pressure on Turkey to enter the war. The main consideration holding Turkey back from active participation in the war was mistrust of the USSR, and the widespread feeling that Nazi conquest and Soviet 'liberation' were equally to be feared. While stopping short of actual belligerency, however, the Turks, especially after 1942, entered into closer economic and military relations with the West and aided the Allied cause in a number of ways. In August 1944 they broke off diplomatic relations with Germany, and on 23 February 1945 declared war on Germany in order to comply with the formalities of entry to the United Nations (UN) Conference in San Francisco.

The war years subjected Turkey to severe economic strains. These, and the dangers of armed neutrality in a world at war, resulted in the imposition of martial law, of closer police surveillance, and of a generally more authoritarian form of government. And then, between 1945 and 1950, came a further series of changes, no less remarkable than the great reforms of Atatürk. When the Charter of the UN was introduced for ratification in the Turkish Parliament in 1945, a group of members, led by Celâl Bayar, Adnan Menderes, Fuad Köprülü and Refik Koraltan, tabled a motion suggesting a series of reforms in the law and the Constitution which would effectively ensure inside Turkey those liberties to which the Turkish Government was giving its theoretical approval in the Charter. The motion was rejected by the Government, and its sponsors were forced to leave the party. In November, however, under pressure of a by now active and informed public opinion, President İnönü announced the end of the single-party system, and in January 1946 the opposition leaders registered the new Democratic Party.

TURKEY UNDER THE DEMOCRATIC PARTY

In July 1946 new elections gave the Democrat opposition 70 out of 416 parliamentary seats and there can be little doubt that completely free elections would have given them many more. During the years that followed, the breach in the dictatorship grew ever wider, and a series of changes in both law and practice ensured the growth of democratic liberties. Freedom of the press and of association were extended, martial law was ended, and on 15 February 1950 a new electoral law was approved, guaranteeing free and fair elections. In May 1950 a new general election was held, in which the Democrats won an overwhelming victory. Celâl Bayar became President, and a new Cabinet was formed, with Adnan Menderes as Prime Minister and Fuad Köprülü as Foreign Minister. The new regime adopted a more liberal economic policy, involving the partial abandonment of *étatisme* and the encouragement of private enterprise, both Turkish and foreign. For a while, the stability and progress of the Republic seemed to be threatened by the growing activities of groups of religious fanatics, whose programme appeared to require little less than the abrogation of all the reforms achieved by the Turkish revolution. After an attempt on the life of the liberal journalist Ahmet Emin Yalman in November 1952, the Government took more vigorous action against what were called the 'forces of clericalism and reaction'. Many arrests were made, and in mid-1953 the National Party, accused of complicity in reactionary plots, was for a time outlawed and legislation was passed prohibiting the exploitation of religion for political purposes. The relations between the two main parties, after a temporary improvement in the face of the common danger of reaction, deteriorated again in the course of 1953–54, though not to such an extent as to imperil national unity. On 2 May 1954, in Turkey's third general election since the war, the Democrats won a resounding victory.

In view of the smallness and weakness of the opposition parties, and the immense parliamentary majority of the Democratic Party, it was inevitable that sooner or later splits would appear within it. In October 1955 a serious crisis culminated in the dismissal or resignation from the party of 19 deputies. These were later joined by others and formed a new party, the Freedom Party.

Conflict between the Government and opposition was sharpened by the decision taken to advance the date of the general elections by more than eight months, to 27 October 1957. The three opposition parties—Republicans, Freedom and National Parties—first intended to present a united front, but the electoral law was changed to make this impossible. They were therefore obliged to present separate lists in each constituency, and so, although the combined votes won by opposition candidates were slightly more than 50% of the total, the Democrats again emerged triumphant, though with a diminished majority.

FOREIGN AFFAIRS 1945–60

In foreign affairs, both the CHP and the Democrat Governments followed a firm policy of unreserved identification with the West in the Cold War. From May 1947 the USA extended economic and military aid to Turkey on an increasing scale, and in 1950 a first indication of both the seriousness and the effectiveness of Turkish policy was given with the dispatch of Turkish troops to Korea, where they fought with distinction. In August 1949 Turkey became a member of the Council of Europe, and early in 1952 acceded to full membership of the North Atlantic Treaty Organization (NATO), in which it began to play an increasingly important part. Thereafter other arrangements were made by which Turkey accepted a role in both Balkan and Middle Eastern defence. This culminated in November 1955 in Turkey's joining the Baghdad Pact, in which the country thereafter played a major role.

In January 1957 the USA announced a new programme of economic and military assistance for those countries of the area which were willing to accept it. At a further meeting held in Ankara the Muslim states belonging to the Baghdad Pact expressed their approval of this 'Eisenhower Doctrine'. The USA in March made known its decision to join the military committee of the Baghdad Pact, and later in March Turkey promised to co-operate with the USA against all subversive activities in the Middle East. It was announced that financial aid would be forthcoming from the USA for the economic projects previously discussed between the members of the Baghdad Pact.

From 1958 Turkey was actively involved in settling terms for the constitution of an independent Cyprus. These were eventually agreed between Turkey, Greece, the United Kingdom

and the Greek and Turkish Cypriots. Cyprus achieved independence in August 1960.

Fidelity to NATO and the Central Treaty Organization (CENTO) remained the basis of Turkey's foreign policy during the late 1950s. By the beginning of 1960, however, Turkey's relations with the USSR were becoming less frigid.

THE 1960 REVOLUTION

Economic difficulties continued to be one of the main preoccupations of the Turkish Government. The development plans envisaged since 1950 had been carried forward with financial aid from the USA and from such bodies as the World Bank. These policies had been accompanied by inflationary pressures, an unfavourable trade balance, decreased imports, a shortage of foreign exchange and, since the agricultural population was in receipt of subsidies from the Government, a higher demand for consumer goods which aggravated the prevalent inflation. Social and economic unease tended to reveal itself in a drift of people from the villages to the towns, the population of centres like Ankara, İstanbul, İzmir, Bursa and Adana being considerably increased during recent decades.

The influences which led to the revolution had long been at work. Hostility between the Democrats in power and the CHP in opposition grew steadily more marked, and was sharpened towards the end of 1959 by suspicions that the Democrats were planning to hold elections in the near future, ahead of schedule. It was feared that these would, if necessary, be rigged to keep the Democrats in power indefinitely.

In May 1959, political tension between the two main parties had already broken into violence during a political tour of Anatolia conducted by the opposition leader İsmet İnönü. The Government banned all political meetings. Blows were struck in the National Assembly, and the opposition walked out.

Much the same pattern of events ushered in the final breakdown a year later. At the beginning of April 1960, İsmet İnönü undertook another political tour of Anatolia. At one point troops were called on to block his progress. The opposition tried, but failed, to force a debate in the Assembly. On their side the Democrats set up a commission of inquiry, composed entirely of their own supporters, to investigate 'the destructive and illegal activities of the CHP'. Again the National Assembly was the scene of violence, and all political activity was suspended for three months.

At the end of April, student unrest led to the imposition of martial law. As administrator of martial law, the Turkish army found itself, contrary to its traditions, involved in politics. A group of officers decided that their intervention must be complete if Turkey was to return to Kemalist principles. In the early hours of 27 May they struck. President Bayar, Prime Minister Menderes, most Democratic deputies and a number of officials and senior officers were arrested. The Government was replaced by a Committee of National Unity headed by Gen. Cemal Gürsel, a much respected senior officer who had fought with Atatürk at Gallipoli.

The coup was immediately successful and almost bloodless. The accusation against the Menderes regime was that it had broken the Constitution and was moving towards dictatorship. The officers insisted that they were temporary custodians of authority and would hand over to the duly constituted civilian authorities. A temporary Constitution was quickly agreed, pending the drafting of a final new one. During this interval legislative power was vested in the Committee of National Unity, and executive power in a Council of Ministers, composed of civilians as well as soldiers. On 25 August, however, 10 of the 18 ministers were dismissed, leaving only three civilians in the Government. Gen. Gürsel was President of the Republic, Prime Minister and Minister of Defence. The courts were declared independent. Commissions were set up to inquire into the alleged misdeeds of the Menderes regime.

Although the new regime did not fail to meet political opposition, particularly among the peasants and around İzmir, a stronghold of Menderes, the main problems facing it were economic. The former regime had been heavily in debt. Austerity measures, including restrictions on credit, had to be put into operation and an economic planning board was set up to work out a long-term investment plan with the aid of foreign experts.

THE COMMITTEE OF NATIONAL UNITY

The Committee of National Unity, which originally consisted of 37 members, was reduced to 23 on 13 November 1960. The 14 officers dismissed represented a group led by Col Alparslan Türkeş, who had been pressing for the army to retain its post-revolutionary powers and to introduce radical social reforms.

This purge completed, preparations for a return to political democracy continued. A new Assembly, to act as a temporary parliament, was convened at the beginning of January 1961. It consisted of the 23 members of the Committee of National Unity, acting jointly with a House of Representatives of 271 members, both elected and nominated. In this the CHP predominated. At the same time party politics were again legalized and a number of new parties emerged. Some of them proved short-lived, but one, the Adalet Partisi (AP—Justice Party), founded by Gen. Ragip Gümüşpala, who had been Commander of the Third Army at the time of the *coup d'état*, attracted the support of many former adherents of the Democratic Party, which had been declared illegal.

A special committee of the Assembly framed a new Constitution which had some significant changes from the 1924 version. It provided for a court to determine the constitutionality of laws, for a bicameral legislature (comprising a national assembly and a senate), and it included a reference to 'social justice' as one of the aims of the State.

THE YASSIADA TRIALS

These constitutional developments took place against the background of the trial of the accused members of the Menderes regime. The trial was held on the small island of Yassiada in the Bosphorus, where the accused had been confined after arrest, and lasted from October 1960 to August 1961. The sentence of the court was pronounced on 15 September. There were 15 death sentences, 12 of which, including that on Bayar, were commuted to life imprisonment. Adnan Menderes, Fatin Zorlu, the former Foreign Minister, and Hasan Polatkan, the former Minister of Finance, were duly hanged. In September 1990, following a prolonged campaign by right-wing factions (including the ruling Anavatan Partisi—ANAP—Motherland Party), the bodies were exhumed and buried in İstanbul with state honours.

The trial, in 1960, inevitably absorbed the attention of the country, and there were many reminders that sympathy for the former regime and its leaders was far from dead. The most serious setback for the authorities, however, appeared in the results of the referendum on the new Constitution. This was approved by 6,348,191 votes against 3,934,370, and the large minority was taken as an indication of continuing loyalty to the Democrats.

The campaign preceding elections in October 1961, perhaps because Yassiada was ruled out as a subject for discussion, proved unexpectedly quiet. On 15 October the elections gave the CHP 173 seats and the AP 158 seats in the National Assembly, and 36 and 70 respectively in the Senate.

These figures were a blow to the hopes of the CHP that they would achieve an overall working majority. A coalition became necessary. The election results were also further evidence of latent support for the Democrats.

THE NEW GOVERNMENT

On 25 October 1961, Parliament opened and the transfer of power from military to civilians was made. The revolutionaries had kept their word and a new epoch began. The next day Gen. Gürsel, the only candidate, was elected President. But forming a government proved a much harder process. On 10 November İsmet İnönü, leader of the CHP, was asked to form a government, and after much hesitation and strong pressure from the army, the AP agreed to join forces with its rival. A new Cabinet was formed with İnönü as Prime Minister, Akıf İyidoğan, of the AP, as Deputy Prime Minister, and 10 more ministers from each of the two coalition parties.

The Government remained, as İnönü said, exposed to a double fire—from those who thought the army did too much (i.e. that civil liberties were still circumscribed) and those who thought it did too little (i.e. that it did not crush all signs of counter-revolution). The resignation of İnönü at the end of May 1962

weakened the extremists in the AP, who had wanted to grant an amnesty to former supporters of Menderes. They were now face to face with the army, the original architects of the 1960 revolution, and many of them felt it wise to moderate their demands.

By the end of June 1962 İnönü had formed a new coalition Government composed of 12 ministers from the CHP, six from the New Turkey Party, four from the Republican Peasants' Nation Party, and one independent minister. The new Government's programme expressed attachment to the principles of Western democracy and to the NATO alliance. It covered almost every sphere of national life, including education, taxation, employment and the problems of a rapidly rising birthrate and an adverse balance of trade.

RAPPROCHEMENT WITH THE USSR

The first months of 1964 were overshadowed by an attempt on the life of İnönü in February, and by the situation in Cyprus, where the fate of the Turkish minority created strong feeling on the mainland. İnönü's critics claimed that he had displayed a considerable lack of foresight by failing to intervene on the island with force when the trouble started. Diplomatic efforts towards a solution failed and public disaffection grew, not only with Greece, but also with Turkey's western allies, in particular the USA and the United Kingdom, which were accused of being lukewarm in their support of Turkey's case. In August 1964 this disaffection exploded in İzmir, when rioters wrecked the US and British pavilions at the trade fair. İnönü, though moving with characteristic caution, gave a warning that the alliance with the West, the basis of Turkey's foreign policy since the war, was in danger. To reinforce his warning, several steps were taken to improve relations with the USSR. Initially, the Soviet Government had appeared to side with Greece on the question of Cyprus, and the Soviet trade pavilion had also been a target for the İzmir hooligans. Diplomatic approaches were made in both Moscow and Ankara, however, and at the end of October Erkin visited the USSR—the first Turkish Foreign Minister to make this journey for 25 years. Before leaving he invoked the memory of the early days of friendship between Atatürk and Lenin, and the same precedent was made much of by his hosts, who tactfully refrained from pressing Turkey into premature neutralism, as they had done in the past. On Cyprus, the USSR appeared to have moved closer to the Turkish point of view, the communiqué which ended Erkin's talks speaking favourably of a solution 'by peaceful means on the basis of respect for the territorial integrity of Cyprus, and for the legal rights of the two national communities'. Erkin's journey was followed up in January 1965 by the visit to Ankara of a Soviet parliamentary delegation. A trade pact between the two countries followed in March.

DEMIREL GOVERNMENT

For all this, Cyprus continued to give the opposition ammunition with which to harass the İnönü Government. At the Senate elections in June 1964, the AP won 31 out of the 51 seats contested, thus increasing its already large majority in this house. Its success was clouded by the death of the party's leader, Gen. Gümüşpala. In November Süleyman Demirel was elected leader in his place, although he was without a seat in Parliament. İnönü survived more than one narrow vote of confidence, but was finally defeated on 13 February 1965, during voting in the National Assembly on the budget—the first time that the term of a Turkish Government had been ended in this way. After a short delay, a coalition Government was formed from the four opposition parties—the AP, the New Turkish Party, the Republican Peasants' Party, and the Millet Partisi (National Party). An independent senator and former diplomat, Suat Ürgüplü, became Prime Minister.

At the general election of 11 October 1965, the AP under Demirel won an overall majority. On introducing his AP Government to the National Assembly, Demirel declared that the most important task would be to withstand communism 'by the realization of social justice and measures of social security'. Emphasis was to be put on industrialization. In spite of its working majority, the Demirel Government proved only marginally more successful than its predecessors in getting things done. However, elections in June 1966 for one-third of the seats in the Senate showed that the AP was not losing popularity.

To some extent this success was attributed to the innate conservatism of the Turkish peasantry, who may have been alarmed by İnönü's statement that the CHP was left of centre. This position was not approved by all the party—some thought that it went too far, others not far enough. A convention of the party in October 1966 showed a victory for the left-wingers. Bülent Ecevit, Minister of Labour in 1961–65, was elected Secretary-General of the party, with the declared intention of turning it into a party of democratic socialism. Six months later 48 senators and congressmen, led by Turhan Feyzioğlu, a former minister, resigned from the party on the grounds that it was falling into a 'dangerous leftist adventure'. This was denied by Ecevit and İnönü, who supported him. They claimed that, on the contrary, their progressive policies would pre-empt the policies of and undermine support for other left-wing parties and therefore represented the best barrier against communism.

In May 1967 a majority of dissidents came together to form the new Reliance Party, which proclaimed its opposition to socialism and its belief in the 'spiritual values of the Turkish nation'. In June Ecevit forced a fresh election of the CHP executive, and by securing the elimination of two left-wing representatives he was able to emphasize that his party remained left of centre rather than left wing.

In March 1968 a new electoral law was approved, in spite of the protests of a united opposition, that abolished the so-called 'national remainder system'—a change which threatened the electoral chances of all the smaller parties but was thought to be particularly aimed at the Türkiye İşçi Partisi (TIP—Turkish Workers' Party), which was accused by the Government of using communist tactics.

In March 1966 President Gürsel was succeeded by Senator Cevdet Sunay. Turkey's relations with her allies in 1966 deteriorated. The Turkish press's campaign against US bases in Turkey led to a riot in Adana in March. Together with these manifestations against Turkey's formerly most stalwart ally, an effort by the Demirel Government to make its whole foreign policy more flexible was undertaken.

The touchstone of Turkey's foreign relations continued to be Cyprus. In 1967 this perennial problem oscillated between near settlement and near war. Later in the year the situation suddenly deteriorated as a result of attacks by Greek Cypriots on the island's Turkish enclaves on 15 November. Two days later the National Assembly voted by 432 votes to 1 to authorize the Government to send troops to foreign countries—in other words, to fight in Cyprus. There were daily Turkish flights over the island and the likelihood of war increased. As a result of strong intervention by US and UN intermediaries, however, a more serious conflict was avoided. On 3 December the Greeks undertook to withdraw their troops from the island and the Turks to take the necessary measures to ease tension. By February 1968 the situation had been so far restored that direct efforts to agree on a negotiated settlement for Cyprus were once again under way.

MILITARY INTERVENTION

Demirel's AP Government was faced with the growing problem of political violence from early 1968 onward. Disorder in the universities, springing from non-political educational grievances and from clashes between political extremists of the right and the left, took an increasingly violent form. Students staged anti-US riots, and in June 1969 troops had to be summoned to prevent extremists disrupting examinations. The fighting between right- and left-wing factions became more serious in 1970, firearms and petrol bombs being used, and a number of political murders taking place.

Parliamentary politics also became rather confused. Elections in October 1969 produced an enlarged majority for the AP, but the party soon split, a number of Demirel's right-wing opponents forming the Demokratik Parti (DP—Democratic Party). Party strengths became almost impossible to calculate, as factions and alliances formed and dissolved, and on crucial votes the support of Government and the combined opposition parties was almost equally balanced. A new party, the Milli Nizam Partisi (MNP—National Order Party), with right-wing policies

and theocratic tendencies, was formed in January 1970 by Prof. Necmettin Erbakan.

Throughout 1970 and the early part of 1971, political and social unrest continued, with outbreaks of violence among students, in the trade unions and by Kurdish separatist groups. Factional bickering prevented the Government from taking effective action and on 12 March 1971, the Chief of the General Staff and the army, navy and air force commanders delivered a memorandum to the President. They accused the Government of allowing the country to slip into anarchy and of deviating from Atatürk's principles. They threatened that, unless 'a strong and credible government' were formed at once, the armed forces would take over the administration of the State. Later that day the Demirel Government resigned.

MILITARY DOMINATION OF POLITICS

A new Government was formed by Dr Nihat Erim, with the support of both the AP and the CHP. Bülent Ecevit, the CHP Secretary-General, resigned from office and refused to collaborate. Dr Erim's programme promised sweeping reforms in taxation, land ownership, education, power and industry, but the Government's attention was first directed to the suppression of political violence. The military ultimatum was followed by further bombings, kidnappings and clashes between right- and left-wing students and between students and police. On 28 April 1971, martial law was proclaimed, initially for one month, in 11 provinces, including Ankara and İstanbul.

Newspapers were suppressed, strikes were banned and large numbers of left-wing supporters were arrested. The MNP was dissolved in May 1971 and the Turkish Labour Party in July. The murder of the Israeli Consul-General in İstanbul by the Turkish People's Liberation Army provided the military authorities with an opportunity to round up nearly 1,000 suspects in İstanbul alone, including many journalists, writers and intellectuals. In September Dr Erim introduced a number of amendments to the Constitution, limiting individual civil rights and the autonomy of universities and radio and television stations as well as placing restrictions on the press and trade unions and giving the Government powers to legislate by decree. Dr Erim's proposal to use the new powers to introduce sweeping social and economic reforms, supported by the armed forces, was opposed by the AP. Cabinet crises in October and December led to the formation of a new coalition Government, again headed by Dr Erim, but his proposals for taking further executive powers were opposed by the four major parliamentary parties, and in April 1972 he resigned. A Government formed by Suat Ürgüplü was rejected by President Sunay, and in May a Government drawn from the AP, National Reliance Party and CHP, headed by Ferit Melen, was approved. There was a swing to the left within the CHP in May; the veteran party leader İsmet İnönü resigned after 34 years as Chairman, and was replaced by Bülent Ecevit. Meanwhile, the terrorist activities of the Turkish People's Liberation Army continued, and martial law was prolonged at two-month intervals.

In July 1972, dissident CHP members, opposing the dominance of the left wing led by Ecevit, formed the Republican Party. In November the CHP withdrew its support from the Melen coalition Government, but its five ministers preferred to leave the party and stay in the Council of Ministers. This caused further resignations from the CHP, including that of İsmet İnönü and 25 other deputies and senators. A number of these dissidents, together with the National Reliance Party and the Republican Party, joined to form the Cumhuriyetci Güven Partisi (CGP—Republican Reliance Party) in February 1973. The CHP, without its right wing, began actively to oppose the Melen Government, which it considered to be dominated by the armed forces, and martial law, under which, it was alleged with increasing frequency, arbitrary arrest and torture were practised. In March, for the first time, the CHP voted against the prolongation of martial law.

President Sunay's term of office expired in March 1973. Gen. Gürler resigned his post as Chief of Staff in order to stand for the presidency, his candidature receiving the strong support of the armed forces. He was opposed by members of the Justice and Democratic parties while the CHP decided to abstain from voting as a protest against military interference in the election and the censorship of electoral news in Ankara. Despite obvious military support for Gen. Gürler, 14 ballots failed to produce a result, and eventually the AP, CHP and CGP agreed on a compromise candidate, Senator Fahri Korutürk, former Commander-in-Chief of the Navy, who had not belonged to any political party. He was elected President on 6 April 1973. The following day Melen resigned, and was succeeded as Prime Minister by Naim Talû, an independent senator, who formed a Government with AP and CGP participation.

The Talû Government, although considered to be merely a caretaker administration to last until the general election, scheduled for October 1973, brought about a number of reforms, and during its term of office the armed forces gradually withdrew from political affairs. A Land Reform Law, distributing some 8m. acres to 500,000 peasants, was passed in June 1973, and measures were taken to prevent foreign domination of the mining and petroleum industries. A strong element within the armed forces felt that the time had come to return to a strictly military role, and that martial law had achieved its objective by duly eradicating extremism. Gen. Sancar, who became Chief of Staff when Gen. Gürler resigned to make his unsuccessful attempt to become President, was opposed to military intervention in politics, and retired 196 senior officers. Martial law was gradually lifted, and came to an end in September.

FOREIGN POLICY DEVELOPMENTS

The traditional hostility between Turkey and Greece revived following the Greek announcement in February 1974 that oil had been found in Greek territorial waters in the Aegean. This led to a dispute over the extent of national jurisdiction over the continental shelf and territorial waters, with both sides making warlike moves in Thrace and the Aegean. Turkey began a hydrographical survey of the continental shelf in this area, claiming oil exploration rights in the eastern Aegean. The Aegean issue contributed to making a preoccupation with the possibility of a confrontation with Greece rather than the USSR the dominating issue of Turkish foreign policy during the late 1970s. The potentially tense situation in the Aegean was overshadowed by a coup in Cyprus in July 1974.

This coup was carried out by the Cypriot National Guard, led by officers from Greece, apparently with the support of the Greek military regime. Declaring its intention of protecting the Turkish community in Cyprus and preventing the union of Cyprus with mainland Greece, Turkey proclaimed a right to intervene as a guarantor state under the Zürich agreement of 1959. On 20 July 1974 Turkish troops landed in Cyprus, and rapidly won control of the area around Kyrenia on the northern coast. The Turkish intervention in Cyprus was followed by negotiations between Turkey, Greece and the United Kingdom. Turkey pressed for the creation of an independent federal Cypriot state, with population movements to give the Turkish community their own sector in the north. The intransigence of both Greeks and Turks, and Greece's rejection of a possible cantonal solution put forward by Turkey, led to a further successful advance by the Turkish forces in Cyprus. When a second ceasefire was called on 16 August, Turkey controlled about one-third of the total area of Cyprus.

The sector under Turkish control, all of Cyprus north of a line running from Morphou through Nicosia to Famagusta, contained more than half the livestock, citrus plantations and mineral reserves of Cyprus, with access to two major seaports. The flight of Greek Cypriot refugees from the north left the Turks a free hand to take over the administration and economy, and establish an effective partition of the island. Ecevit claimed that the Turkish military success had laid the foundation of a federal state with two autonomous administrations, allowing the Turkish Cypriot community to concentrate in the conquered area and establish their own government. On 13 February 1975, the Turkish Cypriots unilaterally declared a 'Turkish Federated State' in northern Cyprus and continued pressing for the establishment of a bi-regional federal state system in Cyprus. Greek and Turkish foreign ministers held talks in Rome, Italy, in May on outstanding disputes between the two countries, with the future of Cyprus among the main topics. The Greek-Turkish Aegean dispute was also discussed, including the issue of ownership of the rights to oil exploration in the area, the equitable division of the Aegean continental shelf and the question of air space control in the area. The dispute was submitted to the

International Court of Justice. In April 1978 Turkey refused to recognize the jurisdiction of the Court on this question, preferring to try to negotiate a political settlement, and in October the Court ruled that it was not competent to try the issue.

The USA imposed an embargo on military aid and the supply of arms to Turkey in February 1975 on the grounds that US military equipment had been used in the Turkish invasion of Cyprus in July 1974 and that Turkey had failed to make substantial progress towards resolving the Cyprus crisis. In July 1975 Turkey implemented counter-measures, including the take-over of US bases in Turkey. After lengthy negotiations a new bilateral defence agreement was reached between the two countries in March 1976, but the agreement was not ratified, owing to the strength of the Greek lobby in the US Congress.

In January 1978, at the beginning of his term of office, Bülent Ecevit stated that his foreign policy would be aimed at the exploration at the highest level of possible compromises between Greece and Turkey. A summit meeting took place at Montreux, Switzerland, on 9 March and the progress made in personal relations between Ecevit and the Greek Prime Minister, Konstantinos Karamanlis, contributed to a general lessening of tension in the Aegean.

In response to a US statement about the linkage of the arms embargo relaxation and US arms aid, Ecevit turned to the USSR to demonstrate that Turkey had alternatives for her national defence. In April 1978 a trade pact was agreed between the two countries and in June a friendship document was signed, which Ecevit claimed not to be in conflict with Turkey's NATO responsibilities. In response to this *rapprochement* with the USSR, the US Congress lifted the arms embargo in October and four key US bases in Turkey were reopened. Finally, after lengthy negotiations, a five-year defence and economic co-operation agreement was signed on 29 March 1980. In return for economic aid to help Turkey modernize her army and fulfil her NATO obligations, the US was to obtain access to over 25 military establishments, allowing expanded surveillance of the USSR. The eagerness of the USA to come to an agreement grew after the Soviet invasion of Afghanistan in December 1979, which increased Turkey's strategic importance.

Some progress was achieved in the Greek-Turkish Aegean dispute in February 1980. On 22 February Turkey revoked Notam 714 which claimed Turkish control of all air traffic over the eastern half of the Aegean. In response, Greece revoked its civil aviation notice of 1974 which declared the Aegean unsafe and banned all flights except its own. However, the dispute flared up again in June when Turkey held its annual NATO Sea Wolf air and naval manoeuvres in the Aegean, with Greece demanding flight plans for areas which Turkey did not regard as being within Greek airspace. In July Turkish Airlines resumed flights to Athens from İstanbul and Ankara. Intercommunal talks on Cyprus, sponsored by the UN, were resumed in June 1979 but were adjourned after a week with no agreement reached.

ECEVIT GOVERNMENT

General elections for the National Assembly and for 52 Senate seats were held on 14 October 1973. In the National Assembly the CHP, with 185 seats, replaced the AP as the largest party, but failed to win an overall majority. The CHP was believed to have won many votes from former supporters of the banned TIP, while the AP lost support to the DP and a new organization, the Milli Selamet Partisi (MSP—National Salvation Party). The latter, led by Prof. Necmettin Erbakan, was founded in 1972 to replace his banned MNP, and shared its traditionalist, Islamic policies, and became the third largest party in the new National Assembly. Prime Minister Talû resigned, but then remained in office for a further three months while negotiations on the formation of a coalition government continued. Despite this parliamentary crisis, the armed forces remained aloof from politics. Eventually, on 25 January 1974, a Government was formed by the CHP and the MSP, with Bülent Ecevit as Prime Minister and Necmettin Erbakan as his deputy. The Council of Ministers was composed of 18 CHP members and 7 from the MSP.

The new Government, an apparently unlikely coalition of the left-of-centre CHP and the reactionary MSP, proclaimed its reforming intentions, but made concessions to the demands of its Muslim supporters which tended to deviate from Atatürk's strictly secular principles. In March 1974, Turkey was for the first time represented at an Islamic Summit Conference. The appointment of an MSP deputy as Minister of the Interior brought about a number of petty manifestations of Islamic puritanism, but the main lines of the Ecevit Government's policy seemed to be of a reforming, liberal nature, intended to remove the more excessive aspects of the police state created during the period of military intervention.

The land reform passed by the Talû administration came into operation in a pilot project in Urfa province, and in July 1974 the ban on opium production, introduced under US pressure in 1972, was rescinded: a move which, together with the successful handling of the Cyprus question, increased Ecevit's popularity. The differences between the MSP and the CHP had been submerged during the Cyprus crisis, but once more became apparent in September. On 16 September 1974 Ecevit announced that he had decided to resign, as the coalition was no longer viable, and to seek a stronger mandate in new elections. New elections, however, were not held immediately and President Korutürk sought to find a coalition government.

Following the resignation of Ecevit's Council of Ministers on 18 September 1974, Turkey remained without a parliamentarily approved government for more than six months. In November Prof. Sadi Irmak attempted unsuccessfully to form an interim coalition to prepare for new elections in 1975, but remained in office in an interim capacity while efforts were made to form a new government. Internal unrest increased during the lengthy government crisis, with serious clashes between opposing political factions and between students.

DEMIREL RETURNS TO POWER

In March 1975 Süleyman Demirel returned to power, leading a right-wing coalition, the Nationalist Front, consisting of four parties: Demirel's AP, the MSP, the CGP and the neo-fascist Milliyetçi Hareket Partisi (MHP—Nationalist Action Party) founded by Col Alparslan Türkeş, who became Deputy Prime Minister. In the Council of Ministers, the AP occupied 16 of the seats, the MSP eight, the CGP four, and the MHP two. However, the precarious nature of this coalition meant that the Government had to avoid taking radical measures which would upset the co-operation between the four parties. This prevented Demirel's Government from tackling the pressing problems of a deteriorating economy and increasing political violence, for Erbakan refused to countenance the austerity measures demanded by the IMF while Türkeş stood in the way of a crackdown on political violence, most of which the 'Grey Wolves' of the MHP were thought to have instigated. The weakness of the coalition also hampered progress towards a settlement of the Cyprus question, with Demirel having to make concessions to the militant views of the extreme right wing represented by Necmettin Erbakan's MSP. Between 1974 and 1977 the fortunes of the MSP changed drastically and their representation in the National Assembly was reduced from 48 to 24. Erbakan became increasingly discredited, although his deputy and chief rival, Korbut Özal, grew in influence. At the same time support for the MHP increased substantially. It combined anti-communism, Islamic values and a desire for centrally-directed free enterprise with a nationalism that would dispense with democracy. During Demirel's administration, the MHP was able to build up a system of militant cadres by placing its supporters in the police and civil service.

In spite of its difficulties, the Demirel Government continued in power by suspending all action over controversial issues, such as the economy, Cyprus and Greece and relations with the European Community (EC) and NATO, pending the general election scheduled for October 1977. Increasing political violence throughout Turkey and especially in the universities, between left- and right-wing groups, persuaded the authorities to bring forward the general election to June. The political inactivity was matched by economic paralysis as it became clear that the economy was overloaded with short-term debt and banks struggled to pay foreign currency bills of payment.

However, the election of June 1977 failed to produce the hoped-for decisive majority. While the CHP increased its share of seats in the National Assembly to 213 out of 450, the AP also increased its share from 149 to 189 seats. Bülent Ecevit, the

leader of the CHP, formed a Council of Ministers but failed to agree a coalition with the smaller parties, and a week later was defeated in a vote of confidence in the legislature. Süleyman Demirel, the leader of the AP, was subsequently invited to form a new Government and on 1 August a coalition came to power which gave key ministerial posts to members of the MSP and the MHP. As a result there was penetration of the university and college administrations by extreme right-wing factions and a consequent flare-up of violence on campuses. By mid-December one-third of the universities were shut and 250 people had died in political violence.

The MSP contributed to the country's deepening financial crisis by blocking attempts to follow IMF prescriptions for the economy, insisting on the maintenance of a 5.5% growth rate and refusing to implement monetarist curbs to reduce inflation. Failure to agree on economic remedies led to the withdrawal of an IMF team in December 1977, without agreeing the necessary restructuring for the foreign debt position.

Frustration at the coalition's powerlessness led to the progressive diminution of the AP's support in the National Assembly between October and December 1977 as members resigned. By 27 December the coalition could muster only 214 votes and Bülent Ecevit was preparing a new coalition. Following a vote of 'no confidence' in the legislature, the Demirel Government resigned on 31 December and formed a caretaker administration. On 2 January 1978 Ecevit formed a new Government.

ECEVIT RETURNS TO POWER

After the chaos of Demirel's administration, the appointment of Ecevit as Prime Minister was greeted with great popular enthusiasm and high hopes were entertained of his promise to deal with the economic crisis and the political violence. Ecevit's popular support, however, was not reflected in the National Assembly. His majority was dependent upon the support of defectors from the AP, to 10 of whom he gave places in the Council of Ministers, while the number of deputies who had 'crossed the floor' had resulted in a pool of about 20 independents with no set allegiances. Radical reforms were urged on Ecevit, but the insecure parliamentary majority, the country's economic weakness and the unwanted reputation of the CHP in the conservative rural areas as a radical party enjoined on him the necessity for caution. He began a painstaking, relentless purge of right-wing elements in the public administration in response to the cramming of their ministries by Demirel, Erbakan and Türkeş in 1975–77. He adopted an economic stabilization programme, signed a stand-by arrangement with the IMF (providing for a total of US $450m. over two years) and began work on restructuring the severe short-term debt burden. He was, however, unable to secure the huge amounts of international financial assistance necessary to make the stabilization programme work and few of the targets were reached. Inflation continued at about 60%–70%, unemployment reached 20% and, for lack of raw materials, industry was working half-time. Nevertheless, Ecevit was unwilling to take further austerity measures demanded by the IMF as a condition for further aid. Moreover, political violence continued to escalate. Although the universities returned to normal, elsewhere more and more people were killed in acts of terrorism. Both the police force and the internal security forces (MIT) were riven by factions of left and right which made them unable to intervene. Here, too, the process of purging extremists was begun and in September 1978 Ecevit replaced the Chief of Security but, while the civilian tools of authority remained weak and unreformed, the maintenance of law and order depended on the armed forces and Ecevit was forced to ask the *gendarmerie* to undertake policing duties in urban areas. By December more than 800 people had been killed, particularly in the eastern provinces. These new areas of violence reflected a change of tactics by the MHP, which during 1978 campaigned in central and eastern Anatolia, where the traditional elements of society had been least affected by modernization and were most threatened by its arrival. Türkeş's appeal to nationalism gained him supporters, particularly in areas where Turks lived with other ethnic groups, notably the Kurds. The violence culminated in December at the south-eastern town of Karamanmaraş in the most serious outbreak of ethnic fighting since the 1920s. There the historic enmity between the orthodox Sunni majority and the Alevi (Shi'a) minority had been exacerbated by the activities of right- and left-wing agitators. On 21 December the funeral of two members of the left-wing teachers' association, murdered the day before, was turned into a large-scale demonstration by the Alevis. The mourners were fired on by Sunni supporters of Türkeş and indiscriminate rioting erupted. After three days, more than 100 people had been killed, at least 1,000 had been injured and large parts of the Alevi quarters had been reduced to ruins. The MIT had failed to alert the Government to the incidents leading up to the massacre and order was not restored until the intervention of the army on 24 December.

MARTIAL LAW

The violence led to the imposition of martial law on 26 December 1978. Although he had long been urged to take this step by Demirel, Ecevit had refused in view of Turkey's previous experiences of martial law. Martial law was imposed for two months (renewed subsequently at two-monthly intervals) in 13 provinces, all, excepting İstanbul and Ankara, in the east, although the mainly Kurdish areas of the south-east were excluded to prevent friction. Ecevit announced that it was to be 'martial law with a human face' and instituted a co-ordination committee for its implementation comprising himself, Gen. Kenan Evren, the Chief of the General Staff, and Lt-Gen. Sahap Yardimoğlu, the Chief Martial Law Administrator. Special military courts were established to hear cases of those arrested for martial law violations. However, even these new measures proved insufficient to curb the violence, which was now endemic.

In April 1979 a crisis developed on the political front when six ministers, members of the group of defectors from the AP, issued a public memorandum criticizing Ecevit for taking insufficient account of their views and demanding tougher measures to combat political violence, particularly by left-wing groups, and Kurdish separatism. They also demanded a redirection of economic policies to allow more Western investment and greater freedom for private enterprise. The gulf between these views and those of Ecevit's left-wing supporters in the CHP became more and more pronounced and the impossibility of reconciling the left- and right-wing elements in the coalition became clear. In response to the growth of Kurdish separatism, and alarmed by Kurdish violence in Iran, Ecevit agreed to extend martial law into six more provinces, all in the Kurdish south-east. Three CHP deputies promptly resigned, reducing the party's minority representation in the National Assembly to 211 out of 450.

As violence continued, the authorities imposed an all-day curfew in İstanbul and Ankara on May Day in 1979, to prevent riots at the traditional parades. A march planned by the more radical of the union confederations, Devrimci İşçi Sendikaları Konfederasyonu (DİSK), was banned and the army ordered the arrest of its entire leadership, a severe blow to Ecevit's reputation as a champion of workers' rights and an indication of the army's increasing involvement in politics. During the next few months Ecevit's parliamentary majority gradually dwindled after a series of resignations by CHP deputies, and in the October by-elections the AP achieved substantial gains. Ecevit's Government resigned on 16 October.

On 24 October 1979 Demirel formed a new Government with the backing of the rightist MHP and the MSP, affording the Government a majority of four. His Council of Ministers was entirely composed of moderate and uncontroversial AP deputies in an effort to avoid antagonizing the left-wing faction in the National Assembly and jeopardizing his slender majority. Demirel promised a tough policy on terrorism and proposed new legislation to accelerate court procedure and give wider powers to regional governors for dealing with terrorist incidents. However, the elections gave rise to a wave of left-wing protest and the proposed measures gained little headway due to obstruction by the CHP, who objected to what they saw as fascist measures.

With no reduction in the level of violence by the beginning of 1980, the armed forces again intervened. On 2 January the Turkish generals issued a public warning to all political parties, criticizing them for arguing and urging them to reach a consensus of opinion on anti-terrorist measures. Under threat of greater military intervention, the National Assembly immediately began to debate the package of anti-terrorist legislation proposed by the Government. In spite of this threat, the bill was defeated on 15 January, when the MSP voted against it,

and sectarian and political killings continued at an average rate of 10 per day. A state-owned factory in İzmir was the scene of fighting between left-wing strikers and the army for several weeks, leading to the imposition of martial law in İzmir and Hatay on 20 February. Twenty provinces were now under martial law. At this time a number of left-wing papers were shut down, including *Politika*, and in May the Türkiye Emekçi Partisi (Workers' Party of Turkey) was dissolved by the Constitutional Court. Once again May Day processions were banned and violence broke out.

The instability of the Government was illustrated by parliamentary inability to choose a new President after Korutürk's term expired in April 1980. This again provoked criticism from Gen. Kenan Evren, Chief of the General Staff. Neither the right nor the left was prepared to compromise on the choice of candidate and after much indecision, İhsan Sabri Çağlayangil took office as acting President. In June the CHP tabled a censure motion intended to force the resignation of the Government before the summer recess. It accused Demirel of allowing prices to rise and violence to continue. However, the 22 MSP deputies voted against the motion, in spite of their opposition to Demirel's pro-Western, pro-NATO stance, and the Government survived the motion by one vote. By August political violence had almost reached the proportions of civil war. Although martial law continued to be extended every two months in 20 out of the 67 provinces, clashes between right and left had caused some 2,000 deaths since the beginning of the year. Meanwhile, inflation and foreign debts continued to escalate, food and power shortages and unemployment were widespread and the political bickering continued. At the beginning of September Demirel attempted to bring forward the elections (scheduled for June 1981), which he hoped would give his party a majority and the power to deal with the country's crisis. However, this move was defeated by the opposition and the Government remained paralysed, unable to make important decisions or implement vital measures.

THE 1980 COUP AND ITS AFTERMATH

On 11 September 1980 the armed forces, led by Gen. Evren, seized power in a bloodless coup, the third in 20 years. There appeared to be three main reasons for their intervention: the failure of the Government to deal with the country's political and economic chaos, the ineffectiveness of the police force, and, more immediately, the sudden resurgence of Islamic fundamentalism, which was evident at a rally in August, during which Necmettin Erbakan and the MSP appealed for the restoration of the *Shari'a*, Islamic holy law. The leaders of the coup formed a five-man National Security Council (NSC), sworn in on 18 September. The Chairman of the NSC, Gen. Evren, became head of state. Martial law was extended to the whole country and the legislature was dissolved. On 21 September the NSC appointed a mainly civilian Council of Ministers, with a retired naval commander, Bülent Ulusu, as Prime Minister and Turgut Özal as Deputy Prime Minister and Minister for Economic Affairs. The new Government's main aims were to eradicate all possible sources of terrorism and political violence and to reduce the power of political extremists, to uphold Kemalist principles, to honour all foreign debts and existing agreements, and to return the country to democratic rule after the establishment of law and order. Immediately former political leaders, suspected terrorists and political extremists were detained, while all political activity was banned and trade union activities were restricted. At the same time, a severe programme of austerity was introduced by Turgut Özal. In October the NSC drafted a seven-point provisional Constitution which provided the generals with unlimited powers for an indefinite period. In January 1981 the military junta announced its decision to establish a Consultative Assembly between 30 August and 29 October 1981, as the first stage in the promised return to parliamentary rule.

By February 1981 the new Government claimed to have eliminated the main left-wing terrorist groups, including the powerful guerrilla organization Dev Yol. By May 1982, according to varying reports, between 43,000 and 100,000 suspected left- and right-wing activists had been detained. The authorities also imposed harsh measures on Kurdish nationalist organizations, believing them to be supported by forces in the Eastern bloc. By May 1982 there had been a number of mass trials of Kurdish activists, especially members of the left-wing separatist Partiya Karkeren Kurdistan (PKK, Kurdistan Workers' Party). In November 1981 a law was passed depriving the universities of their traditional administrative autonomy, and banning academics and students from political parties. In February 1982 there were 44 arrests in the biggest crackdown on left-wing intellectuals since the coup. Censorship of the press was not officially imposed but extremist publications were banned and the press and other media placed under strict self-censorship. By October more than 66,000 suspects were said to have been arrested, including the leaders of the MHP and the MSP, together with a large number of trade unionists and the editors of some leading newspapers. The new Government succeeded in reducing the level of political violence in Turkey and in establishing law and order. However, the likelihood that this had been achieved only at the expense of human rights caused concern among the Western Governments: Turkey was banned from the Council of Europe, EC aid was suspended, and fellow-members of NATO urged Turkey to return to democratic rule as soon as possible.

In October 1981 a Consultative Assembly was formed to draft a new Constitution and to prepare the way for a return to parliamentary rule. It comprised five members of the NSC and 160 others, of whom 40 were appointed directly by the NSC, while the remaining 120 were chosen by the NSC from candidates put forward by the governors of the 67 provinces. All former politicians (who had been banned from political activity in April 1981) were excluded and on 16 October all political parties were disbanded and their assets confiscated. A new Constitution was approved by referendum on 7 November 1982, with a 91% majority—despite widely-expressed objections that excessive powers were to be granted to the President, while judicial powers and the rights of trade unions and the press were to be curtailed. An appended 'temporary article' automatically installed Gen. Evren as President for a seven-year term. The opposition was not allowed to canvass openly against the new Constitution. Under the Constitution, power was vested in the President, enabling him to dissolve the legislature, delay laws, call elections and make all key public appointments.

Following the referendum, the military regime dismissed left-wing university professors, closed newspapers, tightened press censorship and held mass trials of labour leaders and prominent Turks. In May 1983 the President lifted a 30-month ban on political activity and allowed political parties to be formed under strict rules. All the former political parties, which had been dissolved in October 1981, were to remain proscribed, along with 723 former members of the legislature and leading party officials who were banned from active politics for 10 years. By the end of May it was clear to President Evren that proscribed political parties were resurfacing under new names and with new titular leaders. The first new political party to be banned, on 31 May, was the Great Turkey Party, whose leader was Husamettin Cindoruk. This party was the reconstructed AP, with discreet support from Süleyman Demirel. In response, Demirel's supporters formed the Dogru Yol Partisi (DYP—True Path Party). The President gave support to the Milliyetçi Demokrasi Partisi (MDP—Nationalist Democracy Party), led by Gen. Turgut Sunalp, in the hope that it would become the main centre-right party in the new Parliament. On the centre-left the Sosyal Demokrasi Partisi (SDP—Social Democratic Party) was formed, under the leadership of Prof. Erdal İnönü, and won support from the former CHP, although the leader, Bülent Ecevit, recommended boycotting the new political system. The SDP was banned on 24 June. The Halkçi Parti (HP—Populist Party), led by Necdet Calp, had military approval as a centre-left party.

CIVILIAN RULE RETURNS UNDER ÖZAL

A general election was held on 6 November 1983, and parliamentary rule was restored, with a 400-seat unicameral Grand National Assembly (Büyük Millet Meclisi). Election was on the basis of proportional representation (with a minimum requirement of 10% of the total votes, to discourage small parties), voting was compulsory and every candidate had to be approved by the military council.

The President banned a total of 11 parties from participating in the general election. In a surprise result, the conservative ANAP, led by Turgut Özal, won 211 of the 400 seats in the

Grand National Assembly. The party had been allowed to participate only because the President felt that it would be no threat to the two parties that the military leadership favoured. However, the armed forces' preferred party, the centre-right MDP, was beaten into third place, with the centre-left HP coming second. The result reflected the great popularity of Turgut Özal, stemming from his performance while head of the State Trading Organization and later as Deputy Prime Minister and Minister for Economic Affairs. He was appointed Prime Minister and named his Council of Ministers in December.

The result of the election suggested a decisive rejection of military rule, and this view was strengthened when local elections were held on 25 March 1984. Three parties which had been banned from the general election (the SDP, the DYP and the Refah Partisi (RP—Welfare Party)) were allowed to contest the local elections. ANAP received about 40% of the total votes (almost identical to the November general election result), with the moderate left-wing SDP obtaining 23.3% of the votes. Thus, the main opposition in the country to ANAP was a party not represented in the Grand National Assembly, a fact which gave rise to further speculation about the undemocratic nature of the general election. The HP and the MDP (the official parliamentary opposition) fared badly in the elections, winning less than 10% of the votes each. In November 1985 the HP and the SDP, the main opposition parties within and outside the Grand National Assembly respectively, merged to form a single party, known as the Sosyal Demokrat Halkçı Parti (SHP—Social Democratic Populist Party). However, the left-wing opposition was split as a result of the formation, a few days later, of the Demokratik Sol Parti (DSP—Democratic Left Party), led by Rahsan Ecevit (wife of the former Prime Minister, Bülent Ecevit) and drawing support from the former CHP.

The civilian Government's main priorities were economic: to cut the inflation rate, which was around 40% at mid-1984; to lower taxes; to reduce drastically the cumbersome bureaucracy; to boost exports and to liberalize imports; to encourage private enterprise; to relax foreign exchange controls; and to slim down state-owned industries. Corruption continued to be a problem, and in October 1984 the Minister of Finance and Customs, Vural Arikan, was dismissed by President Evren after accusing the Minister of the Interior (who had resigned shortly before) of allowing the police to torture customs officials who had been accused of corruption. The press and labour unions were put under strict control, despite a few civilian appointments to important posts formerly held by the military. The police were given further widespread powers to maintain law and order and to ensure that there was no return to the political violence which was prevalent in Turkey during the late 1970s.

Widespread concern continued throughout the 1980s and the early 1990s regarding the persistent and widespread use of torture of political prisoners. In December 1985 a case brought before the Human Rights Commission of the Council of Europe by five European countries, alleging that Turkey had violated the European Convention for the Protection of Human Rights, was settled out of court when Turkey agreed to rescind all martial law decrees within 18 months, to introduce an amnesty for political prisoners, and to allow independent observers from the Council of Europe to monitor progress. In July 1987 all martial law decrees in Turkey were repealed when martial law was replaced with a state of emergency in the provinces of Diyarbakir, Mardin, Siirt and Hakkâri (making a total of nine provinces under an official state of emergency). The Government's signing, in January 1988, of the UN's and Council of Europe's agreements denouncing torture, however, received a cynical response from both the local and the international media. In November the eight-year state of emergency in İstanbul was revoked.

In November 1987 Dr Nihat Sargin and Haydar Kutlu, the respective leaders of the banned Workers' Party of Turkey and the Turkish Communist Party, returned to Turkey after seven years of self-imposed exile, with the intention of merging their two parties to form a new Turkish United Communist Party. They were both arrested at the airport and were charged with offences under the Turkish penal code, which specifically outlaws communist organizations and the dissemination of Marxist-Leninist ideas. At their trial, which began in June 1988, both men alleged that they had been tortured. In May 1990 they were released from detention for the remainder of the trial, in anticipation of significant changes to the articles of legislation that had declared communist parties illegal. In June it was reported that an application for legal status for the Turkish United Communist Party put forward by the two men, had been rejected. In July 1989, at the end of a seven-year trial of members of the banned Dev Yol, a military court sentenced seven left-wing extremists to death, 39 to life imprisonment and more than 300 to jail terms of up to 21 years for activities dating back to the time of the 1980 military coup. In April 1990 it was estimated that 25,000 people had been detained for political reasons since 1980.

A sharp increase in outbreaks of urban terrorism in early 1990, coupled with a perceived increase in the influence of fundamentalist thought, led to widespread fears of a return to the extremist violence of the late 1970s. In October 1990 a hitherto unknown terrorist group, the Islamic Movement, claimed responsibility for a bomb attack which killed Dr Bahriye Ucok, an outspoken critic of the 'fundamentalist perversion' of Islam and a staunch defender of the secular rights of women. The increase in terrorist attacks by Islamic and left-wing groups was exacerbated by the Government's stance in the conflict in the Persian (Arabian) Gulf. A series of attacks against Western targets in Turkey were unleashed, including US civilians, diplomatic missions and offices of several national airlines and banks in İstanbul and Ankara.

In early April 1991 a draft anti-terrorism bill was approved by the Grand National Assembly. Presented as a move towards greater liberalization and democratization, the bill contained provisions for the abolition of controversial articles of the penal code which had proscribed the formation of religious or communist political parties, for the early release of as many as 35,000 prisoners, for the commuting of the death sentence for more than 250 prisoners and for a relaxation of the ban on the use of minority languages. By mid-April it was reported that some 5,000 political prisoners had already been released as a result of the new bill. In July Turkey's Constitutional Court again refused to afford legal status to the Turkish Communist Party.

The MDP voted to disband itself in May 1986. Many of its members joined the new right-wing Hür Demokrat Partisi (HDP—Free Democratic Party), which was formed by Mehmet Yazar, the former President of the Union of Chambers of Commerce and Industry. In December the HDP merged with ANAP, and the right-wing Vatandas Partisi (VP—Citizen Party, formed earlier in the year) merged with the DYP (although the VP's leader, Vural Arikan, became an independent); the DSP became a legitimate parliamentary group (i.e. it had more than 20 deputies in the Grand National Assembly) when several deputies from the SHP defected and joined its ranks. By the end of 1986, therefore, the number of recognized parliamentary groups in the Grand National Assembly stood at four—ANAP, the SHP, the DSP and the DYP.

In May 1987 it became apparent that there were rifts within ANAP when its Secretary-General, Mustafa Tasar, resigned after criticizing the party's increasingly powerful Islamic fundamentalist wing. ANAP fared well, however, in the mayoral elections in June, winning 55 of the 84 seats contested. The DYP also proved its continuing popularity by winning 17 seats, whilst the SHP won only six seats and the DSP a mere three.

FURTHER STEPS TOWARDS DEMOCRACY

In a national referendum, held in September 1987, a narrow majority approved the repeal of the 10-year ban imposed on over 200 politicians in 1981, which prohibited them from taking an active part in public life. This result enabled Bülent Ecevit to assume the leadership of the DSP, while Süleyman Demirel was elected as leader of the DYP. As the polls for the referendum closed, the Prime Minister, who had campaigned against the repeal of the ban, immediately announced that a general election would be held on 1 November (a year earlier than required). A few days later, the Grand National Assembly approved legislation enabling a general election to be held at such short notice, by eliminating the procedure of primary elections within each party. After protests and threats of an electoral boycott by the opposition parties, however, the Government postponed the general election until 29 November, thus enabling primary

elections to be held. Seven parties contested the general election, which was the first free election in Turkey since the 1980 military coup. ANAP obtained 36.3% of the votes cast (which, because of the 'weighted' electoral system, meant that it was allotted 292 of the seats in the Grand National Assembly, now enlarged from 400 to 450 seats), while the SHP (24.7% of the votes) won 99 seats and the DYP (19.1% of the votes) won 59 seats. Because of the country's proportional representation system, requiring a party to obtain at least 10% of the national vote in order to be represented in the Grand National Assembly, none of the four other parties contesting the election (including the DSP, with 8.5% of the votes, and the RP, with 7.2%) won seats. Özal formed a new expanded Council of Ministers in December. In February 1988 the Sosyalist Parti (Socialist Party), the first overtly socialist political party in Turkey since the 1980 coup, was formally established.

In June 1988, an unsuccessful assassination attempt was made on Özal, as he addressed an ANAP meeting in Ankara. This incident raised fears of a right-wing conspiracy against the Prime Minister, since the would-be assassin had been a senior member of the neo-fascist 'Grey Wolves' group in the 1970s. In August Özal made an unsuccessful attempt to pass a new piece of legislation through the Constitutional Court, which would have enabled local elections (normally held every five years) to take place up to one year in advance. In the following month a national referendum was held to decide whether to adopt this amendment and to bring forward the holding of local elections (scheduled for March 1989) by five months, to November. The political situation became more tense when opposition parties insisted that the result of the referendum should be interpreted as reflecting the extent of confidence in the Prime Minister and ANAP. The widespread public dissatisfaction with the Government and its policies was reflected in the fact that only 35% of the total votes cast were in favour of Özal's proposed amendment, which was, consequently, not adopted.

At the local elections, which were held, as scheduled, throughout Turkey in late March 1989, ANAP obtained only 22% of the total votes, while the SHP and the DYP won 28% and 26%, respectively. The ruling party's defeat included the loss of control of the local councils in the country's three largest cities (Ankara, İstanbul and İzmir) to the SHP. A few days after these elections, Özal implemented an extensive ministerial reshuffle, which was aimed at restoring public confidence in the Government. In the following month, the Prime Minister requested and won from the Grand National Assembly, a vote expressing confidence.

ÖZAL BECOMES PRESIDENT

In mid-October 1989 Özal declared his candidacy for the presidential election to be conducted in the Grand National Assembly on 31 October. Despite a boycott of the election by SHP and DYP deputies, who claimed that Özal no longer had a popular mandate, and attempts by a second ANAP candidate to divide support, Özal received the simple majority required in the third round of voting (having failed to secure the two-thirds majority of the 450 deputies necessary for victory in the first two rounds), polling 263 of the votes. On 9 November Özal succeeded Gen. Kenan Evren as President and unexpectedly appointed Yıldırım Akbulut, the Speaker of the Grand National Assembly and a former Minister of the Interior, as his successor to the premiership. Although Akbulut was considered by many ANAP supporters as likely to be an ineffectual leader, chosen to allow Özal a greater degree of control as President, a motion expressing confidence in the new Prime Minister was approved by the Grand National Assembly, and Akbulut was later elected as party leader. Towards the end of 1989 the parliamentary position of the SHP was seriously undermined when a number of SHP deputies resigned in protest at the expulsion of six Kurdish deputies who had attended a Kurdish conference in Paris earlier in the year. Rumours of division within ANAP were confirmed in early 1990, when the Ministers of Foreign Affairs and of Finance and Customs both resigned, expressing disenchantment with party policy and leadership. In March Bedrettin Dalan, a former Mayor of İstanbul and an ANAP party member, announced his intention of forming a new Demokratik Merkez Partisi (DMP—Democratic Centre Party) which was expected to attract many disaffected ANAP supporters.

Following the forcible annexation of Kuwait by Iraq in August 1990, the Government was afforded the *de facto* power to declare war at an emergency session of parliament where, despite strong opposition, a proposal allowing the Government to accept foreign troops in Turkey and deploy Turkish troops abroad in retaliation for acts of aggression against Turkey, was approved by 216 votes to 151.

Although Özal's visible and vociferous support for the UN's sanctions against Iraq (and for US initiatives in particular) did much to enhance Turkey's international standing, political opponents accused the President of jeopardizing Turkey's position in the conflict unnecessarily. In mid-January 1991 a resolution expanding existing war powers, which had been granted to the Government in September 1990, was approved by the Grand National Assembly, despite strong opposition from the SHP and the DYP. The new resolution effectively sanctioned the unrestricted use of NATO air bases in Turkey by coalition forces. However, President Özal stressed that Iraq's 'territorial integrity' would be violated by Turkish forces only in the event of direct military aggression against Turkey or of territorial incursions into Iraq by Iran or Syria. At the end of January 1991 (in a move interpreted as an attempt to prepare the country for the possibility of war) the Government imposed a 60-day ban on strike action, hoping to curtail disruption in crucial industrial sectors.

At an ANAP party congress convened on 15 June 1991 Prime Minister Yıldırım Akbulut was defeated by former Minister of Foreign Affairs Mesut Yılmaz in a contest for the party leadership. The following day Akbulut resigned as Prime Minister, and on 17 June, in accordance with the Constitution, President Özal invited Yılmaz to head a new administration. On 23 June Yılmaz announced the composition of a new, radically-altered Council of Ministers and the next day he assumed the premiership. The appointment of Yılmaz (the leader of the liberal faction within ANAP) and the composition of the Council of Ministers was widely interpreted as an attempt to balance the influence of the liberal and Islamic fundamentalist movements within the Government. In early July the economic programme of the new administration (reaffirming ANAP's commitment to free-market policies and deregulation) was approved by the ANAP majority in the Grand National Assembly. In August the Government announced that general elections (not legally required until November 1992) would be conducted in October 1991, in response to demands by the opposition SHP and DYP, who claimed that ANAP no longer commanded sufficient popular support to govern effectively.

THE 1991 GENERAL ELECTION

A general election was held on 20 October 1991. The DYP, under the leadership of Süleyman Demirel, received an estimated 27.3% of the votes cast, narrowly defeating ANAP (with 23.9%) and the SHP (with 20.6%). Although the DYP failed to attract the level of support necessary for the formation of a single-party government, it was expected that Demirel would assume the premiership at the head of a coalition government. The new coalition government comprising members of the DYP and the SHP was approved by the Grand National Assembly later in the month. The Council of Ministers was to include 12 SHP ministers (with the deputy premiership assigned to SHP party leader Erdal İnönü). The remaining 20 cabinet positions were to be occupied by DYP members. On 25 November the coalition partners announced a programme for political and economic reform that included the drafting of a new constitution, improvements in anti-terrorist legislation and matters of human rights, and increased levels of cultural recognition and of autonomy in local government for Kurds in Turkey. While international observers were impressed by Demirel's apparent commitment to human rights (the establishment of a separate ministry of human rights, to be headed by an ethnic Kurd, was promptly announced), the formal adoption of amendments to the criminal procedure code, designed to discourage torture (including a proposed reduction in the length of periods of legitimate police detention), were impeded by a lack of consensus within the coalition Government. Although the DYP and the SHP had performed well at municipal elections conducted in early June 1992 (increasing their combined share of national support to 58%, compared with 48% in the October 1991 general

election), the reactivation of the CHP in September 1992 (as a result of the adoption of more lenient guidelines for the formation of political parties, proposed by the Government) threatened to undermine left-wing support for the Government.

FOREIGN AFFAIRS, 1980–93

Turkey is recognized as a key member of NATO, both on account of its strategic position in Europe and because it is the only NATO member of the Organization of the Islamic Conference (OIC). This was illustrated in 1984 when the USA announced plans to provide Turkey with almost twice as much aid as Greece. In December 1981 the NATO countries were divided over support for the Turkish Government: while the USA promised to speed up aid to Turkey, EC countries were considering the suspension of aid. In January 1982 the European Parliament voted to suspend relations with Turkey, while, at the same time, the Council of Europe condemned military rule, in protest against human rights abuses and other repressive measures, the imprisonment of the former Prime Minister, Bülent Ecevit, and the delay in returning to democratic rule. In March 1982 the EC decided to 'freeze' aid to Turkey.

In September 1986 Turkey was readmitted to associate membership of the EC, when the Turkish-EC Association Council (which was established in 1963, but had been suspended since the army coup in 1980) met for talks in Brussels. Turkey, however, failed to gain access to the suspended EC aid, and to extend the rights of Turkish workers in Europe. In April 1987 Turkey made a formal application to become a full member of the EC. Overruling Greek objections, the EC Council of Ministers agreed to submit the application to the Commission of the European Communities to formulate its opinion on the merits of the case. In April 1988 a meeting of the Turkish-EC Association Council in Luxembourg was postponed indefinitely after objections by the Turkish delegation to a reference to Cyprus, which was inserted at the request of the Greek delegates, in the EC's opening statement (see below). In December 1989 Turkey's application was effectively rejected, at least until 1993, by the Commission of the European Communities. The Commission emphasized that the completion of a single European market was necessary before any enlargement could take place, and cited factors including Turkey's unsatisfactory human rights record, high rate of inflation, dependence upon the rural population and inadequate social security provisions as falling short of EC expectations.

The Turkish Government responded positively to requests from the USA for logistical aid following the forcible annexation of Kuwait by Iraq in August 1990, and in September the defence and economic co-operation agreement (which provides for the US military presence in Turkey) was extended. In mid-January 1991 a resolution to extend the war powers of the Government and effectively endorse the unrestricted use of Turkish air bases by coalition forces was agreed by the Grand National Assembly (see above). On the following day US aircraft began bombing missions into north-east Iraq from NATO bases inside south-east Turkey. In February and March the US Government announced substantial increases in military and economic aid to Turkey for 1991 and 1992.

Although Greece and Turkey had agreed to ease tensions in April 1982, relations were further strained when the Turkish-backed 'Turkish Federated State of Cyprus' made a unilateral declaration of independence in November 1983. Turkey is the only country to have recognized this state, the 'Turkish Republic of Northern Cyprus' ('TRNC'), and to have exchanged ambassadors with it (in May 1984). In July 1986 Turgut Özal became the first Turkish Prime Minister to make an official visit to the 'TRNC'. Tension between Greece and Turkey came to a head in March 1987 when a disagreement between the two countries over petroleum-prospecting rights in disputed areas of the Aegean Sea almost resulted in the outbreak of military conflict. Relations between Turkey and Greece improved considerably, however, in 1988: in February the Turkish Government officially annulled a decree, issued in 1964, which curbed the property rights of Greek nationals living in Turkey. In return, the Greek Prime Minister, Andreas Papandreou, officially accepted Turkey's status as an associate member of the EC by signing the Protocol of Adaptation (consequent on Greece's accession to the EC) to the EC–Turkey Association Agreement in April, which the Greek Government had, hitherto, refused to do. The situation deteriorated somewhat, however, later in the same month, when Greece insisted on linking the possibility of Turkey's entry into the EC with the ending of the Turkish presence in Cyprus. In May Melina Mercouri, the Greek Minister of Culture, became the first Greek minister to visit Turkey since 1974, and in the following month Özal became the first Turkish Premier to visit the Greek Prime Minister in Athens for 36 years. As regards Cyprus, Greece wanted the complete de-militarization of the island, on the basis of a set timetable, and the establishment of a joint Greek-Cypriot and Turkish-Cypriot police force under UN auspices. Özal insisted, however, that Turkey would remove its troops only after an overall peace settlement was reached (see chapter on Cyprus). In September 1988 the Turkish and Greek ministers of foreign affairs chaired a session of a joint political committee, which had been proposed in January, in Ankara, while a joint economic committee was convened concurrently in Athens. In February 1990 relations deteriorated again, following violent clashes between Christians and the Muslim minority in western Thrace, in Greece.

Other aspects of Turkey's foreign policy included neutrality in the Iran–Iraq War and commitment to full rights for the Palestinians. In late 1984 tension arose between the USA and Turkey over a congressional resolution condemning alleged massacres of Armenians by Turks during the First World War. The resolution eventually lapsed, and the USA granted military aid, but the tension remained. The Turkish Government was angered once again in February 1987 when the European Parliament adopted a report 'deploring' the alleged massacres. The controversial 'Ottoman Archives', which may help to clarify the circumstances surrounding the alleged killings, were officially opened to scholars for the first time in İstanbul in May 1989.

Turkey protested vehemently against the campaign of forced assimilation, launched by the Bulgarian authorities in late 1984, in which ethnic Turks living in Bulgaria (estimated to number about 1.5m.) were forced to adopt Slavonic names and were banned from practising Muslim religious rites. In February 1988 Turkey took part in a six-nation Balkan conference in Belgrade. During this conference, the ministers of foreign affairs of Turkey and Bulgaria signed a protocol to improve relations between the two countries. In May 1989, however, there were reports that ethnic Turks had been killed in Bulgaria during demonstrations against the continuing assimilation campaign, and the Bulgarian authorities began to deport hundreds of Turks to Turkey. The Bulgarian Government, however, continued to deny the existence of a resident Turkish minority in their country. The official explanation was that the ethnic Turks were merely Slavs whose ancestors had been forcibly converted to Islam. In late May the Bulgarian authorities altered their policy and issued passports and exit visas to at least 150,000 Turks who wished to enter Turkey. In response, the Turkish Government opened the border and publicly stated its commitment to accepting all the ethnic Turks as refugees from Bulgaria. By mid-August an estimated 310,000 had crossed into Turkey, but more than one-third of that number had returned to Bulgaria by February 1990, as a result of disillusionment with conditions in Turkey and the proposed abolition of the assimilation campaign by a new Bulgarian administration.

Following the formal dissolution of the USSR in December 1991, the Turkish Government sought to further its political, economic and cultural influence in the Central Asian region, and to forge strong links with the six Muslim states of the former Soviet Union in particular. In April 1992 Prime Minister Demirel undertook an official visit to several of the former Soviet republics, pledging aid of more than $1,000m. in the form of credits for the purchase of Turkish goods and contracts. At the same time, programmes broadcast by the Turkish national television company were relayed, by satellite, to the region for the first time. In June leaders of 11 nations, including Turkey, Greece, Albania and six former Soviet republics, established a Black Sea economic alliance, and expressed their commitment to promoting greater co-operation with regard to transport, energy, information, communications and ecology.

TURKEY AND THE IRAQI KURDS

In August 1988 the Iraqi armed forces launched a major offensive against Kurdish separatists in northern Iraq. Thousands

of Kurdish refugees (an estimated 100,000–150,000 by early September) fled to the Turkish border, where, after initial hesitation, the Turkish Government admitted them on 'humanitarian grounds' and provided asylum in makeshift camps. In addition, the Turkish Government refused a request by Iraq to allow Iraqi forces to pursue Kurdish guerrillas in Turkish territory. However, the Government made it clear that the refuge being given to the Iraqi Kurds was only temporary. The situation became more serious when many of the refugees claimed that the Iraqi armed forces had launched numerous chemical bomb attacks against them. Despite strenuous denials by Iraqi officials, the physical evidence clearly indicated the use of chemical warfare. The Turkish Government, however, claimed that no traces of the use of chemical weapons had been found, and it would not permit a proposed visit by UN medical experts to investigate the allegations. Iraq offered an amnesty to the Iraqi Kurds in Turkey in September, but very few returned. By August 1989 there were still about 36,000 Iraqi Kurds living in three camps in eastern Turkey, yet the Turkish authorities continued to refuse to recognize them officially as political refugees.

Following the Iraqi invasion of Kuwait in August 1990, the Turkish Government swiftly complied with UN proposals for economic sanctions against Iraq. The passage of Iraqi oil through pipelines (which had not been suspended by the Iraqis themselves) across the Turkish mainland to Mediterranean outlets was curtailed, all Iraqi assets in Turkey were 'frozen' and Turkey's border with Iraq was closed to the passage of all but essential supplies (and to all traffic in January 1991). Turkish nationals were swiftly evacuated from Iraq and Kuwait, and as many as 130,000 troops were redeployed along Turkey's border with Iraq. Despite the increase in the number of Turkish troops in the border region and the deployment of additional US and NATO aircraft in south-east Turkey in early 1991, President Özal continued to stress that Turkey had no intention of opening a second military front against Iraq and that Turkish forces would continue to guarantee Iraq's 'territorial integrity'. In January, following the Government's decision to allow US aircraft to conduct bombing missions into north-east Iraq from NATO bases in Turkey, the Iraqi Minister of Foreign Affairs accused the Turkish Government of committing 'unjustified aggression' against Iraq.

In early March 1991 President Özal revealed that high-level talks had been conducted in Turkey between senior Turkish foreign ministry officials and the leaders of Kurdish groups within Iraq, during which Turkey had endorsed the notion of some form of autonomy for Iraqi Kurds within Iraqi territory. The Turkish Government had also agreed to open its border for humanitarian aid to areas of northern Iraq which had been reportedly liberated by Kurdish rebels in the aftermath of the conflict in the Persian (Arabian) Gulf. By the beginning of April, however, having suffered serious reversals at the hands of the Iraqi armed forces, more than 500,000 Iraqi refugees (mainly Kurds) were reported to be fleeing to the Turkish border. Although the Turkish Government formally announced the closure of the border, claiming that it was unable to accommodate such a large-scale exodus (some 10,000 refugees, many of them ethnic Turks, had already been recently received by Turkish authorities), and appealed to the UN Security Council to consider the plight of the refugees and to take immediate action to ensure their safety, by mid-April it was estimated that some 600,000 refugees (including 400,000 within Turkish borders) were encamped in the mountainous border region. While reports of the appalling conditions confronting the refugees gave rise to grave international concern and the initiation of an ambitious humanitarian aid programme (with US Air Force transport planes from the İncirlik air base distributing supplies to the refugees), the Turkish minister of state in charge of the relief effort criticized Western governments for their slow response to the crisis. Following intense international pressure, the Turkish authorities (who had contained the refugees in the border region in the hope that a protected buffer zone would be created to accommodate the Kurds on flatlands just inside the Iraqi border rather than on equivalent land at a much greater distance inside Turkey) began to make provision for the removal of up to 20,000 of those refugees in greatest need of medical attention to better conditions at an existing camp at Silopi, inside Turkey. Prime Minister Yıldırım Akbulut insisted that such initiatives were merely temporary measures and that the ultimate aim of the relief effort must be the complete repatriation of the Kurds. In mid-April, in accordance with a UN-approved proposal to establish temporary 'safe havens' for the refugees in northern Iraq, Turkey agreed to allow coalition forces to use Turkish facilities to help the refugees, under UN auspices. By mid-May it was estimated that some 200,000 refugees had returned to Iraq, while 89,000 remained in Turkey (65,000 at Hakkâri and 24,000 at Sirnak) and a further 162,000 were still encamped on the Iraqi side of the border with Turkey.

Following the completion of the first phase of the international relief effort for the Kurdish refugees and the subsequent withdrawal of coalition forces, the Turkish Government agreed to the deployment in south-east Turkey of a 3,000-strong multinational 'rapid reaction force' which would respond to any further act of aggression by Iraq against the Kurds in the newly-created 'safe havens'. The force, to be jointly commanded by the USA and Turkey (the latter would reserve the right to veto attacks against Iraq launched from Turkish territory or airspace) was to include a 1,000-strong Turkish battalion. In September 1991 the Government approved a 90-day extension for the presence, in south-east Turkey, of a small allied air-strike force, and subsequently its mandate was granted six-month extensions. All allied ground forces, however, were withdrawn in October.

POLICY TOWARDS THE TURKISH KURDS, 1980–93

During the 1980s the potential threat of separatism among the Kurds in the south-east of the country was a continuing problem. Despite the fact that there are an estimated 3m.–8m. Kurds in Turkey, they are not officially recognized as a separate ethnic group and it is illegal to speak Kurdish. In 1984 the outlawed PKK, which advocates the creation of a Kurdish national homeland in Turkey and is led by Abdullah Ocalan, launched a violent guerrilla campaign against the Turkish authorities in the south-eastern provinces. The Government responded by arresting suspected Kurdish leaders, dispatching more security forces to the region, establishing local militia groups, and imposing martial law in nine troubled provinces. By July 1987, however, martial law had been replaced by a state of emergency under a district governor in all of these provinces. In spite of this concession, the violence continued and the PKK began to concentrate their attacks on the local militia and civilians. In June 1988 the Government made no response to Ocalan's offer of a cease-fire and prisoner exchange and his demand for the legalization of the PKK. He threatened to spread the conflict to the cities and to attack Turkish politicians and diplomats if the Government continued to insist on a military solution. In April 1990 the Government introduced severe measures to combat ethnic unrest, including harsh restrictions on the media and an increase in the powers of local officials to outlaw strikes and impose internal banishment. Violence continued to escalate, however, and in April and May clashes between rebel Kurds, security forces and civilians left 140 dead, marking the bloodiest period of the conflict since August 1984.

In early 1991, in the context of the Kurdish uprising in Iraq, President Özal sought to alleviate mounting tension among Turkish Kurds by announcing the Government's decision to review existing legislation proscribing the use of languages other than Turkish and by allowing Kurds to celebrate openly the Kurdish new year for the first time. By mid-1991, however, a new wave of violence between the PKK guerrillas and the security forces had erupted in the south-eastern provinces. In July three people were killed and more than 100 wounded when security forces clashed with some 20,000 mourners attending the funeral of a murdered Kurdish rights activist in Diyarbakir. The conflict entered a new phase when, in late 1991 and early 1992 (in retaliation for continuing cross-border attacks on Turkish troops), government fighter aircraft conducted numerous sorties into northern Iraq in order to attack suspected PKK bases there. In the course of these raids many civilians and refugees (mainly Iraqi Kurds) were reportedly killed, prompting international observers and relief workers publicly to call into question the integrity of the exercises. In October 1991 the Iraqi Government lodged formal complaints with the UN, denouncing Turkish violations of Iraq's territorial integrity. In April 1992 negotiations with Syria resulted in the reactivation of a 1987

security agreement designed to curb the activities of the PKK in the border region.

In late 1992 Turkish air and ground forces (in excess of 20,000 troops), conducted further attacks upon PKK bases inside northern Iraq, hoping to taking advantage of losses inflicted upon the Kurdish rebels by a simultaneous offensive, initiated by Iraqi Kurdish *peshmerga* forces in October, with the aim of forcing the PKK from Iraq. By mid-December most Turkish ground forces had been withdrawn from Iraqi territory, and in January 1993, the Turkish military offensive was redirected against PKK strongholds in south-eastern Turkey.

ÇILLER BECOMES PRIME MINISTER

On 16 May 1993 Süleyman Demirel succeeded Turgut Özal as President, after being elected in the third round of voting by the Grand National Assembly. (Özal had died in April as a result of heart failure.) In early June Minister of State Tansu Çiller was elected to the DYP party leadership, and subsequently assumed the premiership as Turkey's first woman Prime Minister. Çiller announced the composition of her Council of Ministers in late June. While all 12 SHP ministers retained their portfolios, the replacement of several prominent DYP ministers was interpreted as an attempt by the Prime Minister to consolidate support for her election to office.

On taking office as Prime Minister, Çiller was immediately confronted with a dramatic increase in separatist violence. The PKK ended its unilateral cease-fire, which had been announced in March 1993, by declaring 'war' on all Turkish targets. There followed a wave of bomb explosions in Turkish tourist resorts and abductions of foreign nationals by the PKK. There was also a series of attacks upon Turkish diplomatic missions and business interests in Europe. The Çiller Government responded by postponing measures to allow the use of the Kurdish language in schools and the media, and by withdrawing plans to give a degree of local autonomy to the south-eastern provinces. At the same time the armed forces, which numbered 150,000–200,000 in the south-east of the country, were given a virtual free hand against the PKK.

The pro-Kurdish Halkın Emek Partisi (HEP—People's Labour Party) was outlawed in July 1993. In September Mehmet Sincar, a deputy of the Demokrasi Partisi (DEP—Democratic Party), the successor to HEP, was assassinated. The PKK and the authorities each blamed the other for the assassination. The Government cancelled all public investment in the south-east of the country, while it was estimated that there had been 2,000 deaths in the region as a result of the conflict between June and December 1993. In March 1994 mainstream parliamentarians voted to strip seven members of the DEP (and one independent Kurdish deputy) of their parliamentary immunity from prosecution, and six deputies were subsequently detained. On 16 June Turkey's Constitutional Court banned the DEP and ruled that its 13 deputies should be expelled from the Grand National Assembly, owing to associations with the PKK. In August the six deputies detained since March, along with two DEP deputies arrested in July, went on trial on charges of supporting separatist movements. In December they were found guilty and received prison sentences of between three-and-a-half and 15 years, despite international protests (although the length of time already served in prison was sufficient to enable the immediate release of two of the deputies). At the end of October 1995 the Supreme Court released two of the deputies. However, it upheld the sentences of the four deputies remaining in prison.

In March 1995 about 35,000 Turkish troops were sent into northern Iraq in a military operation aimed at forcing the PKK out of its bases near the border. The PKK was reported, however, to have obtained advance knowledge of the incursion and to have withdrawn to areas inaccessible to the Turkish forces. Under increasing international pressure, including the temporary suspension of relations by the Council of Europe parliamentary assembly and the suspension of military trade with Turkey by certain countries, Turkish troops withdrew by early May. However, there was a further incursion into northern Iraq, by some 3,000 Turkish troops in July 1995, by which time the official death toll arising from the PKK conflict was estimated at more than 19,000.

Even as Çiller struggled to contain and defeat the PKK, she was confronted by tensions within her governing coalition. The minority coalition partner, the SHP, was suspicious of the Prime Minister's plans for privatization. It was widely expected that the Government would suffer heavy electoral defeats in the local elections of March 1994; however, at the elections, the beneficiary was not the main opposition party, ANAP, but the Islamic conservative RP. The RP, which had campaigned against inflation and high interest rates and against Turkey's ties to NATO and the European Union (EU, as the EC had then become), won 19% of the votes and took control of both Ankara and İstanbul.

In May 1994 Çiller sought to consolidate relations with the SHP, and simultaneously to deflect international criticism of Turkey's human rights record in the south-eastern provinces, by announcing plans to open up the political arena to groups that had been barred since the 1980 military coup. All restrictions on political activity were to be abolished, the voting age was to be reduced to 18 from 21, and deputies were to be allowed to move between parties.

Despite continuing dissension within the Government, and the resignation of several cabinet ministers, Çiller's coalition held together throughout the remainder of 1994, sustained, not least, by mutual fear of the RP. In November legislation enabling the sale of some 100 state enterprises was approved by the Grand National Assembly. Çiller's position appeared to be strengthened by the merger of the SHP and the CHP in February 1995, the merged party taking on the latter's name under the leadership of Hikmet Cetin (succeeded by Deniz Baykal in September 1995). The merger led to a new coalition agreement and a consolidation of the Government's parliamentary majority. However, Çiller encountered considerable resistance from the Grand National Assembly in relation to her proposals for 'democratization', as first disclosed in May 1994. In June 1995 deputies from the RP and from within Çiller's own DYP successfully blocked the majority of these proposals. This placed in jeopardy the customs union between the EU and Turkey, the terms of which had been agreed in March and which was scheduled to come into effect at the end of the year, subject to ratification by the European Parliament (which had threatened to veto the agreement unless there was significant progress on raising standards of human rights in Turkey). At the end of July Çiller succeeded in gaining approval from the Grand National Assembly for several democratization measures, including the lowering of the minimum voting age and the removal of certain restrictions on trade unions and political participation. In addition, the number of parliamentary seats was to be increased by 100, to 550.

In foreign affairs Çiller sought the creation of a UN peacekeeping force in Azerbaijan and a role for Turkey in the UN effort in the former Yugoslavia. In July 1994 around 1,455 Turkish troops were deployed in Bosnia and Herzegovina, strictly in support positions. Turkey advocated a removal of the UN embargo against the sale of armaments to Bosnia and Herzegovina and increased pressure on the international community to achieve this aim as a member of the contact group of the OIC. Relations with Greece deteriorated in 1994, owing to Greece's signing of the UN Convention on the Law of the Sea, which would permit the extension of its territorial waters in the Aegean Sea from six to 12 nautical miles. The Turkish Government, fearing the loss of shipping access to international seas, insisted that any expansion of territorial waters would be considered an act of aggression on the part of Greece, to which Turkey would respond. As the Convention entered into force in mid-November 1994, both sides conducted military exercises in the Aegean. Tensions between the two countries were manifest in early 1995 during negotiations to conclude a customs union between the EU and Turkey. Greece finally withdrew its opposition to the agreement in March, following the adoption of a formal timetable for accession negotiations to commence with Cyprus. In June the Grand National Assembly granted the Government military powers to defend the country's interests in the Aegean, following ratification of the Law of the Sea Convention by the Greek parliament.

In early September 1995, following the election of Deniz Baykal as the new leader of the CHP, the party's government ministers submitted their resignation, to enable Baykal to renegotiate the coalition arrangement with the DYP. Talks between Baykal and Çiller revealed substantial differences between the

two leaders, in particular with Baykal supporting trade union wage demands and demanding the resignation of the right-wing İstanbul Director of Security. In addition, Çiller rejected the possibility of conducting an early general election. By 20 September the leaders had failed to secure the future of the coalition, forcing President Demirel to accept the Prime Minister's resignation. On the following day Demirel asked Çiller to form a new government. In early October Çiller announced the composition of a new Government, having secured the backing of the Milliyetçi Hareket Partisi (MHP, Nationalist Movement Party) and the DSP parliamentary groups, although the latter was dependent on Çiller's resolution of the trade dispute (at that time involving an estimated 350,000 striking public-sector workers). A week later the new administration lost a vote of confidence conducted in the Grand National Assembly by 230 to 191 votes, hindered by several defections from its own DYP party. (The 'rebel' deputies were subsequently expelled from the DYP.) On 16 October Baykal revealed that a tentative agreement had been reached with the DYP leadership for the re-establishment of the DYP-CHP coalition. On 17 October Demirel assigned Çiller the task of forming the next government. Çiller conceded that an early general election would have to be conducted, at the end of the year, in order to secure future political stability. At the end of October Demirel approved a new coalition administration, formed by Çiller with the CHP. The Council of Ministers, which included several independent deputies, secured a vote expressing confidence, in the Grand National Assembly on 5 November, obtaining 243 votes to 171.

THE ISLAMISTS ENTER GOVERNMENT

The overriding objective of Tansu Çiller's caretaker administration prior to the general election, scheduled for 24 December 1995, was to secure endorsement by the EU of the long-proposed customs union. In October 1995 the Supreme Court cancelled the charges against four Kurdish former deputies, while the Grand National Assembly voted to amend the 'anti-terror' laws, one of the outstanding concerns of the European Parliament, in order to permit greater freedom of expression. The customs union was finally approved by the European Parliament on 13 December, and entered into force on 1 January 1996. Çiller had warned European leaders that failure to secure the agreement could provoke a rise in Islamic fundamentalism in Turkey, and, indeed, approval of the customs union was granted shortly before the general election in which the RP, which opposed a closer working arrangement with the EU, was expected to perform strongly.

During the election campaign domestic issues, such as the high rate of inflation, were the dominant concerns. The outcome of the election failed to resolve the country's political uncertainties: the RP won 158 of the 550 seats in the enlarged Grand National Assembly, having obtained 21.4% of the votes cast, while the DYP secured 135 seats (19.2%), ANAP 132 seats (19.7%), the DSP 76 seats (14.6%) and the CHP 49 seats (10.7%). The remaining votes, 14.4%, were shared among smaller parties which gained no representation. The rate of voter participation was officially estimated at 85%.

President Demirel gave the RP, as the largest party in the new Grand National Assembly, the first opportunity to form a government. Protracted negotiations between the parties ensued over the next two months. Despite RP leader Necmettin Erbakan's apparently conciliatory approach, the party failed to secure the secular coalition partner that it needed to form the first predominantly Islamic government in the history of modern Turkey. The question increasingly became whether the two secular right-wing parties, the DYP and ANAP, could agree on terms for a coalition that would prevent the formation of an RP administration. Finally, on 28 February 1996, ANAP and the DYP concluded an agreement. A rotating premiership arrangement was to be undertaken, according to which the ANAP leader, Mesut Yılmaz, was to occupy the office in the first year. The DYP was given most of the economic ministries, while ANAP took control of the defence and security portfolios. The new coalition still needed the support of the DSP if it was to control an absolute majority in the Grand National Assembly, but a formal arrangement proved impossible to secure.

Within weeks it was evident that the DYP-ANAP coalition would not last long, not least because of the intense personal animosity between Yılmaz and Çiller. During April and May 1996 the RP won two parliamentary votes to initiate corruption investigations against Çiller, on both occasions with significant support from ANAP deputies. Meanwhile, the opposition parties questioned the credibility of the Government following a ruling of the Constitutional Court to annul the vote of confidence that the coalition received in March. By the end of May Çiller was publicly urging Yılmaz to resign. The political uncertainty was seriously damaging the economy. The atmosphere of crisis within the country was deepened by an unsuccessful attempt to assassinate President Demirel on 19 May. In early June the Grand National Assembly, with the support of DYP deputies, voted to debate a censure motion on the Government; however, on 6 June Yılmaz resigned.

On 7 June 1996 Necmettin Erbakan was invited to form a government, and negotiations to establish a new coalition began. The DYP entered into discussions with the RP for the first time. On 28 June the two parties reached agreement, and the new coalition won a 'confidence' vote in the Grand National Assembly on 8 July. Erbakan, as leader of the RP, became Prime Minister, while Çiller assumed the deputy premiership and foreign affairs portfolio. In addition, the DYP was awarded the defence, interior and education ministries and responsibility for the Treasury. The coalition's programme embraced pragmatism, perhaps in order to reassure a watchful army, long the guardian of Turkish secularism. The new Government announced that its objective was to secure political and economic stability; it promised to pursue further European integration and undertook to honour existing international and strategic agreements, providing that they did not threaten national interest.

Nevertheless, Turkey had entered a new, potentially contradictory, era. It had moved closer to Europe even as it had sworn in its first Islamist-led government. Almost immediately Erbakan embarked on a tour of Middle East and Asian Islamic countries, while there was continuing uncertainty over the future of the agreement reached in February 1996 between Turkey and Israel, providing for co-operation in military training, which had led Syria, Egypt and Iran to express anxiety that Turkey was abandoning the Islamic camp. It remained to be seen whether RP rank-and-file members would be willing to accept the continuation of this agreement without demur. Similar uncertainty prevailed over the long-term prospects for continued use of Turkish bases by allied forces engaged in 'Operation Provide Comfort' in northern Iraq, although at the end of July a five-month extension of the mandate was approved. Relations with the USA, however, became strained in the first months of the new administration. In August Turkey and Iran signed an agreement authorizing the construction of a pipeline between the two countries and enabling the sale of natural gas from 1999. The accord was concluded days after the entry into force of US legislation threatening punitive measures against countries undertaking substantial investment commitments in Iran. In early September Turkey was reportedly not consulted before US air strikes were launched against Iraqi government troops in northern Iraq, and the Turkish authorities refused permission for the use of Turkish bases to pursue the operation.

However, there were policy areas where continuity seemed more assured under a government led by the RP. The RP leadership pledged itself to firm action against the PKK. On 30 June 1996 a militant supporter of the Kurdish cause killed herself and six soldiers in a suicide bomb attack in Tunceli, eastern Turkey. In late June more than 30 members of the principal pro-Kurdish nationalist grouping, the Halkın Demokrasi Partisi (People's Democracy Party), including its leader Murat Bozlak, were detained following disturbances at a party congress and were subsequently charged with encouraging separatism. Civilian clashes with police occurred in Ankara and İstanbul during June and July at demonstrations of support for some 300 PKK prisoners who were on hunger strike as a protest against their treatment and conditions of confinement. Some 12 detainees died while refusing sustenance, prompting widespread international criticism at the Government's intransigence. Meanwhile, the Grand National Assembly, at the end of July, approved an extension of the state of emergency in the south-eastern provinces, despite the RP's electoral campaign commitment to reverse the situation, and the Turkish army intensifed its efforts to combat the PKK in the south-east

and in northern Iraq. In August the Government approved legislation granting extensive powers of martial law to the governors of all 76 provinces, in a move which suggested the imminent repeal of the controversial 'state of emergency' law, which in November was extended for a further four months in nine of the ten south-eastern provinces in which it had previously been applied. In August legislation was also endorsed which relaxed curbs on the Kurdish language and culture and facilitated increased investment in the south-east. In October, however, the European Parliament blocked aid to Turkey worth US $470m., because of continuing concerns regarding the country's human rights record. Following the US raids on northern Iraq in early September, the Turkish Government proposed the establishment of an exclusion zone along its entire border with Iraq in order to prevent an influx of refugees and to eradicate separatist violence from the region. Turkey argued for the ending of UN sanctions against Iraq, which would allow it to begin purchasing Iraqi oil, and the renegotiation of 'Operation Provide Comfort', which, it was claimed, had produced a political vacuum in northern Iraq, which was being exploited by the PKK. The 'Operation Provide Comfort' mandate expired on 31st December 1996, and a more limited aerial surveillance operation, 'Northern Watch', which was to monitor Iraq's compliance with UN resolutions, was established. In December, in accordance with the 'oil-for-food' agreement (Resolution 986) agreed between the UN and Iraq in May, a fixed quantity of Iraqi oil began to be exported through Turkey, in order to enable Iraq to purchase supplies of medicine and food.

Syria's alleged support for the PKK was likely to mean that its relations with Turkey would remain tense. A further source of tension between the two countries lay in Turkey's construction of hydroelectric dams on the Euphrates river, which Syria protested against, claiming that they would severely restrict its water supplies. In May Syria had accused Turkey of responsibility for a series of bomb explosions that had occurred in a number of its large cities. A further likely area of continuity in policy lay in Turkey's relations with Greece. In January confrontation flared up over rival territorial claims to the Kardak/Imia rocks in the Aegean Sea. UN and US mediation persuaded both sides to end a military and naval build-up in the area; however, the issue remained unresolved and in April 1997 Turkey rejected proposals to take the dispute to the International Court of Justice.

In October 1996 Erbakan was the subject of a vote of confidence in the Grand National Assembly, following severe criticism of his Government's foreign policy, which included a controversial visit to Libya by the Prime Minister; the censure motion was defeated. In early November the Minister of the Interior, Mehmet Ağar, resigned amid allegations by opposition parties of close links between senior DYP politicians, the police and organized crime. In December the chief of police in İstanbul was suspended, along with five other senior officers, pending an investigation into the allegations. In December 1996, the controversial visit of President Rafsanjani of Iran, during which a number of economic accords were signed, provoked widespread criticism, while tensions were further exacerbated following an anti-Israeli rally in Sincan, an Ankara suburb, on 31 January, during which the Mayor of Sincan publicly urged the introduction of *Shari'a* law in Turkey. The mayor was arrested and the Iranian ambassador, Muhammad Reza Bagheri, who also took part in the demonstration, left the country amid denials by senior parliamentary officials that his departure was related to the event. On 4 February the army paraded a tank unit through Sincan in what was widely considered to be a display of secular strength.

The Government suffered a serious legal defeat in December 1996 when the European Court of Human Rights (ECHR) ruled that Turkey, as the effective power in the 'TRNC', had breached the European Convention on Human Rights by denying a Greek Cypriot woman access to her property in Kyrenia since the 1974 invasion. The ruling was expected to open the way for compensation claims against Turkey (a signatory of the Convention) by other displaced Greek Cypriots.

YILMAZ REPLACES ERBAKAN

In the context of persistent rumours of an imminent military coup and a new censure motion against the Government, tabled in protest at proposals to introduce Islamic reforms, a meeting of the military-dominated National Security Council (NSC) on 28 February 1997 led to the publication of an 18-point memorandum setting out recommendations to ensure the protection of secularism in Turkey. On 5 March, under severe pressure, Erbakan reluctantly signed the memorandum, whereby the Government was committed to increasing the length of compulsory state education from five to eight years, to closing unauthorized Islamist schools and acting against Muslim brotherhoods (*Ikhwan*); to halting the employment of soldiers expelled from the army for fundamentalist activities; and to reducing co-operation with Iran.

Although the immediate political crisis had been resolved, DYP dissidents began to call for the dissolution of the Government and the organization of early elections. At the end of April 1997 the NSC demanded that Erbakan accelerate implementation of the 18-point memorandum, stating that inadequate progress had been made. On 26 May Erbakan was also compelled to chair a special session of the Supreme Military Council and to counter-sign an order expelling 161 officers from the army for demonstrating Islamist sympathies. On 20 May a censure motion brought by four opposition parties was only narrowly defeated, and by 30 May the Government had lost its parliamentary majority as more DYP deputies defected (a number had resigned in April). Erbakan finally stepped down on 18 June, but President Demirel selected not Çiller (despite agreements concluded at the formation of the 1996 coalition) but ANAP leader Mesut Yılmaz to form a new coalition. On 30 June Yılmaz was appointed Prime Minister, having successfully gained the support of the DSP and the recently-founded Demokrat Türkiye Partisi (DTP—Democratic Turkey Party), along with several DYP defectors, to form a coalition with a nominal 12-seat majority. The new Government's programme, announced on 7 July, stressed its commitment to secularism and echoed many of the recommendations of the 18-point memorandum drawn up by the NSC (including the controversial education reforms). The Government received a vote of confidence from the Grand National Assembly on 12 July. Legislation promulgating the education reforms secured parliamentary approval in mid-August, as did a press amnesty law which suspended the sentences of imprisoned editors (believed to number at least six) who had been convicted of publishing articles posing a threat to national security. Later that month, the trial began of a total of 48 members of the security forces, including 11 officers, for the murder of a journalist in 1996. Doubts were raised about the effectiveness of the trial when the defendants failed to attend the court; delays to the case resulted in demonstrations in İstanbul in January 1998. In March, however, five of the officers were sentenced to more than seven years' imprisonment, while the remaining six were acquitted.

On 5 September 1997 the Human Rights Co-ordination High Council met in Diyarbakır to review measures introduced to prevent torture. In early October the Government established a working council for freedom of thought and expression, and launched an initiative to promote human rights through radio and television broadcasts.

On 16 October 1997 Turkey agreed an out-of-court settlement in a case of alleged torture which had been taken to the ECHR. Later that month a human rights activist, Esber Yagmurdereli, was sentenced to 23 years' imprisonment for supporting terrorist activity and disseminating separatist propaganda. Following both foreign and domestic condemnation of his detention, he was released in November ostensibly on the grounds of ill health. At the end of November the ECHR ordered Turkey to pay compensation to six former DEP deputies who had been detained for two weeks without trial and to three Kurdish women whose homes had been destroyed by the army.

In March 1998 10 members of the security forces were acquitted of torturing 14 students who were subsequently convicted of belonging to a proscribed organization and sentenced to between five and 12 years' imprisonment. At the end of the month, five of the students were released, pending their retrial on lesser charges. During late 1997 and early 1998 detainees at Erzurum prison protested against prison conditions, staging an extended hunger strike and taking hostages to reinforce their claims.

Meanwhile, in May 1997 the armed forces launched their most ambitious military incursion into northern Iraq yet, in pursuit of PKK activists, in a move which involved the mobilization of some 50,000 troops. The army claimed that its intervention was invited by the Iraqi-Kurdish Democratic Party of Kurdistan (DPK), which was reported to have clashed ferociously with the PKK during 1996. The incursion prompted a muted international response, when compared with the military intervention of 1995; the USA had been 'disengaging' from northern Iraq for some months and appeared content for Turkey to assume some of its former responsibilities. The most severe critics of the exercise were Iran and Syria, who accused Turkey of seeking to establish a permanent military presence in northern Iraq. A further offensive against PKK positions in northern Iraq in October was accompanied by the lifting of the 10-year-old state of emergency in three of the nine south-eastern provinces (Bitlis, Batman and Bingöl). The continuing emergency rule in the other six provinces and the Turkish military presence in northern Iraq were seen as indicative of a Turkish intention to create an informal cross-border security zone to prevent further incursions by Kurdish rebels.

FOREIGN RELATIONS UNDER YILMAZ

At the end of April 1997 the Greek and Turkish ministers responsible for foreign affairs held bilateral talks in Malta under EU auspices, during which it was agreed that each country would establish a committee of experts to help resolve bilateral disputes. The two committees were to be separate and independent and were to communicate through the EU. In July, at a NATO summit in Madrid, direct talks took place between Demirel and the Greek Prime Minister, Konstantinos Simitis (the first such meeting for three years). An agreement, known as the Madrid agreement, was signed in which both sides pledged to respect the other's sovereign rights and to renounce violence, and the threat of violence, in their dealings with each other. Later in July, following earlier statements from Turkey expressing the hope that Greece would revoke its veto on EU aid, Greece stated that the veto would not be removed unless Turkey agreed to international arbitration over the disputed islet of Imia/Kardak.

In July 1997 Turkey announced the formation of a joint committee to implement partial integration between Turkey and the 'TRNC', in response to the EU's agreement to commence accession talks with Cyprus. Turkey also declared in September that should the EU continue to conduct membership talks with the Greek Cypriot Government, then it would seek further integration with the 'TRNC'. Shortly afterwards Turkey banned all Greek-Cypriot ships from entering Turkish ports. Following the involvement of Greece in Greek Cypriot military exercises in October, in November Turkish forces engaged in military manoeuvres in the 'TRNC'. However, Yılmaz and Simitis held a cordial meeting later in November and agreed to explore confidence-building measures. Throughout 1997 and early 1998 relations were strained by accusations of violations of airspace and territorial waters, made by both Greece and Turkey. The most serious incident occurred in October when Greece accused Turkey of harassing a plane carrying the Greek Minister of Defence. In January 1998 Turkey declared that a Greek plan to extend its territorial waters from six to 12 miles was unacceptable, as were plans to open several Aegean islets for settlement. Turkey also protested to the UN that the proposed opening of an airbase at Paphos in southern Cyprus would destabilize the military situation on the island. In April Greece again vetoed the release of aid promised to Turkey under the Turkish-EU customs union. In June new tensions arose over Cyprus when six Turkish military aircraft landed at a 'TRNC' airfield in response to the landing a week earlier of Greek military aircraft at Paphos. The following month President Demirel paid an official visit to the 'TRNC' (in response to an unprecedented visit to Greek Cyprus by President Stefanopoulos of Greece the previous month), amid a show of Turkish military force to mark the 24th anniversary of the 1974 intervention. At the same time, Yılmaz reiterated Turkey's threat to take retaliatory military action if the Greek Cypriot Government went ahead with its plan to deploy Russian-supplied missiles before the end of 1998.

Relations with the EU were further strained by announcements in December 1997 that Turkey would not be included in negotiations for the enlargement of the EU, but that it would be invited to a newly-created European Conference, which was to include both EU and non-EU states, Turkey stated that it would not attend such a conference and that it would also cease negotiations on Cyprus, human rights and the Aegean disputes. The deadlock persisted in 1998–99, aggravated by the opening of substantive accession negotiations between the EU and Cyprus in November 1998.

In January 1999 Turkey refused to pay compensation which had been awarded by the ECHR to a Greek Cypriot woman for land lost as a result of the Turkish occupation of northern Cyprus. The damages were due to have been paid by October 1998: failure to comply with the ECHR ruling could result in expulsion from the Council of Europe.

In January 1999 Turkey accused Greece of escalating tension in the Aegean and urged reconciliation through talks and negotiations. Relations with Greece deteriorated in early 1999 following repeated Turkish accusations of Greek support for the PKK; Greece denied the accusations, although Ocalan was later captured at the Greek embassy in Kenya (see below). In March Turkey alleged that Greece had unilaterally suspended 'confidence-building' talks on the dispute in the Aegean, and denied a claim that Turkish aircraft had violated Greek airspace. However, relations between the the two countries improved considerably in August 1999, following the positive political and humanitarian response of the Greek Government to the earthquake that devastated Turkey in that month (see below).

Meanwhile, following negotiations, it was announced at the end of September 1997 that full diplomatic relations were to be resumed with Iran. In September President Demirel called for talks with Syria and Iran on the use of the Euphrates' waters.

In December 1997 at a conference of the OIC in Teheran, which Demirel attended, a resolution was passed condemning joint military action with Israel, although all specific references to Turkey were dropped; planned joint military exercises between Turkey, Israel and the USA took place in the Aegean in January 1998. They were condemned as provocative by many Arab states, particularly Syria and Iran. Official visits had previously been conducted by the Turkish and Israeli ministers responsible for defence, and Turkey had earlier awarded Israel several military contracts.

Relations with both Syria and Italy were soured during 1998 as a result of the refusal of those countries to facilitate Turkey's apprehension of the PKK leader Abdullah Ocalan (see below).

DOMESTIC DIFFICULTIES PERSIST

In January 1998 the Constitutional Court banned the RP on the grounds that it had a 'hidden' fundamentalist agenda and had conspired against the secular order. In addition, former Prime Minister Erbakan and six other RP officials were banned from holding political office for five years. A month later some 100 former RP deputies joined the new Fazilet Partisi (FP, Virtue Party), which had been founded in December 1997 under the leadership of Ismail Alptekin, and by early March the FP had become the largest party in the Grand National Assembly.

Public demonstrations followed the military's insistence on the strict enforcement of the ban on wearing Islamic dress in public buildings, notably educational establishments. The largest of these demonstrations was attended by 10,000 people in İstanbul at the end of February 1998. In early March the University of İstanbul temporarily annulled the ban and the Government stated that the ban would not be strictly enforced. In mid-March the Government survived its third censure motion, which was presented against the Minister for Education for his handling of the issue of Islamic dress. A few days later 20 members of a proscribed Islamic organization were arrested for inciting the demonstrations. At the end of the month the NSC criticized the Government for advocating a relaxation of the enforcement of anti-Islamic legislation; the Government subsequently proposed further measures to curb Islamic radicalism, and the universities announced their decision to enforce the dress code. Further demonstrations were organized by the trade unions in protest at legislation that they feared would erode union rights.

Also in March 1998, the Court of Appeals ruled that former Prime Minister Çiller could not be prosecuted over allegations that she had misused government funds during her premiership. While admitting that she had withdrawn substantial sums from a secret government 'slush fund', Çiller had claimed that she could not disclose the destination of the money for reasons of national security. Nevertheless, the Grand National Assembly voted in April to open a new investigation of the former Prime Minister's finances, while the following month her husband, Özer Çiller, was given a five-year suspended prison sentence for having misled a parliamentary commission investigating the couple's wealth. In May the Grand National Assembly confirmed that an inquiry would be conducted into corruption allegations against Prime Minister Yılmaz connected with tendering for government contracts. In early June Yılmaz announced that he would resign at the end of the year to make way for a broad-based caretaker government which would oversee the holding of early legislative elections in April 1999.

In August 1998 12 former RP politicians, including Erbakan and FP leader Recai Kutan, were charged with illegally diverting funds from the party prior to its dissolution. An investigation into Çiller's assets was begun in September, and in that month a Minister of State, Refaiddin Sahin, resigned both from the cabinet and from the DTP following accusations that he had failed to serve the interests of the party.

In September 1998 Minister of State Eyup Asik resigned from the Grand National Assembly following allegations that he had helped a suspected head of a Turkish organized crime syndicate to avoid arrest; Asik was acquitted in February 1999. In November 1998 the Grand National Assembly approved an investigation into the Minister of Public Works and Housing, Yaşar Topçu, on charges that he misused his office in the tender for the İzmit Bay Project. In November corruption charges against Çiller were dismissed by a parliamentary commission, owing to insufficient evidence; in that month Erbakan was acquitted on charges of slandering the judiciary, and Minister of State Günes Taner was removed from office following a parliamentary censure motion arising from corruption allegations. In December Çiller's husband was acquitted on charges of falsifying documents.

Following corruption allegations against the Prime Minister connected with the privatization of the Türk Ticaret Bankası, in November 1998 the Grand National Assembly approved a motion of 'no confidence' in the Government, which subsequently resigned. Protracted political manoeuvring resulted in the formation, in January 1999, of an interim administration headed by Ecevit, consisting of members of the DSP and independents. Also in January, a motion was filed for the dissolution of the pro-Kurdish nationalist Halkın Demokrasi Partisi (HADEP—People's Democracy Party), owing to its alleged links with the PKK; in March, however, the Constitutional Court ruled that HADEP was to be allowed to contest the elections.

In February 1999 the trial began of 79 alleged Islamists, including Erbakan. Hasan Celal Güzel, the YDP leader, was imprisoned for one year in February for inciting hatred in a speech at a meeting in Kayseri province; he received a further one-year sentence in May for insulting the President. In February the Minister of Finance and Customs resigned in order to stand for election as mayor of İstanbul. In February the High Election Council ruled that former RP deputies would not be allowed to take part in the forthcoming elections as independent candidates.

OCALAN CAPTURED—1999 GENERAL ELECTION

Relations with Syria, which had already deteriorated in July 1998 (owing to Syria's repeated claim to the Hatay region of Turkey), worsened in early October after Turkey threatened the use of force if Syria did not expel PKK leader Abdullah Ocalan (known to be residing in that country) and close down terrorist training camps both in Syria and the Beka'a valley in Lebanon. It was reported that 10,000 Turkish troops had been deployed near the border; the Turkish ambassador to Syria was also recalled. Egypt and, later, Iran both attempted to mediate in the dispute, and following a meeting of Turkish and Syrian officials in late October an agreement was signed under which Syria would not allow the PKK to operate on its territory; Ocalan was also forced to leave the country.

Turkey had recalled temporarily its ambassador to Italy in October 1998 after that country hosted a meeting of the Kurdish parliament-in-exile. Relations deteriorated further following the arrest of Ocalan upon his arrival in Italy in November, as a result of Italy's refusal to extradite him to Turkey and of his application for asylum. Anti-Italian demonstrations were held in Turkey, and Italian goods were boycotted; Turkey also threatened to end diplomatic relations if Ocalan's asylum requests were granted. PKK attacks in the south-east were reported during November, and government operations against the PKK continued. Ocalan's request for asylum was denied and in January 1999 Ocalan was reported to have left Italy. His whereabouts were unclear, but in February Ocalan was captured at the Greek embassy in Kenya and returned to Turkey. Widespread Kurdish protests were held throughout Europe.

At the end of February 1999 Ocalan was charged with treason and held personally responsible for the deaths of some 30,000 people during the 15-year Kurdish struggle for autonomy. PKK violence in protest at the trial continued in that month, and there were also threats of violence against tourists in Turkey. In April a further operation was launched against the PKK, involving the deployment of some 15,000 Turkish troops in northern Iraq. Some foreign journalists were permitted to observe Ocalan's trial, conducted on the prison island of Imrali, but Ocalan's lawyers claimed that they had been prevented from providing a proper defence. During the proceedings Ocalan depicted himself as a moderate and declared his willingness to negotiate a peace agreement for the Kurdish region if his life was spared. On 29 June, however, he was found guilty and sentenced to death; appeal proceedings were pending. In early August the PKK indicated its willingness to comply with Ocalan's request for a cease-fire in south-eastern Turkey. At the end of August the Grand National Assembly aproved a law offering a limited amnesty to Kurdish rebels. (Ocalan had stated that the PKK would be prepared to surrender arms if the Turkish authorities were to offer a general amnesty.) The law was to apply only to PKK rebels not involved in armed operations and excluded senior commanders. In early September, however, President Demirel vetoed the bill.

Turkey had claimed another major policy victory in December 1998 when, following intense international pressure, the Greek Cypriot Government revoked its plan to deploy Russian-supplied S-300 missiles on Cyprus, although the Turkish Government maintained that the decision to deploy them instead on the Greek island of Crete was also unacceptable.

On 18 April 1999, early elections to the 550-seat Grand National Assembly were held. Some 87% of the electorate voted, and the DSP became the largest party in the Grand National Assembly with 136 seats, closely followed by the MHP (129 seats) and the FP (111). ANAP and the DYP obtained 86 seats and 85 seats respectively; three seats were won by independents. HADEP performed strongly in the south-east, but failed to gain the 10% of the national vote necessary for a seat in the Grand National Assembly. The CHP leader, Deniz Baykal, resigned following the poor performance of his party. In May a three-party coalition Government was formed by the DSP, the MHP and ANAP. Headed by Ecevit, the new Government commanded 351 seats in the Grand National Assembly and was the fist since 1995 to enjoy an overall parliamentary majority. The coalition intended to pursue anti-inflationary policies, in force since late 1997, social security reform and the reduction of agricultural subsidies. In the same month the Chief Prosecutor instituted a court case against the FP, with the aim of dissolving the party. At that time the FP was involved in controversy after one of its female deputies had arrived at the Grand National Assembly for her investiture wearing an Islamic headscarf.

AUGUST 1999 EARTHQUAKE

A major earthquake, measuring 7.8 on the Richter scale, which struck north-western Turkey on 17 August 1999 resulted in an official death toll of 14,000 by late August, with estimates that a further 30,000 bodies remained buried under the rubble. Widespread public anger focused on the slow response of state institutions, particularly the armed forces, to the disaster, and on the endemic corruption which had allowed many sub-standard apartment blocks to be constructed in a region known to

be vulnerable to earthquakes. As a result of the damage caused by the earthquake, the Greek Government agreed to stop blocking EU development loans to Turkey, and to endorse fully EU credits for reconstruction and rehabilitation in that country.

Economy

Dr DAVID SEDDON

Revised for this edition by Alan J. Day

Turkey is about 1,450 km (900 miles) long and some 500 km (300 miles) wide, covering an area of 779,452 sq km (300,948 sq miles). The October 1985 census recorded a population of 50,664,458, and that of October 1990 showed the population to be 56,473,035. These totals excluded Turks working abroad, the largest number of whom are in Germany. The census results indicated an average annual population increase between 1985 and 1990 of 2.2%, compared with 2.6% between 1980 and 1985. Turkey's population density was 65.0 per sq km in October 1985, and had increased to 80.4 per sq km by mid-1996. The results of the national census conducted in November 1997 showed the population to have increased to 62.9m., indicating an average annual rate of growth of 1.5% since 1990. İstanbul, the country's largest city, had a population of 9.2m. (7.2m. in 1990), followed by Ankara (the capital) with 3.7m. and İzmir with 3.1m.

The country possesses great natural advantages: the land yields good grain and a wide variety of fruit and other products; it is rich in minerals; and it has a number of natural ports. The climate is varied and, on the whole, favourable, but communications are hindered by the mountain ranges that ring the Anatolian plateau to the north, east and south.

Gross national product (GNP) expanded, in real terms, by an average of 7% annually between 1970 and 1978. However, in the severe economic and social crisis of the late 1970s, growth slowed to the extent that an actual decline of 1.1% was recorded in 1980. In 1980–90 GNP at constant 1987 prices increased by an annual average of 5.5%, with a growth rate of 9.2%, the highest for more than a decade, in 1990. In 1991 the adverse effects of the Gulf War contributed to growth of just 0.9%, with GNP amounting to US $109,078m. The economy recovered in 1992, with GNP growth of 5.9%. This impressive growth performance continued in 1993, with a rate of 7.3%, owing essentially to a consumption boom fed by foreign borrowing. An official target growth rate of 4.5% was announced for 1994, but, after a severe financial crisis early in the year and an austerity programme in April, GNP, in fact, contracted by 6.1%. The decline in the economy was successfully reversed during 1995, and a growth in GNP of 8% was achieved, which levelled out at 7.9% in 1996. The strongest sectoral growth in both 1995 and 1996 was recorded in trade and industry. Figures published by the OECD revealed that although per-capita income rose by 6.1% in 1995, to $2,928, the wealthiest 20% of the population had a per-capita income of $8,037, while the poorest had only $717, giving Turkey the worst income distribution of all OECD countries except Mexico. In 1997 GNP rose by 8.6% to $199,300m. ($3,130 per head) on a conventional exchange-rate basis. In mid-1999 it was estimated that Turkey's economy had grown by no more than 3.8% in 1998, owing to adverse external factors such as a major financial crisis in Russia (Turkey's second most important trading partner). In mid-1999 a growth rate of 0.5% was predicted for that year, although a major earthquake in August, which severely affected production in some parts of the country, seemed likely to result in a growth rate of some –2.5%.

AGRICULTURE

Turkey relies substantially on agriculture, although the sector's overall role is shrinking rapidly. According to ILO, 36.8% of the country's labour force was employed in the agricultural sector in 1997. Agriculture provided 59.4% of total export revenue in 1979, but the proportion declined to around 20% in the late 1980s and stood at 13.6% in 1994. The agricultural sector, including forestry and fishing, contributed 17.5% of gross domestic product (GDP) in 1996, 15.1% in 1997 and 17.6% in 1998. Nearly 25m. ha, or about one-third of total land area, are under cultivation. Most of the farms are small and the average size of a family farm is only 8 ha. The country is basically self-sufficient in foodstuffs. The principal agricultural exports are cotton, tobacco, wheat, fruit and nuts. Other important crops are barley, sunflower and other oilseeds, maize, sugar beet, potatoes, tea and olives.

During the period 1963–70 Turkey's agricultural output rose by only 2.5% per annum, mainly because insufficient emphasis had been placed on agriculture in both the first and second economic development plans. However, with the introduction of land reforms and the improved utilization of land, machinery and farmer education resources, agricultural production in 1971 increased by some 30%. In 1975 real expansion in agriculture was 10.9%, but such good results were infrequent. In 1978 the rise in output was only 2.7%, while in 1981 it was just 0.3%. The rate of increase has fluctuated considerably in recent years and although inadequate rainfall in 1989 caused agricultural output to contract by 10.8%, during 1980–90 agricultural output grew by an annual average of 1.3%. In 1990–96 an average annual increase of 1.2% was recorded. In 1995 an increase in output of only 2% was attained, but growth was stronger in 1996, averaging 5.2%, largely due to exceptionally strong growth during the last three months of the year. Production then declined by about 1% in 1997, according to estimates from US Department of Agriculture officials in Ankara. Favourable weather conditions in 1998 led to an increase of some 10% in that year's agricultural production.

Government policy is to increase agricultural productivity, but budget constraints restrict project financing. The funds that are available come mainly from international sources, notably the World Bank. However, there is increasing foreign commercial interest in developing Turkish agro-industry, particularly for Middle Eastern export markets. In an attempt to alleviate the poverty of the south-eastern provinces of Turkey, the government drew up a south-east Anatolia programme (GAP) in the early 1980s, covering a total area of 74,000 sq km. Some 495 projects were integrated into GAP, which envisaged the construction of 22 dams on the Tigris and Euphrates rivers and their tributaries, 19 power plants and an irrigation network with the potential to cover 8.5m. ha. GAP has been affected by delays resulting from attacks by the PKK separatists and disputes over financing. In 1994 two water pipelines were opened. At the end of that year GAP had cost US $11,000m. and required an estimated $21,000m. for its scheduled completion by 2005.

About one-half of the cultivated area is devoted to cereals, of which the most important is wheat. The principal wheat-growing area is the central Anatolian plateau but the uncertain climate causes wide fluctuations in production. Barley, rye and oats are other important crops grown on the central plateau. Maize is grown along the Black Sea coastal regions, and leguminous crops in the İzmir hinterland. Rice, normally sufficient for domestic needs, is grown in various parts of the country. Since 1977 the annual wheat harvest has usually stayed above the high level of 16m. metric tons, owing to good weather, improved cultivation methods and increased levels of irrigation. In 1993 there was a particularly good harvest of 21m. tons, although export earnings remained at a relatively low level of about US $70m. In 1994 output was 17.5m. tons, with no improvement in export earnings. Output rose to 18.0m. tons in 1995, 18.5m. tons in 1996 and 18.6m. tons in 1997, while

provisional figures for 1998 suggested that output had again increased, to 21.0m. tons.

Cotton has traditionally been Turkey's main export earner, grown mainly in the İzmir region and in the district round Adana, in southern Turkey. In recent years, however, it has lost some of its traditional importance. Production stood at 558,000 metric tons in 1993, when exports of cotton were valued at US $123m., and 630,000 tons in 1994. The irrigation of agricultural land in the eastern Haran region was expected to enhance the production of cotton, and official figures indicated that production stood at 794,000 tons in 1996, 832,000 tons in 1997 and an estimated 802,000 tons in 1998.

Turkey produces a particularly fine type of tobacco. The three principal producing regions are the Aegean district, the Black Sea coast and the Marmara-Thrace region. The bulk of the crop is produced in the Aegean region, where the tobacco is notable for its light golden colour and mild taste. The finest tobacco is grown on the Black Sea coast, around Samsun. Although a traditional Turkish export, its relative position as an export has been declining in recent years. Most of Turkey's tobacco exports go to buyers in the USA and East European countries. The size of the crop fluctuates considerably: in 1993 it reached a record level of 324,000 metric tons (matched only in 1976) but fell to 204,000 tons by 1995. Production increased to 232,000 tons in 1996 and to 293,000 tons in 1997, although estimates for 1998 showed a decrease in production, to 255,000 tons. In 1984 the Government permitted the first legal imports of foreign cigarettes in more than forty years, breaking the monopoly over sales and distribution held by the state-owned tobacco and beverages agency, Tekel. Several international tobacco companies have started negotiations to manufacture cigarettes locally, and one joint-venture operation has been established at Bitlis in the south-east of the country to produce cigarettes for export. A new cigarette factory in İzmir, as part of a joint venture between the US tobacco company Philip Morris and the local Sabanci group, produces popular US brands for the domestic market. Tekel, however, has responded by raising capacity and output and improving the quality of its brands.

The coastal area of the Aegean, with mild winters and hot, dry summers, produces grapes, figs and olives. Exports of dried figs were valued at US $53m. in 1993. France is the main customer for figs. The outstanding product, however, is the sultana type of raisin. Turkey normally ranks second in the world as a sultana producer, but in good years becomes the largest producer in the world. Sultana harvests varied from 85,000 metric tons in 1976 to 138,000 tons in 1989, when exports were worth $72m. In 1996 the sultana harvest was 220,000 tons, increasing to 233,000 tons in 1997 and falling to an estimated 250,000 tons in 1998. In 1994 total exports of dried fruits were valued at $747m.

The Black Sea area, notably around the Giresun and Trabzon, produces the greatest quantity of hazel-nuts (filberts) of any region in the world. A harvest of 446,000 metric tons was recorded in 1996, when exports of hazel-nuts were valued at $444m. Substantial amounts of walnuts, chestnuts and almonds are also grown.

Tea is grown at the eastern end of the Black Sea, around Rize, and in other areas. Production of fresh leaves from state-owned tea plantations has steadily increased since the early 1980s to total 654,000 metric tons in 1994. Output declined to 524,000 tons in 1995, but increased to 600,000 tons in 1996, 752,000 tons in 1997 and to an estimated 979,000 tons in 1998.

Turkey is also an important producer of oilseeds, principally sunflower, cotton, sesame and linseed. It also produces olive oil, some of which is exported. Production fluctuates, partly because of the two-year flowering cycle of olive trees. In 1997 olive oil production decreased from 220,000 metric tons in 1996 to 40,000 tons, although provisional figures showed that production increased to 224,000 tons in 1998.

Turkey was, until 1972, one of the seven countries with the right to export opium under the UN Commission on Narcotic Drugs. Much opium was, however, exported illegally, particularly to the USA and Iran; partly as a result of pressure from the US Government, the Turkish Government made the cultivation of opium poppies illegal in 1972, but the ban was ended in July 1974 and the flowers are grown in certain provinces under strict controls. Opium gum is no longer tapped from the living plant. The poppy pods (opium straw) are sold to the government, which processes them into concentrate for export as the basis for morphine and other drugs.

Sheep and cattle are raised on the grazing lands of the Anatolian plateau. Stock-raising forms an important branch of the economy. The sheep population (33.1m. in 1997) is mainly of the Karaman type and is used primarily as a source of meat and milk. The bulk of the clip comprises coarse wool suitable only for carpets, blankets and poorer grades of clothing fabric. However, efforts have been made in recent years to encourage breeding for wool, and there are some 200,000 Merino sheep in the Bursa region. The Angora goat produces the fine, soft wool known as mohair. Turkey is one of the world's largest producers of mohair, with an average output of about 9,000 metric tons per annum.

Although Turkey has for many years worked towards agricultural self-sufficiency, imports were set to rise in 1998, especially from the European Union (EU). In January 1998 Turkey agreed to grant the EU major trade concessions on exports of EU food and farm products to the country. The Government agreed to unlimited imports of EU breeding cattle and up to 70% reductions on import duties for some 19,000 tons of frozen beef a year from the EU. Between September and the end of May every year, Turkey will accept imports, without duty, of 200,000 tons of wheat, 100,000 tons of barley, 52,000 tons of corn, 46,000 tons of malting barley, 28,000 tons of rice and 60,000 tons of soy oil. The EU can also export 80,000 tons of sugar to Turkey at half the normal duty rates. These concessions were agreed despite the EU's decision to exclude Turkey from the list of countries currently eligible to join the organization (see External Trade).

MINERALS

Turkey has a diversity of rich mineral resources, including large quantities of bauxite, borax, chromium, copper, iron ore, manganese and sulphur. The mining and quarrying sector employed some 176,000 workers in 1997. Mineral exports earned US $2,316.6m. in 1994 and $2,243.0m. in 1995, representing about 10% of the value of total exports. About 60% of all mineral output, and all coal production, derives from state-owned enterprises. The most important state-owned enterprise in the mining sector is Etibank, which works through its subsidiaries, Eregli Coal Mines, East Chromium Mines, Turkish Copper, Keban Lead Mines and Keçiborlu Sulphur Mines. During the early 1960s state-owned enterprises increased their predominance over the private sector, with an investment programme that was supported by the Mining Investment Bank, established in 1962. The policy of encouraging the private sector to play a greater part in the mining industry, through the establishment of the Turkish Mining Bank Corpn in 1968, has failed to overcome the general reluctance of private investors to view mining as a worthwhile area for long-term investment, with the result that the private sector is under-capitalized. An additional factor militating against the development of mining has been the long-held suspicion of foreign investment in mining. A law enacted in 1973 restricted foreign participation in mining development projects. However, this restriction was relaxed in January 1980, allowing up to 49% foreign participation in mining ventures. Since then, negotiations have proceeded slowly between Etibank and potential foreign partners for copper, lead and other mineral mining. In 1983, Etibank entered into a joint venture agreement with a US company, Phelps Dodge, for copper mining. Etibank's banking and mining operations were separated in 1993, in the initial phase of privatization, which was completed in 1998.

Bituminous coal is found at and around Zonguldak, on the Black Sea coast. The seams are steeply inclined, much folded and strongly faulted. The coal is generally mined by the longwall system or a variation of it. These mines constitute Etibank's largest operation, and the coalfield is the largest in this part of the world, including the Balkans. Most of the seams are of good coking quality, the coke being used in the steel mills at nearby Karabük. In 1998 total coke production amounted to 2.2m. metric tons, compared with 2.5m. tons in 1997 and 3.2m. tons in 1996. Lignite is found in many parts of central and western Anatolia, and total reserves are estimated at 5,000m. tons. In 1998 production of lignite by public-sector enterprises amounted to 62.5m. tons. Seams located in western Turkey are operated

by the West Lignite Mines. The other main mines are at Soma, Degirmisaz and Tunçbilek. Lignite deposits at Afsin Elbistan are being developed, with extensive German and international financial assistance, as part of an ambitious integrated energy project designed to increase capacity by 1,360 MW.

Practically all of Turkish iron ore comes from the Divrigi mine, situated between Sivas and Erzurum, in the north-east of the country, and operated by the Turkish Iron and Steel Corpn. The average grade of ore is from 60% to 66%; reserves have been estimated at 28m. metric tons. Output of iron ore increased from 1.7m. tons in 1979 to 5.5m. tons in 1992. Production totalled 3.4m. tons in 1996.

Turkey is one of the world's largest producers of chromite (chromium ore). The richest deposits are in Güleman, south-eastern Turkey, in the vicinity of İskenderun; in the area around Eskişehir, north-west Anatolia; and between Fethiye and Antalya on the Mediterranean coast. The Güleman mines, producing 25% of the country's total, are operated by East Chromium Mines under Etibank. Other mines are owned and worked by private enterprise. Little chromium is used domestically and the mineral is the principal earner of foreign exchange among Turkey's mining exports. Output of chromite fell from a peak of 800,000 metric tons of ore, mined in 1977, to less than 500,000 tons per year in the early 1980s, but recovered to reach 1.5m. tons in 1989. However, production decreased again to around 600,000 tons in 1992 with exports valued at US $32m. In 1993 output decreased further, and export earnings fell to $18m.

Copper has been mined in Turkey since ancient times. Current production, conducted entirely by Etibank, comes from the Ergani Mines, at Maden in Elâziğ, and the Morgul Copper Mine, at Borçka in Çoruh province. Production of blister copper has tended to fluctuate, decreasing from 36,000 metric tons in 1986 to 28,578 tons in 1994. In 1998 34,000 tons of blister copper were produced. Most of the output is exported to Germany, the United Kingdom and the USA. Known reserves of copper ore are estimated at 90m. tons.

Eskişehir, in north-west Anatolia, is the world's leading centre for meerschaum mining. Meerschaum, a soft white mineral which hardens on exposure to the sun and looks like ivory, has long been used by Turkish craftsmen for pipes and cigarette holders.

Manganese, magnesite, lead, sulphur, salt, asbestos, antimony, zinc and mercury are important mineral resources. Of these, manganese ranks first in importance. Deposits, worked by private enterprise, are found in many parts of the country, but principally near Eskişehir and in the Eregli district. Lead is mined at Keban, west of Elâziğ. Production of sulphur (public sector only), mainly from the Keciborlu mine, in Isparta province, totalled 39,000 metric tons in 1987. Antimony is mined in small quantities near Balikesir and Nigde. An important find of mercury deposits, which may amount to 440,000 tons, has been made at Sizma, in Konya province. Large uranium deposits have been discovered in the Black Sea, between 1 km and 2 km below sea-level. Turkey's first commercially viable silver mine was opened in January 1988. In April 1996 a project to develop Turkey's first gold mine (reserves were discovered in 1990) near Bergama, in İzmir province, was finally approved.

The Uludağ (Bursa) tungsten deposits, carrying an average grade of 0.43% WO_3, are among the richest in the world. Etibank and the German firm of Krupp are jointly working these deposits. Output of tungsten ore reached 3,400 metric tons in 1979. Other minerals are barytes, perlite, phosphate rock, boron minerals, cinnabar and emery (Turkey supplies more than 80% of the world market for emery).

Turkey's bauxite deposits are now supplying the aluminium complex which was built, with Soviet aid, at Seydişehir. The plant's initial annual capacity was 60,000 metric tons of aluminium but this is to be expanded to 120,000 tons. The plant will also produce alumina for export, and semi-finished products. The reserves at Seydişehir are estimated at more than 30m. tons.

Petroleum was first discovered in Turkey in 1950, and all subsequent discoveries have been in the same area, in the south-east of the country. It is mostly heavy-grade petroleum with a fairly high sulphur content. Production of crude petroleum has fluctuated since it reached 3.5m. metric tons in 1973. Because of the small size of Turkey's main oilfields in the fractured terrain of the south-east, it declined steadily between 1980 and 1985. Production increased in the early 1990s and reached 3.9m. tons in 1993. In 1996 production totalled 3.5m. tons and declined slightly to 3.4m. tons in 1997 and to 3.2m. tons in 1998. Total domestic output of crude petroleum of about 49,000 barrels per day (b/d), in addition to about 1,500 m. cu m of natural gas, accounts for roughly 12% of the country's hydrocarbon requirements. Imports of petroleum and petroleum products rose from US $3,329.4m. in 1995 to $4,042.9m. in 1996, when they accounted for 9.4% of the value of total imports. Saudi Arabia is Turkey's main supplier, with substantial volumes also imported from Iran and Libya. Prior to a UN embargo on trade with Iraq, that country was a major supplier of petroleum.

Three main companies produce petroleum: the Turkish Petroleum Corpn (TPAO), a 99% state-owned Turkish company, with an output of 26,000 b/d, and subsidiaries of the Royal Dutch/Shell Group and the US Mobil group, which produce 18,000 b/d and 5,000 b/d respectively. Ultimate reserves are estimated by TPAO at 10,000m. barrels. Exploration is continuing in the south-east and in the Aegean. In 1983 the Government passed a new law which was intended to liberalize conditions for foreign companies, enabling them to export up to 35% of any onshore petroleum which they discovered, and up to 45% of any offshore output. At first, major foreign oil companies were dubious about Turkey as a viable political and economic base, but in 1984 quickening interest resulted in the signing of several joint-venture exploration agreements by new foreign major oil companies with TPAO.

Refining and other 'downstream' operations are dominated by the state-owned Turkish Petroleum Refining Co (Tupras), which has four refining complexes: Batman in the southeast, Aliaga near İzmir, İsmit near İstanbul, and the Central Anatolian Refinery at Kirikkale near Ankara. The 226,000 b/d İsmit refinery suffered extensive fire damage following an earthquake in August 1999. Turkey's sole private refinery is ATAS, near Mersin on the Mediterranean coast, a joint venture of Mobil, Shell British Petroleum and a local company.

TPAO operates a 500-km pipeline, with a diameter of 45 cm (18 in), which runs from the oilfields around Batman to Dörtyol on the Gulf of İskenderun. A 986-km pipeline from Kirkuk, in northern Iraq, to Turkey has a capacity of 1.5m. b/d. Completion and full commissioning of a second pipeline, alongside the first, took place in July 1987. Until August 1990, when economic sanctions were imposed upon Iraq by the UN, the twin pipeline from Kirkuk to Turkey's Mediterranean terminal at Ceyhan carried about one-third of Iraq's oil exports. The closure of the pipeline for more than six years is estimated to have cost the Turkish state oil and gas pipeline authority, Botas, more than US $400m. per year in lost revenues. In March 1996 Turkey and Iraq signed a memorandum of understanding determining conditions for the future reopening of the pipeline. Following Iraqi acceptance, in May, of a UN proposal to permit limited oil sales (up to a value of $2,000m. over a six-month period, amounting to an estimated 800,000 b/d) in order to purchase humanitarian supplies, the pipeline was scheduled to open in mid-September. However, the agreement was postponed by the UN in early September, owing to Iraqi military activities against its Kurdish population, and oil did not start to flow through the pipeline until December.

Turkey is looking to Central Asia to provide the major proportion of its future oil needs, and has begun projects to develop supplies there. In 1994 TPAO became part of the Azerbaijan International Operating Company (AIOC), a consortium of foreign oil companies in an oil production-sharing agreement with Azeri state oil company Socar, to develop offshore oilfields in the Caspian Sea. TPAO also became a partner in the Azeri Shah Deniz field in 1996, and has established an oil exploration company with the Kazakhstan Government.

Oil and gas transportation is a controversial issue in the Caspian Sea/Central Asia regions. Turkey, Russia and Iran are competing to route the rich energy resources of Azerbaijan, Kazakhstan, Turkmenistan and Uzbekistan through their territories en route to Western markets. Turkey is advocating a pipeline that would run from Baku in Azerbaijan through Georgia and then across Turkey to the Mediterranean port of Ceyhan, at an estimated cost of US $2,500m. Russia, meanwhile, is promoting a route across the Caucasus to the terminal

at the Russian Black Sea port of Novorossiisk. Other proposals include a pipeline to Georgia's Black Sea port of Supsa, and a swap agreement with, or export pipeline through, Iran. The governments of Turkey, the USA and Azerbaijan have all declared their support for the Baku–Ceyhan route, which would reduce dependence of Caspian Sea energy exports on Russia.T-urkey's position is based largely on its concern to restrict the use of the Bosphorus to export petroleum. In 1994 Turkey imposed stricter controls for ships transporting hazardous goods through the Bosphorus, effective from 1 July, following a collision in March. Russia, which exports some 70% of its oil exports by means of the Bosphorus protested at the measure. An agreement signed in April 1997, to build a pipeline with a capacity of 560,000 b/d, rising to 1.5m. b/d, from the Kazakhstan oilfields to the Russian Black Sea port of Novorossiisk, was likely to increase tensions between Turkey and Russia regarding the use of the Bosphorus for the export of petroleum.

Demand for natural gas is projected to rise dramatically in Turkey over the next two decades, with the main consumers expected to be industry and power plants. Although natural gas production has risen steadily in recent years, it currently meets only about 3% of domestic consumption requirements. The bulk of Turkish gas demand is met by imports, nearly all from Russia. In December 1997 Turkey and Russia signed a 25-year contract (the so-called 'Blue Stream' agreement) for a large increase in Russian natural gas imports. The gas will mostly be delivered via a 1,210-km-long dual pipeline which, when built (at a cost of US $13,500m.), will run from Isobilnoye in southern Russia under the Black Sea to the Turkish port of Samsun and on to Ankara. It may eventually be extended to Israel. The agreement includes the import of an additional 3,000m. cu m of gas per year through the pipeline, with its throughput rising to 16,000m. cu m by 2010. The rapid increase in Russian supplies through the Black Sea pipeline and the existing route (crossing Ukraine, Moldova, Romania and Bulgaria) from the current annual level of 7,000m. cu m is expected to meet half of Turkey's total annual demand for imported gas of about 60,000m. cu m by 2010. An earlier agreement to ensure the supply of natural gas was concluded in August 1996, with Iran. Construction of a 1,400-km pipeline from Tabriz, in Iran, to Ankara was scheduled to commence at the end of 1996. Despite US disapproval, Turkey proceeded with the project and awarded the contract for the construction of the first section of the pipeline, from the Iranian border to Erzerum, in early 1997; the second section, from Erzerum to Ankara, was to be built at a later date. Iran was to be responsible for financing the section of the pipeline running through its own country. According to a further agreement, signed in December 1996 with Turkmenistan, from 1999 Turkey was to import 3,000m. cu m of natural gas each year from Turkmenistan, via the Tabriz–Ankara pipeline, in the place of Iranian gas, until such gas was available. In late July 1997 the US Administration announced that it would not oppose the construction of the $1,600m.-gas pipeline from Turkmenistan, because it would not technically violate US-imposed sanctions against Iran. US officials stated that Turkey's agreement to purchase Turkmen gas would make it less reliant on supplies from Iran, but an oil industry source maintained that the deal involved a gas swap, with Turkmenistan pumping gas into the Iranian pipeline and an equivalent amount of Iranian gas being sent to Turkey. Turkey has also signed a number of agreements to import supplies of liquefied natural gas (LNG). Imports of LNG from Algeria, equivalent to 3,000m. cu m a year of natural gas, began in 1994 and were to continue for a 20-year period, while plans exist for annual imports of LNG from Qatar, equivalent to 2,000m. cu m of natural gas, to begin in 1999. The state pipeline agency, Botas, is tendering a project to build a terminal at Alinga with the capacity to store 4,000 cu m of LNG. It is due for completion by 2000.

INDUSTRY

The leading role in the process of inaugurating industrialization was played by the State economic enterprises (SEEs). However, by the beginning of the 1970s the private sector accounted for nearly one-half of industrial output and its rate of capital investment had become almost equal to public sector investment. The Government announced its long-awaited plans for privatization of the SEEs in May 1987. Initially, the Government's stake in 22 private companies would be sold, followed by the denationalization of the more efficient and profitable SEEs. As a first step, one-half of the Government's shareholding of 40% in Teletas, a telecommunications company, was sold to the private sector in early 1988. A sharp fall in share prices on the İstanbul stock exchange then slowed the privatization programme. Five state-owned cement works were sold directly to a French company (although the completion of this sale was suspended in 1991), and USAS, an aircraft services firm, was sold directly to a Scandinavian airline in early 1989. The fact that these were sold directly to foreign companies, rather than to the public on the stock exchange, attracted widespread criticism. As the stock exchange recovered at the end of 1989, the Government proceeded with the sale of its minority shareholdings in private-sector companies. Such holdings in six companies were sold in early 1990. Subsequent privatizations enjoyed varying degrees of success. Small portions of state-owned shareholdings were sold in a number of major companies such as Petkim, the petrochemicals giant, and Erdemir, the iron and steel complex. In the first half of 1992 the Demirel Government undertook five such sales, with estimated total revenue of TL 552,000m. In July 1992 the Government announced the sale of 11 state cement companies which together accounted for 18% of total cement production in Turkey. In late 1992 and 1993 the privatization programme continued at a steady rate, but under the Çiller Government few sales were completed. In July 1994 legislation to accelerate privatization was declared to be unconstitutional by the Constitutional Court, although new legislation was approved in November. Nonetheless, the programme generated only US $354m. in 1994, and $576m. in 1995 (of a target revenue figure for that year of $5,000m.). Although every government from the mid-1980s claimed that privatization was a key part of economic policy, only $3,500m. had been raised from the sale of state enterprises by 1997. However, proceeds from privatization in 1998 were projected to rise dramatically as the coalition Government under Mesut Yılmaz reactivated the process. In May 1998 the Privatization Administration (OIB) sold a 12.23% stake in Türkiye İş Bankası (one of the country's leading commercial banks) for $651m., while in July it accepted a bid of $1,160m. for a 51% holding in the petrol distributor Petrol Ofisi. However this bid effectively lapsed some weeks later when the prospective buyer (a consortium of four local firms) failed to secure the necessary finance. The second highest bidder (another local consortium) withdrew its own $1,150m.-offer in March 1999, two months after being awarded the option to proceed without the purchase. In April the OIB formally cancelled the privatization of Petrol Ofisi, having previously been obliged to defer the sale of several other organizations in the second half of 1998 in the light of adverse market trends and pre-election political uncertainties. In July 1999, following Turkey's change of government, the OIB announced plans to issue tender documents during the second half of 1999 for the sale of state assets with an estimated value of up to $2,000m.

Turkey's recent high growth rates have been industry-led. The share of industry in the economy increased from 12% of GDP in 1952 to 27.8% in 1996. It increased further, to 28.9%, in 1997 before declining to 25.4% in 1998. Growth in the manufacturing sector has been the most noticeable, under the stimulus of the Government's export incentive scheme, although, latterly, domestic demand has equalled the demand made on manufacturing for exports. In 1986 the manufacturing sector expanded by a record 10.5%, followed by growth of 10.1% in 1987. In 1994 the financial collapse caused the manufacturing sector to contract by 8.4% although an expansion in the manufacturing sector of 13.5% was reported in 1995, but during the first nine months of 1996, manufacturing production slowed to 6.5%.

Production of such goods as paper, cotton and woollen yarn, cotton and woollen fabrics, refined fuels and petroleum products, steel products and glassware began a significant recovery in the early 1980s. Overall, the average annual growth rate of industrial GDP was 7.8% in 1980–90, and 4.6% in 1990–96.

Textiles and clothing manufacture accounts for some 40% of Turkey's export sales. Exports of textiles rose by more than 10% in 1997 to US $2,800m., while overseas sales of readywear clothing grew by 14% to more than $7,000m. The industry employs around one-fifth of Turkey's industrial workers, accounting for more than 8% of industrial production.

The iron and steel industry in Turkey is one of the fastest-growing in the world and prospects are good, compared with its difficulties in the early 1980s. Both private and public manufacturers complain of dumping by European and Asian companies. Public sector capacity is 4.6m. metric tons per year and private sector capacity 2.7m. tons per year. Total output of crude steel reached 10.3m. tons in 1993. In July 1996 an agreement was signed with the European Coal and Steel Community (part of the EU) for the elimination of duties by both sides, with effect from 1 August 1996. The value of exports of iron and steel declined to US $1,954m. in 1996, from $1,998m. in 1995 and $2,160m. in 1994.

Cement production, on the strength of the expansion in the construction industry (due largely to the Government's mass housing programme), rose to a record 20m. metric tons in 1986. Production has continued to increase, in spite of occasional declines in years when the economy as a whole has done badly, and output stood at 38.1m. tons in 1998. The industry is now almost totally privately-owned as a result of the privatization programme.

Among food industries, the state-controlled sugar industry is the most important. In 1994 total production of raw sugar was 1.7m. metric tons, with the private sector accounting for only slightly over 25% of this total. Total production declined slightly to 1.3m. tons in 1995, but rose to 1.8m. tons in 1996, to 2.0m. tons in 1997 and to 2.5m. tons in 1998.

The paper and board industry is dominated by the state-owned SEKA corporation, which has one old-established mill at İzmir, with an annual capacity of 126,000 metric tons of paper and board, plus six mills which have been opened since 1971. Total output of paper and board is relatively stable at around 400,000 tons annually (including 136,000 tons of newsprint and 78,000 tons of Kraft paper in 1994).

The motor vehicle industry was established after 1956, and by 1971 had become the largest industrial employer after the textile sector, accounting for about 5% of total industrial output. After several years of suppressed demand and low capacity utilization in the early 1980s, the outlook began to improve in 1983. In 1988 output of cars (local versions of certain Fiat, Ford and Renault models) increased by 12.7%, to 120,800. By 1993 output had nearly trebled to just under 345,000. However, in 1994 the automotive sector suffered a collapse in demand as a result of the currency crisis which hit the economy, and the output of cars fell to 201,000. Nevertheless, a number of foreign manufacturers have expressed interest in local production ventures in view of Turkey's expanding domestic market and, since the start of 1996, its advantageous trading relationship with the EU, under the customs union agreement. In 1994 a Toyota assembly plant began operations, and Honda and Mazda have more recently pledged to invest in production projects. In 1996 Honda was proceeding with the construction of a car plant, in association with Anadolu Endustri Holding AŞ, at a cost of US $50m., while Oyak-Renault, the Turkish subsidiary of Renault of France, announced plans to build a $362m.-plant, which would employ over 1,000 workers. In early 1997 it was reported that Volvo of Sweden planned to invest DM 300m. in a factory at Bursa, to produce buses for export to the Middle East and Russia. The new plant, a joint venture with Ulosoy Holding, was to begin production by 2000. Suzuki and KIA were also reported to be considering the construction of car production plants in Turkey, though in 1996, the first year of customs union with the EU, car production fell by 11% to 207,575, while imported models increased their share of car sales. Total vehicle output for 1996 rose by 2% to 348,467, however, as a result of a sharp increase in the production of buses, tractors and trucks. The domestic car industry faced the prospect of further problems in 1997, following a decision taken by the Erbakan Government which allowed all Turkish citizens to import one foreign used car, on the condition that they deposited DM 50,000 in a state bank. Production of vehicles made by South Korea's Hyundai Motor Co was inaugurated in September 1997 at a plant near İzmit. The plant's initial output of 60,000 cars a year will eventually double when it reaches full capacity. It was announced in March 1998 that the US Ford Motor Co and the local Otosan had agreed in principle to build a $500m. car plant in Turkey, with a planned capacity of 120,000 vehicles a year. In 1997 car sales rose to 344,800, but while sales of imported cars rose by 118%, sales of those produced in Turkey increased by only 21%. Sales of light commercial vehicles increased to 118,800 units.

In 1970 Turkey's first petrochemicals complex, situated at İzmit, began production of ethylene, polythene, polyvinyl chloride (PVC), chlorine and caustic soda. There is another petrochemicals plant at Aliaga, while a third is planned at Yumurtalık. They are operated by the state-owned firm Petkim. In 1994 the output of artificial fertilizers (excluding potassic fertilizers) totalled 4.0m. metric tons, although this increased to 5.3m. tons by 1998. The state-owned Turkish Nitrates Corpn has a nitrate plant at Kutahya, a triple superphosphate plant at Samsun and a superphosphate plant at Elâziğ. There are several privately-owned fertilizer plants, including triple superphosphate plants at İskenderun and Yarimca. Turkey produces 75% of its requirements of fertilizers and, when new plants are completed, it will be self-sufficient.

Other manufacturing industries include tobacco, chemicals, pharmaceuticals, metal working, engineering, leather goods, glassware and ferrochrome.

The power sector, along with the transport, communications and tourism sector, has continued to hold priority in the Government's development programmes for every year since 1989. Nevertheless, together with other infrastructural projects, the power sector suffered from the attempt to cut back Government spending and progress was slow on power plant projects. In spite of the progress made in power plant construction in recent years, many more units will have to be built to meet an expected increase in demand to 170,000m. kWh annually by the end of the century, compared with 33,000m. kWh in 1986. Output from stations operated by the Turkish Electricity Board accounted for 62% of all electricity generated, while chartered companies and private generators provided the remainder. Total output stood at 94,862m. kWh in 1996, rising to 103,296m. kWh in 1997 and 110,902m. kWh in 1998. Thermal sources accounted for about 62% of the 1998 total power generation and hydroelectricity the remainder. In mid-1995 construction of a natural gas generating station in Marmara was initiated by a consortium of one Turkish and three foreign companies. The power plant, which was estimated to cost US $540m., had a potential capacity of 3,600m. kWh. In November 1995 an agreement was signed with foreign creditors and contractors for the construction of the 672-MW-capacity Birecik hydroelectric plant on the Euphrates river. The agreement was the first of many planned build-operate-transfer schemes, under which the ownership of the plant was to be transferred to the Turkish government once it became fully operational and profitable, or after a period of 15 years. In mid-1996 preparations were being undertaken to provide for the construction of the country's first nuclear generator, at Akkuyu on the southern Mediterranean coast. The $1,500m.-plant was put out to tender in December 1996 and construction was expected to be completed in 2005. The plant, which is expected to have a capacity of 1,400 MW, should supply some 2% of Turkey's energy needs. Turkey has imported electricity from Bulgaria for some time, and in March 1997 Ankara signed a new five-year energy agreement with that country. Official sources indicated that domestic power production rose by 10.5% in 1996, but still failed to keep pace with increase in demand, which grew by 12%. The growth in energy consumption is estimated to require an additional 2,000 MW of new capacity annually, and the Ministry of Energy and Natural Resources has estimated that capacity must rise threefold to 65,000 MW between 1998 and 2010. Even with increasing private sector input, most new capacity will have to be provided by the state. The Turkish Electricity Generation & Transmission Corpn. (TEAŞ) awarded a $1,500m. contract in March 1998 to a consortium led by Japan's Mitsubishi Corpn to build the 1,400 MW Afsin-Elbistan B thermal power station. A decision on the award of a similar contract for the Afsin-Elbiston C plant had not been announced by mid-1999. Most new capacity will be generated by gas-fired plants.

Joint-venture defence manufacturing with foreign partners is the next major development for foreign investment in Turkish industry (a development that began with the US $4,000m.-agreement concluded in 1983 with the US Government and a US company, General Dynamics, to assemble and later manufacture F-16 fighter aircraft at Murted outside Ankara). The

Defence Industry and Support Administration (DIDA), established in 1985, was to co-ordinate Turkey's 10-year, $15,000m. programme to modernize the armed forces. The modernization was to involve, to a large extent, locally manufactured equipment and weapons. In July 1988 a joint-venture manufacturing agreement for multi-launch rocket systems was signed by a US company and a state-owned munitions company. According to the agreement, 180 rocket launchers were to be produced at a plant near Burda. Some of the launchers were to be bought by DIDA and the remainder were to be exported. In late 1988, a consortium (including a US company and the Turkish company Nurol) was awarded a contract to manufacture armoured personnel carriers in Turkey. Turkey currently exports a range of weapons including F-16 fighter aircraft and armoured personnel carriers. In August 1998 it was reported that Turkish Aerospace Industries (TAI) had awarded a $200m.-contract to install radar systems on 80 F-16s to a joint venture between a local company and the US' Lockheed Martin Corpn. The Turkish firm was already working on a contract to install radar systems on another 160 Turkish F-16s. Earlier, in June, the Government suspended talks with France's Aerospatiale over a $441m. short-range anti-tank missile production contract after the French National Assembly voted in May to adopt a resolution recognizing the genocide of Armenians in Turkey in 1915. In July 1998 it was announced that the Ministry of Defence had signed a $558m. contract with a German company for the construction of four 1,400-ton submarines.

Tourism is one of Turkey's fastest growing industries and is an important source of foreign currency. In 1996 some 8.6m. tourists visited Turkey, generating US $5,650m. in revenue. While these figures represent a substantial improvement on the previous decade, a huge potential still remains unrealized. One problem over the past few years has been the escalation of Kurdish nationalist activity which frequently spills over into the tourist resorts of the West, severely damaging the prospects of the tourism industry. Tourist arrivals increased to 9.7m. in 1997 and 9.8m. in 1998. In 1998 Germany was the main source of tourists, followed by Russia, the UK, USA, France, Iran, Italy, Yugoslavia, Greece and Syria.

FINANCE

The Central Bank (Merkez Bankası), the sole bank of issue, started its operations on 3 October 1931. It controls exchange operations and ensures the monetary requirements of certain state-owned enterprises by the discounting of bonds which are issued by these institutions and guaranteed by the treasury. However, legislation that was adopted in 1987 awarded the Government wide-ranging powers over the Central Bank, that could, if they were applied, theoretically reduce the bank to the level of an ordinary state bank. In June 1999 a law providing for the reform of the financial sector was passed. The legislation, which will come into effect in early 2000, incorporated core principles of the Basle Committee on Banking Supervision relating to risk-based capital requirements, loan administration procedures, auditing practices and credit risk issues, and envisaged the establishment of an independent Regulatory and Supervisory Board for Banking, whose members (appointed for six-year terms) were to be nominated by the treasury, the Ministry of Finance, the Central Bank, the state planning organization, the Capital Markets Board and the Banks' Association of Turkey. This new body would monitor the observance of financial regulations (which had hitherto been regularly breached by some smaller institutions) and would have powers to order the merger or acquisition of institutions in financial difficulty. In early 1999 Turkey had 74 banks, of which 38 were small family-controlled concerns. At least 14 of these concerns were reported to be in difficulties in 1999 because of over-lending to affiliated companies, two others having recently been seized by the Central Bank at an estimated cost of US $700m.

The monetary unit is the kuruş (piastre) by the law of April 1916. The Turkish lira (pound), which is, in practice, employed as the monetary unit, is equal to 100 kuruş.

The principal sources of budgetary revenue are income tax, import taxes and duties, taxes and fees on services, and revenues from state monopolies. In late 1984 the Government introduced value-added tax to replace the previous unwieldy system of production taxes.

In 1993 the budget deficit tripled that of the previous year to reach TL 122,000,000m., or 9.2% of GNP. In April 1994 the Government introduced stringent spending cuts as part of an austerity package designed in response to a financial collapse earlier in the year (see below). As a result, the budget deficit was substantially reduced in real terms and totalled TL 146,000,000m., or 3.7% of GNP, in 1994. None the less, the budget deficit continued to exert serious inflationary pressure on the economy and to attract much domestic and international criticism. The Government continued to borrow heavily on the domestic market, although foreign borrowing became prohibitively expensive because of the crisis and was reduced. Domestic debt stood at TL 799,100,000m. at the end of 1994 (compared with TL 356,555,000m. at the end of 1993). At the same time, Turkey's foreign debt came down to US $65,601m., from more than $67,000m. in 1993. The pressure of servicing both the domestic and external debt indirectly fuels the rate of inflation. In 1993 the average annual rate of inflation was 66.1%, and in 1994 it rose dramatically to 106.3%.

Under these inflationary pressures, in early 1994 two US credit rating agencies downgraded Turkey's credit rating, which resulted in a 'run' on foreign currencies. The value of the lira was officially devalued by 12% against the dollar; however the currency contined to plummet. Interest rates rose to 150%–200% as the Government and the Central Bank desperately tried to bring the financial markets under control. In early April the Government announced a programme of austerity measures to reduce the budget deficit, lower inflation and restore domestic and international confidence in the economy. The programme included a 'freezing' of wages, price increases of up to 100% on state monopoly goods, as well as longer-term restructuring measures such as the closure of loss-making state enterprises and an accelerated privatization process. By May the lira stabilized at around TL 30,000 to the dollar, having stood at some TL 16,000 at the beginning of the year. In August the value of the lira fell once more but was steadied at a rate of TL 34,000 per dollar, following an increase in interest rates from 70% to 240%. The austerity measures then began to have a measure of success, the markets stabilized and the lira stayed below 40,000 to the dollar until the end of the year. The measures also helped to restore international confidence in the Turkish economy and to secure an IMF stand-by loan, approved in July, of SDR 610m. (approximately US $873m.). However, the 14-month stand-by agreement was abandoned by Prime Minister Çiller in September 1995, after the collapse of the Government. The inflationary pressure on the economy remained strong during 1995, and the annual rate of inflation slowed only to 93.6%. The actual budget deficit rose to TL 320,000,000m. in 1995. In January 1997 the Prime Minister announced a budget deficit for the whole of 1996 of TL 1,215,000,000m., which represented 8.2% of GNP. In November 1996 the Government had ordered all state and local administrative spending to be suspended until the beginning of 1997, in an effort to reduce the size of the deficit. In October the Prime Minister had stated that he would balance the state budget for the first time in 50 years, increase investment and end domestic borrowing. This was to be achieved largely through the receipt of projected revenues from the extended privatization programme (see above), although an IMF team that visited Ankara that month warned that the Government was unlikely to reach its 1997 budgetary targets and called on the Government to take swift action to implement both major fiscal adjustment and structural reform. The widening budget deficit/GNP ratio was the main underlying factor inflicting inflationary pressure upon the economy and the annual rate of inflation was 82.4% in 1996. The IMF projections of still higher inflation and concern over the RP's ambitious budget predictions resulted in the Japanese and US credit rating agencies lowering Turkey's international credit rating at the end of 1996. The coalition Government of Prime Minister Yılmaz, which took office in mid-1997, made a determined effort in its first year to stem the rise in inflation and improve economic management. By July 1998, year-on-year inflation had fallen to 72% from 101% in January. The reduction was achieved largely through a 'freeze' in public sector prices. In June 1998 the Government signed an accord with the IMF under which the Fund would monitor the Turkish economy for 18 months. The agreement, which committed the Government

to keeping a tight rein on public expenditure and boosting privatization and tax receipts, set targets for wholesale inflation of 50% by the end of 1998 and 20% by the end of 1999. Tax reform legislation, passed in July, reduced the tax burden for most people and aimed to encourage full declaration of earnings. However, in the same month the Government was forced to compromise on its pledge to keep down public sector pay rises when it agreed to an immediate 20% rise, with a further 10% for the three months from October. In 1998 the Government recorded an actual budget deficit of TL 3,697,000,000m. (equivalent to 7% of GNP) from expenditure of TL 15,585,000,000m. revenue and of TL 11,888,000,000m. The primary budget, excluding expenditure on debt servicing, showed a surplus of TL 2,479,000,000m. The 1999 budget was approved in June and provided for a deficit of TL 9,236,000,000m. (equivalent to 11.6% of GNP). Budgeted expenditure for 1999 was TL 27,266,000,000m., including TL 10,300,000,000m. for debt servicing, while revenue totalled TL 18,030,000,000m. The anticipated surplus on the 1999 primary budget (excluding interest payments) was TL 1,064,000,000m. The increase in the 1999 debt-servicing requirement (which was 67% higher than in 1998) was the result of a larger than expected rise in the interest payable on the Government's domestic borrowing.

A heavy burden of foreign debt, contracted in the late 1970s and extended through reschedulings in 1978, 1980 and 1981, has severely hampered the Government's structural adjustment programme. In January 1980 the Government introduced an austerity package which set the economy on a more open footing, in contrast to its previously insular, state-dominated growth; for example, a ban on foreign investment in mining (including petroleum) exploration was lifted. Turkey's foreign creditors responded with yet more large infusions of aid; the IMF pledged US $1,650m. over three years. In both 1980 and 1981, successful debt rescheduling operations were carried out, which left Turkey with a manageable short-term debt load by converting much of Turkey's debt into medium- and long-term credits. However, the Government has not managed to control external borrowing and the country's foreign debt totalled $67,356m. at the end of 1993, $73,300m. by the end of 1995 and $79,767m. at the end of 1996. Some 52% of Turkey's foreign debt was incurred through bilateral financial protocols, 37% was raised from international bond issues, 8% by commercial banks and 3% from multinational agencies. $59,231m. consisted of medium- and long-term debt, while the rest consisted of short-term debt. Debt service payments of $9,880m. in 1995 and $9,410m. in 1996 were made. Turkey originally intended to borrow externally only $2,500m. in 1996, but this was increased to $5,000m. in May because of the widening budget deficit. By September 1997 Turkey's foreign debt stock stood at $84,500m. The Yılmaz Government's economic programme projected external debt rising to more than $100,000m. by the end of 1999. The debt service schedule for the second half of 1998 suggested that there would be more redemptions than borrowings in aggregate. Turkey's domestic debt rose from TL 356,555,000m. in 1993 to TL 1,368,000,000m. in 1995, reaching TL 3,149,000,000m. by the end of 1996. In dollar terms domestic debt increased to $30,600m. in 1997. At the end of 1998 foreign debt stock totalled $101,000m., while domestic debt totalled $44,500m. During 1998 the Government borrowed a total of $2,400m. in international capital markets (later raised to $2,600m. through the issue of additional bonds). In 1999 its international borrowing target (as formulated prior to the August earthquake) was around $3,000m., plus an estimated $1,000m. for project financing.

Turkey's persistent trade deficit has been partly offset, for some time, by a net surplus on invisible earnings (services and transfers), particularly helped by expatriate workers' remittances. A major contributor to the invisibles balance since the early 1980s has been the contribution from Turkish contractors, who, although arriving late for the growth in the Middle East construction industry, quickly made their mark. Like other foreign firms, however, their fortunes have suffered as a result of the fall in the price of petroleum and the subsequent decrease in development revenues. Since the collapse of the Soviet Union, Turkish contractors have been turning their attention to Russia, Azerbaijan and the Turkic republics of Central Asia, with considerable success. They have built hotels, factories, public buildings and lodgings for troops returning from East Germany. In March 1997 a Russian official stated that 150 Turkish contractors were working on 200 construction projects in Russia, worth some US $5,000m., making Turks the leading foreign contractors in that country.

Workers' remittances have long been an important source of foreign exchange. These totalled US $4,229m. in 1997 and $5,397m. in 1998. Receipts from tourism, also an important source of foreign exchange, totalled $7,002m. in 1997 and $7,177m. in 1998. A current-account deficit of $2,437m. was recorded in 1996, increasing to $2,679m. in 1997, although in 1998 a surplus of $1,871m. was recorded. Turkey receives large inflows of foreign currency from unrecorded trade with Eastern Europe and Russia, known as the 'suitcase trade', which do not appear in official current-account statistics. Estimates have suggested that these unrecorded revenues may be as high as $5,000m–$10,000m.

EXTERNAL TRADE

Since 1947, Turkey has had a persistent foreign trade deficit. But, following the economic reforms of 1980 and the introduction of free-market, export-led policies, the deficit decreased for a few years in the early 1980s. In 1990 the deficit more than doubled, to US $9,555m., owing to the overvalued lira, the continuing liberalization of the import regime and the phasing out of direct subsidies to exporters. Foreign trade performance was much improved by 1994, with exports of $18,390m. and imports of $22,606m., bringing the trade deficit down to $4,216m. In 1995, however, while exports increased to $21,975m., imports rose sharply to $35,187m., resulting in a trade deficit of $13,212m. Figures issued for 1996 showed that exports increased to $32,446m., but imports rose to $43,028m., resulting in a trade deficit of $10,582m. In 1997 a deficit of $15,398m. was recorded from exports of $32,631m. and imports of $48,029m. The deficit in 1998 stood at $14,332m. from exports of $31,220m. and imports of $45,552m. Turkey's principal imports are machinery, chemicals, petroleum and iron and steel. The principal exports are ready-to-wear clothing, textiles and agricultural products, principally fruit, vegetables and nuts. The EU is Turkey's principal trading partner, with Germany alone taking 20.3% of all Turkish exports in 1998 and supplying 15.9% of all imports. A customs union with the EU came into effect in January 1996 (see below) and a supplementary agreement on trade in iron and steel products, concluded in July 1996, means that, in theory, there is free trade between Turkey and EU countries in all goods, except agricultural products. As analysts had predicted, there was a rapid increase in imports from the EU in 1996, with imports rising by 19%, as Turkey removed remaining trade tariffs, with the result that the trade gap between Turkey and the EU widened. Turkey's trade with Russia and with the Turkic-speaking Central Asian republics, Azerbaijan, Uzbekistan, Kazakhstan and Kyrgyzstan, grew rapidly in 1995. While official Turkish exports to Russia totalled $1,200m. in 1995, some analysts believed that the figure would rise to $6,000m. if the so-called 'suitcase trade' (see above) were taken into account.

In 1963 the Government signed an association agreement with the EC, under which Turkey was granted financial aid and preferential tariff quotas. A package of minor improvements was introduced at the end of 1976 and the association agreement was revised in July 1980, offering Turkey a five-year financial aid package. Since the military coup of September 1980, aid from EC countries has become increasingly dependent upon the restoration of democracy and human rights in Turkey. NATO countries have been divided on support for the Ankara regime: in December 1981 the USA promised to accelerate aid to Turkey, but in March 1982 EC aid worth US $586m. was 'frozen'. This aid remained blocked, despite the reconvening of the Turkey-EC Association Council in September 1986. In 1987 Turkey submitted an application for full EC membership in March, followed by a concerted diplomatic effort to win support for its application in Europe. The 'frozen' aid was partly released in early 1988. At the end of 1989 the European Commission published its report in response to Turkey's application for full membership. The report drew attention to both economic and political problems in Turkey, as well as the country's unsatisfactory human rights record, and proposed that negotiations should not start until after 1992. Discussions between the two sides in

1993 secured an agreement to construct a customs union, which was scheduled to be effective on 1 January 1995. In December 1994 the EU-Turkey Association Council agreed to postpone the establishment of the customs union, owing to persisting concerns regarding the Turkish Government's record on human rights, democracy and the rule of law. Negotiations in early 1995 finally concluded an agreement, which was signed at a meeting of the EU-Turkey Association Council in March. The accord was formally ratified by the European Parliament in December, and came into effect on 1 January 1996. However, some $470m. in EU adjustment funds to support the customs union was blocked in September 1996 by Greece, and by the European Parliament as a result of concern over Turkey's human rights record. Turkey's relations with the EU remained strained throughout 1996, and they suffered a further setback in December 1997 when the EU decided to exclude Turkey from the list of countries eligible to join the organization in the near future. Although the European Commission subsequently published a strategy in March 1998 for enhancing co-operation by building on the customs union which came into force in 1996, EU financial assistance to Turkey remained blocked at the insistence of Greece. In January 1997 Turkey signed a free-trade agreement with Hungary, under which virtually all tariffs on industrial goods were to be removed. A free-trade agreement with Israel was finally ratified by the Turkish parliament in April 1997 and there were predictions that trade between the two countries could grow rapidly to reach some $2,000m. per year.

In recent years, the US Government's intended military and economic aid to Turkey has been affected by the determination of Congress to institute severe cuts in retaliation for the Turkish Government's refusal to modify its support for the 'Turkish Republic of Northern Cyprus'. The Congress has also attempted to withhold certain portions of aid in order to encourage greater respect for human rights in the Turkish Government's treatment of Kurdish separatists. In August 1994 Prime Minister Çiller refused US military and economic aid amounting to US $453m., owing to its conditional element. In June 1996 the US House of Representatives vetoed a $25m. foreign aid allocation to Turkey, in part because of Turkey's land blockade of Armenia. However, the US Senate later authorized the release of some $12m., without conditions. Turkey incurred further US displeasure when Ankara signed a trade agreement with Cuba in August 1996 and when Prime Minister Erbakan made controversial visits to Iran and Libya.

At the end of August 1997, following a recommendation by the National Security Council (NSC), the Government indicated that the illegal barter trade with northern Iraq would be brought under control, to raise urgently required tax revenues. For some years Turkish traders had exchanged a variety of goods for cheap Iraqi diesel oil, to be resold in Turkey at prices far lower than those recommended officially. Although this thriving border trade was in violation of UN sanctions against Iraq, it was tolerated, since it provided an important source of foreign currency for the Kurdish population of northern Iraq. Petrol Offisi, the state-owned petroleum distributor, was henceforth to buy, sell and tax the diesel, to raise an estimated $900m. a year in revenue for the Government.

PROSPECTS

Successive Five-Year Economic Development Plans have aimed at the long-term target of self-sustained economic growth (independent of foreign loans), devoting a large proportion of investment to mining and manufacturing industry. In May 1989 the Government published the sixth Five-Year Plan (1990–94), which envisaged an average annual growth rate of 7%, reaching 8.3% in 1994. Private sector investments were targeted to grow at an annual average rate of 11%, with growth reaching 15% by the end of the Plan period. The surplus on the current account of the balance of payments was expected to increase throughout the period, to reach US $2,500m. in 1994, while exports were projected to grow at an average rate of 15% per year, and to exceed $22,000m. by 1994. In September 1994 the preparation for the seventh Plan was postponed by one year; an intermediary target plan was implemented in 1995. In May 1995 the Government published the seventh Plan, for the period 1996–2000, which envisaged economic growth increasing to an annual 7.1%.

From 1989 onwards, however, political instability affected the Government's ability to implement its economic plans. The appointment of Tansu Çiller as Prime Minister in 1993 was a popular choice with the business community, and while she quickly identified economic priorities, internal problems hampered attempts to implement reform. The political uncertainty and negotiations which took place following the collapse of the coalition Government in 1995, were accompanied by the largest series of strikes since the 1970s, which caused the closure of ports and a halt in production at state-owned industrial and transport companies. By October the strike action was costing the country an estimated US $500m. in lost export revenue and production and threatened to undermine attempts to control inflation and restore economic stability. Prior to the general election in December, Çiller was able to settle the public-sector wage dispute, and, more importantly, to secure ratification of the EU customs union, which entered into force on 1 January 1996. The impact of the removal of commercial barriers (except those on agricultural goods) was expected to stimulate trade between the two sides and to promote greater competitiveness among Turkish industries. The EU was to provide ECU 1,800m. over a five-year period, in order to assist the implementation of the new trade regime and to alleviate any initial hardships resulting from the agreement. However, during 1996 the release of ECU 375m. in aid was blocked, until July, by Greece, following a deterioration in relations with Turkey, and, in September, by the European Parliament, expressing renewed concern at the human rights situation in Turkey.

The general election of December 1995 failed to produce a clear victory for any one party, and a period of uncertainty followed. In March 1996 the newly-established True Path Party (DYP)–Anavatan Partisi coalition administration announced measures to confront the expanding budget deficit, by implementing social security and tax reforms and reducing public-sector expenditure. However, the growing public discord between the two parties precluded the adoption of any stabilizing measures to improve the economic situation. In June a new Government was established, led by the Islamic fundamentalist Welfare Party (RP), with the DYP as a coalition partner. In early July the new administration approved an increase in the minimum wage and salary increases of 50% for state workers and pensioners. During his first five months in office, Erbakan announced three economic packages which, he claimed, would raise a total of US $30,000m. in revenue, to meet the pay award and limit the budget deficit. They included the sale of state-owned land, housing and real estate, a 6% levy on short-term foreign financing of imports (mainly consumer goods), measures to attract hard currency held abroad by Turkish banks, and the leasing of uncompleted power plants. The new Government stated that the main aspects of its economic programme were: a commitment to a free-market economy; lower inflation and a steady growth rate; lower taxation for producers; greater efforts to attract foreign investment; an acceleration in the privatization programme; an emphasis on investment in infrastructure projects; and economic planning to achieve long-term solutions. According to the OECD, international reaction to the Government's fiscal performance was likely to be one of the most important factors in determining future economic stability and growth. In addition, it advised the Government to adhere to budget targets and to implement structural reforms, in order to stabilize inflation and control high interest rates, which were contributing to a disabling debt-servicing cost. At the end of November 1996 the Grand National Assembly approved the Prime Minister's ambitious and controversial budget for 1997, in which he vowed to increase expenditure, end domestic borrowing and yet produce a 'zero-deficit' through a massive increase in government income from privatization. Dubbed the 'dream' budget, it totalled TL 6,254,920,000m., and encountered strong criticism from political opponents and from the country's business community. The IMF predicted that the Government would raise only a fraction of the revenue projected from privatization and warned that the Government could face a budget deficit of TL 3,014,000,000m. in 1997. The Government's privatization plans received a welcome boost in January 1997, when the Constitutional Court gave its approval to the sale of a major

stake in the state company, Türk Telecom, though there were objections to a number of the Prime Minister's revenue-raising packages, notably his attempt to sell large public real estate holdings and lease state-owned power projects. Early in 1997 Erbakan made new promises of additional pay increases to state workers and pensioners, over and above those included in the 1997 budget, which did little to inspire confidence in the Government's economic competence.

Announcing the new Government's economic policy in July 1997, Mesut Yılmaz stated that priority would be given to countering inflation and accelerating privatization (see above). The new Minister of Finance, Zekeriya Temizel, announced revised economic targets for 1997, which included: growth in GNP of 5.5%–6%, compared with the previous target of 4%, based on a 5.7% increase in GNP during the first quarter of 1997; a reduction in the trade deficit, from US $20,500m. to $20,000m.; and a budget deficit at the end of the year of TL 2,400,000m., including a supplementary budget of TL 2,000,000m. Inflation in 1997 was forecast at 75%–80%. Independent analysts viewed these goals as more realistic than those of the previous Government, and significant economic progress was recorded during the following year despite the Government's weak political base in the Grand National Assembly.

Following the elections, held in April 1999, the new Government declared its intention to implement a programme of structural reforms. It was announced in early July that the IMF monitoring programme introduced in 1998 would remain in place in preparation for an application for an IMF stand-by arrangement. The increasing need for social security reform, and the importance attached to it by the IMF, led the Government to publish a draft bill proposing an increase in the pensionable retirement age, from 38 to 58 for women and from 43 to 60 for men, over a 10-year period. Legislation to reform the financial sector was enacted in June (see above), and in the same month the Government imposed a 20% ceiling on public-sector pay increases, despite trade union demands that increases be linked to the prevailing inflation rate of more than 50%. On 13 August constitutional amendments were approved permitting international arbitration in disputes between state bodies and foreign investors and allowing the privatization of state-owned utilities. The lack of international arbitration clauses in contracts for 'build-operate-transfer' projects had previously deterred many potential foreign partners from investing in infrastructure development, including high-priority work in the energy sector.

Following a major earthquake (7.8 on the Richter scale) in north-western Turkey on 17 August 1999, attention focused on the relief and reconstruction of the region, which was responsible for up to 70% of Turkish industrial production. Damage was caused to a number of industrial plants in the area, including an oil refinery, and there was a general dislocation of industrial production resulting from lack of staff (through death, injury, homelessness or involvement in rescue work) and from the disruption of infrastructure. Immediate allocations of external aid included US $420m. from the World Bank (of which $300m. came from the re-designation of existing loans and $120m. from the mobilization of new financing) pending the completion of detailed assessments by World Bank and IMF experts. Internal initiatives included a planned 'national solidarity tax' designed to raise up to $1,500m. through selective increases in certain taxes. Early estimates of the cost of the earthquake to the Turkish economy ranged from $5,000m., over a period of 18 months, to as much as five times this amount. In early September it was announced that Greece had agreed to end its veto of EU development aid to Turkey and was endorsing fully a loan of €600m. to be released by the EU to aid reconstruction.

Directory

The Constitution

In October 1981 the National Security Council (NSC), which took power in September 1980, announced the formation of a Consultative Assembly to draft a new constitution, replacing that of 1961. The Assembly consisted of 40 members appointed directly by the NSC and 120 members chosen by the NSC from candidates put forward by the governors of the 67 provinces; all former politicians were excluded. The draft Constitution was approved by the Assembly in September 1982 and by a national referendum in November. Its main provisions are summarized below:

Legislative power is vested in the unicameral Grand National Assembly, with 400 deputies, who are elected by universal adult suffrage for a five-year term. Executive power is vested in the President, who is elected by the Grand National Assembly for a seven-year term and is empowered to appoint a Prime Minister and senior members of the judiciary, the Central Bank and broadcasting organizations; to dissolve the Grand National Assembly; and to declare a state of emergency entailing rule by decree. Strict controls on the powers of trades unions, the press and political parties were also included. An appended 'temporary article' automatically installed the incumbent President of the NSC as Head of State for a seven-year term, assisted by a Presidential Council comprising members of the NSC.

An amendment adopted in June 1987 increased the number of deputies in the Grand National Assembly from 400 to 450. The number was increased to 550 in a further amendment adopted in July 1995.

The Government

HEAD OF STATE

President: SULEYMAN DEMIREL (took office 16 May 1993).

COUNCIL OF MINISTERS

(September 1999)

A coalition of the Demokratik Sol Partisi (DSP), the Milliyetçi Hareket Partisi (MHP) and the Anavatan Partisi (ANAP).

Prime Minister: BÜLENT ECEVİT (DSP).

Legislature

BÜYÜK MİLLET MECLİSİ
(Grand National Assembly)

Speaker: YILDIRIM AKBULUT.

General Election, 18 April 1999

Party	% of votes	Seats
Demokratik Sol Parti (DSP)	22.19	136
Milliyetçi Hareket Partisi (MHP)	17.98	129
Fazilet Partisi (FP)	15.41	111
Anavatan Partisi (ANAP)	13.22	86
Doğru Yol Partisi (DYP)	12.01	85
Independents	0.87	3
Others*	18.32	—
Total	100.00	550

* Including Cumhuriyet Halk Partisi (8.71%) and Halkın Demokrasi Partisi (4.75%).

Political Organizations

Political parties were banned from 1980–83. Legislation enacted in March 1986 stipulated that a party must have organizations in at least 45 provinces, and in two-thirds of the districts in each of these provinces, in order to take part in an election. A political party is recognized by the Government as a legitimate parliamentary group only if it has at least 20 deputies in the Grand National Assembly.

In mid-1992, following the adoption of more lenient guidelines for the formation of political parties (proposed by the Demirel Administration), several new parties were established, and the left-wing CHP, dissolved in 1981, was reactivated.

Anavatan Partisi (ANAP) (Motherland Party): 13 Cad. 3, Balgat, Ankara; tel. (312) 2865000; fax (312) 2865019; f. 1983; supports free-market economic system, moderate nationalist and conservative policies, rational social justice system, integration with the EU, and closer ties with the Islamic world; Chair. MESUT YILMAZ; Sec.-Gen. YAŞAR OKUYAN.

Büyük Birlik Partisi (BBP) (Great Unity Party): Tuna Cad. 28, Yenişehir, Ankara; tel. (312) 4340920; fax (312) 4355818; f. 1993; Chair. MUHSIN YAZICIOĞLU.

Cumhuriyet Halk Partisi (CHP) (Republican People's Party): Çevre Sok. 38, Ankara; tel. and fax (312) 4685969; f. 1923 by Kemal Atatürk, dissolved in 1981 and reactivated in 1992; merged with Sosyal Demokrat Halkçı Parti (Social Democratic Populist Party) in February 1995; left-wing; Leader ALTAN OYMEN; Sec.-Gen. ADNAN KESKIN.

Değisen Türkiye Partisi (DEPAR) (Changing Turkey Party): Aşağlı Öveçler 6, Cad. 78, Sok. 15/2, Dikmen, Ankara; tel. (312) 4794875; fax (312) 4795964; f. 1998; Chair. GOKHAN ÇAPOĞLU.

Demokrasi ve Bariş Partisi (DBP) (Democracy and Peace Party): Menekşe 1, Sok. 10-A/7, Kızılay, Ankara; tel. (312) 4173587; f. 1996; pro-Kurdish; Leader REFIK KARAKOÇ.

Demokrat Türkiye Partisi (DTP) (Democratic Turkey Party): Mesrevi Sok 22, Ankara; tel. (312) 4421619; fax (312) 4386463; Leader (vacant).

Demokratik Sol Partisi (DSP) (Democratic Left Party): Fevzi Çakmak Cad. 17, Ankara; tel. (312) 2124950; fax (312) 2213474; f. 1985; centre-left; drawing support from members of the fmr Republican People's Party; Chair. BÜLENT ECEVIT; Sec.-Gen. ZEKI SEZER.

Doğru Yol Partisi (DYP) (True Path Party): Selanik Cad. 40, Kızılay, Ankara; tel. (312) 4172241; fax (312) 4185657; f. 1983; centre-right; replaced the Justice Party (f. 1961 and banned in 1981); Chair. TANSU ÇILLER; Sec.-Gen. NURHAN TEKINEL.

Fazilet Partisi (FP) (Virtue Party): Hanımeli Sok. 15/7, Sıhhıye, Ankara; tel. (312) 230 7780; f. 1997; replaced Refah Partisi (Welfare Party), dissolved by Constitutional Court; Islamic fundamentalist; interest in free-market economy; Leader RECAI KUTAN.

Halkın Demokrasi Partisi (HADEP) (People's Democracy Party): Mithatpaşa Cad. 39/9, Kızılay, Ankara; tel. (312) 3602838; f. 1994; pro-Kurdish nationalist party; Chair. MURAT BOZLAK.

İşçi Partisi (IP) (Workers' Party): Mithatpaşa Cad. 10/8, Sıhhıye, Ankara; tel. (312) 4352999; fax (312) 4343386; f. 1992; Chair. DOĞU PERİNÇEK.

Liberal Demokratik Parti (LDP) (Liberal Democratic Party): Gazi Mustafa Kemal Bul. 108/18, Maltepe, Ankara; tel. (312) 2323374; f. 1994; Chair. BESIM TIBUK.

Millet Partisi (MP) (Nation Party): İstanbul Cad., Rüzgarlı Gayret Sok. 2, Ankara; tel. (312) 3127626; fax (312) 3127651; f. 1992; Chair. AYKUT EDIBALI.

Milliyetçi Hareket Partisi (MHP) (Nationalist Action Party): Strazburg Cad. 36, Sihhiye, Ankara; tel. (312) 2318700; fax (312) 2311424; f. 1983; fmrly the Conservative Party; Leader DEVLET BAHÇELI; Sec.-Gen. KORAY AYDIN.

Ozgurluk ve Dayanisme Partisi (ODP) (Freedom and Solidarity Party): Necatibey Cad. 23/11, Ankara; f. 1996; Leader UFUK URAZ.

Yeniden Doğuş Partisi (YDP) (Rebirth Party): Sağlık Sok 3, Sıhhıye, Ankara; tel. (312) 4356565; fax (312) 4356564; f. 1992; Chair. HASAN CELAL GUZEL.

Yeni Parti (YP) (New Party): Rabat Sok 27, Gaziosmanpaşa, Ankara; tel. (312) 4469254; fax (312) 4469579; f. 1993; Leader YUSUF BOZKURT ÖZAL.

The following proscribed organizations were engaged in an armed struggle against the Government:

Partiya Karkeren Kurdistan (PKK) (Kurdistan Workers' Party): f. 1978; 57-member directorate; launched struggle for an independent Kurdistan in 1984; Leader ABDULLAH OCALAN.

Revolutionary People's Liberation Party–Front (DHKP–C): left wing faction of Dev-Sol; subsumed parent organization in 1996.

Judicial System

Until the foundation of the Turkish Republic, a large part of the Turkish civil law—the laws affecting the family, inheritance, property, obligations, etc.—was based on the Koran, and this holy law was administered by special religious (*Shari'a*) courts. The legal reform of 1926 was not only a process of secularization, but also a radical change of the legal system. The Swiss Civil Code and the Code of Obligation, the Italian Penal Code and the Neuchâtel (Cantonal) Code of Civil Procedure were adopted and modified to fit Turkish customs and traditions.

According to current Turkish law, the power of the judiciary is exercised by judicial (criminal), military and administrative courts. These courts render their verdicts in the first instance, while superior courts examine the verdict for subsequent rulings.

SUPERIOR COURTS

Constitutional Court: Consists of 11 regular and four substitute members, appointed by the President. Reviews the constitutionality of laws, at the request of the President of the Republic, parliamentary groups of the governing party or of the main opposition party, or of one-fifth of the members of the National Assembly, and sits as a high council empowered to try senior members of state. The rulings of the Constitutional Court are final. Decisions of the Court are published immediately in the Official Gazette, and shall be binding on the legislative, executive, and judicial organs of the state.

Court of Appeals: The court of the last instance for reviewing the decisions and verdicts rendered by judicial courts. It has original and final jurisdiction in specific cases defined by law. Members are elected by the Supreme Council of Judges and Prosecutors.

Council of State: An administrative court of the first and last instance in matters not referred by law to other administrative courts, and an administrative court of the last instance in general. Hears and settles administrative disputes and expresses opinions on draft laws submitted by the Council of Ministers. Three-quarters of the members are appointed by the Supreme Council of Judges and Public Prosecutors, the remaining quarter is selected by the President of the Republic.

Military Court of Appeals: A court of the last instance to review decisions and verdicts rendered by military courts, and a court of first and last instance with jurisdiction over certain military persons, stipulated by law, with responsibility for the specific trials of these persons. Members are selected by the President of the Republic from nominations made by the Military Court of Appeals.

Supreme Military Administrative Court: A military court for the judicial control of administrative acts concerning military personnel. Members are selected by the President of the Republic from nominations made by the Court.

Court of Jurisdictional Disputes: Settles disputes among judicial, administrative and military courts arising from disagreements on jurisdictional matters and verdicts.

The Court of Accounts: A court charged with the auditing of all accounts of revenue, expenditure and government property, which renders rulings related to transactions and accounts of authorized bodies on behalf of the National Assembly.

Supreme Council of Judges and Public Prosecutors: The President of the Council shall be the Minister of Justice, and the Under-Secretary to the Minister of Justice shall serve as an *ex-officio* member of the Council. Three regular and three substitute members from the Court of Appeals, together with two regular and two substitute members of the Council of State, shall be appointed to the Supreme Council by the President of the Republic for a four-year term. Decides all personnel matters relating to judges and public prosecutors.

Public Prosecutor: The law shall make provision for the tenure of public prosecutors and attorneys of the Council of State and their functions. The Chief Prosecutor of the Republic, the Chief Attorney of the Council of State and the Chief Prosecutor of the Military Court of Appeals are subject to the provisions applicable to judges of higher courts.

Military Trial: Military trials are conducted by military and disciplinary courts. These courts are entitled to try the military offences of military personnel and those offences committed against military personnel or in military areas, or offences connected with military service and duties. Military courts may try non-military persons only for military offences prescribed by special laws.

Religion

ISLAM

More than 99% of the Turkish people are Muslims. However, Turkey is a secular state. Although Islam was stated to be the official religion in the Constitution of 1924, an amendment in 1928 removed this privilege. After 1950 subsequent governments have tried to re-establish links between religion and state affairs, but secularity was protected by the revolution of 1960, the 1980 coup and the 1982 Constitution.

Diyanet İşleri Reisi (Head of Religious Affairs in Turkey): Prof. MUSTAFA SAIT YAZICIOĞLU.

CHRISTIANITY

The town of Antioch (now Antakya) was one of the earliest strongholds of Christianity, and by the the 4th century had become a patriarchal see. Formerly in Syria, the town was incorporated in Turkey in 1939. Constantinople (now İstanbul) was also a patriarchal see, and by the 6th century the Patriarch of Constantinople was recognized as the Ecumenical Patriarch in the East. Gradual estrangement from Rome developed, leading to the final breach between the Catholic West and the Orthodox East, usually assigned to the year 1054.

In 1986 it was estimated that there were about 100,000 Christians in Turkey.

The Orthodox Churches

Armenian Patriarchate: Ermeni Patrikliği, Şarapnel Sok 20–22; 34480 Kumkapı, İstanbul; tel. (212) 4580658; fax (212) 5164833; e-mail divan@armenianpatriarchate.org.tr; f. 1461; 65,000 adherents (1999); Patriarch MESROB II.

Finance

(cap. = capital; res = reserves; dep. = deposits; m. = million; brs = branches; amounts in Turkish liras unless otherwise stated)

The Central Bank of the Republic of Turkey was originally founded in 1930, and constituted in its present form in 1970. The central bank is the bank of issue and is also responsible for the execution of monetary and credit policies, the regulation of the foreign and domestic value of the Turkish lira jointly with the government, and the supervision of the credit system. In 1987 a decree was issued to bring the governorship of the Central Bank under direct government control.

Several banks were created by special laws to fulfil specialized services for particular industries. Etibank operates primarily in the extractive industries and electric power industries; the Ziraat Bankası makes loans for agriculture; the Emlâk Bankası participates in industrial undertakings and the construction of all types of building.

The largest of the private sector Turkish banks is the Türkiye İş Bankası, which operates 841 branches.

There are several credit institutions in Turkey, including the Sınai Kalınma Bankası (Industrial Development Bank), which was founded in 1950, with the assistance of the World Bank, to encourage private investment in industry by acting as underwriter in the issue of share capital.

There are numerous co-operative organizations, including agricultural co-operatives in rural areas. There are also a number of savings institutions.

In 1990 the Turkish Government announced plans to establish a structure for offshore banking. A decree issued in October 1990 exempted foreign banks, operating in six designated free zones, from local banking obligations.

In June 1999 an independent supervisory body, the Regulatory and Supervisory Board for Banking, was established by law to monitor the financial sector. The treasury, the Ministry of Finance, the Central Bank, the state planning organization, the Capital Markets Board and the Banks' Association of Turkey were each to nominate one member to the Board for a six-year term. The Board was to be operational from early 2000. Other legislation passed in June 1999 incorporated core principles of the Basle Committee on Banking Supervision relating to risk-based capital requirements, loan administration procedures, auditing practices and credit risk issues.

BANKING

Transport

RAILWAYS

The total length of the railways operated within the national frontiers is 10,508 km (1997), of which 8,607 km are main lines, 2,065 km are electrified, and 2,453 km are signalled. A new direct rail link between Ankara and İstanbul, cutting the distance from 577 km to 416 km, is expected to be completed by 2000. There are direct rail links with Bulgaria to Iran and Syria. A new line connecting Turkey with Georgia is expected to be completed by 2000. A light railway system for İstanbul, expected to total 109 km in length upon its completion, is currently under construction. A 7.5-km section of a 29-km 'metro' transport system was scheduled for completion in 1995. A 14.6-km initial phase of a planned 76-km 'metro' and light rail transport system in Ankara, was scheduled to open in 1997. An 8.6 km light rail route for the city opened in 1996.

Türkiye Cumhuriyeti Devlet Demiryolları İşletmesi Genel Müdürlüğü (TCDD) (Turkish Republic State Railways): Genel Müdürlük, Talatpaşa Bul., 06330 Gar, Ankara; tel. (312) 3090515; telex 44390; fax (312) 3123215; e-mail tcddapk@superonline.com; f. 1924; operates all railways and connecting ports (see below) of the State Railway Administration, which acquired the status of a state economic enterprise in 1953, and a state economic establishment in 1984; 508 main-line diesel locomotives, 68 main-line electric locomotives, 1,046 passenger coaches and 16,989 freight wagons; Chair. of Board and Gen. Dir HASAN MOLLAĞULLARI.

ROADS

At 1 January 1996, 1,246 km of motorways were open to traffic and nearly 530 km of motorways were under construction; the total length of the highway network was 61,245 km and the total length of village roads was 320,000 km. In 1996 there were 58,687 km of roads in the maintenance programme with 49,376 km open all year and 7,316 km open, when possible, in winter.

Bayındırlı ve İskan Bakanlığı Karayolları Genel Müdürlüğü (General Directorate of Highways): KGM, Yücetepe, 06100 Ankara; tel. (312) 4252343; fax (312) 4172851; e-mail info@kgm.gov.tr; internet http://www.kgm.gov.tr; f. 1950; Dir-Gen. DINÇER YIĞIT.

SHIPPING

At the end of 1997 Turkey's merchant fleet comprised 1,146 vessels and had an aggregate displacement of 6.6m. grt.

General-purpose public ports are operated by two state economic enterprises. The ports of Bandırma, Derince, Haydarpaşa (İstanbul), İskenderun, İzmir, Mersin and Samsun, all of which are connected to the railway network, are operated by Turkish State Railways (TCDD) (see above), while the smaller ports of Antalya, Giresun, Hopa, Tekirdağ and Trabzon are operated by the Turkish Maritime Organization (TDI).

Onur Air Taşımacılık AŞ: Senlik Mahallesi, Gatal Sok. 3, 34810 Florya, İstanbul; tel. (212) 6632300; fax (212) 6632319; f. 1992; regional and domestic charter services; Chair. CANKUT BAGANA; Man. Dir SEVINÇ PINAR.

Pegasus Hava Taşımacılığı AŞ: İstasyon Cad. 24, Kat. 1, 34800 Yeşilyurt, İstanbul; tel. (212) 6632934; telex 21117; fax (212) 6635458; f. 1989; charter services; Chair. O. BERKMAN; Gen. Man. L. J. LOWTH.

Sonmez Hava Yolları: 9 km Yakova Yolu, PK 189, Bursa; tel. (224) 2610440; fax (224) 2465445; f. 1984; scheduled flights and dedicated freight; Chair. ALI OSMAN SONMEZ.

SunExpress Air: Fener Mahallesi Sinanoghu Cad., Oktay Airport, PK 28, 07100 Antalya; tel. (242) 3234047; fax (242) 3234057; e-mail sunexpress@condor.de; internet http://www.sunexpress.de; f. 1990; charter and dedicated freight; serves European destinations; Man. Dir. FLORIAN HAMM.

Top Air: Yeni Hangarlar Bölgesi, Atatürk Havalimani, 34630 Yesilköy, İstanbul; tel. (212) 5990227; fax (212) 5997910; f. 1990; scheduled flights.

Türk Hava Yolları AO (THY) (Turkish Airlines Inc.): Atatürk Hava Limanı, 34830 Yeşilköy, İstanbul; tel. (212) 6636300; telex 21198; fax (212) 6634744; e-mail turkishairlines@thy.com; internet http://www.turkishairlines.com; f. 1933; majority state-owned; extensive internal network and scheduled and charter flights to destinations in the Middle East, Africa, the Far East, Central Asia, the USA and Europe; Pres. and CEO YUSUF BOLAYIRLI.

Tourism

Visitors to Turkey are attracted by the climate, fine beaches and ancient monuments. Tourism is being stimulated by the Government, and the industry is expanding rapidly. In 1998 receipts from tourism reached a record US $7,177m., compared with $7,002m. in 1997, while the number of tourists increased from 9.7m. in that year to 9.8m. in 1998.

Ministry of Tourism: İsmet İnönü Bul. 5, Bahçelievler, Ankara; tel. (312) 2128300; fax (312) 2128391; e-mail tbtgmos@tr-net.net.tr; internet http://www.tourism.gov.tr; f. 1963; Dir-Gen. of Establishments YENAL ÜNSELİ; Dir-Gen. of Information MUSTAFA SIYAHHAN; Dir-Gen. of Investments HALUK AKAR.

Defence

Chief of General Staff: Gen. HUSEYIN KIVRIKOGLU.

Ground Forces Commander: Gen. ATILLA ATES.

Navy Commander: Adm. ILHAMI ERDIL.

Air Force Commander: Gen. ILHAN KILIC.

Gendarmerie Commander: Gen. RASIM BETIR.

Defence Budget (1998): estimated at TL 2,179,000,000m.

Military Service: 18 months.

Total Armed Forces (August 1998): 639,000 (including 528,000 conscripts): army 525,000 men, navy 51,000 men, air force 63,000 men.

Paramilitary Forces: 182,200: 180,000 gendarmerie, 2,200 coast guard.

Education

When the Turkish Republic was formed, the Ministry of Education became the sole authority in educational matters, replacing the dual system of religious schools and other schools. One of the main obstacles to literacy was the Arabic script, which required years of study before proficiency could be attained. In 1928, therefore, a Turkish alphabet was introduced, using Latin characters. At the same time the literary language was simplified, and purged of some of its foreign elements. In 1996 the Government's expenditure on education amounted to TL 442,420,000m., or 11.2% of total budget expenditure.

PEOPLE'S SCHOOLS

This change of script created a need for schools in which reading and writing in the new alphabet could be taught to adults. Temporary institutions, known as 'people's schools' or 'national schools', were established throughout Turkey. During the winter months these schools gave instruction in reading and writing and other basic subjects to men and women beyond the normal school age. Between 1928

and 1935 about 2m. people received certificates of proficiency. Since then, education in Turkey has made significant advances. According to estimates by UNESCO, the average rate of adult literacy in 1995 was 82.3% (males 91.7%; females 72.4%).

PRIMARY EDUCATION

Primary education may be preceded by an optional pre-school establishment which serves 3–6 year old children.

According to the 'Basic Law of National Education', the education of children between the ages of six and 14 is compulsory. Basic Education Institutes are organized to provide eight years of education and are essentially a combination of primary school and middle school. Primary education, therefore, comprises two cycles, the first consisting of five years at primary school and the second of three years at middle school.

The transition from a system of primary and middle schools to that of a single eight-year basic education school was introduced throughout the country from September 1997.

Primary education is now entirely free, and co-education is the accepted basis for universal education. The number of schools has risen from 12,511 in 1950 to 49,240 in 1995/96, and the number of teachers from 27,144 to some 232,000. In 1995/96 some 6.4m. children were enrolled at primary schools. In 1994 enrolment at primary schools included 96% of children in the relevant age-group (mlaes 98%; females 94%).

SECONDARY EDUCATION

The reorganization of the system of secondary education began in the early 1920s. This period of education lasts for a minimum of three years after primary education and provides for students who intend to proceed to higher educational institutions. Secondary education encompasses general high schools, or lycées, and vocational and technical high schools. In addition, since 1992/93, 'open' high schools have provided secondary education opportunities to young working people through the media and other new technologies.

The lycée takes the student up to the age of 17 or 18 years, and those who wish to proceed to an institute of higher education must pass the state matriculation examination. The study of a modern language (English, French or German) is compulsory. In 1995/96 there were around 209,000 staff teaching at the secondary level and some 4.8m. pupils were enrolled at an estimated total of 14,367 secondary schools. In 1994 enrolment at secondary schools included 50% of children in the relevant age-group (males 58%; females 41%).

INFORMAL EDUCATION

Informal education comprises teaching and guidance outside of the formal education system, which aims to ensure all citizens obtain reading, writing and other essential skills. Since 1932, reading-rooms have been established in every town and many villages. They are centres of social and cultural life and provide evening classes. Their libraries, meeting-halls and recreational facilities are open to all. In the towns there are also evening trade schools which provide technical training for adults, and travelling courses are sent out to the villages. Other informal education is provided for children of secondary school age through apprenticeship training.

HIGHER EDUCATION

Higher educational institutions in Turkey were founded, and are administered, by the State. These institutions include the universities and the higher professional schools. In 1995/96 there were 817 institutes of higher education (including universities, teacher training colleges and other technical and vocational institutions). The number of students enrolled at universities and equivalent institutes of higher education was 1.2m. in that academic year.

TECHNICAL EDUCATION

The problem of technical education began to be seriously considered first in 1926; specialists were invited from Europe and America, and a plan was drawn up for perfecting the existing vocational schools and for founding new ones to meet the economic needs of each region. In 1995/96 there were 3,678 technical and vocational lycées, giving training to some 1.3m. students. Plans were made for evening schools to train craftsmen and for the founding of teachers' technical training high schools. In addition, there are colleges for commerce, tourism, communication, local administration and secretarial skills.

TEACHERS' TRAINING

In Turkey teachers' training colleges are divided into three basic categories: two-year teacher-training institutes which train teachers for primary schools, three-year teacher-training institutes which train teachers for middle schools and higher teacher-training schools offering a four-year course qualifying teachers for the lycées. Students of the higher teacher-training schools take specialist subject courses in the relevant university faculty and their pedagogy courses in the higher teacher-training schools.

THE UNITED ARAB EMIRATES

ABU DHABI DUBAI SHARJAH RAS AL-KHAIMAH UMM AL-QAIWAIN AJMAN FUJAIRAH

Geography

The coastline of the seven United Arab Emirates (UAE) extends for nearly 650 km (400 miles) from the frontier of the Sultanate of Oman to Khor al-Odaid, on the Qatari peninsula, in the Persian (Arabian) Gulf, interrupted only by an isolated outcrop of the Sultanate of Oman which lies on the coast of the Persian Gulf to the west and the Gulf of Oman to the east at the Strait of Hormuz. Six of the emirates lie on the coast of the Persian Gulf, while the seventh, Fujairah, is situated on the eastern coast of the peninsula, and has direct access to the Gulf of Oman. The area is one of extremely shallow seas, with offshore islands and coral reefs, and often an intricate pattern of sand-banks and small gulfs as a coastline. There is a considerable tide. The waters of the Gulf contain abundant quantities of fish, hence the important role of fishing in local life.

The climate is arid, with very high summer temperatures; and, except for a few weeks in winter, air humidity is also very high. The total area of the UAE has been estimated at 77,700 sq km (30,000 sq miles), relatively small compared with neighbouring Oman and Saudi Arabia, and it has a rapidly growing population, totalling 2,377,453 at the census of December 1995. In 1998 the population was estimated to be 2,720,000. The population is concentrated in the emirates of Abu Dhabi and Dubai, the principal commercial regions of the country. Abu Dhabi is the largest emirate, with an area of about 67,350 sq km (26,000 sq miles) and a population of 928,360 at the December 1995 census. The town of Abu Dhabi is also the capital of the UAE. The most important port is Dubai, the capital of the UAE's second largest state. Its significance derives from its position on one of the rare deep creeks of the area, and it now has a very large transit trade.

Many inhabitants are still nomadic Arabs, and the official language is Arabic, which is spoken by most of the native inhabitants. Arabs are outnumbered, however, by non-Arab immigrant workers. In the coastal towns there are many Iranians, Indians, Pakistanis and Africans. Most of the native inhabitants are Muslims, mainly of the Sunni sect.

History

Revised for this edition by Michael James den Hartog

In the early 16th century the Portuguese commercial monopoly of the Gulf area was challenged by other European traders. The Portuguese ascendency in the East gradually declined, and in 1650 they evacuated Oman, losing their entire hold on the Arabian shore. There followed a period of commercial and political rivalry between the Dutch and the British. The initial Dutch predominance weakened and in 1766 came practically to an end, while the British were consolidating their position in India.

Both European and Arab pirates were very active in the Gulf during the 17th, 18th and early 19th centuries. Attacks on British-flag vessels led to British expeditions against the pirates and eventually, in 1818, against the pirate headquarters at Ras al-Khaimah and other harbours along the 240 km of 'Pirate Coast'. In 1820 a general treaty of peace, for suppressing piracy and slave traffic, was concluded between Great Britain and the Arab tribes of the Gulf. It was signed by the principal sheikhs of the Pirate Coast and Bahrain. A strong British squadron was stationed at Ras al-Khaimah to enforce the treaty.

Piracy persisted and accordingly, in 1835, the sheikhs agreed, in a 'maritime truce', not to engage, under any circumstances, in hostilities by sea during the pearl-diving season. The advantages of this were so noticeable that the sheikhs willingly renewed the truce for increasing periods until, in May 1853, a 'treaty of maritime peace in perpetuity' was concluded, establishing a 'perpetual maritime truce' on the newly-named 'Trucial Coast' (also called Trucial Oman). It was supervised by the British Government, to whom the signatories would refer any breach. The British did not interfere in wars between the sheikhs on land.

Towards the end of the 19th century, France, Germany and Russia showed increasing interest in the Gulf area, and in 1892 Britain entered into separate but identical 'exclusive' treaties with the Trucial rulers, whereby the sheikhs undertook not to cede, mortgage or otherwise dispose of parts of their territories to anyone except the British Government, nor to enter into any relationship with a foreign government, other than the British, without British consent. Britain had already undertaken to protect the states from outside attack in the perpetual maritime treaty of 1853.

In 1820, when the general treaty was signed, there were only five Trucial states. In 1866, on the death of the Chief Sheikh of Sharjah, his domains were divided among his four sons, the separate branches of the family being established at Sharjah, Ras al-Khaimah, Dibba and Kalba. Kalba was incorporated into Sharjah in 1952, when its ruler agreed to accept all existing treaties between the United Kingdom and the Trucial States, as did the ruler of Fujairah. This involved recognizing the British Government's right to define state boundaries, to settle disputes between the Trucial sheikhdoms and to render assistance to the Trucial Oman Scouts, a force of some 1,600 men, officered and paid for by the United Kingdom, which was founded in 1952.

In 1952, on British advice, a trucial council was established, at which all seven rulers met at least twice a year, under the chairmanship of the political agent in Dubai. Its object was to encourage the pursuit of a common policy in administrative matters, possibly leading to a federation of the states.

The advent of the commercial production of petroleum in mid-1962 gave Abu Dhabi a great opportunity for development. A major obstacle to this development was removed in August 1966, when Sheikh Shakhbut bin Sultan an-Nahyan, the ruler of Abu Dhabi since 1928, was deposed. The ruling family replaced Shakhbut by his younger brother, Sheikh Zayed bin Sultan. The subsequent history of Abu Dhabi has been indicative of a society suddenly transformed by the acquisition of immense wealth. In 1966 petroleum was discovered in neighbouring Dubai, which also benefited greatly from the petroleum boom.

In June 1965 Sheikh Saqr bin Sultan of Sharjah was deposed. In spite of an appeal to the United Nations (UN), supported by Iraq and the United Arab Republic (now Egypt), the accession of his cousin, Sheikh Khalid bin Muhammad, proceeded without incident.

Intending to relocate its major military base in the Middle East, the United Kingdom started work in 1966 on a base in Sharjah, which by 1968 had become the principal base in the Gulf. However, British forces had been withdrawn from the area by the end of 1971. The Trucial Oman Scouts, based in Sharjah, were proposed as the nucleus of a federal security force after the British withdrawal, but some states, notably Abu Dhabi, were already creating their own defence forces.

In order to avoid disputes over the ill-defined state borders, those between Qatar, Abu Dhabi and Dubai were settled early in 1970—although not without objection from Saudi Arabia, whose territorial claims overlapped those of Abu Dhabi to a considerable extent. In late 1974 a border agreement was signed with Saudi Arabia on the Liwa oases, whereupon Saudi Arabia recognized the United Arab Emirates (UAE) and ambassadors were exchanged.

The original proposals for the formation of a federation (after the British had withdrawn) included Bahrain and Qatar, as well as the seven Trucial States, but these larger and more developed states eventually opted for separate independence. On 1 December 1971 the United Kingdom terminated all existing treaties with the Trucial States. On the following day Abu Dhabi, Dubai, Sharjah, Umm al-Qaiwain, Ajman and Fujairah formed the UAE, and a treaty of friendship was made with the United Kingdom. The federation approved a provisional constitution, which was to expire after five years, when a formal constitution would be drafted. However, the provisional constitution was repeatedly renewed until 1996, and this lent a flexibility to the developing emirates, allowing the process of centralization to follow a gradual course and averting any serious dispute which could arise from an emirate's contravention of formal constitutional decrees. At independence, Sheikh Zayed, the ruler of Abu Dhabi, took office as the first President of the UAE. Sheikh Rashid bin Said al-Maktoum, the ruler of Dubai since 1958, became Vice-President, while his eldest son, Sheikh Maktoum bin Rashid (Crown Prince of Dubai), became Prime Minister. In December 1991 the UAE became a member of both the League of Arab States (Arab League) and the UN. In February 1972 Ras al-Khaimah became the seventh member of the federation.

In January 1972 the Ruler of Sharjah, Sheikh Khalid, was killed by rebels under the leadership of his cousin, Sheikh Saqr, who had been deposed in 1965. The rebels were captured, and Sheikh Sultan bin Muhammad succeeded his brother as ruler, confirming a continuation of the late Khalid's relatively liberal principles of government, and Sharjah's membership of the UAE.

Although the UAE remained one of the most conservative Arab states, it gave considerable support to the Arab cause in the October War of 1973 and participated in the associated petroleum cut-backs and boycotts. It was the first state to impose a total ban on exports of petroleum to the USA, and subsequently supported the Arab ostracism of Egypt which followed the negotiation of the Camp David agreements between Egypt and Israel in 1978 and the subsequent 1979 peace treaty between the two countries.

TOWARDS GREATER CENTRALIZATION

In December 1973 the separate Abu Dhabi Government was disbanded and, in a ministerial reshuffle, some of its members became federal ministers. Most notably, the Abu Dhabi minister responsible for petroleum, Dr Mana bin Said al-Oteiba, became the first federal Minister of Petroleum and Mineral Resources. The government reorganization involved a considerable extension of central authority and was a further step towards the integration of the seven sheikhdoms. In May 1975, at a session of the Supreme Council, the seven emirs gave their consent, in principle, to further steps towards centralization. In November Sharjah merged the Sharjah National Guard with the Union Defence Force, and also granted control of its broadcasting station to the Federal Ministry of Communications, its police to the Ministry of the Interior and its courts to the Ministry of Justice. The Sharjah flag was abolished in favour of the federal tricolour. Fujairah and Abu Dhabi both discontinued the use of their flags.

The merger of the main defence forces (the Union Defence Force, the Abu Dhabi Defence Force and the Dubai Defence Force) was finally agreed in early May 1976, when Gen. Sheikh Khalifa bin Zayed an-Nahyan, the Crown Prince of Abu Dhabi, was made deputy supreme commander (Sheikh Zayed became supreme commander). In November the provisional constitution was amended so that the right to levy armed forces and acquire weapons was placed exclusively in the hands of federal government.

During 1976 Sheikh Zayed, impatient with the slow rate at which the emirates were achieving centralization, threatened not to stand for a second term as President of the UAE in November. In the event, he was re-elected unanimously after the Supreme Council had granted the federal Government greater control over defence, intelligence services, immigration, public security and border control. A reshuffle of the Council of Ministers followed in January 1977, with ministers chosen on the principle of individual merit rather than equitable representation of the seven emirates. The new 40-member Federal National Council, which was inaugurated on 1 March, included only seven members of the first five-year session (1971–76).

Mounting pressure from within the emirates for a more united federation led, in 1978, to the setting up of a joint Cabinet-Federal National Council committee to discuss methods of achieving this. Events in Iran in 1979 and the resultant security threat prompted a full meeting of the Council of Ministers and the Federal National Council in February. The outcome of this was a 10-point memorandum advocating the abolition of all internal borders, the unification of defence forces and the merging of revenues in a federal budget. This plan was subsequently submitted to the Supreme Council.

Despite their widespread support in the emirates, these proposals aggravated the long-standing rivalry between Abu Dhabi, the financial mainstay of the federation, and Dubai, which had become increasingly critical of the centralized federal Government. Dubai rejected the memorandum completely and, together with Ras al-Khaimah, boycotted a Supreme Council meeting in March 1979.

It was thought that the deadlock had been broken, at least temporarily, when Sheikh Rashid, ruler of Dubai, replaced his son as Prime Minister of the federal Government (while retaining the vice-presidency) in July 1979. A new Council of Ministers was formed, preserving a similar balance of power between the emirates as before. Ras al-Khaimah integrated its defence force with the federal force, and both Abu Dhabi and Dubai pledged to contribute 50% of their revenues from petroleum to the federal budget. Dubai's forces, however, remained, in practice, a separate entity. Further attempts at integration included the construction of national roads, the installation of telecommunications, and the central planning and financing of health, education and agriculture. In November 1981 Sheikh Rashid was re-elected Prime Minister by the Supreme Council, and Sheikh Zayed was re-elected President.

FOREIGN POLICY AND THE IRAN–IRAQ WAR

With the outbreak of war between Iran and Iraq in 1980, the UAE became vulnerable to external forces over which it had no control. Iran's repeated threats to close the Strait of Hormuz to traffic carrying exports of petroleum from Gulf countries represented a grave potential danger to states such as the UAE, which depend on revenues from petroleum. Partly in response to Iranian threats, the UAE joined with five other Gulf states to form the Co-operation Council of the Arab States of the Gulf (Gulf Co-operation Council—GCC, see p. 255) in March 1981, to work towards economic, political and social integration in the Gulf. The GCC's primary concern initially was to develop greater economic co-operation, but this gave way to concern over the region's ability to defend itself. A bilateral defence agreement was signed with Saudi Arabia in 1982, and, in accordance with GCC policy, the UAE has substantially increased its defence expenditure.

The foreign policy of the UAE is motivated chiefly by its support for Arab unity, especially in the Palestinian cause. In March 1985 President Zayed pledged his country's support for Lebanon in its fight against Israeli occupation forces. In the Iran–Iraq War, it made substantial donations to Iraq, but in 1984 these were reported to have been discontinued, owing to the UAE's financial difficulties. Whether or not this was the case, the report indicated the UAE's desire to maintain some

neutrality in the conflict, an attitude which was less clearly perceptible in other GCC states.

In August 1987 a Panamanian-registered supertanker, the *Texaco Caribbean,* struck a mine (presumed to be of Iranian origin) 13 km off the coast of the UAE, near the port of Fujairah. The Government of the UAE declared Fujairah port a danger zone and banned all commercial shipping from a surrounding area of 100 sq km, while minesweeping operations were carried out. At the end of August the UAE gave provisional permission for the use of its ports as a base for British minesweeping operations. In April 1988 the Mubarak oilfield, which belongs to the emirate of Sharjah and is located 30 km off the coast of the UAE, was closed for two months, following an attack on its installations by forces involved in the Iran–Iraq War.

The decline in revenues from petroleum in the mid-1980s had little effect on the comfortable lifestyle of the UAE, although certain development plans were postponed or rescheduled. One effect of decreased revenue was a greater commitment to local co-operation both within the UAE and among Gulf countries in general. Thus, bilateral agreements with Oman, Qatar, the People's Democratic Republic of Yemen and Iraq were made for the purpose of mutual aid in educational, scientific and cultural development. In November 1985 diplomatic relations were established between the UAE and the USSR. This was expected to lead to increased bilateral trade between the countries.

In November 1987 the UAE resumed diplomatic relations with Egypt, following the adoption of a resolution at a summit meeting of the Arab League, which permitted member states to resume relations with Egypt at their own discretion.

The escalation of tension in the Gulf, exacerbated by the presence of US and Soviet naval forces, had resulted in the adoption of Resolution 598 by the UN Security Council on 20 July 1987, which urged an immediate cease-fire. In November, at an extraordinary meeting of the Arab League in Amman, Jordan, representatives of the member states, including the UAE, unanimously condemned Iran for prolonging the war against Iraq, deplored its occupation of Arab (i.e. Iraqi) territory, and urged it to accept Resolution 598 without pre-conditions.

DEVELOPMENTS IN DOMESTIC POLITICS

In October 1986 the provisional federal constitution was renewed for a further five years, and Sheikh Zayed and Sheikh Rashid were unanimously re-elected to the posts of President, and Vice-President and Prime Minister, respectively.

An attempted coup took place in Sharjah in June 1987, when Sheikh Abd al-Aziz, a brother of the ruler (Sheikh Sultan bin Muhammad al-Qasimi), issued a statement, in his brother's absence, which announced the abdication of Sheikh Sultan, on the grounds that he had mismanaged the economy. (Sharjah had incurred debts estimated at US $920m. in mid-1987, as the result of an extravagant programme of construction ordered by the ruler.) However, Dubai intervened and convened a meeting of the Supreme Council of Rulers, which endorsed Sheikh Sultan's claim to be the legitimate ruler of Sharjah, and restored him to power. As a result of the attempted coup, Sheikh Abd al-Aziz was given the title of Crown Prince and granted a seat on the Supreme Council. In July Sheikh Sultan formed an executive council in Sharjah, comprising the heads of local government departments and other individuals selected by him, to assist in the administration of the public affairs of the emirate. Sheikh Sultan also signed an agreement with bank creditors, whereby Sharjah's loan repayments would be rescheduled until 1993. In February 1990, however, Sheikh Sultan removed his brother from the post of Crown Prince and revoked his right to succeed him. In July Sheikh Sultan appointed Sheikh Ahmad bin Muhammad al-Qasimi, the head of Sharjah's petroleum and mineral affairs office, as Deputy Ruler of Sharjah. He was not given the title of Crown Prince. On 7 October the Ruler of Dubai, Prime Minister and Vice-President of the UAE, Sheikh Rashid bin Said al-Maktoum, died. He was succeeded in all of his offices by his eldest son, Sheikh Maktoum bin Rashid al-Maktoum. In November a reorganization of ministerial portfolios took place. In October 1991 the Supreme Council confirmed Sheikh Zayed and Sheikh Maktoum as, respectively, President and Vice-President, each for a further five-year term. The provisional federal constitution was also renewed for a further period of five years.

In 1991 the UAE became involved in a major international financial scandal, when, in July, the regulatory authorities in seven countries closed down (without warning) the operations of the Bank of Credit and Commerce International (BCCI), in which the Abu Dhabi ruling family and agencies had held a controlling interest (77%) since April 1990. The termination of the bank's activities followed the disclosure by an auditor's report, commissioned by the Bank of England, of systematic, large-scale fraud by BCCI authorities (perpetrated before April 1990). By the end of July 1991 BCCI's activities had been suspended in all 69 countries in which it had operated. A compensation plan, drawn up by the bank's majority shareholders, was delayed in December 1992, when three prominent creditors, who had objected to a clause that would require recipients of compensation to waive any further claims against Abu Dhabi in respect of the BCCI scandal, initiated appeal proceedings and it was not until February 1995 that a compensation agreement, worth a total of US $1,800m., received judicial authorization in Luxembourg. In February 1996 the UAE Central Bank formally revoked the licence of the BCCI, and in May the Abu Dhabi authorities made a payment of $1,550m. to BCCI's liquidators, Touche Ross (a further $250m. was to be held in an escrow account for release at a later date). In September 1999 Touche Ross announced that a third payment to creditors was to be made within six months, taking the level of returns to 55%. Earlier that year Touche Ross had initiated legal action in an attempt to recover some AED 1,691m. from the ruler of Sharjah, Sheikh Sultan bin Muhammad al-Qasimi.

Meanwhile, in February 1994 the Minister of Petroleum and Mineral Resources, Yousuf bin Omeir bin Yousuf, resigned, citing personal reasons. In that month Sheikh Zayed issued a decree whereby a wide range of crimes, including murder, theft, adultery and drugs-related offences, would be tried in *Shari'a* (Islamic religious law) courts rather than in civil courts, and in April 1995 the Council of Ministers approved the introduction of the death penalty for drugs dealers and smugglers. In September a *Shari'a* court sentenced a 16-year-old Filipino woman to death for the murder of her Arab employer following an alleged rape. The sentence provoked public outcry in the Philippines. In mid-October, following appeals to the UAE authorities from the Philippine Government and the subsequent personal intervention of Sheikh Zayed, the family of the deceased agreed to rescind their right to demand the execution of the accused in return for financial compensation. Later in the month the death sentence was commuted by an appeal court, which sentenced the accused to 100 lashes and one year's imprisonment, followed by deportation.

In January 1995 a decree was issued by the Ruler of Dubai, Sheikh Maktoum bin Rashid al-Maktoum, naming Sheikh Muhammad bin Rashid al-Maktoum as Crown Prince. The decree also named Sheikh Hamdan bin Rashid al-Maktoum as Deputy Ruler of Dubai. In June 1996 legislation designed to make the provisional constitution permanent was endorsed by the Federal National Council, following its approval by the Supreme Council of Rulers.

In late March 1997 there was a cabinet reshuffle—the first for seven years. Thirteen of the 22 cabinet members, including the ministers of finance, defence and foreign affairs, retained their posts, while the new appointments included Sheikh Fahim bin Sultan al-Qasimi as Minister of Economy and Commerce and Sheikh Abdullah bin Zayed an-Nahyan, son of the late UAE President, as Minister of Information and Culture.

FOREIGN RELATIONS

Iraq's occupation of Kuwait, in August 1990, caused political and economic crisis throughout the Gulf region. The UAE responded by supporting resistance to Iraqi aggression, and on 20 August the UAE ordered all nationals to join the armed forces for six weeks' military training. At the same time it was announced that armed forces opposing Iraq's aggression would be granted military facilities in the UAE. Units from the British and French air forces were among those which were subsequently stationed there. In February 1991, after the outbreak of hostilities between Iraq and a US-led multinational force, the UAE air force conducted four raids against Iraqi targets.

In the aftermath of the war between Iraq and the US-led multinational force, the Ministers of Foreign Affairs of Egypt,

Syria and the six GCC states met in Damascus, Syria, in order to discuss regional security arrangements. The meeting resulted in the signing of the 'Damascus declaration' which envisaged, among other things, the formation of an Arab peace-keeping force comprising mainly Egyptian and Syrian troops. At the beginning of May 1991 the Ministers of Foreign Affairs of the GCC states held an emergency meeting in Kuwait to discuss further regional security measures. In early May Egypt announced that it would withdraw its armed forces from Saudi Arabia and Kuwait within three months: an apparent failure to honour its commitment, under the 'Damascus declaration', to participate in the Arab peace-keeping force. At the beginning of April the President of the UAE had discounted the possibility of Iraq's participation in a Gulf security system while Saddam Hussain remained in power there; but he had indicated that the UAE would be prepared, in concert with the other GCC member states, to consider Iranian security proposals. In September 1992 a meeting attended by Egypt, Syria and the GCC states was presented with an Egyptian proposal to create a series of rapid deployment forces. However, the consideration of military co-operation was discontinued, in favour of discussion of political and economic co-ordination.

Tension between the UAE and Iran was not confined to matters relating to the GCC; there was also a territorial dimension. Rival claims to the island of Abu Musa had been made by Sharjah and Iran in 1970, when petroleum exploration began. In 1971 agreement was reached to divide any oil revenues. In August 1992, however, it was reported that Iran had annexed Abu Musa after 20 years of joint control. It was claimed that Iranian authorities had denied landing permission to more than 100 residents of the island who were returning from Sharjah, and that Iran was refusing a compromise agreement. Iran subsequently claimed sovereignty over Abu Musa, together with the Greater Tunb and Lesser Tunb islands. Discussions between representatives of the countries' Ministers of Foreign Affairs were convened in Abu Dhabi at the end of September, but collapsed almost immediately, with Iran refusing to discuss ownership of two of the three islands. At a GCC summit meeting in Abu Dhabi in December it was demanded that Iran reverse the 'virtual annexation' of the islands. In April 1993 a GCC statement expressed satisfaction at recent developments and support for bilateral negotiations. In the same month it was reported that all persons who had been expelled from (or refused entry to) Abu Musa in 1992 had been permitted to return. Both the UAE and Iran periodically proclaimed their commitment to direct talks; however, by late 1994 no significant progress had been made towards resolving the conflict, and in December the UAE announced its intention to refer the dispute to the International Court of Justice. In February 1995 it was alleged that Iran had deployed air defence systems on the islands. In November officials from the UAE and Iran, meeting in Qatar, failed to reach agreement on establishing an agenda for ministerial-level negotiations. In March 1996 relations between the two countries deteriorated further when Iran opened an airport on Abu Musa; in the following month Iran established a power station on the island of Greater Tunb. Although talks were held in March 1997, no solution was reached, and in June the UAE protested to the UN about a pier which, it alleged, Iran had constructed on Greater Tunb. The GCC has supported UAE claims to the islands but has also welcomed an Iranian offer to open dialogue. In March 1999 the GCC issued a statement criticizing Iranian naval exercises near the disputed islands. At that time, the UAE was also highly critical of a developing *rapprochement* between Iran and Saudi Arabia, the latter having offered to mediate in the dispute over the islands. Relations with Saudi Arabia deteriorated further following a visit to that country by President Khatami of Iran, although the Saudi authorities insisted that any *rapprochement* with Iran would not be achieved at the expense of its relations with any other country.

In September 1993 the UAE welcomed the successful negotiation of the Declaration of Principles on Palestinian Self-Rule (see Documents on Palestine, p. 120), and pledged financial support to the Palestinians. The UAE also continued to modernize its defence capability, signing a defence agreement with the USA in July 1994 which extended the agreement signed in 1991 in the aftermath of the Gulf conflict. This coincided with the announcement of plans to reduce the size of the UAE armed forces by 10,000, to 50,000.

In September 1994 the UAE, along with the other GCC member states, agreed to a partial removal of the Arab economic boycott of Israel. In mid-January 1995 the UAE signed a defence agreement with France which provided for 'consultations' in the event of aggression against or threats to UAE territory. A similar agreement was reportedly under negotiation with the United Kingdom. However, negotiations stalled for a period, owing to the reluctance of the British Government to accept the extension of UAE jurisdiction over British troops deployed there. A defence agreement was finally signed in November 1996, by which the United Kingdom undertook to defend the UAE in the event of an external attack. In mid-October 1995, while addressing a meeting of the new ambassadors in the UAE, Sheikh Zayed announced that it was 'time for reconciliation' with Iraq and appealed for the easing of UN sanctions against that country to relieve the suffering of the Iraqi people. In January 1997 the UAE sent a shipment of aid containing food and medicine to Iraq to help alleviate the desperate situation of Iraqi children. In March, in protest at Israel's decision to construct a Jewish settlement in a disputed area of East Jerusalem, the Arab League voted to suspend negotiations to establish diplomatic links with Israel, close Israeli missions, restore the economic boycott and withdraw from multilateral peace talks. In November the UAE, in common with most other GCC and Arab League member states, did not attend the fourth Middle East and North Africa economic conference in Doha, Qatar: the boycott was widely observed in protest at the attendance of a delegation from Israel, which was regarded as having failed to fulfil its obligations with regard to the Middle East peace process in general, and the Oslo accords in particular. In late 1997, as the crisis developed between Iraq and weapons inspectors of the UN Special Commission (UNSCOM, see Iraq), the UAE persisted in its reconciliatory stance towards Iraq, refusing US requests to allow the deployment of US fighter aircraft in the UAE, and strongly advocating a diplomatic solution. A further shipment of medicine and food aid from the UAE arrived in Iraq in February 1998. In that month a ship transporting illegal Iraqi oil exports sank off the coast of Sharjah causing a major oil spill. The Minister of State for Foreign Affairs announced his intention to prevent a recurrence of this event, and in August an environmental protection law was approved. In June the UAE reiterated its support for an end to the economic blockade against Iraq and in August it was announced that the UAE was to restore diplomatic ties with Iraq, although there was no indication of how soon this would take place. The UAE boycotted a meeting of GCC oil ministers in March 1999 in protest at the decision by Saudi Arabia to begin petroleum production in disputed land prior to an agreement being reached on the ownership of the land. In May the UAE and Oman signed an agreement demarcating their joint border.

The UAE is expanding its air force as part of a 10-year weapons procurement programme, worth an estimated US $15,000m. In December 1997 the Government signed a contract for the modernization of its 33 *Mirage* 2000 jets, and for the purchase of 30 new *Mirage* 2000-9 fighter aircraft, and in May 1998 it was announced that 80 US F-16 fighter aircraft had been ordered (at a cost of at least $6,000m.), representing the largest defence purchase in the country's history.

Economy

Dr P. T. H. UNWIN

Revised for this edition by MICHAEL JAMES DEN HARTOG

INTRODUCTION

Prior to the discovery of petroleum, the economy of the seven sheikhdoms, or emirates, that comprised the Trucial States was based on pearling, fishing, trade and a limited amount of agriculture. In the 19th century, piracy, as defined by the Western powers that became dominant in the area, also formed an important source of income for the coastal tribes. Since 1958, when petroleum was first discovered off Abu Dhabi, and in particular since June 1962, when it was first exported, the economy of the area has undergone dramatic change. The pace of this change increased appreciably following independence in 1971, leading to the creation of the federal state of the United Arab Emirates (UAE), and the increases in the price of oil dictated by the Organization of the Petroleum Exporting Countries (OPEC, see p. 264), of which the UAE is a member. In 1995, according to estimates by the World Bank, the UAE's gross national product (GNP), measured at average 1993–95 prices, was equivalent to US $17,400 per head. During 1985–95, it was estimated GNP per head decreased, in real terms, by an average annual rate of 3.5%.

The UAE covers approximately 77,700 sq km, most of which is either sand desert or *sibakh* (salt flats). At the March 1968 census its population was 179,126. The pace of the UAE's rapid economic change can be seen in the dramatic increase in population during succeeding years: it reached 1,042,099 by the December 1980 census, and results from the December 1985 census indicated that the population had grown by 55.7% in the intervening five years, to 1,622,464, of whom about 670,000 were inhabitants of Abu Dhabi. The December 1995 census recorded a population of 2.38m., of whom 928,360 lived in Abu Dhabi, 674,100 in Dubai, 400,400 in Sharjah and the remainder in the other emirates. During 1990–97 the population increased by an annual average of 4.9%. In 1998 the population was officially estimated to be 2,720,000. The largest relative increases in population have been in the smallest emirates, reflecting their policy of economic expansion. The unequal distribution of the sexes (with males accounting for about two-thirds of the total population) indicates the large amount of immigration that has been necessary to sustain the country's economic growth. Foreign workers comprise some 80% of the population. There have been strong demands for the redeployment of labour from non-Arab Asians to Arabs. In a government drive against illegal immigrants, up to 200,000 Asian workers were estimated to have left the country by November 1996. Despite a consequent increase in labour costs, the Government justified its actions on the grounds of the need to avoid cultural dilution and political unrest. In 1997 it was estimated that the total number of people in employment was 1,313,500, of whom 7.6% were engaged in agriculture and fishing (compared with 21% in 1965), 34.5% in industry (32% in 1965) and 57.9% in services (47% in 1965).

Despite progress in the UAE towards political integration, co-ordination in economic policies has proved to be difficult to accomplish. Abu Dhabi's wealth tends to overshadow the other emirates but, at the same time, it is the main factor which holds the seven emirates together. Apart from the difference between Abu Dhabi and Dubai over participation in the petroleum industry, the two main emirates have tended to pursue independent strategies in developing their various industries. An important instrument of development policy is the federal budget, which is essentially concerned with the implementation of federal infrastructure policy. Individual emirates also draw up separate budgets for municipal expenditure and local projects. The Constitution provides for social services, such as health and education, to come under federal control. In the 1970s Abu Dhabi contributed more than 90% of the federal budget revenue, but by 1990 its share had fallen to about 80%, with Dubai contributing about 16%. In terms of gross domestic product (GDP), Abu Dhabi continues to dominate the UAE, but its share of total GDP declined from 70% in 1980 to 61% in 1984. Dubai contributed 25% of total GDP, and Sharjah 8%, in 1984. As a result of depressed petroleum prices from 1983, overall GDP declined in some subsequent years, but in 1989 the economic recovery which followed the cease-fire in the Iran–Iraq War enabled a number of industrial projects, postponed in the mid-1980s, to be revived. GDP in that year increased by 15.9%, to AED 100,976m. (US $27,506m.), and in 1990 the combination of increased oil production and higher prices produced a massive increase in GDP, to AED 125,266m. ($34,110m.).

Iraq's invasion of Kuwait in August 1990 initially had a destabilizing effect upon the UAE economy. Work on development projects was suspended and banks lost between 15% and 30% of their deposits in August and September. More than 8,000 Kuwaitis fled to the UAE. Higher shipping insurance premiums acted as a restraint on trade. By the end of 1990, however, work on development projects had resumed, and confidence in the economy had revived as a result of the 54% increase in the revenue which the UAE had earned from its sales of petroleum in the course of the year. At $21,100m., the value of these sales was more than sufficient to meet the additional expenses which the UAE incurred as a result of the crisis in the Gulf. A large part of these expenses arose from the financial support it gave to the military operations of the anti-Iraq coalition; and from aid granted to those countries for which the economic effects of the crisis were most severe. (The UAE donated £275m. towards the cost of British and US $4,067m. towards the cost of US military operations. It also made a contribution of $1,469m. to the Gulf Financial Crisis Co-ordination Group.) After the liberation of Kuwait in February 1991 the UAE announced ambitious expenditure plans in both the petroleum and non-petroleum sectors. The UAE also benefited from participation in Kuwait's reconstruction programme, in the aftermath of its liberation, and from a revival of regional trade after the war. The UAE placed orders worth an estimated $12,050m. for defence equipment in 1993. Cumulative UAE defence spending during the 1990s was forecast to total about $20,000m. Under the country's 'offset' rules, foreign defence contractors winning orders worth more than $10m. were required to reinvest, over a seven-year period, 60% of the value of such orders in approved projects beneficial to the UAE economy.

GDP increased, in real terms, by an estimated annual average of 0.4% in 1980–93. According to UN estimates, real growth in GDP was recorded at 2.2% in 1995, 5.0% in 1996 and 4.5% in 1997. The non-oil sectors of the economy accounted for two-thirds of GDP in 1996. According to IMF figures, GDP totalled AED 157,144m. in 1995, AED 175,781m. in 1996 and was forecast to rise to AED 181,012m. in 1997. Relatively steady revenues from petroleum exports and rapidly growing non-oil trade have provided a strong financial base to support the Government's ambitious plans for industrial expansion and diversification through the 1990s. By 1997 the non-oil sector was estimated to contribute some 70% of GDP.

PETROLEUM AND GAS

The economy of the UAE is dominated by petroleum. At the end of 1998 the UAE's proven oil reserves totalled 97,800m. barrels (9.3% of world reserves and 12.2% of OPEC reserves). At the end of 1998 the UAE's proven reserves of natural gas totalled 6,000,000m. cu m (4.1% of world reserves). In 1996 91.4% of total reserves (5,300,000m. cu m) were in Abu Dhabi. Between 1971 and 1980 the UAE's revenue from petroleum increased about 25-fold, and, particularly between 1973 and 1976, the economy expanded very rapidly. In this period, public-sector spending increased at an annual rate of 72%. The second half of the 1970s, however, was a period of retrenchment, and there was a major recession in the mid-1980s. Owing to the surplus of petroleum supplies in the 1980s, government revenue from

exports of petroleum was greatly reduced. Japan, which is the largest customer for crude petroleum from the UAE, imported 26.8% of its total crude oil requirements from the UAE in 1995. The petroleum sector's contribution to GDP declined from 63% in 1980 to 32% in 1996. In 1997, as a result of declining petroleum prices, the sector's contribution to GDP decreased further, to 29%.

In 1983 Abu Dhabi produced 69.9% of the UAE's petroleum output, Dubai 29.5% and Sharjah 0.5%. Output rose rapidly, from an average of 14,200 barrels per day (b/d) in 1962 (the first year of production) to 1,059,000 b/d in 1971. Output nearly doubled to 1,998,700 b/d in 1977 before falling gradually to 1,133,743 b/d in 1981—lower than in any year since 1971. Under the terms of an OPEC agreement in March 1983, the UAE was accorded a production quota of 1.1m. b/d.

Towards the end of 1985 it was evident that Abu Dhabi was exceeding its production quota. After the abandonment of oil-pricing agreements at an OPEC meeting held in Vienna in October, the UAE's production rose appreciably. In December OPEC decided to abandon production restraint and to seek a larger share of the market. By March 1986 it was apparent that Abu Dhabi had raised production levels by almost 30%, while, at the same time, halving prices, in an attempt to maintain its revenue. The UAE's total production rose from 805,000 b/d at the end of 1985 to 1.7m. b/d in July 1986. The OPEC decision to seek a larger market share exacerbated the oil glut and precipitated the collapse in prices during 1986. At the beginning of August OPEC agreed to reduce its members' overall production by about 4m. b/d for two months from 1 September in an effort to stabilize prices. This had the effect of setting the UAE's quota at 950,000 b/d, and this level was reaffirmed at an OPEC meeting held in October, when marginally higher collective production levels were established for November and December. The UAE's production quota for the first six months of 1987 was set at 902,000 b/d, with Abu Dhabi assuming 682,000 b/d to be its share of the quota, and Dubai taking 220,000 b/d. In February 1987, however, Abu Dhabi was producing approximately 780,000 b/d, and Dubai about 380,000 b/d, thereby continuing the trend of over-production that has been characteristic of the UAE in recent years. At the November 1988 meeting, OPEC members agreed to form a committee, consisting of representatives of eight member states, to monitor the production quotas of all members and to supervise adherence to the levels allocated. The UAE was widely acknowledged to be the most flagrant over-producer in OPEC and repeatedly rejected the quotas that it had been allocated, claiming that they were inconsistent with the country's large reserves and disproportionate to the quotas allotted to other OPEC member states.

In June 1988 the Supreme Petroleum Council was formed, following the issuing of a presidential decree which proposed the abolition of the Department of Petroleum and the dissolution of the board of directors of the Abu Dhabi National Oil Co (ADNOC), in an attempt to unify the Government's petroleum policy and planning activities. The 11-member Council, headed by Sheikh Khalifa bin Zayed an-Nahyan, assumed the former responsibilities of ADNOC's directors and of the Department of Petroleum, namely the administration and supervision of all the country's petroleum affairs.

In March 1990 the UAE was producing 2.01m. b/d, against its OPEC quota (which it did not recognize) of 1.095m. b/d. By July the price of oil had fallen to US $14 per barrel. The UAE agreed to a compromise proposal that its OPEC quota should be revised to 1.5m. b/d. Iraq's invasion of Kuwait in August, however, led to the suspension of OPEC quotas as member states agreed to compensate for the loss of Iraqi and Kuwaiti production of petroleum due to the UN's mandatory trade embargo. The UAE's average output during the 1990–91 Gulf crisis was 2.4m. b/d, 63% more than its quota figure of July 1990. Increased production was accompanied until January 1991 by higher 'spot' prices. With the outbreak of hostilities between the US-led multinational force and Iraq, prices began to decline to pre-conflict levels. Having reached a maximum price of $32 per barrel in October 1990, by February 1991 the 'spot' price of Dubai crude petroleum had fallen to less than $15 per barrel. In March OPEC agreed to lower production levels by 5% in the second quarter of the year. The UAE agreed to reduce its level of production to 2.320m. b/d. From March 1992 the UAE's OPEC quota was set at 2.244m. b/d, which the UAE appeared to be observing, notwithstanding Abu Dhabi's decision to proceed with a $5,000m. development programme designed to add an extra 600,000 b/d of oil production capacity by 1996. In 1992 crude oil production averaged 2,283,200 b/d. UAE petroleum production has fluctuated little since 1993, hovering around its OPEC quota (set in April of that year) of 2.161m. b/d.

In November 1997, at a meeting of OPEC members convened in Jakarta, Indonesia, production quotas were increased to reflect actual production (many OPEC members, including the UAE, exceeded their quotas in 1997) and the expected increase in demand in 1998; the UAE's new quota was 2.366m. b/d. However, declining petroleum prices in 1998 led to production cuts. In March both OPEC and non-OPEC members agreed to reduce production, and in June, following a further decrease in prices, the UAE pledged to reduce production to 2.157m. b/d compared with average output of 2.270m. b/d in May. In addition to the declining petroleum prices, the UAE was also more directly affected by the economic crisis in Asia, as more than 50% of its exports in 1996 went to Japan, South Korea and Singapore. Petroleum prices continued to decline, and in March 1999 the UAE agreed to reduce production further, to 2.000m. b/d (effective from 1 April), in conjunction with both OPEC and non-OPEC countries in an effort to stabilize the market. By mid-1999 a notable recovery in world petroleum prices had been achieved as a result.

During 1999 memorandums of understanding were signed between Qatar, Oman and the UAE, providing for the construction of a gas pipeline to link Qatar to Abu Dhabi, Dubai, Oman and Pakistan, at an estimated total cost of US $10,000m., over a seven-year period. Qatar, which has huge reserves of unassociated gas in the North Field, was initially to supply 30,000m. cu m of gas per year. The project was promoted by Abu Dhabi in response to increasing shortages of gas for power generation in that emirate.

Abu Dhabi

The first company to obtain a concession to explore for petroleum in Abu Dhabi was the Trucial Coast Development Oil Co, which was granted a concession over the entire territory in 1939. In 1962 the consortium was renamed the Abu Dhabi Petroleum Co (ADPC), and during the 1960s it gradually relinquished much of its concession. Agreements made in the early 1970s gave ADNOC, founded in 1971, an eventual 60% share, back-dated to 1 January 1974. ADNOC has a monopoly over distribution and is responsible for all petroleum installations and oil-based industries in the emirate. The second largest oil company in Abu Dhabi was founded in 1954 as Abu Dhabi Marine Areas Ltd (ADMA), which in 1971 was a consortium of British Petroleum (BP) and Compagnie Française des Pétroles (CFP). In 1972 BP sold 45% of its shares to the Japan Oil Development Co (JODCO) and by 1974 the Abu Dhabi Government, in the form of ADNOC, had acquired a 60% share. In 1977 ADNOC and ADMA agreed to establish a new company, ADMA-OPCO (with the same shareholders as ADMA), for offshore work, and in 1978 the Abu Dhabi Company for Onshore Oil Operations (ADCO) was formed from ADPC for onshore work. These two companies produced 93% of Abu Dhabi's petroleum in 1979, and the remaining four companies in the emirate, the Abu Dhabi Oil Company Ltd, the Total Abu al-Bukhoosh Co, the Al-Bunduq Company Ltd and Amerada Hess, produced about 7%. The main onshore oilfields are the Murban, Bu Hasa and Asab fields, while the main offshore ones are Umm Shaif (which produced an average 133,599 b/d in 1983) and Lower Zakum (average 71,912 b/d in 1983). This level was broadly maintained into the 1990s. With the onset of the Gulf crisis in August 1990 and the suspension of OPEC quotas, Abu Dhabi provided 75% of the UAE's expanded production, at levels of up to 1.8m. b/d.

Two new discoveries of petroleum were reported in 1982, and during 1983 ADNOC drilled a total of 16 exploration wells. In 1985 two further offshore oilfields came into operation, with the Sateh field producing at 10,000 b/d and the Umm ad-Dalkh field producing at 25,000 b/d. However, the oil glut and reductions in OPEC production quotas for the UAE led to a fall in output prior to the last quarter of 1985. During the last quarter of 1985, however, Abu Dhabi raised production considerably in order to offset declines in prices, and the unfavourable prospects

for the oil industry in the short term also led to the postponement of two schemes to increase the rate of recovery from the Sahil and Bab fields. In August 1986 Abu Dhabi was producing approximately 1.3m. b/d, but during 1987 some rationalization of ADNOC's activities took place. ZADCO and UDECO were merged, and by 1988 ADCO was operating only four rigs, compared with 15 in mid-1986, but exploration drilling increased in 1989. In March 1991 Abu Dhabi announced that, as part of a US $7,000m. development plan (1991–95), $2,800m. was to be spent on doubling exports of liquefied natural gas (LNG), increasing long-term production capacity from 2m. b/d to 2.6m. b/d and doubling refining capacity to more than 250,000 b/d. Formal approval had been obtained for the release of the estimated $500m. that was needed to expand capacity at the onshore Bab field and the offshore Upper Zakum field. At the Bab field ADCO aimed to increase capacity from 60,000 b/d to 350,000 b/d. The capacity at the Upper Zakum field was to be increased by 200,000 b/d. Small discoveries that had been ignored over the past decade were also to be reappraised. In late 1994 the broad division of crude oil production within Abu Dhabi was 425,000 b/d from ADMA-OPCO offshore fields, 470,000 b/d from the Upper Zakum offshore field and 920,000 b/d from ADCO's onshore fields. At 1 January 1995 proven oil reserves in Abu Dhabi were 92,200m. barrels (92.6% of the UAE total).

The Government has consistently sought to develop its 'downstream' production, and its first refinery, at Umm an-Nar, came 'on stream' in 1976 with a capacity of 15,000 b/d. A second refinery, at Ruwais, went into operation in June 1981. The Ruwais refinery, which after expansion was originally planned to achieve an output of 300,000 b/d, was producing to a capacity of only 71,000 b/d in 1985 and 1986, after declines in demand had led to cut-backs in the scale of expansion. By 1991 its capacity had fallen to 50,000 b/d. Work on a 60,000 b/d extension of the Umm an-Nar refinery was completed in 1984. In 1993 the capacity of the Umm an-Nar refinery was raised to 85,000 b/d, bringing total refining capacity in Abu Dhabi to 215,500 b/d. In 1994 aggregate refinery throughputs in the UAE averaged 226,000 b/d. The long-standing proposal to expand the Ruwais refinery finally received government approval in January 1995, allowing planners to draw up detailed specifications for a major upgrading package which was expected to cost between US $1,300m. and $1,900m. As well as the construction of two condensate processing plant units, the expansion is expected to include a 420-MW–450-MW power plant, a 30,000 cu m-per-day desalination facility and a major seawater system. In early 1988 the Abu Dhabi-based International Petroleum Investment Co (IPIC) began to develop its refinery interests elsewhere, by purchasing a 10% interest in a Madrid-based refinery, Compañía Española de Petróleos, for $123m. This ensured a secure outlet for 60,000 b/d of Abu Dhabi's crude petroleum. The interest was doubled in early 1989. IPIC (which is jointly owned by ADNOC and the Abu Dhabi Investment Authority) announced plans in May 1994 to acquire a 20% interest in the Austrian energy and chemicals group OMV. During the 1970s there were several plans for the development of petrochemical industries in the emirate, but one of the few to come to fruition was the fertilizer complex at Ruwais, Ruwais Fertilizer Industries (FERTIL), of which two-thirds is owned by ADNOC and one-third by Total-CFP. FERTIL produced 600,000 tons of ammonia and urea in 1994. In 1995 ADNOC announced outline proposals for a major new petrochemical development at Ruwais, to be undertaken after the forthcoming expansion of the Ruwais oil refinery. The project, structured as a joint venture, involves the development of a polyethylene complex, an ethylene dichloride plant and an aromatics plant. In September 1997 IPIC and OMV announced plans to acquire a 50% share in Borealis, a Copenhagen-based polyethylene producer. Borealis is the largest European polyethylene producer and is expected to become the world's fourth-largest producer. It has also been involved in the building of a polyethylene complex in the UAE, which is scheduled to commence production by 2000. In November 1998 a contract was awarded for the construction of a 600,000 tons-per-year ethane cracker on the Abu Dhabi Polymers Company complex at Ruwais. Further contracts, for the construction of two 225,000 tons-per-year polyethylene units were awarded in mid-1999.

Abu Dhabi's exports of petroleum are transported through two main terminals. The Jebel Dhanna terminal was completed in 1963. Additional installations, finished in 1974, increased the export capacity of ADPC's Murban petroleum to 1,280,000 b/d. ADMA-OPCO's Umm Shaif and Zakum petroleum is exported through the Das terminal. Two smaller terminals exist at Abu al-Bukhoosh and Mubarraz. At the beginning of 1980 ADNOC and JODCO began work on a new terminal, costing $750m., on Delma island. As a result of the onshore petroleum expansion plans announced in March 1991, Jebel Dhanna was also to be expanded. Three new tanks were to be ready for commissioning in late 1992.

During the early 1970s much of the gas produced in association with petroleum was flared off, but in 1977 an LNG plant at Das island started recovering offshore associated gas, and in 1981 the GASCO plant began onshore gas collection. In 1981 a new gasfield was found underlying the offshore Zakum oilfield, and in 1984 exploration began in Abu Dhabi's share of the Khuff formation, thought to be one of the largest offshore gasfields in the world.

In 1983 the Abu Dhabi Gas Liquefaction Co (ADGAS) borrowed US $500m. to upgrade its Das island complex by building three new LNG storage tanks and four for liquefied petroleum gas (LPG), together with vapour recovery units. The Thamama C Gas project came on stream in 1984, processing gas from the Thamama C foundation of the Bab field. In 1988 Das island produced 2.48m. tons of LNG, 7.8% above design capacity, for export to ADGAS's sole long-term contract customer for LNG, Japan's Tokyo Electric Power Co. A third LNG production train and 34m. cu m per day of additional gas-gathering facilities were completed in 1994, raising the plant's capacity to 5m. tons per year. In early 1995 ADGAS made several LNG shipments to Belgian, Spanish and French importers under single-cargo sales agreements. It subsequently secured short-term contracts to supply a total of nearly 1m. tons of LNG to the same customers between July 1995 and April 1996.

ADNOC's ambitious plans for the expansion of its 'upstream' gas industry include the Asab field gas development scheme (AGD), phase two of the onshore gas development programme (OGD) and the Khuff reservoir development project.

Dubai

Dubai is the second largest producer of petroleum in the UAE, producing approximately 420,000 b/d during 1991 and 380,000 b/d in 1992. In 1994 crude oil contributed an estimated 20.1% of Dubai's GDP. By early 1994 output was down to an estimated 275,000 b/d, and steps were being taken to slow the rate of decline through increased use of enhanced recovery techniques. Output had risen to an estimated 320,000 b/d by mid-1994 following the drilling of new wells. Two years later, when Dubai's estimated oil output was around 300,000 b/d, independent analysts were forecasting a decline to around 250,000 b/d in 1997 and to less than 200,000 b/d in 1998, as offshore reservoirs approached exhaustion. In 1963 Conoco acquired the earlier petroleum concession, held from 1937 to 1961 by Iraq Petroleum Co, and formed the Dubai Petroleum Co (DPC), concentrating on offshore production. In 1954 CFP and Hispanoil had obtained an onshore concession, and formed Dubai Marine Areas Ltd (DUMA). In 1963 DPC acquired a 50% share in DUMA's concession and then released some of its shares to other companies, so that by the late 1960s CFP, Hispanoil, Continental Oil, Texaco, Sun Oil and Wintershall all had shares in DUMA–DPC's concession. By 1974 the Government of Dubai had acquired a 60% share in participation in DUMA–DPC. Nevertheless, the former concessionaire companies continued to operate under the same conditions until, in 1979, the Government decided to buy back 50% of the production to market it directly.

Although petroleum was first discovered in Dubai in 1966, production did not begin until 1969. Output averaged 34,236 b/d in 1970, rising to 362,346 b/d in 1978. Output is mainly from the two offshore oilfields of Fateh and South West Fateh, but some petroleum is also lifted from the Rashid and Falah offshore fields. In May 1982 a major new onshore discovery was made in the Margham field, and by 1988 production reached 40,000 b/d of condensate from 15 wells. In April 1989 a 59-km pipeline, linking the Margham field with the gas-processing plant at Jebel Ali, was brought into operation. The pipeline has a maximum capacity of 13.5m. cu ft per day. By the end of 1990 Dubai had a total of 341 oil wells. Exploration was not

interrupted by the Gulf crisis, and development work at 21 wells was completed in 1990. DPC also installed a US $200m. platform to increase capacity at the Fateh field in 1990. DPC's storage capacity stood at 2.3m. barrels at the end of 1990.

During the 1970s Dubai's natural gas was flared off, but in 1980 a gas treatment plant, owned by the Dubai Natural Gas Co (DUGAS), began operations. Dubai's gas reserves are estimated at 125,000m. cu m, and the DUGAS plant, at Jebel Ali, began operations with a treatment capacity of 3m. cu m per day. In 1985 the plant had a production capacity of between 825 and 850 metric tons per day (t/d) of propane, 600 t/d of butane and 850 t/d–900 t/d of condensate. Most of the production from the plant is shipped to Japan. In 1988 DUGAS and two foreign companies, ASCO (of the USA) and BP, signed an agreement to process associated gas from the Margham field at Jebel Ali. Previously this gas had been flared. Construction of a new DUGAS plant to produce methyl-tertiary-butyl ether, a lead substitute in petrol, was completed in February 1995. In July 1997 the Dubai-based Emirates National Oil Corpn awarded a contract for the construction of a condensate processing plant to an Italian company, Technipetrol. The plant is due to be operational by late 1998, and is expected to produce 60,000 b/d of naphtha, jet fuel and diesel for sale in the local market. The installation of an unleaded petrol plant is also planned at Jebel Ali.

Sharjah

Production of petroleum began in Sharjah in 1974, with the Mubarak field producing at the rate of 60,000 b/d. The field lies in a 'protocol area', which is occupied by Iran, and in the north it lies in Iranian territorial concessions for hydrocarbons exploration. Sharjah has production and drilling rights, but shares production and revenue with Iran. This situation caused considerable difficulties following the onset of hostilities between Iran and Iraq, and in 1984 oil exploration was interrupted when Iranian patrol boats arrived near Abu Musa island. The security problems facing Sharjah became more apparent when Iranian naval forces attacked the Mubarak oilfield in April 1988, thereby causing its closure for a period of two months. Of the remaining revenue 20% is shared with Umm al-Qaiwain, and 10% with Ajman. The field has brought Sharjah revenues of around AED 20m. per year. At the end of 1980 Amoco announced a major new onshore discovery of petroleum and natural gas. Exports of crude petroleum from this Sajaa field started in mid-1982 at a rate of 25,000 b/d. The emirate's total production in 1983 exceeded 50,000 b/d. It is estimated that Sharjah maintained production levels at an average of 65,000 b/d during 1987–90, although in 1991 output was about 25% lower, owing to problems at the Mubarak field. By 1992 output from the Mubarak field had fallen to 8,000 b/d.

Export revenues from Sharjah's two gasfields, Sajaa 1 and Sajaa 2, were expected substantially to reduce Sharjah's international debt, which was estimated at between US $600m. and $700m. in 1986, and average production from the Sajaa fields in 1986 reached 16.98m. cu m per day. However, the collapse of the price of petroleum weakened Sharjah's ability to repay its international debt. A pipeline costing $190m. was completed in 1984, to carry gas from the Sajaa fields to power stations in Ras al-Khaimah, Fujairah, Ajman and Umm al-Qaiwain, and in 1985 this pipeline had a capacity of 60,000 b/d of condensate and 1.1m. cu m per day of gas. Following the settlement of the border dispute between Sharjah and Dubai in 1985, a 24-in (60-cm) gas pipeline was built to supply gas from the Sajaa field to the Dubai Electrical Co's power and desalination plant at Jebel Ali. An agreement was also reached in 1983 for Amoco to drill six wells over the ensuing 15 months, to bring the capacity of the Sajaa field to 14.2m. cu m per day. An LPG plant began production in July 1986, with a capacity of 13,000 b/d of mixed LPGs, 7,500 b/d of propane, 6,000 b/d of butane and 6,000 b/d of condensate. Many projects were postponed during the recession of the mid-1980s, but the economic revival following the 1990–91 Gulf crisis enabled the Government to revive development plans. In July 1992 the Amoco Sharjah Oil Co (owned 60% by the Sharjah Government and 40% by Amoco Corpn) announced significant new gas discoveries, and in 1993 plans were announced to expand Sharjah's gas-processing capacity by 60% in 1994. A new contract to supply gas to power stations in the northern emirates was awarded by the UAE federal authorities in June 1994. Amoco Sharjah's gas-processing plant operated at or above its nominal design capacity of 19.8m. cu m per day throughout 1995, achieving daily throughputs in excess of 22.7m. cu m during periods of peak demand. In 1996 the plant's capacity was under expansion, in order to meet an anticipated increase in peak demand to 25.5m. cu m per day. It was estimated that 50%–60% of Sharjah's dry gas production was piped to Dubai in 1995, with the remainder going to Sharjah and the northern emirates' power stations. Production of condensates and natural gas liquids was 40,000 b/d–45,000 b/d in 1995. In December 1995 Amoco Corpn signed a memorandum of understanding with the Government of Oman whereby the US company was granted exclusive representation to market Omani gas in the UAE. Amoco's proposal was to build a pipeline from Oman's gas fields to Amoco Sharjah's gas-treatment plant, which would be expanded to handle a greatly increased throughput. (Gas demand in Dubai and the northern emirates was forecast to rise by as much as 34m. cu m per day within six years.)

FAL Petroleum Co (owned by a Sharjah businessman) announced in late 1995 that it had purchased an existing Canadian oil refinery for shipment to Sharjah and reassembly on a free-zone site at Hamriyya, where it was scheduled to begin producing 20,000 b/d of petroleum products in late 1997.

Ajman, Fujairah, Ras al-Khaimah and Umm al-Qaiwain

Of the remaining emirates, Ras al-Khaimah appears to have the largest reserves of petroleum and natural gas. Offshore discoveries, made in 1976 and 1977, proved not to be commercially exploitable, but Gulf Oil made new discoveries off the west coast in 1981. In the same year, an onshore concession was granted to a consortium of Amoco and Gulf Oil, and, following seismic tests, Gulf Oil announced significant discoveries of petroleum and gas in the second offshore test well, Saleh One X, in February 1983. The well started production in February 1984, at 5,000 b/d, followed in April by Saleh Two X at 3,500 b/d, and production there has since increased. At the beginning of 1985, however, Ras al-Khaimah was producing oil at a rate of only between 8,000 b/d and 10,000 b/d. A new well, Saleh Four X, began operating in February 1985, with a production rate of between 7,000 b/d and 8,000 b/d of oil, and a further well, Saleh Five X, was 'spudded' in April. Ras al-Khaimah's overall production has not, however, been as high as was anticipated, and in 1987 production was only 11,000 b/d, most of the revenue from which was used to finance exploration and development. By the end of 1987 a seventh well had been 'spudded' in the Saleh field, and production was reported to be about 12,000 b/d. By mid-1986 the four-stage programme to establish a 'downstream' oil industry in Ras al-Khaimah, at a cost of US $45m.–$50m., had been completed. This consists of pipelines from the Saleh field to the mainland, separation and stabilization facilities, onshore storage facilities for 500,000 barrels, and an LPG plant. In 1991 the Omani Government agreed to allow gas from its Bukha offshore field to be processed at Ras al-Khaimah. Output was expected to be limited to around 5,000 b/d of condensate, 800 b/d of LPG and 40 cu ft of 'dry' gas per day. The emirate has been processing gas at Khor Khuwair since 1985, but utilization has been minimal. In January 1996 a new company, Ras al-Khaimah Oil and Gas, whose principal shareholder was a US investor, signed an agreement to undertake onshore and offshore exploration work in the emirate.

Umm al-Qaiwain's first well was 'spudded' in 1981, and a Canadian concession in the emirate was due to start production in 1985. Exploration continues in Umm al-Qaiwain, as it does in Ajman, where drilling for petroleum finally began in 1982. In July 1983 Ajman formed the Ajman National Oil Co (AJNOC), with a capital of US $37m. In February 1984 it was announced that two Canadian oil companies had been granted offshore concessions in Fujairah, and in 1988 Broken Hill Petroleum of Australia conducted a seismic survey off shore from the emirate. Further exploration of the northern emirates featured prominently in the UAE's 1991–95 development plan. In late 1995 a 30,000 b/d refinery, purchased second-hand from a major multinational by the Greek company Metro Oil, went into production in Fujairah upon completion of more than 12 months' reassembly work. The refinery's product mix was configured to

supply the needs of shipping using Fujairah's bunkering facilities. In 1995 Fujairah's deep-water port was one of the world's largest bunkering stations. It had about 500,000 cu m of product storage capacity and was well placed to act as a bulk oil trade centre for the Gulf and the Indian sub-continent. A major new tank-terminal venture, with a projected initial capacity of 465,000 cu m and a projected final capacity of 700,000 cu m, was under development in Fujairah in 1996 by a consortium led by Royal Van Ommeren (a Dutch company with world-wide oil storage interests).

INDUSTRY

Since the UAE was formed in 1971, the diversification of the economy away from petroleum has been a clearly stated government policy. The development of an integrated infrastructure and extensive construction work took place in the 1970s, and this early industrial development was manned largely by immigrant labour. It is estimated that by 1982 the labour force of the UAE was 559,960, of whom a large majority—in some sectors over 90%—were non-nationals. In the early 1980s, anxiety over the large number of Asian workers and unemployment led to the enforcement of a restrictive labour-law and stricter visa regulations, making it increasingly difficult for overseas casual labourers to settle in the UAE. However, by 1986, when the expatriate work-force in Dubai totalled only 75,070, the decline of the economy had led to a reversal of this policy, and the Government had begun to encourage immigrant labourers earning incomes above a certain level to bring their families with them. A survey conducted by the UAE Ministry of Economy and Industry in 1988 indicated the poor productivity of capital invested in manufacturing industry in the UAE, a lack of new technology and the low level of wages paid to the mainly Asian work-force. In 1987 non-oil manufacturing industry contributed 11% of GDP (compared with 4% in 1980), but in 1990 the proportion declined to 7.3%, its value being AED 9,300m. In 1994 this sector contributed 8.3% of GDP, with a value of AED 11,160m.

The federal Ministry of Electricity and Water is responsible for 11 power stations: at Umm al-Qaiwain, Falaj al-Mualla, Dhaid, Masfut, Manama, Uzun, Masafi, Fujairah, Qidfa and Dibba. On the east coast a 33-kV overhead transmission system has been installed, and a number of small contracts were issued in 1980 to link the remainder of the power supply system in this area. In Dubai power is generated by the locally-owned Dubai Electricity Co, and in 1980 a steam power station at Jebel Ali was inaugurated with 60-MW generators. Ras al-Khaimah, Sharjah and Abu Dhabi are also responsible for their own power. In addition to the old diesel, gas and steam stations, Abu Dhabi's power is provided by the Umm an-Nar East and West stations, Units 9 and 10, a new 600-MW station at Bani Yas, and stations at Sadiyat and al-Ain. The UAE's installed generating capacity rose from 1,723.9 MW in 1979 to 3,933 MW in 1986. The UAE's output of electric energy increased from 4,991m. kWh in 1979 to 15,419m. kWh in 1989, with energy consumption per caput increasing from 126 kg of oil equivalent in 1965 to 10,874 kg in 1990.

In 1982 the power stations at Qidfa and Ghalilah began operations, resulting in a 97% rise in power output in the northern emirates during the first nine months of the year. In April 1989 it was announced that the Taweela A power station, under construction since 1984, would begin operation in August, supplying Abu Dhabi with 250 MW of power and 20m. gallons of water per day (g/d). The second phase, originally approved in January 1987 and recently completed, entailed the construction of a power station (Taweela B) with a capacity of 732 MW, and a desalination unit with a capacity of 76m. g/d. Work on the Taweela project was interrupted by the Gulf crisis of 1990–91. Further delays were caused by the decision, in March 1991, to invite retenders for construction of Taweela B, with a view to securing a bid closer to the sum allocated for the project. In the event, the 'turnkey' contract was awarded for the Taweela B project in July 1992, to a Zürich-based consortium. It was reported in April 1997 that the Abu Dhabi Government is understood to have approved the US $700m. expansion of the Taweela A power and desalination plant to be implemented as an independent power project. Plans have also been announced for the expansion of the Jebel Ali E station by 232 MW to 472 MW, and for the construction of a new power station, Jebel Ali G, with a capacity of 440 MW. There are also plans to build a major station between Mirfa and Ruwais, to supply power and water to a large number of villages and islands in Abu Dhabi. Expenditure on power has often been subject to budgetary constraints, but, with demand rising by about 10% per year, the Government has decided to press rapidly ahead with expansion projects. By 1994 the total installed capacity of the UAE's power stations was 5,000 MW, while the anticipated demand in 2000 was 7,500 MW. At the beginning of 1995 electricity prices were increased from AED 0.07 to AED 0.15 per kWh, leaving them significantly below the estimated production costs of about AED 0.20 per kWh at the most modern power stations and up to AED 0.35 per kWh at older plants. In mid-1995 more than 1,500 MW of new generating capacity was under construction in the UAE, while distribution networks were undergoing major upgrading and expansion.

The lack of water resources has led to much investment in the provision of fresh water, and by 1985 there were 22 desalination plants in the UAE. In 1982 annual water demand was estimated at 565m. cu m, of which agriculture used 410m. cu m. Examples of projects which have been completed are: a 3.3m. g/d desalination plant associated with the power station at Qidfa, in Fujairah, and a reverse osmosis desalination plant, with a capacity of 3.6m. g/d, at Ajman. Four 50 MW steam turbines, and two 18,000-cu m-per-day multi-stage flash desalination units were built at Raafah, in Umm al-Qaiwain. A project to divert water from two Turkish rivers, the Ceyhan and the Seyhan, to the Gulf along two pipelines, totalling 5,000 km in length, has been discussed, but has never come close to implementation. Total UAE water production in 1989 was 85,000m. gallons, compared with 81,000m. gallons in 1987. The range of projects that the Government announced for expanding the UAE's electric power capacity after the end of the Gulf War in February 1991 all envisaged increases in desalination capacity. In January 1995 Abu Dhabi had an installed desalination capacity of 110m. g/d and was currently proceeding with six new projects which would add an additional 84m. g/d of capacity. Of the 81m. g/d of desalinated water supplied to Abu Dhabi city in 1994, 44m. g/d was for domestic use and the remainder for horticultural use. Dubai had 30m. g/d of excess desalination capacity in 1995, the completion of new water plants at power stations having eliminated the water authority's need to purchase up to half of Dubai's fresh water supply from a desalination facility attached to the Dubai Aluminium Co (DUBAL) complex. Plans were announced in 1995 to install a total of about 8m. g/d of new desalination capacity in the northern emirates of Fujairah, Ajman and Ras al-Khaimah. In July 1997 the federal Ministry of Electricity and Water awarded an AED 235m. contract to the local Emirates Trading Agency for the supply and installation of five new desalination units in the northern emirates.

Abu Dhabi

Most of Abu Dhabi's heavy industry is centred on the Jebel Dhanna-Ruwais industrial zone, 250 km west of Abu Dhabi city, which was officially opened by Sheikh Zayed in March 1982. This is mostly oil-related, with a petroleum refinery capable of processing 120,000 b/d at Ruwais and a fertilizer plant forming the central projects (see Petroleum and Gas).

In 1979 the General Industries Corpn (GIC) was set up to co-ordinate non-petroleum development, and by early 1981 it was involved in a paper bag factory, a brick works, a concrete block factory, a steel-rolling mill, and an animal feed plant, all of which had begun production in the preceding two years. An industrial bank, the Emirates Industrial Bank, was founded in 1983 to fund new industrial projects. Light industry is concentrated in the al-Musalah area, just over the bridges joining Abu Dhabi island to the mainland. In 1985 there was a total of 221 industrial units in Abu Dhabi. A bottling plant for Coca-Cola opened in 1989, and the construction of a plant to manufacture 6,000 tons of polyurethane blocks per year has been announced. The government-owned Abu Dhabi Investment Co (ADIC) launched an industrial investment programme in 1993. In 1995 the GIC was finalizing plans to sell five industrial plants with an estimated combined valuation of AED 700m., this being the UAE's first privatization initiative since 1985 and the first in

which the intended means of privatization was a series of share offers through the UAE's informal stock market. In February 1996 the GIC announced that shares worth AED 300m. in several of its food processing companies would be distributed to social security recipients, low-income employees and small shareholders. New projects under active evaluation by the GIC in mid-1996 included the construction of a rolling mill at Taweela to manufacture steel bars for the local building industry. In June 1997 it was reported that the GIC had launched an AED 100m. industrial loan fund to support private sector participation in small and medium-sized industrial ventures in the emirate.

A joint-stock company called Abu Dhabi Ship Building (ADSB) was established in 1995 with the US company Newport News (40%) and the Abu Dhabi Government (18.5%) as founding shareholders. The remaining 41.5% of the share capital was raised through a heavily over-subscribed public offering. ADSB's repair and construction facilities for naval and merchant vessels were to be located initially at an established dry dock at Mussafah pending construction of a purpose-built yard with a projected completion date of 1999.

A decree was issued in July 1996 to establish Abu Dhabi's first free zone on Saadiyat island, east of Abu Dhabi city. It was intended to invest up to US $3,000m. to develop storage, transportation and trading facilities for various commodities, from ores, grain and foodstuffs to precious metals and gems. The island was to be linked to Abu Dhabi city by a 6-km bridge. In August 1997 it was announced that both local and international investors would be offered a $1,700m. equity stake in the initial public offering in the Saadiyat Free Zone Authority (SFZA) which will regulate the free zone. A project development company will build and operate the facilities on the island under a 25-year renewable concession agreement.

Dubai

Dubai has taken the lead in developing non-petroleum industry (which could explain how in 1983, when the UAE witnessed a narrowing of its trade surplus, Dubai's increased by 30%, despite a 14% decline in petroleum revenues). This has been centred on the Jebel Ali port and industrial area, 30 km west of Dubai city. The decision to build a new deep-sea port was taken in August 1976, and there were 15 km of quays by mid-1981. The port possessed 67 berths by 1988, and is the largest man-made harbour in the world. In 1989 Jebel Ali Port handled 9.97m. tons of cargo. The older Port Rashid had 35 berths by mid-1984. By 1985 there was a total of 305 industrial units in Dubai. Despite a reduction in trade through Dubai's ports in the immediate aftermath of Iraq's invasion of Kuwait in August 1990, owing to raised war risk insurance premiums, shipping container tonnage in 1990 rose by 79% and general cargo tonnage by 61% compared with 1989. In May 1991 a new company, the Dubai Ports Authority (DPA), was established to take over the running of Port Rashid and Jebel Ali. Dubai's ports are playing an important role as transhipment points for Kuwait's reconstruction programme.

The first major plant to begin production was an aluminium smelter, owned by DUBAL, which commenced operations at the end of 1979. It was built at a cost of US $800m., and initially had an installed capacity of 135,000 metric tons of aluminium ingots per year. By 1988 production had increased to 163,445 tons, of which Japan purchased 64%. In May 1989 work began on the expansion of the plant by more than 40%, to a capacity of 240,000 tons per year. It was completed in early 1991. In 1992 DUBAL's production of hot metal totalled 244,605 tons, and a total of 250,000 tons of finished metals were sold to 21 countries, the main export markets being Japan (42.5% of sales), Taiwan, South Korea and Thailand. Sales comprised 50% billets, 36% foundry alloys and 14% high-purity ingots. DUBAL is powered by five 100-MW gas turbines, driven by fuel from the neighbouring gas treatment plant, operated by DUGAS. In 1994 DUBAL produced 246,264 tons of hot metal and a record 273,085 tons of cast metal. Sales in 1994 totalled 268,292 tons (39% of which went to the Japanese market). In January 1995 DUBAL announced plans to expand its production capacity to 372,600 tons per year by early 1997 at a cost of $503m., of which $253m. would be financed out of company resources and the balance through a five-year syndicated bank loan. A further expansion of production capacity, to 525,000 tons per year (at a cost of $725m.), was to be completed in early 2000. In 1979 another industrial plant, cable manufacturer DUCAB, came into production. Its sales of cables were worth a record AED 212m. ($57.7m.) in 1993, when it won major new export orders in Asian markets. In 1994 DUCAB produced nearly 20,000 tons of copper and aluminium cable. In 1995 it expanded its product range to include specialist lead-sheathed cables for the oil, gas and petrochemical industries. Initially, DUCAB was jointly owned by BICC of the United Kingdom and the Dubai Government, but in June 1997 the Abu Dhabi Government bought a 35% share in the company.

In May 1980, in an effort to promote Dubai's industrial development, Sheikh Rashid decreed that Jebel Ali should be a free-trade zone. The Jebel Ali Free Zone Authority, which offers the advantages of duty-free trade, was finally inaugurated, under full foreign ownership, in early 1985 (see Trade, Transport and Tourism). By mid-1994 around 630 companies had set up businesses in the Jebel Ali Free Zone, and new companies were arriving there at an average rate of 15 per month. Major foreign companies locating there included Xerox, Union Carbide, 3M, Black and Decker, Mitsubishi, York International, BP Amoco Arabian Agencies and Shell Markets. Local firms at Jebel Ali include Dubai's National Cement Co and the National Flour Mills, which began production in 1987. A new sugar refinery with a daily capacity of 2,400 tons was due to go into production in late 1994. In 1990 a warehouse and distribution facility for the Sony Corpn and a US $3m. manufacturing plant for the Kavoos Co of Iran, to make raw materials for paint production, were opened. Jebel Ali Free Zone has become an important distribution point for Kuwait's reconstruction programme. In 1990 investments in the zone reached AED 1,500m., a 50% increase on 1989 levels. A second area for light industry has also been developed around the extended port area of Mina Rashid in Dubai itself. The garment-manufacturing sector has expanded dramatically, with the value of exports rising from an insignificant level in 1985 to $227.1m. in 1993. The industry is concentrated in Jebel Ali, where 25 factories were established by mid-1988, mostly by Indian businessmen. However, punitive quotas, introduced by the USA, have caused some units to close. The economic importance of this sector to the UAE is diminished by the fact that all raw materials and labour are imported, mainly from India.

In 1994 (which saw a marked decline in textile and garment exports) the Jebel Ali Free Zone Authority adopted a policy of not granting new licences to garment manufacturers, on the grounds that it did not wish to encourage labour-intensive industries. By early 1995 the total number of companies using the zone was about 735, drawn from 70 countries in all parts of the world. Distribution and sales operations (often serving markets far beyond the Gulf region) outnumbered manufacturing and assembly operations by about two to one, although manufacturing and assembly accounted for four-fifths of total investment in the zone. Investment in 'high-technology' ventures such as computer assembly fell well short of targets set by the Free Zone Authority, which was currently making special efforts to attract this type of venture. An Indian company announced in early 1995 that it was to invest US $27m. at Jebel Ali to establish a nylon tyre cord factory with an annual capacity of 18,000 tons. In mid-1996 India's Southern Petroleum Industries Corpn (SPIC) announced plans to locate a fertilizer plant at Jebel Ali to serve the Indian market. At that time more than 1,000 companies were operating in the Jebel Ali Free Zone.

In April 1993 the authorities introduced a new law that explicitly excluded licensed national firms from the 'offshore' provisions of the original free-zone legislation (see Trade, Transport and Tourism, below), confirmed their liability to the provisions of Dubai's standard company laws, and made the granting of a licence subject to proof of at least 51% UAE or GCC ownership of the company concerned and at least 40% locally added value in its products. It was hoped that the removal of former ambiguities would encourage more local companies to take advantage of the infrastructure benefits of manufacturing within the zone. Industrial investment in Dubai in 1993 totalled AED 10,500m. (8% up on 1992), while investment by foreign companies totalled AED 1,800m. (23% up on 1992). Industrial production in 1993 was valued at AED 9,600m. (an increase of

24.8%), including exports worth AED 4,500m. (39.2% more than in 1992).

The Northern Emirates

Industrial development in the remaining emirates has been based largely on the construction industry and port expansion. Two container ports have been developed in Sharjah, where there is also a lubricating oil plant, a rope factory, the Sharjah Oxygen Co, a factory making plastic pipes and a cement plant producing 700 tons per day. The Gulf Industries Complex in Sharjah's industrial zone was opened in 1981, producing furniture and household utensils. In April 1982 a fodder factory at Mina Khaled, operated by the Gulf Company for Agricultural Development, was opened. An LPG plant came into operation on the site in July 1986. According to a study by the Emirates Industrial Bank, Sharjah was the focus of 35% of the UAE's industrial installations in 1987. Total capital investment in Sharjah increased from AED 461m. in 1977 to AED 997m. in 1987, while the number of employees doubled, from 3,173 to 6,840, over the same period. Sharjah's industrial sector registered 48% growth in 1988. In 1996 Sharjah was well established as a centre for light industry and manufacturing and was developing its fifteenth industrial estate to facilitate further expansion of this sector.

Ras al-Khaimah has developed a valuable export business in aggregate (stones used in making concrete) from the Hajar Mountains. The first explosives factory in the Gulf was opened there in 1980, and a pharmaceutical factory was opened in 1981. The emirate has a cement factory, an asphalt company and a lime kiln, and in 1981 the Ras al-Khaimah Company for White Cement was established to build the Gulf's first white cement factory at Khor Khuwair. This joint Kuwaiti-UAE venture was due to commence operations in March 1986, producing 300,000 tons of white cement per year.

At the end of 1980 the Government of Fujairah established a department of industry and economy to organize industrial development. Fujairah has factories producing marble, tiles, rockwool (asbestos) insulation, concrete blocks, tyres and shoes, and many of these industries use materials from the Hajar mountains, where surveys have indicated significant quantities of copper, chromite, talc and magnesium. Commercial production of 1,600 tons per day began at a new cement plant in Dibba in 1982, when Fujairah's US $4.9m. rockwool factory also started operations, with an annual capacity of 5,000 tons. Cement production capacity was due to rise to 2,500 tons per day during 1996. A new port with 11 berths was opened in Fujairah in 1982. Traffic at the port increased after Iraq's invasion of Kuwait in August 1990 as shippers attempted to avoid the war risk insurance premiums levied on the Gulf ports of Abu Dhabi and Dubai. In 1990 traffic at the port of Fujairah increased by 50% compared with 1989. A crushing plant, designed to produce 3m. tons per year of aggregate for cement production, went into production in May 1985. A five-year Development Plan, announced in 1988, included proposals for a $100m. industrial suburb and a $140m. break-shipment warehouse project. Fujairah outlined ambitious development plans in 1991, based on significant investment by the GCC member states. These include a Gulf railway, with the spur of the line connecting with the port of Fujairah, and a petrochemical complex. A free-zone facility in Fujairah was the base for 55 enterprises in mid-1995. Its total trade volume in the first half of 1995 was 6,152m. tons (principally foodstuffs, textiles, electronic goods, medical equipment, packaging and steel commodities) with a value of AED 260m.

Umm al-Qaiwain has concentrated on construction, and the newly-formed Umm al-Qaiwain Cement Industries Co plans to build a cement works producing 1m. tons per year to add to the one already in existence. Currently, however, the UAE's annual cement capacity is 8.4m. tons, which is four times the level of local demand of 2m. tons, and consequently the UAE's eight cement works are seeking to implement a production quota system. Cement production and related activities are likely to remain the dominant sector of the economy of Umm al-Qaiwain. Plans, announced in 1986, for the construction of an aluminium smelter, at a cost of US $1,200m., were abandoned in 1988, and the smelter will now be built in Qatar. Umm al-Qaiwain has also followed Dubai's example by establishing a free zone by royal decree in 1987.

Ajman, the smallest emirate, has a cement factory, a dry dock and a ship repair yard. There is a pressing need for improved infrastructure in Ajman. In 1991 the federal Government announced plans for a 240-MW increase in the electricity production capacity of the northern emirates. Contracts to install an extra 210 MW of capacity were awarded in late 1994. Plans were being drawn up in 1995 for new west-coast electricity distribution links between Ras al-Khaimah, Ajman and Umm al-Qaiwain, while a proposal to link the northern emirates to the Abu Dhabi grid was under consideration as a future development option. In January 1997 the federal Ministry of Electricity and Water signed contracts for the interconnection of the west-coast power distribution network in the northern emirates.

AGRICULTURE

Since the establishment by the FAO of an agricultural experimental station at Digdagga (Ras al-Khaimah) in 1955, agriculture in the UAE has undergone a major transformation. Traditionally, agriculture was based on nomadic pastoralism, in association with some oasis cultivation on the east coast and at Liwa, Dhaid, al-Ain and Falaj al-Mualla. This cultivation was totally dominated by dates. Although dates are still the major crop in terms of area cultivated, the production of vegetables has increased dramatically. The UAE continues to import more than 70% of its food requirements, but it is now largely self-sufficient in salad vegetables, eggs and poultry. In April 1984 a ban was announced on imports of those foods in which the UAE is self-sufficient, during growing seasons. Most agriculture takes place on the gravel plains on either side of the Hajar Mountains, at al-Ain or at Liwa. This expansion has been implemented through the creation of a widespread government extension service. In general, agricultural inputs are provided to farmers at about one-half of their real cost, with the Government subsidizing fertilizers, seeds and pesticides at 50% of cost. A central laboratory for the Ministry of Agriculture and Fisheries was officially opened near al-Ain in April 1982. In 1982 official figures stated that total production of fruit and vegetables reached 343,500 tons. In that year the value of vegetable production was AED 773m., of a total GNP of AED 119,700m. Some of this has, in the past, gone to waste, and in 1983 the Government established the Public Corporation for Agricultural Produce to ensure that surplus vegetables are shared between the emirates, and to package and store produce. Agricultural production increased from 39,000 tons in 1972 to more than 600,000 tons per year in the late 1980s, while the area of cultivable land increased from about 48,000 ha to more than 250,000 ha in 1994. Date production rose from 62,000 tons in 1986 to an estimated 245,000 tons in 1997, while tomato production increased from 42,000 tons in 1990 to an estimated 545,000 tons in 1997. Government figures indicate that in al-Ain the number of farms increased from 980 in 1979 to 1,939 in 1983, with an increase in farm area over the same period from 43,000 dunums to 82,668 dunums. The area of forest in the al-Ain region also increased, from 10,617 ha in 1978 to 13,433 ha in 1983.

There are a number of large-scale agricultural enterprises in the UAE. By 1981 there were three private dairy farms, four poultry farms, a French-sponsored fresh vegetable concern at al-Ain, and a government wheat project on 600 ha at al-Oha, near al-Ain. During 1984 the Arab Company for Animal Production's farm in Ras al-Khaimah was reported to be producing 16,000 cartons of milk and yoghurt daily from its 600 cows. A US $26m. poultry farm has been built at Fujairah. This will produce 3.5m. birds and 11m. eggs per year. Experiments in hydroponics are being undertaken on Saadiyat island. The Arab Company for Livestock Development, based in Damascus, Syria, plans to establish a 200-ha dairy farm, at a cost of AED 13m., in Fujairah, where it also operates the poultry farm. In 1989 the UAE produced about 13,000 tons of poultry, making the country 45% self-sufficient. Output of eggs reached 170m. in 1989, satisfying 70% of domestic requirement. A vegetable-canning factory was opened at al-Ain in 1986. In 1997 the UAE produced an estimated 24,000 tons of poultry, and output of eggs totalled 13m. metric tons.

The increased cultivation of vegetables and, in particular, the extensive forestry programme have led to severe problems with the water tables. Between 1976 and 1980, 1,545 new wells were dug by government teams, and it seems that at least this number were also dug privately. The consequent fall in the water table has been dramatic, especially near the coast. In 1980 the water table in Ras al-Khaimah fell by 3.37m. In places this has led to increased salinity of soil and water. Encroachment of seawater was also reported in 1982, when it apparently penetrated as far as 20 km inland in the northern emirates. As a result, several farms are now going out of production. The Government has attempted to alleviate the problem through the construction of desalination plants (see Industry) and catchment dams, such as those opened in 1982 at Wadi Ham and Wadi Bih. At the end of 1982 the Government barred the drilling of new wells in parts of the northern emirates. In November 1982 the Tebodin Co of the Netherlands began a comprehensive study of the fresh water needs of the four smallest emirates until 2011, to enable the Ministry of Electricity and Water to formulate policies for those emirates. In 1983 a new dam was opened in Fujairah, with a capacity of 10m. cu m of rain-water, and plans were laid for the construction of a 17,000 cu m-per-day desalination plant at Ajman. Despite the problems facing the UAE concerning its water supply, plans were shelved in 1984 for the construction of eight recharge dams. During 1987 Abu Dhabi's Executive Council announced plans to drill a further 200 artesian wells in three parts of the emirate to supply farmers with yet more water for irrigation purposes. Further plans for the western region in 1988 included the construction of small desalination plants to treat brackish water pumped by free pumps, and the cultivation of 600 ha, using sprinklers and drip irrigation. In 1990 Abu Dhabi announced its intention to cultivate 1,300 ha in Abu Dhabi, the western region and al-Khaten. In order to irrigate this land 100 wells were to be sunk and two reservoirs were to be built. A large fossil-water reservoir was discovered at a depth of 70 m in the Liwa area of Abu Dhabi's western region in 1996, prompting the announcement of a 630-well drilling programme.

Total subsidies for farming in the 1983 budget were estimated at AED 35m., and the Ministry of Agriculture and Fisheries projected investments of AED 1,172m. in farm development between 1983 and 1993. The food sector's contribution to GDP increased sixfold, to AED 106.5m., in the nine years to 1984, and during 1980–89 agricultural GDP increased by an annual average of 8.9%. In 1997 agriculture, livestock and fisheries contributed an estimated AED 5,503m. (3.0%) to the UAE's total GDP at factor cost. By 2000, the UAE is expected to reach 100% self-sufficiency in wheat, and 95% self-sufficiency in fish, although in 1985 it was reported that over-fishing in breeding areas was beginning to have adverse effects on the fishing industry. The total catch was 95,129 tons in 1990, when there were 10,611 full-time fishermen, compared with about 4,000 in 1980. It was estimated in 1993 that the current annual catch of 97,200 tons exceeded local demand for fish by about 27,200 tons. Part of this surplus was exported and part was returned to the sea (there being no fish-processing industry in the UAE to provide a market for it). In 1996 the total catch was 105,554 tons.

TRADE, TRANSPORT AND TOURISM

During the 1970s the UAE's earnings from exports of petroleum enabled the country to retain a healthy overall balance of trade. In the early 1980s decreases in the levels of the UAE's petroleum production resulted in a relative decline in the country's trade surplus. The Iran–Iraq War brought considerable problems for the economies of other countries in the region, but Dubai continued to benefit from its trade links with Iran. In 1990, as a result of increased oil export volume and firmer oil prices, occasioned by the Gulf crisis, the trade surplus increaed to AED 37,000m., from AED 20,387m. in 1989. In 1993 exports and re-exports totalled AED 86,500m. (including petroleum worth AED 44,500m.), while imports totalled AED 72,000m. (including AED 25,500m. spent on items for re-export). The resulting visible trade surplus was AED 14,500m., although the current-account surplus was just AED 4,522m. in 1993, compared with AED 11,170m. in 1992. In 1994 exports and re-exports totalled AED 97,924m., while imports totalled AED 83,606m. (including AED 31,000m. spent on items for re-export), resulting in a visible trade surplus of AED 14,318m. In 1995 the trade surplus was AED 22,600m. (exports and re-exports AED 114,000m., total imports AED 91,400m.), increasing to AED 29,500 in 1996 (exports and re-exports AED 130,700m., total imports AED 101,200m.) and to AED 30,300m. in 1997 (exports and re-exports AED 139,500m., total imports AED 109,100m.).

The principal commodity groups in the UAE's imports are basic manufactures, machinery and transport equipment, and food and live animals. The leading purchasers of crude petroleum from Abu Dhabi are Japan, Western Europe and the Far East. All of Sharjah's petroleum exports go to the USA. In 1993 the leading suppliers of imports into the UAE were Japan, China, the USA, the United Kingdom and India. The UAE was admitted to GATT membership in March 1994, and to its successor, the World Trade Organization, in February 1996.

One way in which trade has been allocated is through the designation of free-trade zones, such as Jebel Ali and Port Zayed. From April 1982 customs duty in Dubai and Sharjah was lowered from 3% to 1%, to bring it in line with Abu Dhabi. In 1983 all the emirates introduced a 4% unified import tariff, following a GCC unified economic agreement, although this tariff was not uniformly applied throughout the federation until August 1994 (when individual emirates formally abandoned inconsistent customs practices). Imports from within the GCC area were exempt from the 4% tariff, as were many industrial raw materials, agricultural inputs, medicines and certain food items. Since the cease-fire in the Gulf War, several lines which had operated to the east coast during the conflict have returned to the Gulf, and investment in the free-trade zones has risen. The Jebel Ali Free Zone offers various incentives to investors, including: the right to 100% foreign ownership; the absence of taxes, import or export duties; and the right to full repatriation of profits and capital, as well as an ample supply of cheap labour.

The modern internal transport system of the UAE was largely developed in the late 1960s and the 1970s, when main roads were constructed to link all the major cities. The petroleum retailer Emarat (formerly known as Emirates General Petroleum Corpn) operated a network of 168 service stations in 1996. One of the characteristics of the country's economy over recent years has been the expansion in the number of major airports. Over 11.6m. passengers and 637,000 tons of cargo passed through the UAE's airports in 1995. There are six international airports in the UAE, the busiest of which is in Dubai. In 1993 Dubai airport handled 5.67m. passengers and 218,264 tons of cargo, and was considering plans to increase its annual cargo-handling capacity from 250,000 to 350,000 tons. In late 1995 plans were announced to expand the airport, which will increase handling capacity to 12m. passengers a year by 2000, and in 1996 some 8.5m. passengers used the airport. Abu Dhabi has two international airports—the main one handled over 3m. passengers in 1995—which are being upgraded and expanded in a five-year, $500m. investment programme, financed by the Abu Dhabi Government. The new Sharjah international airport handles the bulk of the UAE's air-cargo as well as providing up-to-date facilities for passengers. The other UAE airports are in Fujairah and Ras al-Khaimah. In 1985 Dubai founded its own airline, Emirates Airlines, which by late 1995 was flying to 38 destinations. In 1992 Emirates Airlines announced a US $1,000m. investment plan to purchase new aircraft over a 10-year period. Contracts have since been signed with Boeing (for seven B777 aircraft) and Airbus Industrie (for 16 A330-200 airliners). In 1997/98 Emirates Airlines carried 3.68m. passengers and 200,138 tons of cargo, achieving net profits of AED 262.4m. There is strong competition from Gulf Air, which enjoys considerable regional superiority.

Port facilities have also been greatly expanded over recent years. The UAE has a total of 15 commercial ports, which between them handle over 33m. tons of cargo a year. Fujairah port's container throughput rose to 480,000 20-foot-equivalent units (TEUs) from 188,129 TEUs in 1987. Container traffic at Mina Rashid was 557,521 TEUs in 1988, while at Mina Jebel Ali the total freight handled was 4,475,175 metric tons. In 1992 the Dubai Ports Authority's area of operations (taking in Mina Rashid and Mina Jebel Ali) was ranked as the world's sixteenth busiest container port, with combined traffic of 1.48m. TEUs, shared almost equally between the two locations. In 1998 these two ports handled more than 36m. metric tons of cargo. The

number of vessels calling at the Dubai ports in 1992 was 8,253, and the amount of general cargo handled, excluding petroleum, totalled 2.8m. tons. In 1998 the Dubai Ports Authority's area of operations handled 2.8m. TEUs. In that year the Abu Dhabi port of Mina Zayed handled 4,368,007 tons of general cargo. Total container traffic at the UAE's six major ports was some 3.5m. TEUs for 1995 (of which 2.15m. TEUs passed through the Dubai ports). There are plans for a new port at Taweela in Abu Dhabi to serve the proposed industrial zone. Substantial development is planned for the site with a new shipbuilding facility, and a gas processing facility to treat offshore Khuff gas before it is delivered to Jebel Ali in Dubai.

The UAE tourism industry, which in 1993 catered for more than 1m. visitors for the first time, was undergoing rapid expansion in 1995 as several major development schemes neared completion while others were at earlier stages of construction. In Dubai, the principal centre for UAE tourism (with 1,768,000 visitors in 1996), the main emphasis was on diversification into luxury beach and resort developments catering predominantly for holidaymakers rather than the business travellers who constituted the core clientele of many of Dubai's older-established hotels. Promotion of the UAE as a year-round destination for 'sunshine tourism' was aimed in the mid-1990s mainly at the upper end of the European market. Promotional campaigns in Japan and the USA were due to be stepped up in the later 1990s.

BANKING AND FINANCE

The unit of currency in the UAE is the dirham, which was created in 1973 to replace the Bahraini dinar and the Qatar/Dubai riyal, formerly used in the emirates. With effect from March 1996, 'AED' superseded 'Dh' as the Central Bank's official abbreviation for the currency unit. The dirham is linked officially to the IMF's Special Drawing Right but in practice to the US dollar. In 1979 and 1980 the Currency Board revalued the dirham by small amounts (up to 1%) against the dollar in order to try to curb capital outflows from the country (there are no exchange controls), which were attracted by generally higher interest rates elsewhere. The revaluations were also designed to ease the tightness of liquidity in the domestic money market which had been caused by the capital outflows. As a result of maintaining a fixed exchange rate of US $1 = AED 3.671, the dirham lost more than 40% of its value in relation to the major European currencies between February 1985 and February 1987. During 1987 the dirham depreciated by a further 11.3% against an international 'basket' of currencies, as a result of the decline of the dollar.

A central monetary institution, the UAE Currency Board, was established in 1973, but inter-emirate rivalry prevented it from being given full central banking powers. This has led to a rapid multiplication of banks in the country. The Currency Board, managed mainly by expatriates, was able to bring only a little order to the banking free-for-all. A moratorium on the opening of new banks was imposed in 1975, lifted temporarily and then re-imposed with a let-out for international banks of restricted licences (which allow all operations except domestic retail banking), only five of which have opened. In December 1980 the UAE Central Bank replaced the Currency Board, and the rulers of Abu Dhabi and Dubai agreed to place one-half of their national revenues with the new institution. In April 1981 the moratorium on new banks was lifted again but in May the governor of the Central Bank announced that no foreign banks would be granted new branch licences. In July 1981 the Central Bank became more aggressive and told all foreign banks that they had until 1984 to reduce their operations to eight branches each. One way in which some banks tried to minimize the impact of this legislation was by becoming locally incorporated, with a 60% UAE shareholding. By the end of 1983, however, all foreign banks had complied with the legislation and reduced their number of branches to eight. Early in 1982 the Central Bank again intervened to keep a high level of liquidity in the country by imposing a 30% interest-free reserve requirement on dirham loans placed outside the UAE for less than one year, replacing the former 15% charge, imposed in May 1981, for loans up to three months.

Other disruptions to the banking sector were announced in early 1983. The ruler of Abu Dhabi decided that foreign banks should pay a tax of 20% on profits; and the Central Bank, implementing certain clauses of the 1980 bank law, established an upper limit on borrowing by individual bank directors and boards of directors. Despite this, many banks continued to do well in the early 1980s. In 1982 Umm al-Qaiwain opened its first locally incorporated bank, the National Bank of Umm al-Qaiwain. However, the general 'ceiling' of 5% on loans to individual directors led to the collapse, in 1983, of the Union Bank of the Middle East, which had loaned its Chairman, Abd al-Wahab Galadari, monies representing 25%–30% of the bank's total lending. The Central Bank forced his resignation in November, and established a committee of bankers and businessmen to take over the management of the bank. By mid-1986, Abd al-Wahab Galadari's creditors had received a payment of 75% from the official receivers, which amounted to US $321m. Other banks seem to have adopted policies in accordance with the Central Bank's requirements.

A further development in the banking sector was the establishment, in 1983, of the Emirates Industrial Bank, with an authorized capital of AED 500m., to provide loans to new industries. Towards the end of 1984, in an attempt to discourage capital outflow, the Central Bank announced increases in the percentage of demand deposits accepted by local banks which would have to be placed with the Central Bank. The Central Bank's concern over the liquidity of many of the country's smaller banks has continued, and in 1985 a Central Bank circular obliged each of the UAE's banks to provide a detailed account of its financial operations, thus proving the existence of its inner reserves. This move was followed by a series of mergers involving the country's smaller banks.

The collapse of the price of petroleum in 1986, and the deepening recession of the mid-1980s, caused an increasing number of problems for the majority of the banks in the UAE. In mid-1986 the Central Bank announced several measures that were aimed at imposing restraint in financial matters. The new measures, in particular, prohibited banks operating in the UAE from making unsecured loans. In 1987 provision for loan losses was reduced, and in 1988 the Central Bank announced that UAE banks were in a position to withstand bad debts (i.e. debts unlikely to be repaid). During 1987 a presidential decree specified that, in future, all debt cases would be considered by the civil court rather than the *Shari'a* court, and a further decree spread considerable confusion by announcing that in all cases interest should not exceed the amount of the principal debt. Initially Iraq's invasion of Kuwait in August 1990 severely affected confidence in the banking sector. According to UAE spokesmen, however, the banking sector overcame the negative effects of the Gulf crisis by virtue of speedy action by the Central Bank to ensure liquidity and confidence in the 47 existing commercial banks, whose consolidated balance sheet total increased by 9.5%, to US $35,300m., in the second half of 1990. However, the effective failure of the National Investments and Security Corpn (NISCORP) in September 1991, after recording losses of $35m., impelled the federal authorities to seek to restore confidence by appointing a new Governor of the Central Bank. Total bank assets rose by 10% in 1991, to AED 142,000m. In 1995, when 19 local and 28 foreign banks were active in the UAE, aggregate bank assets totalled AED 180,892m. (the highest such figure in any Arab state except Saudi Arabia). By June 1998 the total assets of commercial banks had reached AED 207,077m.

Inflation and the growth of bank credit have both been reduced since 1980. In mid-1994 the inflation rate was estimated to be around 6.5% per annum. According to planning ministry figures, the inflation rate was 4.4% in 1995 and 4% in 1996. The UAE has been considering the establishment of a stock exchange since 1985. Limited trading in shares has been conducted by a group of five financial institutions. Companies whose shares are being traded include the 10 leading UAE banks, four local insurance companies, the state telecommunications company (Etisalat) and some smaller industrial groups. In May 1997 it was reported that public subscription in the UAE's first mutual fund was to be invited at the beginning of June. Launched and managed by the Emirates Bank Group, the fund would provide the first opportunity for non-UAE nationals to invest in the UAE's equities market. The fund's launch came at a time of increased activity in the UAE stock market. On the informal market, trading volumes had risen by 100% during the previous

two years, boosted by the establishment of several new joint stock companies. Several new public offerings are reportedly planned, in advance of the establishment of the long-awaited stock exchange. Several banks have diversified their operations in recent years, notably the Abu Dhabi Commercial Bank, which has introduced Islamic banking, and the British Bank of the Middle East (now HSBC Bank Middle East), which has established a regional treasury centre. In June 1999 the Council of Ministers approved a draft law on the structure of the formal stock exchange; the law has yet to be approved by the Federal National Council. The stock exchange is to be established on Saadiyat island where the Government hopes to establish a regional financial centre.

In many economic matters, the individual emirates tend to pursue their own separate policies, although they rarely publish detailed budgets. Until recently, Abu Dhabi and, to a lesser extent, Dubai were the only two contributors to the federal budget, but by the beginning of 1986 Sharjah was also publicly committed to contributing to the budget. Nevertheless, by mid-1987, following the attempted coup in Sharjah, it became clear that the country's finances were in difficulties, as its total debt burden was in the order of US $920m. By the beginning of July, however, loans valued at $130m. had been rescheduled.

Federal expenditure is divided into current expenditure, development and expenditure for investment. It should be noted, however, that the federal budget reflects only part of the country's total expenditure, as the individual emirates also have their own budgets. Figures for these are not always available, but in Abu Dhabi total budget expenditure declined from a record level of AED 7,000m. in 1982 to AED 6,525.4m. in 1983, when there was a deficit of AED 2,900m. In 1984 a deficit of approximately AED 1,487m. was recorded. Abu Dhabi has not published its budgets since 1984, although in 1988 total expenditure of AED 3,600m. was announced. In 1994 the Abu Dhabi Government announced a 20% spending cut-back for the current year, to be followed by a further 20% cut-back in its 1995 budget. It did not, however, specify the amounts involved, and was generally assumed to be indicating broad objectives rather than imposing binding targets. In 1996 Abu Dhabi was reported to have received revenue of AED 36,332m. and incurred expenditure of AED 62,353m., resulting in a deficit of AED 26,021m., while Dubai recorded a deficit of AED 512m. (from revenue of AED 7,922m. and expenditure of AED 8,434m.). In the same year, Sharjah recorded a surplus of AED 162m. (from revenue of AED 1,456m. and expenditure of AED 1,345m.) and Ras al-Khaimah recorded revenues of AED 217m. and expenditure of AED 254m., resulting in a deficit of AED 37m.

The 1995 federal budget provided for total spending of AED 17,949m. and total revenue of AED 16,903m., leaving a deficit of AED 1,046m. In 1996 the federal budget provided for total spending of AED 16,953m. and total revenue of AED 18,072m., resulting in a deficit of AED 1,119m. Provisional figures for 1997 forecast a deficit of AED 1,441m. from revenue of AED 19,628m. and expenditure of AED 18,187m.; projections for 1998 showed revenue of AED 19,895m. and expenditure of AED 21,395m., resulting in a deficit of AED 1,498m. Spending allocations in 1998 included AED 8,741m. for interior and defence and AED 4,804m. for education and health; some AED 1,343m. was allocated for development expenditure. The 1999 budget, announced in May, provided for a deficit of AED 2,482m. from revenue of AED 20,245m. and expenditure of AED 22,910m.

Sheikh Zayed bin Sultan an-Nahyan, the ruler of Abu Dhabi and President of the UAE, was a founding shareholder of the Bank of Credit and Commerce International (BCCI). In 1988 BCCI became involved in a scandal when two of its US subsidiaries were accused of 'laundering' profits from trade in illegal drugs. With the bank's problems mounting, Sheikh Zayed and Abu Dhabi agencies purchased a 77% stake in BCCI in mid-1990 and sought to formulate a plan for reconstructing BCCI. In September 1990 the headquarters of BCCI were moved from London to Abu Dhabi. The reconstruction plan was thought to involve dividing BCCI into three separately capitalized entities registered in London, Hong Kong and Abu Dhabi, respectively, and with the holding company based in Abu Dhabi. Abu Dhabi invested as much as US $1,000m. in BCCI. These plans, however, were pre-empted when BCCI was closed on 5 July 1991 in seven countries after a report by its auditors, Price Waterhouse, commissioned by the Bank of England, alleged major and systematic fraud by the bank. Within days BCCI operations had been suspended in most of the 69 countries in which it had operated. The UAE protested at the lack of prior consultation before BCCI's closure.

The closure of BCCI caused hardship amongst traders, businessmen and shippers in the UAE. Agencies in Abu Dhabi are owed US $1,400m. and 35,000 private depositors are owed $600m. The UAE Government has stated that it will compensate these private depositors. Abu Dhabi's intention appeared to be to reconstruct the bank as a Middle East and Asian bank. On 3 August 1991 the Bank of Credit and Commerce (Emirates) changed its name to the Union National Bank. It was intended that BCCI's 40% shareholding should be purchased in order to sever all ties with the parent bank. In mid-1992 the Abu Dhabi-based majority shareholders in the former BCCI warned creditors that their offer of 30% compensation payment was final. Creditors, however, appeared unwilling to accept this and ready to risk litigation. In July Abu Dhabi was criticized, in a draft of the official British report of the BCCI collapse, for withholding information as to the scale of the fraud from the Bank of England. In October it was reported that 90% of BCCI's creditors had voted to accept the joint liquidators' plan, but in mid-1993 the objections of a minority of creditors (who were pursuing their case in the Luxembourg courts) continued to delay acceptance of the plan. The Ministry of Justice in Abu Dhabi stated in July 1993 that 13 senior managers of BCCI would go on trial in October on charges including forgery of documents, concealment of banking losses, and making false loans. All but one of the 13 defendants were convicted at the conclusion of the trials in May 1994 (although two convictions were later overturned on appeal).

In January 1995 a Luxembourg court approved a revised settlement plan (already approved by courts in London and the Cayman Islands) under which the Abu Dhabi Governnment and ruling family would contribute US $1,800m. in compensation payments to BCCI creditors world-wide over a period of three years. In May 1996 the Abu Dhabi Government signed an agreement implementing the settlement plan, whereby $1,550m. was to be paid directly to the liquidators and $250m. was to be paid into an escrow account for later release. The liquidators' stated intention was to pay a first dividend of about 20% of creditors' claims in mid-1996. Subsequent dividends were expected to increase the total compensation paid to 30%–40% of the amount claimed. The UAE Central Bank formally removed BCCI from its banking register in April 1996 (the closing date for compensation claims from UAE depositors). In November 1996 it was announced that the first payments would be made in December of that year. In September 1999 BCCI's liquidators announced that a third payment to creditors was to be made within six months, taking the level of returns to 55%. Earlier that year the liquidators initiated legal action in an attempt to recover some AED 1,691m. from the ruler of Sharjah, Sheikh Sultan bin Muhammad al-Qasimi.

With effect from July 1993, the UAE Central Bank introduced new banking regulations whereby the minimum ratio for capital adequacy was raised to 10% (2% higher than the internationally recommended minimum). Moreover, the legal definition of a bank's 'core' capital and its 'supplementary' capital was respecified in accordance with current international standards. All on- and off-balance-sheet items were required to be ranked according to a schedule of risk. Banks were required to maintain a minimum level of 10% of total risk-weighted assets relative to their capital base, in which 'core capital' must reach a minimum of 6% of total risk-weighted assets, while 'supplementary capital' would be considered only up to a maximum of 67% of core capital. Banks would henceforth be required to report to the Central Bank every three months.

In October 1993 the Central Bank issued a circular tightening the banking regulations still further from the beginning of 1994 (with provision for deferral on a case-by-case basis until the end of 1995). This circular limited any bank's exposure to the following proportion of its capital base: 25% if the exposure was to a government-owned commercial entity; 5% to a director or board member, and no more than 25% in aggregate to the bank's whole board; 6% in aggregate to bank employees; 7% to one of

its shareholders, or a single borrower, or a group of related borrowers; 20% to a subsidiary or affiliate. There were also ceilings on funded inter-bank exposures, letters of credit and guarantee, and other contingent liabilities. Banks were required to report large exposures (including those of subsidiaries) to the Central Bank on a quarterly basis, a large exposure being defined in the circular as all exposures to a single borrower or a group of related borrowers that total 7% or more of a bank's capital base. The Central Bank later agreed to exclude contingent liabilities from its definition of a large exposure, which was to be calculated after deductions for provisions, cash collateral and deposits under lien. The Central Bank also agreed to draw up a list of acceptable securities against which banks would be permitted to lend without reference to the 'large exposure' limits. During 1994 UAE banks increased their capital by more than US $200m. to comply with international adequacy standards and UAE banking regulations.

In February 1995 a total of 53 leading corporate and individual members of the Dubai business community and ruling family (including nine financial institutions) announced the establishment of a new joint-stock company, Dubai Investments, in which they would hold 45% of the shares. The remaining 55% of the shares were sold to the public two months later through a heavily over-subscribed flotation (open to all UAE nationals) managed by Emirates Bank International. Dubai Investments had an authorized capital of AED 1,300m. Its stated aims included the establishment and acquisition of interests in a wide range of economic activities, including agricultural, mining, services, insurance and tourism ventures within the UAE and, in the longer term, suitable ventures in other countries. The new company announced its first equity investment (in a fibre-optic manufacturing venture in the Jebel Ali Free Zone) in February 1996. In November 1996 Dubai Investments announced that it had acquired majority stakes in three local companies and that it planned to build a new industrial park close to the Jebel Ali Free Zone and port.

In late 1997 reports of instability were denied by Mashreq Bank. The Central Bank issued a statement affirming the strong position of the bank, which later announced net profits of AED 486m. for 1997, the largest in local banking history. In March 1998 the Central Bank was obliged to intervene and provide short-term liquidity in support of Dubai Islamic Bank. There was some speculation that the discovery of fraudulent practices had prompted the crisis. At that time, legislation was being prepared to strengthen the role of the Central Bank and to enforce stricter regulation of the financial sector. In May 1999 the Central Bank called an emergency meeting with four local and nine foreign banks to discuss proposals for the recovery of debts of AED 479m. accrued by an expatriate businessman whose clients had defaulted on payments.

DEVELOPMENT PLANNING

Until 1981, development expenditure in the UAE came from the annual federal budget, and there was no attempt at detailed long-term integrated economic planning, although Abu Dhabi did have a loose development plan for 1977–79. The end of the 1970s saw a great increase in health facilities in the country, with the number of hospital beds available rising from 1,750 in 1979 to 3,500 in April 1981. This increase was partly brought about through the completion of two major new hospitals at al-Ain. In 1986 the UAE had 28 hospitals and 119 clinics. In 1989 a total of 10 new primary health care centres were planned, at a cost of AED 10m.–12m. each. In 1990 the UAE had one doctor for every 1,040 inhabitants and one nurse for every 500 inhabitants, and in 1994 there was one doctor for every 598 inhabitants. The infant mortality rate in 1995 was 16 per 1,000 live births, compared with 87 per 1,000 in 1970. In 1993 99% of the population had access to public health services. In January 1995 the Government increased the annual fee for a compulsory health card to AED 300 for each adult non-citizen and AED 100 for each adult citizen. In 1999 the UAE had 51 hospitals with 6,835 beds, and at the end of 1997 there were 5,000 doctors and 10,000 nurses in the country.

The first Five-Year Plan was intended to have been implemented in 1981, to run until 1985, but the fall in revenues from petroleum severely restricted initial proposals. Overall expenditure was estimated to be AED 16,000m. for the five years, with Abu Dhabi receiving 21%, Fujairah 12.5%, Sharjah 10.8%, Ras al-Khaimah 9.4%, Umm al-Qaiwain 7.7%, Dubai 5.3%, and Ajman 4.4%. The Plan initially predicted an overall increase of 20% in the country's GDP up to 1985. However, in 1983 alone GDP fell by 13.5%, and in 1981–85 GDP, at constant 1990 prices, declined by an annual average of 2.3%. The Plan also allocated AED 3,800m. to the agricultural sector, which was expected to expand at an annual rate of 10.3%. It was hoped, in particular, to improve productivity and marketing services, and to aim for the best possible use of water resources. Of the AED 16,000m. which was to be spent in the Plan, AED 3,500m. was for investment projects and AED 8,400m. for schemes already under construction. The experience of the first five-year plan for the UAE meant that there was little enthusiasm for a second and the emirates of the UAE returned to a more flexible approach to defining and planning development priorities. In early 1989 Abu Dhabi announced that the emirate planned to spend about AED 14,800m. in the next decade on infrastructure and development. A total of AED 875m. was allocated to the construction of 85 schools (as part of the fifth education plan), of which 41 were scheduled to be completed by the beginning of the 1990/91 academic year.

In November 1996 the Abu Dhabi Government established a consultative committee for the development of the emirate. The committee was to develop and facilitate procedures for businesses seeking to invest in the emirate. Its establishment was in keeping with Abu Dhabi's overall policy of encouraging greater private sector investment, of which the planned privatization of electricity and water installations was a key aspect. In the same month Dubai unveiled its first strategic development plan, setting out an ambitious programme aimed at achieving economic diversification, high non-oil sector growth and increased productivity by 2010. The plan envisaged annual GDP growth of 5% over the next 15 years, fuelled by a 6%–7% annual increase in the non-oil sector contribution to GDP. The plan envisaged capital investments of AED 44,500m. over the next five years, with funding for projects proceeding from both the Government and the private sector.

The UAE, however, has not only been concerned with its own development. Abu Dhabi, through its Fund for Arab Economic Development (ADFAED), has been a major source of international aid. ADFAED was set up in 1971 with a capital of US $120m.; its commitments up to the end of 1980 totalled $800m. However, in 1982, as a result of declining revenues from petroleum, the UAE reduced its foreign aid budget to AED 6,500m. from AED 9,400m. in 1981. Aid continued to decline during the 1980s, but in 1988 ADFAED signed loans totalling AED 151m. ($41.1m.), compared with AED 15.6m. ($4.2m.) in 1987. The ADFAED was renamed the Abu Dhabi Fund for Development at the end of 1993 (reflecting its involvement in projects in some non-Arab countries).

On 22 April 1991 the UAE agreed, as part of the GCC, to establish a Gulf Development Fund, with a capital of US $10,000m. for an initial 10-year period. The fund was to provide new finance for those Middle East countries whose economies are relatively weak. Finance will be aimed at the private sector and will be incorporated into World Bank and IMF programmes.

Directory

The Constitution

A provisional Constitution for the UAE took effect in December 1971. This laid the foundation for the federal structure of the Union of the seven emirates, previously known as the Trucial States.

The highest federal authority is the Supreme Council of Rulers, which comprises the rulers of the seven emirates. It elects the President and Vice-President from among its members. The President appoints a Prime Minister and a Council of Ministers. Proposals submitted to the Council require the approval of at least five of the Rulers, including those of Abu Dhabi and Dubai. The legislature is the Federal National Council, a consultative assembly comprising 40 members appointed by the emirates for a two-year term.

In July 1975 a committee was appointed to draft a permanent federal constitution, but the National Council decided in 1976 to extend the provisional document for five years. The provisional Constitution was extended for another five years in December 1981, and for further periods of five years in 1986 and 1991. In November 1976, however, the Supreme Council amended Article 142 of the provisional Constitution so that the authority to levy armed forces was placed exclusively under the control of the federal Government. Legislation designed to make the provisional Constitution permanent was endorsed by the Federal National Council in June 1996, after it had been approved by the Supreme Council of Rulers.

The Government

HEAD OF STATE

President: Sheikh ZAYED BIN SULTAN AN-NAHYAN, Ruler of Abu Dhabi (took office as President of the UAE on 2 December 1971; re-elected 1976, 1981 and 1991).

Vice-President: Sheikh MAKTOUM BIN RASHID AL-MAKTOUM, Ruler of Dubai.

SUPREME COUNCIL OF RULERS

(with each Ruler's date of accession)

Ruler of Abu Dhabi: Sheikh ZAYED BIN SULTAN AN-NAHYAN (1966).

Ruler of Dubai: Sheikh MAKTOUM BIN RASHID AL-MAKTOUM (1990).

Ruler of Sharjah: Sheikh SULTAN BIN MUHAMMAD AL-QASIMI (1972).

Ruler of Ras al-Khaimah: Sheikh SAQR BIN MUHAMMAD AL-QASIMI (1948).

Ruler of Umm al-Qaiwain: Sheikh RASHID BIN AHMAD AL-MU'ALLA (1981).

Ruler of Ajman: Sheikh HUMAID BIN RASHID AN-NUAIMI (1981).

Ruler of Fujairah: Sheikh HAMAD BIN MUHAMMAD ASH-SHARQI (1974).

COUNCIL OF MINISTERS

(September 1999)

Prime Minister: Sheikh MAKTOUM BIN RASHID AL-MAKTOUM.

Deputy Prime Minister: Sheikh SULTAN BIN ZAYED AN-NAHYAN.

Minister of the Interior: Lt-Gen. Dr MUHAMMAD SAID AL-BADI.

Minister of Foreign Affairs: RASHID ABDULLAH AN-NUAIMI.

Minister of Finance and Industry: Sheikh HAMDAN BIN RASHID AL-MAKTOUM.

Minister of Defence: Sheikh MUHAMMAD BIN RASHID AL-MAKTOUM.

Minister of Economy and Commerce: Sheikh FAHIM BIN SULTAN AL-QASIMI.

Minister of Information and Culture: Sheikh ABDULLAH BIN ZAYED AN-NAHYAN.

Minister of Communications: AHMAD BIN HUMAID AT-TAYER.

Minister of Public Works and Housing: RAKKAD BIN SALEM BIN RAKKAD.

Minister of Higher Education and Scientific Research: Sheikh NAHYAN BIN MUBARAK AN-NAHYAN.

Minister of Health: HAMAD ABD AR-RAHMAN AL-MADFA.

Minister of Electricity and Water: HUMAID BIN NASSER AL-OWAIS.

Minister of Labour and Social Affairs: MATEER HUMAID AT-TAYER.

Minister of Planning: Sheikh HUMAID BIN AHMAD AL-MU'ALLA.

Minister of Petroleum and Mineral Resources: OBEID BIN SAIF AN-NASIRI.

Minister of Agriculture and Fisheries: SAID MUHAMMAD AR-RAGABANI.

Minister of Education and Youth: ALI ABD AL-AZIZ ASH-SHARHAN.

Minister of Justice, Islamic Affairs and Awqaf (Religious Endowments): MUHAMMAD NAKHIRA ADH-DHAHERI.

Minister of State for Cabinet Affairs: SAID KHALFAN AL-GHAITH.

Minister of State for Finance and Industry: MUHAMMAD KHALFAN BIN KHARBASH.

Minister of State for Foreign Affairs: Sheikh HAMDAN BIN ZAYED AN-NAHYAN.

Minister of State for Affairs of the Supreme Council: Sheikh MAJEED BIN SAID AN-NUAIMI.

Legislature

FEDERAL NATIONAL COUNCIL

Formed under the provisional Constitution, the Council is composed of 40 members from the various emirates (eight each from Abu Dhabi and Dubai, six each from Sharjah and Ras al-Khaimah, and four each from Ajman, Fujairah and Umm al-Qaiwain). Each emirate appoints its own representatives separately. The Council studies laws proposed by the Council of Ministers and can reject them or suggest amendments.

Speaker: MUHAMMAD BIN KHALIFA AL-HABTOUR.

Judicial System

The 95th article of the Constitution of 1971 provided for the establishment of the Union Supreme Court and Union Primary Tribunals as the judicial organs of State.

The Union has exclusive legislative and executive jurisdiction over all matters that are concerned with the strengthening of the federation, such as foreign affairs, defence and Union armed forces, security, finance, communications, traffic control, education, currency, measures, standards and weights, matters relating to nationality and emigration, Union information, etc.

President Sheikh Zayed signed the law establishing the new federal courts on 9 June 1978. The new law effectively transferred local judicial authorities into the jurisdiction of the federal system.

Primary tribunals in Abu Dhabi, Sharjah, Ajman and Fujairah are now primary federal tribunals, and primary tribunals in other towns in those emirates have become circuits of the primary federal tribunals.

The primary federal tribunal may sit in any of the capitals of the four emirates and have jurisdiction on all administrative disputes between the Union and individuals, whether the Union is plaintiff or defendant. Civil disputes between Union and individuals will be heard by primary federal tribunals in the defendant's place of normal residence.

The law requires that all judges take a constitutional oath before the Minister of Justice and that the courts apply the rules of *Shari'a* (Islamic religious law) and that no judgment contradicts the *Shari'a*. All employees of the old judiciaries will be transferred to the federal authority without loss of salary or seniority.

In February 1994 President Sheikh Zayed ordered that an extensive range of crimes, including murder, theft and adultery, be tried in *Shari'a* courts rather than in civil courts.

Chief Shari'a Justice: AHMAD ABD AL-AZIZ AL-MUBARAK.

Religion

ISLAM

Most of the inhabitants are Muslims of the Sunni sect. About 16% of the Muslims are Shi'ites.

CHRISTIANITY

Roman Catholic Church

Apostolic Vicariate of Arabia: POB 54, Abu Dhabi; tel. (2) 461895; fax (2) 465177; e-mail apvicar@emirates.net.ae; responsible for a territory covering most of the Arabian peninsula (including Saudi Arabia, the UAE, Oman, Qatar, Bahrain and Yemen), containing an estimated 900,000 Catholics (31 December 1997); Vicar Apostolic Fr GIOVANNI BERNARDO GREMOLI, Titular Bishop of Masuccaba.

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, the UAE forms part of the diocese of Cyprus and the Gulf. The Anglican congregations in the UAE are entirely expatriate. The Bishop in Cyprus and the Gulf resides in Cyprus.

Al-Ghurair Group of Companies: POB 1, Dubai; tel. (4) 693311; fax (4) 691852; f. 1960/61; general contracting, banking, import and export, aluminium extrusion and manufacture of aluminium doors, windows, etc., PVC pipes, tiles and marbles, cement and mineral waters; gold and exchange dealers, owners of grain silos and flour mills, printing press, packaging factory, real estate dealers; cap. AED 1,000m.; Chair. SAIF AHMAD MAJED AL-GHURAIR; Vice-Chair. ABDULLAH AHMAD MAJED AL-GHURAIR; 1,600 employees.

Gulf Eternit Industries S.A.: POB 1371, Dubai; tel. (4) 857256; telex 47040; fax (4) 851935; e-mail info@gulf-eternit.com; manufacture of Fibrecement and glass reinforced plastic pipes; Pres. FOUAD MAKHZOUMI.

Al-Habtor Engineering Enterprises Co (LLC): POB 320, Dubai; tel. (4) 857551; telex 45603; fax (4) 857479; e-mail heepd@emirates.net.ae; f. 1970; civil and building contracting; Dirs KHALAF A. AL-HABTOOR; RIAD T. SADIK; about 4,000 employees.

Bin Hussain Aluminium Factories: POB 1535, Dubai; tel. (4) 660643; telex 45947; fax (4) 661567; process and fabrication of aluminium doors, windows, shop fronts, balustrades, rolling shutters, etc.; Chair. HUSSAIN MUHAMMAD BIN HUSSAIN.

Bin Ladin Organization for Construction and General Trading: POB 1555, Dubai; tel. (4) 691500; tel. 45991; fax (4) 691350; f. 1967 in UAE; civil engineering, roadworks, piling, ground services and building, electrical contracting; Chair. and Man. Dir ABU BAKR SALIM AL-HAMID; 4,000 employees.

National Cement Co Ltd: POB 4041, Dubai; tel. (4) 382671; telex 47202; production and sale of cement; Chair. SAIF AHMAD AL-GHURAIR.

Shirawi Contracting and Trading Co: POB 2032, Dubai; tel. (4) 220251; telex 45483; f. 1971; building and civil engineering contractors, supply of building materials; sales AED 290m.; cap. AED 50m; Chair. ABDULLAH ASH-SHIRAWI; 2,000 employees.

United Foods Ltd: POB 5836, Dubai; tel. (4) 382688; telex 46689; fax (4) 381987; e-mail aseel@emirates.net.ae; f. 1976; manufacture and trading of hydrogenated vegetable oil and cooking oil; Chair. SAEED MUHAMMAD AL-MULLA; Gen. Man. M. TAWFIQ BAIG; 235 employees.

Unity Contracting Co (UNCO) Ltd: POB 16638, Dubai; tel. (4) 667870; telex 46603; fax (4) 661790; f. 1972; building and civil works contracting; Gen. Man. HRAYR SOGHOMONIAN; 900 employees.

Fujairah

Fujairah Cement: POB 600, Fujairah; tel. (9) 223111; telex 89047; fax (9) 227718.

Ras al-Khaimah

Alltek Emirates Ltd: POB 1569, Ras al-Khaimah; tel. (7) 668865; telex 99117; fax (7) 668977; manufacture and marketing of spray plasters, decorative paints and limestone powder.

Raknor (PVT) Ltd: POB 883, Ras al-Khaimah; tel. (7) 668351; telex 99251; fax (7) 668910; f. 1976; manufacture of concrete blocks.

Sharjah

CME Contracting Marine Engineering: POB 1859, Sharjah; tel. (6) 354511; telex 68069; turnkey industrial projects, water and electricity plants, construction, building, marine works; joint venture between Chair. and German cos Klaus Stuff, Helma Greuel-Mainz; Chair. Dr F. AL-GAWLY; 323 employees.

Conforce Gulf Ltd Co: POB 289, Sharjah; tel. (6) 591433; telex 68082; f. 1979; building contractor, exporter of building and electrical materials; Man. ABDULLAH MUHAMMAD BUKHATIR.

Dafco Trading and Industrial Co WLL: POB 515, Sharjah; tel. (6) 593333; telex 68106; fax (6) 596531; f. 1980; general contracting trading company; operates factories producing bricks and concrete; Man. M. AL-FARHAN.

General Enterprises Co: POB 1150, Sharjah; tel. (6) 331727; telex 68020; fax (6) 336470; general trading and contracting; Gen. Man. Sheikh AHMAD BIN MUHAMMAD SULTAN AL-QASIMI.

Gulf Building Materials Co Ltd (GBM): POB 1612, Sharjah; tel. (6) 354683; telex 68089; production and supply of building materials: cement, marble and aluminium.

Hempel's Paints (Emirates) Ltd: POB 2000, Sharjah; tel. (6) 283307; telex 68197; f. 1977; manufacture and sale of paints for offshore marine, domestic and industrial use; Chair. SA'UD ABD AL-AZIZ AR-RASHID; CEO and Gen. Man. JOHN R. SPENDLOVE.

Sharjah Electrodes: POB 2019, Sharjah; tel. (6) 331000; fax (6) 337244; f. 1976; manufacture and distribution of arc welding electrodes and wire nails; Chair. MUHAMMAD SHARIF ZAMAN; 37 employees.

Umm al-Qaiwain

Umm al-Qaiwain Aluminium Co (UMALCO): Umm al-Qaiwain.

Umm al-Qaiwain Asbestos and Cement Industries Co: POB 547, Umm al-Qaiwain; tel. (6) 671772; telex 69711; fax (6) 671011; Chair. Sheikh SA'UD BIN RASHID AL-MU'ALLA.

Transport

ROADS

Roads are rapidly being developed in the United Arab Emirates, and Abu Dhabi and Dubai are linked by a good road which is dual carriageway for most of its length. This road forms part of a west coast route from Shaam, at the UAE border with the northern enclave of Oman, through Dubai and Abu Dhabi to Tarif. An east coast route links Dibba with Muscat. Other roads include the Abu Dhabi–al-Ain highway and roads linking Sharjah and Ras al-Khaimah, and Sharjah and Dhaid. An underwater tunnel links Dubai Town and Deira by dual carriageway and pedestrian subway. In 1993 there was a total paved network of roads of 4,555 km, of which 1,753 km were main roads.

SHIPPING

Dubai has been the main commercial centre in the Gulf for many years. Abu Dhabi has also become an important port since the opening of the first section of its artificial harbour, Port Zayed. There are smaller ports in Sharjah, Fujairah, Ras al-Khaimah and Umm al-Qaiwain. Work on a dry-dock scheme for Dubai was completed in 1979. It possesses two docks capable of handling 500,000-ton tankers, seven repair berths and a third dock able to accommodate 1,000,000-ton tankers. In 1988 the Dubai port of Mina Jebel Ali, which has the largest man-made harbour in the world, contained 67 berths. Current modernization of Port Khalid in Sharjah was to double its berth capacity, and the two-berth port of Fujairah was opened in 1983.

Abu Dhabi National Tanker Co (ADNATCO): POB 2977, Abu Dhabi; tel. (2) 277733; telex 22747; fax (2) 272940; subsidiary company of ADNOC, operating owned and chartered tankships, and transporting crude petroleum, refined products and sulphur; Chair. NASSER AHMAD AS-SUWAIDI; Gen. Man. BADER M. AS-SUWAIDI.

Abu Dhabi Petroleum Ports Operating Co (ADPPOC): POB 61, Abu Dhabi; tel. (2) 333500; telex 22209; fax (2) 333567; e-mail adppoc@emirates.net.ae; f. 1979; manages Jebel Dhanna, Ruwais, Das Island, Umm an-Nar and Zirku Island SPM terminal, Mubarraz; cap. AED 50m.; 60% owned by ADNOC, 40% by LAMNALCO Kuwait; Chair. YOUSUF BIN OMEIR BIN YOUSUF; Gen. Man. KHALIFA M. AL-GOBAISI.

Abu Dhabi Seaport Authority: POB 422, Port Zayed, Abu Dhabi; tel. (2) 730600; fax (2) 731023; internet http://www.portzayed.gov.ae; administers Port Zayed; handled 319,578 20-ft equivalent units (TEUs) in 1998; Harbour Master SAID DARWISH.

Ahmad bin Rashid Port and Free Trade Zone: POB 279, Umm al-Qaiwain; tel. (6) 7655882; telex 69717; fax (6) 7651552; e-mail abrpftz@emirates.net.ae.

Dubai Drydocks: POB 8988, Dubai; tel. (4) 450626; telex 48838; fax (4) 450116; e-mail drydocks@emirates.net.ae; internet http://www.drydocks.gov.ae; state-owned dry-docks with cleaning facilities, galvanizing plant, transport systems and facilities for maintenance and repair of ships of any size; Chief Exec. KEITH BURGESS.

Dubai Ports Authority (DPA): POB 17000, Dubai; tel. (4) 815000; telex 47398; fax (4) 816093; e-mail mktg@dpa.co.ae; offers duty-free storage areas and facilities for loading and discharge of vessels; supervises ports of Jebel Ali and Mina Rashid; handled 2.8m. TEUs in 1998; Chair. SULTAN AHMAD BIN SULAYEM; Exec. Dir DAVID GIBBONS.

Fal Shipping Co Ltd: POB 6600, Sharjah; tel. (6) 286666; fax (6) 280861; operates tankships; Chair. ABDULLA JUMA AS-SARI; Gen. Man. MUHAMMAD OSMAN FADUL.

Fujairah Port: POB 787, Fujairah; tel. (9) 228800; telex 89085; fax (9) 228811; f. 1982; offers facilities for handling full container, general cargo and 'roll on, roll off' traffic; handled 480,000 20-ft equivalent units (TEUs) in 1998; Chair. Sheikh SALEH BIN MUHAMMAD ASH-SHARQI; Harbour Master TAMER MASOUD.

Jebel Ali Free Zone Authority (JAFZ): POB 17000, Dubai; tel. (4) 815000; telex 47398; fax (4) 815001; e-mail mktg@jafza.co.ae; the authority administers a 100 sq km zone, created by the Govt of Dubai in 1985, which includes the 7,500-acre Jebel Ali port and industrial area offering 67 berths; offers facilities for handling container, bulk, general and liquid traffic; warehouse and office facilities; specialized storage incl. cold stores and tank farms; by December 1998 approx. 1,500 companies had established business in the Free Zone; Port Rashid and Jebel Ali port handled more than 36m. metric tons of cargo in 1998; Chair. SULTAN AHMAD BIN SULAYEM.

Jebel Dhanna/Ruwais Petroleum Port: c/o ADCO, POB 270, Abu Dhabi; tel. (2) 666100; telex 22222; fax (2) 669785; facilities include 5 tanker berths, export of crude petroleum, refined products, fertilizers, ammonia and sulphur; Terminal Superintendent J. B. SHEEHAN.

Mina Saqr Port Authority: POB 5130, Ras al-Khaimah; tel. (7) 668444; telex 99280; fax (7) 668533; Port operators handling bulk cargoes, containers, general cargo and 'roll on, roll off' traffic; govt owned; Chair. Sheikh MUHAMMAD BIN SAQR AL-QASIMI; Man. DAVID ALLAN.

Mina Zayed Port: POB 422, Abu Dhabi; tel. (2) 730600; telex 22731; fax (2) 731023; internet http://www.portzayed.gov.ae; facilities include 21 deep-water berths of up to 15 metres draft; 5 container gantry cranes of 40 tons capacity; specializes in container traffic, general, reefer and bulk cargoes; in 1998 Port Zayed handled 4,368,007 metric tons of cargo; Chair. Sheikh SAID BIN ZAYED AN-NAHYAN; Dir MUBARAK AL-BU AINAIN.

National Marine Services Co (NMS): POB 7202, Abu Dhabi; tel. (2) 339800; telex 22965; fax (2) 211239; operate, charter and lease specialized offshore support vessels; cap. AED 25m.; owned 60% by ADNOC and 40% by Jackson Marine Corpn USA; Chair. SOHAIL FARES AL-MAZRUI; Gen. Man. Capt. HASSAN A. SHAREEF.

Sea Bridge Shipping: POB 8458, Dubai; tel. (4) 379858; fax (4) 372600; cargo ships; Chair. S. RAMAKRISHNAN; Man. Dir L. B. CULAS.

Sharjah Ports and Customs Department: POB 510, Sharjah; tel. (6) 281666; telex 68138; fax (6) 281425; the authority administers

Port Khalid and Port Khor Fakkan and offers specialized facilities for container and 'roll on, roll off' traffic, reefer cargo and project and general cargo; in 1998 Port Khalid handled 80,175 20-ft. equivalent units (TEUs) of containerized shipping, and Port Khor Fakkan 783,352 TEUs; Chair. (Ports and Customs) Sheikh SAUD BIN KHALID AL-QASIMI; Dir-Gen. ABD AL-AZIZ SULAIMAN AS-SARKAL.

Umm al-Qaiwain Port: POB 225, Umm al-Qaiwain; tel. (6) 666126; telex 69611.

Vela International Marine: POB 26373, City Towers 2, Sheikh Zayed Road, Dubai; tel. (4) 312800; fax (4) 315675; operates tankships; Chair. DHAIFALLAH F. ALUTAIBI; Man. Dir ADEL M. AD-DULAIJIN.

CIVIL AVIATION

There are six international airports at Abu Dhabi, al-Ain (Abu Dhabi), Dubai, Fujairah and Ras al-Khaimah, and a smaller one at Sharjah, which forms part of Sharjah port, linking air, sea and overland transportation services. In 1995 a total of 11.6m. passengers used the six UAE airports, 3.3m. of them passing through Abu Dhabi airports; and in 1996 a record 8.5m. passengers used Dubai airport.

Civil Aviation Department: POB 20, Abu Dhabi; tel. (2) 757500; telex 24406; responsible for all aspects of civil aviation; Chair. HAMDAN BIN MUBARAK AN-NAHYAN.

Abu Dhabi Aviation: POB 2723, Abu Dhabi; tel. (2) 449100; telex 22656; fax (2) 449081; f. 1976; domestic charter flights; Chair. HAMDAN BIN MUBARAK AN-NAHYAN; Gen. Man. MUHAMMAD IBRAHIM AL-MAZROUI.

Emirates Air Service: POB 2723, Abu Dhabi; tel. (2) 757021; telex 22656; fax (2) 449100; f. 1976 as Abu Dhabi Air Services; overhaul, engine and avionics servicing, component repairs and complete refurbishment.

Emirates Airline: POB 686, Dubai; tel. (4) 228151; telex 48085; fax (4) 214560; e-mail corpcom@emirates.com; internet http://www.ekgroup.com; f. 1985; services to 45 destinations world-wide; owned by the Dubai authorities; in 1997/98 the airline carried 3.7m. passengers and 200,138 tons of freight; Chair. Sheikh AHMAD BIN SAID AL-MAKTOUM; Man. Dir. MAURICE FLANAGAN.

Falcon Express Cargo Airlines: Suite 501 Holiday Centre, Sheikh Zayed Rd, POB 9372, Dubai; tel. (4) 826886; fax (4) 823125; e-mail feca@emirates.net.ae; f. 1995; dedicated freight.

Gulf Air Co GSC (Gulf Air): POB 5015, Sharjah; tel. (6) 356356; fax (6) 354354; f. 1950; jointly owned by Govts of Bahrain, Oman, Qatar and Abu Dhabi since 1974; flights world-wide; Pres. and Chief Exec. SALIM BIN ALI BIN NASSER.

Tourism

Tourism is an established industry in Sharjah, and plans are being implemented to foster tourism in other emirates, notably in Abu Dhabi and Dubai. In 1994 foreign visitors to the UAE totalled more than 1.9m., compared with 616,000 in 1990. In 1996 some 1.8m. tourists visited Dubai.

Department of Tourism and Commerce Marketing: POB 594, Dubai; tel. (4) 511600; fax (4) 511711.

Dubai Information Department: POB 1420, Dubai; Dir OMAR DEESI.

Fujairah Tourism Bureau: POB 829, Fujairah; tel. (9) 231554; fax (9) 231006; e-mail fujtourb@emirates.net.ae; internet http://www.fujairah-tourism.com; f. 1995; Chair. Sheikh SAEED ASH-SHARQI; Dir WAHID BIN YOUSSEF.

National Corporation for Tourism and Hotels (NCTH): Abu Dhabi; 20% owned by Government of Abu Dhabi.

Ras al-Khaimah Information and Tourism Department: POB 141, Ras al-Khaimah; tel. (7) 751151; Chair. Sheikh ABD AL-AZIZ BIN HUMAID AL-QASIMI.

Sharjah Commerce and Tourism Development Authority: POB 26661, 11th Floor, Crescent Tower, Buheirah Corniche, Sharjah; tel. (6) 5562777; fax (6) 5563000; e-mail sctda@sharjahcommerce-tourism.gov.ae; internet http://www.sharjahwelcome.com; f. 1980; Dir. MUHAMMAD SAIF AL-HAJRI.

Defence

The Union Defence Force and the armed forces of the various emirates were formally merged in May 1976, although difficulties have since been experienced (see History). Abu Dhabi and Dubai retain a degree of independence. Military service is voluntary.

Chief of Staff of Federal Armed Forces: Lt-Gen. MUHAMMAD BIN ZAYED AN-NAHYAN.

Total armed forces (August 1998): 64,500 (army 59,000; navy 1,500; air force 4,000).

Defence Budget (1998): AED 13,700m. (US $3,700m.); federal expenditure on defence has been substantially reduced since the early 1980s, but procurement and project costs are not affected, as individual emirates finance these separately. In 1992 a scheme was announced to draft thousands of local men and women into the army, and to replace the estimated 30% expatriate section of the army with nationals.

Education

Primary education is compulsory, beginning at six years of age and lasting for six years. Secondary education, starting at the age of 12, also lasts for six years, comprising two equal cycles of three years. As a proportion of all school-age children, the total enrolment at primary and secondary schools was equivalent to 85% in 1996 (males 85%; females 85%), compared with only 61% in 1970. Secondary enrolment included 71% of children in the relevant age-group in 1996 (males 68%; females 74%). The UAE is engaged in expanding education, which is regarded as a unifying force for the future of the federation. As a result, major accomplishments in the provision of education have been achieved within the emirates. By 1985/86 there were an estimated 255,000 students at all stages of education in the country as a whole, compared with 141,424 in 1980/81 and about 109,000 in 1978/79. In 1996/97 a total of 55,624 children attended government kindergartens, and 259,509 attended primary schools in the UAE. At the same time, secondary enrolment totalled 180,764. There are primary and secondary schools in all the emirates, and further education in technical fields is available in the more advanced areas. Teachers from other Arab countries, most notably Kuwait, Egypt and Jordan, supplement the UAE's native teaching staff; of a total of 8,859 teachers in 1983, only 646 were UAE nationals. Many students receive higher education abroad. The UAE has one university, at al-Ain in Abu Dhabi, where 16,213 students were enrolled in 1996/97. The four higher colleges of technology (two for male and two for female students) in Abu Dhabi admitted a total of 1,150 students in 1992/93, all of whom were citizens of the UAE. Federal government expenditure in 1995 included AED 2,699m. for education (15.1% of total expenditure by the central Government). Adult illiteracy averaged an estimated 46.5% (males 41.6%; females 61.9%) in 1975, but, according to UNESCO estimates, had decreased to 20.8% (males 21.1%; females 20.2%) by 1995. A literacy and adult education programme is in operation.

YEMEN

Geography

On 22 May 1990 the Yemen Arab Republic (YAR) and the People's Democratic Republic of Yemen (PDRY) merged to form the Republic of Yemen. Yemen consists of the south-west corner of the Arabian peninsula—the highlands inland, and the coastal strip along the Red Sea; and the former British colony of Aden (195 sq km or 75.3 sq miles) and the Protectorate of South Arabia (about 333,000 sq km or 128,570 sq miles), together with the islands of Perim (13 sq km or 5 sq miles) and Kamaran (57 sq km or 22 sq miles). The Republic of Yemen lies at the southern end of the Arabian peninsula, approximately between longitude 43°E and 56°E, with Perim Island a few km due west, in the strait marking the southern extremity of the Red Sea; and Socotra in the extreme east. Yemen has frontiers with Saudi Arabia and Oman (the former in the process of delimitation in late 1998 and the latter officially demarcated in mid-1995), although atlases still show considerable variation in the precise boundaries of the three countries, or sometimes do not indicate them at all. The capital of the Republic of Yemen is San'a, which lies on the al-Jehal plateau (2,175 m above sea-level).

Physically Yemen comprises the dislocated southern edge of the great plateau of Arabia. This is an immense mass of ancient granites, once forming part of Africa, and covered in many places by shallow, mainly horizontal layers of younger sedimentary rocks. The whole plateau has undergone down-warping in the east and elevation in the west, so that the highest land (over 3,000 m) occurs in the extreme west, near the Red Sea, with a gradual decline to the lowest parts (under 300 m) in the extreme east. The whole of the southern and western coasts of Yemen were formed by a series of enormous fractures, which produced a flat but very narrow coastal plain, rising steeply to the hill country a short distance inland. Percolation of molten magma along the fracture-lines gave rise to a number of volcanic craters, now extinct, and one of these, partly eroded and occupied by the sea, forms the site of Aden port.

An important topographic feature is the Wadi Hadramawt, an imposing valley running parallel to the coast at 160 km–240 km distance inland. In its upper and middle parts, this valley is broad, and occupied by a seasonal torrent; in its lower (eastern) part it narrows considerably, making a sudden turn south-eastwards and reaching the sea. This lower part is largely uninhabited, but the upper parts, where alluvial soil and intermittent flood water are available, support a farming population.

Rainfall is generally scarce, but relatively more abundant on the highlands and in the west. The climate of the highlands is considered to be the best in all Arabia since it experiences a regime rather like that of East Africa: a warm, temperate and rainy summer, and a cool, moderately dry winter with occasional frost and some snow. Aden receives 125 mm of rain annually, all of it during winter (December–March), whilst in the lowlands of the extreme east, it may rain only once in five or 10 years. In the highlands a few miles north of Aden, falls of up to 760 mm occur, for the most part during summer, and this rainfall also gradually declines eastwards, giving 380 mm–500 mm in the highlands of Dhofar. As much as 890 mm of rain may fall annually on the higher parts of the interior, off the Red Sea coast, with 400 mm–500 mm over much of the plateau; but the coast receives less than 130 mm generally, often in the form of irregular downpours. There is, therefore, the phenomenon of streams and even rivers flowing perennially in the western highlands but failing to reach the coast.

Ultimately, to the north and east, rainfall becomes almost negligible, as the edges of the Arabian Desert are reached. This unusual situation of a reversal in climatic conditions over a few miles is thought to be the result of two streams of air; an upper one, damp and unstable in summer, and originating in the equatorial regions of East Africa; and a lower current, generally drier and related to conditions prevailing over the rest of the Middle East. In this way the low-lying coastal areas have a maximum of rainfall in winter, and the hills of Yemen a maximum in summer. Temperatures are everywhere high, particularly on the coastal plain, which has a southern aspect: mean figures of 25°C (January) to 32°C (June) occur at Aden town, but maxima of more than 38°C are common. Owing to this climate gradation from desert temperate conditions, Yemen has a similar gradation of crops and vegetation. In the interior, off the Red Sea coast, the highest parts appear as 'African', with scattered trees and grassland. Crops of coffee, qat, cereals and vegetables are grown, while, lower down, 'Mediterranean' fruits appear, with millet and, where irrigation water is available, bananas. The date palm is the only tree to grow successfully in the coastal region.

To the east, except on the higher parts, which have a light covering of thorn scrub (including dwarf trees which exude a sap from which incense and myrrh are derived), and the restricted patches of cultivated land, the territory is devoid of vegetation. Cultivation is limited to small level patches of good soil on flat terraces alongside the river beds, on the floor and sides of the Wadi Hadramawt, or where irrigation from wells and occasionally from cisterns can be practised. The most productive areas are: Lahej, close to Aden town; two districts near Mukalla (about 480 km east of Aden), and parts of the middle Hadramawt. Irrigation from cisterns hollowed out of the rock has long been practised, and Aden town has a famous system of this kind, dating back many centuries. Today, however, the main system of irrigation is provided by floodwater.

The area of Yemen is approximately 536,869 sq km (207,286 sq miles) and its population was 14,587,807 at the census of 16 December 1994.

History

ROBIN BIDWELL

Revised for this edition by RICHARD I. LAWLESS

PRE-ISLAMIC YEMEN

In the millenium before Christ there were three centres of civilization in the Arabian peninsula; one in the north-west around Madain Salih, the second based in Bahrain and in what is now the United Arab Emirates (UAE); and the third, the most advanced, in the Yemen. Traditional Arab genealogists assign to the Yemenis a different ancestor (*Qahtan*) from that of the northern tribes (*Adnan*). Yemen was unique amongst ancient civilizations in that it was not dependent on a great river, but relied upon rainfall to irrigate terraced fields, controlling the waters by a sophisticated system of dams, of which the one at Marib was famous throughout Arabia. In addition to flourishing agriculture, the incense trade and the use of its ports as a link between India, China, Africa and the Mediterranean made it one of the richest regions of the ancient world. References in the Bible and Classical authors and archaeology indicate that it had a social structure that has endured even into this century: towns with an hereditary literate class, trades divided into noble and ignoble, settled agriculturalists and, separate from these, tribesmen who were sometimes soldiers and sometimes predators. The chronology is uncertain, but it is clear that about 110 BC the whole area including what are now parts of Saudi Arabia and Oman came under the domination of the Himyarites whose rule continued almost until the rise of Islam at which time, after half a century of Abyssinian rule, Yemen had recently been conquered by the Persians.

EARLY ISLAMIC YEMEN

The Persian *satrap* appears to have accepted an invitation from the Prophet to adopt Islam and, according to tradition, the whole of the great tribe of Hamdan, the ancestors of the Hashid and Bakil tribes, were converted in a single day by Muhammad's son-in-law Ali; this forged a link between them and the Hashemites which lasted until the Revolution of 1962. Although huge numbers of Yemenis served in the Islamic armies (which conquered territories from the Atlantic to the borders of China), for a while it seemed that Yemeni particularism might prove too strong to accept a religion of foreign origin, and a series of revolts occurred. The Caliphs of Baghdad took little interest in such a remote area and in 822 their local governor, Ibn Ziyad, revolted and reunited most of the old Himyarite state under his own rule from the city of Zabid. Although short-lived, this had the effect of splitting the Yemen away from the main Arab Empire and reasserted its individuality.

The second half of the ninth century was a period of religious strife as the Ismailis attempted to seize control of the Yemen. In 1037, while the Ismailis were ruling in Cairo, a local chieftain conquered most of the old Himyaritic area and ruled it from San'a in their name. The Sulayhid dynasty survived in great prosperity for almost a century, but as it declined local governors asserted their independence. In 1174, the great Saladin (Salah ad-Din al-Ayyubi), who had overthrown the Ismailis in Egypt, sent his brother to destroy their adherents in Yemen and once again most of south-west Arabia was governed by a single ruler. The Ayyubids remained for half a century and left affairs in the hands of an official, ar-Rasul, who later assumed an independent sovereignty.

The Rasulids, from their capital at Taiz, had diplomatic relations with Persia, India and China and were so effective that they were able to organize a trilateral campaign by land and sea against a rebellious vassal in Dhofar. Their state, in turn, disintegrated and the area was totally fragmented when the Portuguese attacked Aden in 1513.

FROM THE SIXTEENTH TO THE EARLY NINETEENTH CENTURY

The fear that the Portuguese might establish a presence in southern Arabia which could serve as a base to attack the Holy Places led to the intervention of the Ottoman Sultan. An army, using firearms for the first time in the area, succeeded in installing a Pasha in San'a who ruled almost all of the historic Yemen. The Zaidis in the mountains remained detached and in the east the Kathiri family established a semi-independent state in Hadramawt, although they acknowledged Ottoman sovereignty. The discovery of the route to India round the Cape practically destroyed the importance of Aden as an entrepôt, but, from *c.* 1600, British and Dutch traders travelled to Mocha to buy coffee and sell textiles.

At about the same time a new Zaidi Imam launched a guerrilla war against the Turks who, after nine years' fighting, agreed to leave him in control of the area north of San'a. His son launched a religious and national war which, in 1636, led to their departure. He and succeeding Imams brought the whole of South Arabia, including Dhofar and Asir under their rule.

Once more central authority declined and in 1728 the Governor of Lahej and Aden proclaimed himself an independent Sultan and his example was followed in Asir and most of the South. By the time the explorer Niebuhr visited San'a in 1763 the writ of the Imam was only valid in San'a, Taiz and the Tihamah.

In 1804 the Wahhabis occupied Mecca and Medina and also penetrated into the Tihamah. Some years later the Ottoman Sultan, as Protector of the Holy Places, requested his vassal Muhammad Ali, Pasha of Egypt, to expel them. This he did and went on to take over the Tihamah and monopolize the coffee trade; in 1837 he bought control of Taiz.

In 1834, taking advantage of the plundering of an Indian vessel flying the British flag, the Bombay Government sent Captain Haines of the Indian navy to exact restitution and at the same time to negotiate for the purchase of Aden (a valuable fuelling station between Britain and India). The Sultan of Lahej, fearing that it might be seized by the Egyptians, agreed to sell but then reneged on the deal. His son then tried to kidnap Haines in order to repossess the document and this provided a pretext for an attack in which Aden was stormed on 19 January 1839.

In 1841 as part of a general peace settlement Muhammad Ali Pasha evacuated his troops from Yemen. A period of lawlessness ensued, during which the Imam requested a treaty of protection with the British. Haines, who was at that time Political Agent in Aden, was ordered to refuse. The Turks decided to reassert control and in 1849 they occupied Hodeida.

THE BRITISH IN ADEN 1839–1918

At the time of the conquest, Aden was in a state of dilapidation with about 600 inhabitants, but Haines had the vision to realize that it could be built into a great port to serve the hinterland and resume its historic role as an entrepôt. In seven years the population rose to 25,000. After repelling two attempts by the Sultan of Lahej to recapture the town, Haines sought the friendship of the local tribes by giving small subsidies to their leaders, often through the Sultan of Lahej, and by abstaining from interference in their internal affairs. Aden became a free port in 1850 and from 1869 benefited from the substantial increase in shipping that resulted from the opening of the Suez Canal, although until 1881 it was not master of its own water supply. Aden was a military base, secured by the acquisition of Perim Island and Little Aden, which had been sought by the French, and occupation of part of the Somali coast which ensured that no hostile power could dominate the entrance to the Red Sea. The Kuria Muria Islands were a gift to Queen Victoria from Saiyid Said of Oman.

In the early 1870s the Turks in San'a established contact with some of the tribes, including those of Hadramawt, that had been at least nominally subject to the Ottoman Sultan during the first occupation. This alarmed the British who pre-

sented Constantinople with a list of nine tribes that they regarded as under their sphere of influence and in which they would oppose Turkish interference. The Turks occupied part of the Sultanate of Lahej, but withdrew in December 1873 after strong diplomatic action in Constantinople. The British then consolidated their position with a series of treaties, similar to the Exclusive Treaties with the Gulf Sheikhdoms, signed with the tribes, who, in return for protection against outside attack and regular subsidies, undertook to refrain from correspondence with foreign powers to whom they were not to cede any territory without approval. These events were significant in Yemeni history because for the first time southern Arabia was formally divided into two distinct territories separated by a boundary which was apparent to the tribes and recognized by international agreement.

Despite proposals by the British Foreign Office that Aden should be taken over by the Colonial Office, it continued to be administered as part of the Bombay presidency. Consequently, Aden began to adopt a distinctly Indian style of government and trade. Despite the emergence of small numbers of educated local Arabs, the increasing use of English and Urdu words and expressions made its colloquial language difficult for outsiders to understand and it took on a cultural identity of its own which was quite different from the traditional Arab background of San'a.

THE TURKS IN YEMEN AND THE FIRST WORLD WAR

The Turks had occupied Hodeida in 1849 and, after concluding a treaty with the Imam, proceeded to settle in San'a but were expelled with heavy casualties by its inhabitants. There followed twenty years of near-anarchy until the opening of the Suez Canal enabled Constantinople to send large reinforcements by sea as part of its general policy of reasserting its position in Arabia. San'a was occupied again in 1871 and while the Zaidis were left alone, the rest of the country was virtually controlled by occupying forces despite frequent skirmishes with the tribes. Yemen was regarded as a place of exile for Ottoman officials whose financial dishonesty and lax morals caused great resentment.

In 1891 Muhammad Hamid ad-Din was elected Imam and, taking the regnal name assumed by the leader of the seventeenth century revolt, he issued a proclamation denouncing the religious unworthiness of the Turks to rule the country, once again showing the symbiosis of Zaidi doctrine and Yemeni nationalism. Soon all the highlands rallied to him but Constantinople retaliated by sending a notoriously ruthless Pasha who crushed the rebellion. The Turks then attempted to modernize their administration, but the secular nature of many of their reforms alienated the Shafai inhabitants of the Tihamah and Hujariyah.

In 1904 Muhammad's son, Yahya, succeeded him as Imam and called for a new uprising. In addition to their immorality and secularization, he was particularly incensed by the Turkish agreement with the British to delimit a frontier which he regarded as recognizing the separation of territory he considered as part of historic Yemen. Despite the deployment of almost 100,000 troops, the Turks were unable to destroy Yahya's tribal levies and in 1911, anxious to redeploy their troops to confront the Italian invasion of Tripoli and imminent war in the Balkans, they concluded with him the treaty of Da'an. Yahya conceded that the Ottoman Sultan was responsible for the defence and foreign affairs of the Islamic community as a whole, including Yemen, in return for non-interference in the religious and legal affairs of the Zaidis: in effect he was left in control of the Highlands while the Turks ruled the Tihamah where unrest continued.

Despite several British efforts to buy his support after the outbreak of war in 1914, Yahya remained loyal to the treaty. The Turks, by exploiting British military incompetence, occupied Lahej and besieged Aden for over three years. Having failed to win over Yahya, the British sought to undermine his position by providing the intensely ambitious *de facto* independent ruler of Asir, Said Muhammad Ali al-Idrisi, with the financial means to subvert the Hashid and Bakil tribes and encouraged plots to overthrow the Imam. Yahya also resented apparent British support for the pretensions of Sharif Hussain of Mecca to be King of the Arabs and the seizure of Kamaran, just off the Yemeni coast. The Turks occupied the north-western part of the Protectorate, tried unsuccessfully to incite the tribes east of Aden and only withdrew after their Government, defeated elsewhere, sought an armistice.

BRITISH RELATIONS WITH THE IMAM YAHYA

After the war, relations between Yahya and the British Government were extremely uncordial. They deteriorated further when, upon the withdrawal of the Turks from territories within the recognized area of the Aden Protectorate, Yahya sent his troops to replace the Turkish contingent while the British seized Hodeida and encouraged al-Idrisi to extend his influence in the Tihamah where, as a Shafai, he was preferred to the Zaidi Imam. When Hodeida was evacuated, al-Idrisi was allowed to occupy it. The British then attempted to conciliate Yahya in the same way as had been the strategy with other Peninsular rulers, most of whom received subsidies from Britain in return for accepting direction in their foreign affairs. A mission sent for the purpose was detained in Tihamah by Shafai tribesmen opposed to the Imam. Negotiations lingered on because the British wished to discuss details of a frontier which Yahya, claiming by right of inheritance all that had once been ruled by his Himyaritic ancestors, declared had no legal existence. He also denied the right of the authorities in Aden to have relations with the Protectorate chiefs whom he regarded as Yemeni subjects. After a serious incident in 1928 the British bombed Taiz and other cities and Yahya agreed to withdraw his troops.

In 1933 Yahya, aware of the probability of war with Ibn Sa'ud on his northern frontier, settled his dispute with the British. In the Treaty of San'a, signed in February 1934, he tacitly accepted the boundaries agreed between Britain and the Turks, although he considered this as merely permitting Aden to administer part of his territory. In deference to his claims, no further boundary pillars were erected and no further survey carried out. It was agreed that no changes would be made in the boundaries for 40 years after which the matter would be discussed again. The British elevated Yahya's status by recognizing him as King. The treaty ushered in a period of generally peaceful coexistence which lasted for the rest of the reign of Imam Yahya. He resented the toleration of his political opponents in Aden while the British were concerned about his apparent friendship with Fascist Italy, although during the Second World War he remained strictly neutral.

POST-WAR ADEN AND THE HINTERLAND

In 1937, in addition to the hinterland, the Colonial Office had taken control of Aden itself. In 1947 a nominated Legislative Council for Aden was established and in 1949 the first elections, for a township authority, were held. Meanwhile, the town was transformed by the construction of a refinery, and the efficient bunkering service that followed ensured that Aden, still a free port, was by 1957 fourth after London, Liverpool and New York in the amount of shipping that it handled. Local industries were created to satisfy the needs of a population which trebled within a few years and increased still further after the British Government's Defence White Paper of 1957 made the Colony the largest British military base outside Europe. The increase in prosperity enabled the Government in Aden to establish what were, at the time, the best social services in the Arab world. Most who came to work in Aden were from the North, and locally-born Arabs were outnumbered by Yemeni immigrants.

There was no evidence of discontent with colonial rule before December 1947, when there was a general strike, followed by riots in which more than 100 people were killed, as a protest against British policy in Palestine. Subsequently three nationalist groups emerged—the Aden Association, which aimed at eventual independence within the Commonwealth, to be achieved by co-operation; the South Arabian League, seeking independence for a united Colony and Protectorate under the Sultan of Lahej; and a radical United National Front, demanding union with Yemen and Muscat as a republic.

These movements were supported by the freest press in the Arab world, but it was the rise of a trade union movement that strengthened their position. At a time when the voice of Nasser could be heard through the newly-invented transistor radios, the Imam's union with Egypt led to the first talk of 'the occupied South', and, when a reform gave the elected members a majority

on the Legislative Council, the question arose of votes for immigrants from North Yemen, who constituted the majority of trade unionists. When, in January 1959, voting was held for 12 seats, there was a boycott by many Arabs: nine Arabs, two Somalis and an Indian were elected.

After the Treaty of San'a, the administration in Aden believed that more should be done for the Protectorate, and the first measure was to appoint a political officer and to enlist local tribesmen to police their own areas. There was a considerable increase in security, and progress was made in educational, health and agricultural matters. In 1937 the Qu'aiti Sultan of Mukalla had become the first ruler to bind himself to accept a resident adviser and 'for the welfare of his state to accept his advice in all matters except those concerning Muhammadan religion and custom'. Within five years the area had an effective, locally-run administration, directed by a State Council.

The hinterland was divided into the Eastern and Western Aden Protectorates (the EAP and the WAP, respectively). The EAP comprised the Hadramawt, the coastal strip of Mahra and the associated island of Socotra, and two minor Wahidi sultanates to the west of Mukalla with a total population estimated at 326,000. The WAP consisted of 17 states and various territories where there was no administration of any sort and which were never even visited by government officials, Arab or English.

Advisory treaties were later signed with the other states of the EAP and with many of those of the WAP. Their effect depended upon the working relationship that the adviser could establish with his local ruler for he had no executive powers. A Sultan who rejected 'advice' tendered through the Governor could be deposed, but this needed the approval of the Secretary of State for the Colonies, who often had little time for the misconduct of a minor sheikh. An Arab chief who was knowledgeable about the area and who was liked or feared by the people, could normally impose his views upon a transitory British official. In practice the sultanates were not colonies because they enjoyed a large degree of independence, albeit hampered by financial dependence on the British.

During the Second World War British intervention increased because of the need to maximize local production of food. By 1954 the number of chiefs in relation with Aden had grown to more than 50 and this incensed the Imam who imposed his own interpretation of the Treaty of San'a, which he declared to have been violated. He therefore initiated a determined effort to incite the tribes to revolt against Christian encroachments. This caused the Governor, Sir Tom Hickinbotham, to reverse the old policy of relying on tribal particularism in order to prevent union against the British and to attempt to form a federal union which would create a distinct South Arabian nation. He attempted, but failed, to impose a ready-made formula, which made no mention of eventual independence and was unsuited to local conditions.

The idea of federation, despite its failure, provoked the Imam into intensifying his efforts to arouse subversion. He was assisted by Egyptian and Russian advisers and technicians. Violent incidents culminated in the spring of 1958, when an estimated 1,000 dissidents besieged a British political officer in a fort near the frontier while, at the same time, bombs were being thrown in Aden Colony. The idea of federation also encouraged the Sultan of Lahej to attempt to unite South Arabia under his own rule and consequently began to recruit adherents in other states while at the same time he talked of joining the Arab League and of employing Egyptian advisers. He was deposed.

The double threat from Lahej and Yemen, which would become more dangerous when Badr, known to be pro-Nasser, succeeded his father; the fact that the increase in economic activity made the existence of customs posts every few miles an absurd inconvenience; and the possibility that oil would be discovered in Hadramawt which would be unlikely to share its benefits unless there was some form of unity, revived the idea of federation. The British authorities primed the most trusted amirs with financial rewards and promises and feigned surprise when the rulers of six WAP states, Beihan, Audhali, Fadhli, Dhala, Lower Yafa and the Upper Aulaqi Sheikhdom travelled to Britain to request assistance in forming a federation.

THE MUTAWAKILITE KINGS (1919–1962)

During the war in 1914 Yahya had only exerted authority in the Zaidi areas and after the departure of the Turks, al-Idrisi made a determined effort to assume control of the Shafai areas. In 1920, however, the British discontinued his subsidy and his supporters decreased. He died in 1923, leaving feuding successors and a situation in which both Yahya and Ibn Sa'ud could intervene. Although a certain amount of fighting was involved, Yahya managed to bring both Zaidi and Shafai areas under either his own control or that of friendly chiefs. British officials travelling to San'a to negotiate the treaty of 1934 were astonished at the tranquillity of the country, which contrasted strongly with the insecurity prevailing in the Aden Protectorate.

Yahya managed to retain some Turkish soldiers and officials to form a backbone for his administration but otherwise he relied upon the traditional allies of the Imamate—the Saiyids and the traditional literate class of Qadis and upon the Hashid and the Bakil to comprise an armed force.

Yemen, before the discovery of petroleum in the Peninsula, was practically the only state that was self-supporting and Yahya saw no need for foreigners who might interfere with his independence and corrupt his people. Not even Arab states were permitted to establish embassies in San'a, foreign newspapers were forbidden, prospecting for petroleum or minerals was prohibited and though some weapons were obtained from Italy, Yahya ensured that it exercised no political influence. His determination to reconstitute the Himyarite 'empire' led to maladroit encroachments in Asir and Najran which culminated in a war with Saudi Arabia. An army under the future King Faisal advanced through the Tihamah, capturing Hodeida, but Ibn Sa'ud, unwilling to commit his troops to fighting in the mountains and to risk European intervention, made peace on generous terms, although Yahya had to withdraw his claims to Asir and Najran. Towards the end of his reign, Yahya joined the Arab League and the UN, uniting with other Arabs in opposition to Zionism.

Yahya had allowed young men to study abroad and had even sent some to Baghdad for military training. They returned convinced of the backwardness of Yemen and formed an opposition group, the *Ahrar,* the Free Yemenis, based in Aden where they received support in the local press. They were financed by merchants who wished to end royal monopolies. Yahya had provoked some of the religious leaders by breaking Zaidi tradition in requiring oaths of allegiance to his son Ahmad as Crown Prince. This particularly affronted the influential Saiyid Abd Allah al-Wazir who considered his right to the throne at least equal to that of Ahmad. These dissidents coalesced in a 'Sacred National Pact' which would establish a constitutional Imamate under al-Wazir, and enlisted tribal outlaws who in February 1948 assassinated Yahya in the first post-war coup in the Arab world.

Ahmad, though personally unpopular, managed to rally the tribes because of the shock of the murder, the failure of the new regime to attract support at home or abroad, and a promise that his tribal followers might sack San'a. He moved the capital to Taiz and ruled as autocratically as his father had done, showing the same immense knowledge of the country and intuitive understanding of the causes of local events. He survived a failed military coup and several assassination attempts.

He ended the country's isolation, admitting resident ambassadors, giving concessions to oil prospectors, accepting Soviet aid to develop Hodeida harbour and a Chinese-built road up to San'a. He maintained the claim to rule the whole of South Arabia and his dislike of the British, intensified by suspicions that they had connived at the murder of his father and by their adoption of a forward policy in the Aden Protectorate at a time when imperialism was in retreat elsewhere. In 1953, with the support of other Arab states, he raised the issue with the UN. He feared that the British might formally annex Shabwa, where there was believed to be oil. His officials fomented trouble across the frontier, attracting malcontents with arms and money. In order to acquire arms he signed a treaty in 1955 with Saudi Arabia and Egypt and later made agreements with several Eastern Bloc countries. Criticism grew of his reactionary and arbitrary policies, but he disconcerted his opponents by joining with Egypt and Syria in the United Arab States, which implied the backing of Nasser, the champion of radical Arab nationalism.

In April 1959 Ahmad was the first Imam ever to leave the country, travelling to Rome, Italy, for treatment for morphine addiction. The unnatural union did not survive Egyptian intervention during his absence and he denounced it. Consequently, hostility to Nasser led to a *rapprochement* with the British. He reverted to morphine addicton after another assassination attempt and gradually allowed Badr to assume power before his death in September 1962.

THE FEDERATION OF SOUTH ARABIA

After a treaty in which the British extended to the new entity, as a whole, the Protectorate Treaties previously concluded with its individual members, the federation came into existence in February 1959. The British would continue to meet the cost of its defence. Its ultimate aim, for which the Colonial Secretary pledged help to prepare, was independence. A new capital, al-Ittihad, was built and Sultans, sitting as the Supreme Council, constituted its only political and legislative organ. The ruler of each state, eventually numbering 17, had to be given a cabinet portfolio. The federation, dependent on British officials and British finances, initially appeared to be an instrument for British foreign policy and was never recognized by Arab Governments, many of which worked to destroy it. Nevertheless, considerable economic and some social progress was made, and in 1961 the federation acquired its own armed forces, consisting of five infantry battalions, an armoured car regiment with signals and administrative units.

In 1961 the British Government, believing that the security of the base in Aden was threatened by the turbulence engendered by trade union activists, now calling themselves the People's Socialist Party, decided to overwhelm the nationalists there by merging the Colony into the new federation. Britain would retain sovereignty over the Colony. Many Aden politicians were strongly opposed, but enough were coerced or bribed and some genuinely supported it. A motion to unite was forced through the Legislative Council in September 1962 and took effect from January 1963, but many, particularly the intellectuals, never ceased to resent the way in which merger was brought about. All those with grievances found a ready hearing amongst those in the British Labour Party who were ideologically opposed to a government of Sultans.

Mutual jealousies amongst the rulers meant that the federation had neither a president nor a prime minister and its titular head was the Chairman of the Supreme Council—an office which rotated monthly. The important states of the EAP refused to join and the British declined to coerce them although federal leaders saw their membership as vital. A constitutional conference arranged for December 1963 had to be postponed when a grenade was thrown amongst the rulers assembled at Aden airport, and it did not take place until June 1964. The leaders assembled in London, England, were relentlessly intimidated by the Colonial Secretary, Duncan Sandys, to the extent that one of the founding Sultans defected, joining the nationalist opposition in Cairo, Egypt. It was announced, however, that independence would come in 1968 and that in the interim there would be a president and a prime minister, an elected assembly and complete arabization of the civil service. These reforms were not implemented, for there was no agreement as to who should occupy the principal offices and outside Aden there was still no real administrative structure and no political organization to mobilize the people in support of the federation. The rulers, in offices in the capital, started to lose touch with what was occurring in their home states. Aden remained under a state of emergency imposed after the grenade attack and there was an increasing tendency amongst British officials to see its population as 'disloyal' in comparison with the 'trustworthy' Sultans.

The Yemeni Revolution had brought bribed Egyptian officers to the frontier to incite subversion. With their encouragement, young men from the Protectorates, inspired by the ideals of Arab nationalism, formed the National Liberation Front (NLF, which was allegedly entirely financed by Egypt) announcing in a declaration of 14 October 1963 that they intended not merely to expel the British from South Arabia, but to make a socialist revolution. Their first triumph was to provoke a tribal revolt in Radfan which was suppressed by the use of British troops, helicopters and even heavy bombers. The campaign attracted wide publicity and led to criticism by left-wingers in Britain and the Arab world which seriously damaged the image of the federation, in whose name it was undertaken. Further denunciation followed the destruction of a Yemeni fort after Egyptian aircraft had dropped bombs on the territory of the federal Government which then invoked the Defence Treaty with Britain. The anti-colonial group at the UN became increasingly interested in the area, passing, in 1963, Resolution 1949 which called for self-determination for South Arabia, elections under UN supervision and the removal of the British base. Doubts about the future of the federation increased after the election of Harold Wilson as the Prime Minister of the British Government in October 1964.

In April 1964, visiting San'a, Nasser had sworn 'by Allah, to expel the British from all parts of the Arabian peninsula' and a campaign of urban terror was launched to make Aden ungovernable. It was estimated that between December 1963 and May 1966, 60 people were killed and 350 injured in Aden alone, one-third of the casualties being British. On joining the federation Aden had been permitted a chief minister and Abd al-Qawi Makkawi, appointed to that post in March 1965, appeared more anxious to appease the terrorists than to collaborate with the British. He denounced the state of emergency and the banning of the NLF. After Makkawi had publicly refused to condemn the murder of a respected official, he was dismissed by the Governor, Sir Richard Turnbull, who suspended the Constitution and imposed direct colonial rule in September 1965. He went into exile, joined soon afterwards by Asnaj and they and the NLF amalgamated, as a result of Egyptian pressure, to form the Front for the Liberation of Occupied South Yemen (FLOSY).

Financial difficulties and the need to conciliate internal party opposition led the Wilson Government, in February 1966, to announce that there was no further need for the Aden base—the defence of which had been the paramount reason for creating the federation. Moreover, there would be no further British military presence in South Arabia after independence in 1968. The federal leaders, realizing that they had isolated themselves from much of the Arab world by supporting the British, felt betrayed and defenceless. Around the same time militants of the NLF became more radical, finding the ideas of Mao and Guevara more to their liking than those of the bourgeois Nasser and of the FLOSY leaders and, by bank robberies and extortion, they freed themselves from financial dependence on Egypt. Assisted by fellow tribesmen in the police force and the federal armed forces, they fought the British and at the same time wrested control of the Aden streets from FLOSY. Aden was still formally a Colony and the British refused to allow the federal Government to use its own forces to improve security there and its members started to lose confidence in their own future and attempted to negotiate on a basis of Resolution 1949. In December 1966 the NLF declared itself the sole representative of the people of South Arabia.

The British Government was now preoccupied with withdrawing from South Arabia with the minimum cost in British lives and with the lesser objective of leaving a stable government behind. Various expedients were tried, including inviting help from Nasser and from the UN, promising a short-term security cover and working for an alliance between the federal Government and the NLF, with which secret contacts were established. It was even hoped that Saudi Arabia might take over responsibility for the area. There was also a desperate attempt to organize a new administration under an Adeni premier, after a brief but bloody military mutiny in June 1967 but this failed owing to the jealousies of the tribal ministers.

The NLF started to take control of state after state in the hinterland and on 4 September 1967 the High Commissioner stated that the federal Government had ceased to exist. Although the NLF was known to have extreme left-wing views, the British preferred it to the pro-Nasser FLOSY and assisted its assumption of power. FLOSY, deprived of external support as a result of the Egyptian withdrawal from Yemen, was defeated with heavy losses after the federal army declared support for the NLF. The handover to the NLF was formalized by a meeting at Geneva, Switzerland, after which force and threats were used by the British to prevent any of the federal rulers from returning home.

REVOLUTION AND EGYPTIAN INTERVENTION IN THE NORTH

The Imam Ahmad died on 19 September 1962 and Badr assumed the throne. Nasser welcomed this development as it seems likely that he had sanctioned a coup against Ahmad but ordered its postponement on his death as he regarded Badr as an ally who would support his version of Arab nationalism. His instructions were, however, disregarded by the Commander-in-Chief, Field Marshal Abd al-Hakim Amer, who was anxious to find an independent and profitable source of revenue for the Egyptian army. With the help of Egyptian officers, Yemeni officers on the night of 26/27 September bombarded the palace of Badr and announced that he had been assassinated. A senior officer, Col Abd Allah Sallal, who does not seem to have been involved in the coup, was proclaimed President in the expectation that he would later be replaced. Within days, in order to 'oppose any foreign intervention', Egyptian troops arrived with such speed that they had clearly been deployed beforehand, in anticipation of the coup.

The Royalists rallied under Badr's uncle, Hassan, who was proclaimed Imam and called for the tribes to rally to him. Although many supported the new Imam, the traditional allies of the Imamate, the Hashid and Bakil, whose chiefs had suffered at the hands of Ahmad, did not. Hassan set up a government in Saudi Arabia and also received help from the federal rulers of the south, with the connivance of the British. In October the Royalists captured Marib in the east but were repelled at Sada in the north. The Egyptians, knowing that this could not have been achieved without Saudi help, bombed Saudi towns and the two countries appeared on the brink of open war. Sallal called for all-out war, proclaimed a republic of the Arabian peninsula and demanded the return of Najran and Asir.

In November 1962 Badr reappeared, gave a press conference, and resumed the Imamate. The Americans, believing that the republic controlled the whole country and anxious to conciliate Nasser, recognized the new regime but the British who were better informed, did not and their legation was closed. The Yemen Arab Republic (YAR) was admitted to the UN.

Sallal promoted himself Field Marshal and was determined to rule. However, despite several attempts to secure constitutional legitimacy, he was never able to do so. Practically without local adherents, he had to rely on the Egyptians, who, though they often treated him with contempt, were unable to find a more convincing representative. The Egyptian forces were increased, in 1963 numbering about 28,000, and in April the UN attempted to bring about the disengagement of Egyptian and Saudi forces by providing an Observer Mission (UNYOM) but as it was not forbidden to contact the royalists, it proved totally futile and was withdrawn in September 1964.

Many Yemenis came to realize that their country was merely providing a battlefield on which Nasser and King Faisal were contesting the leadership of the Arab world. Moderate republicans and moderate royalists therefore attempted to make a peace between Yemenis at a conference at Erkowit in Sudan in October 1964. They agreed that both Badr and Sallal should relinquish power and that Egyptian forces should be asked to leave, but the initiative failed owing to the intransigence of the Egyptians and of Sallal. A cease-fire was proclaimed, but it lasted only a few days and was followed by a series of royalist successes, which left them in control of one-third of the country. The republicans split and the moderates, led by the Prime Minister, Ahmad Nu'man, tried to make peace but were again frustrated by Sallal's belligerence.

Nasser, realizing that he could not win a war which was becoming extremely unpopular at home, tried to end it by negotiating with King Faisal on the basis that he would withdraw his forces, now estimated at 50,000 provided the Saudis stopped supplying the royalists. Negotiations continued until the publication of a British 'white paper' on defence in February 1966, with the statement of the intended departure from Aden by 1968.

For the next year there was a stalemate—which the armed forces, subsidized by at least one side and with unusual opportunities to loot—were in no hurry to end. Egyptian military activity was confined to bombing and poison gas attacks, while the royalists were divided by internal feuds in the absence of Badr through ill-health.

The situation was transformed by the Egyptian defeat, by Israel, in the June War of 1967. At the Khartoum Summit, Nasser, now dependent upon Saudi Arabian financial assistance, agreed to withdraw his troops from Yemen. This was opposed by Sallal who feared for his own position but the withdrawal of Egyptian troops was nevertheless completed by the end of November, by which time he was out of the country on his way to seek alternative support from the Eastern Bloc. No one rallied to his support, there was no bloodshed and he was succeeded by a three-man Council headed by Qadi Abd ar-Rahman al-Iryani who had been one of the old *Ahrar* but had also been an adviser to the Imam Ahmad.

The royalists launched a major offensive and in December they began a three-month siege of San'a. The republicans, led by Gen. Hassan al-Amri, conducted a vigorous defence in which they were supported firstly by Soviet aircraft and secondly by the NLF which had by then taken power in Aden and which sent volunteers who succeeded in opening the road from Hodeida. Al-Amri, without the Egyptian forces previously thought indispensable, succeeded in reconquering much of the country, helped by intensified royalist feuding which led to the brief deposition of Badr by his cousin Muhammad bin Hussain. Many tribal chiefs defected.

By February 1970 King Faisal had decided that he could tolerate the moderate republic of al-Iryani, a pious Muslim, and indeed use it as an ally against the communist South. He therefore terminated all aid to the royalists and 'ordered' them to cease fighting. Nearly all except members of the ruling family returned and were integrated in the new regime which was then recognized by Saudi Arabia and the United Kingdom. It was estimated that during the war 200,000 Yemenis, 4% of the population, had been killed. Although the Egyptians had done some good work in improving education and other social services, they had also installed a ponderous bureaucracy, modelled on the one in Cairo, which was quite unsuitable for Yemeni needs.

THE SOUTH GOES LEFT (1967–1978)

Qahtan ash-Shaabi, the only one amongst the chiefs of the NLF with sufficient seniority to be credible as a statesman, had emerged as their leader at their first Congress at Taiz in 1965. He led the delegation to the Geneva talks and upon the formal take-over of sovereignty on 30 November 1967 he proclaimed himself President, Prime Minister and Commander-in-Chief. He at once declared South Yemen a unitary state, abolished the old sheikhdoms and demanded the abandonment of all tribal bloodfeuds. Other parties were banned, the press was controlled, a State Security Supreme Court was created and quickly established firm control throughout the country by means of a police force trained by East Germans. An uprising amongst the Aulaqis, who had been the greatest beneficiaries of the federation but who also had preferred FLOSY to the NLF, was crushed with such savagery that henceforth they played little part in affairs and an attempt by the Sharif of Beihan, with Saudi backing, to regain his state was defeated.

Relations with the United Kingdom deteriorated rapidly as advisers who had remained to assist in the build-up of new armed forces were expelled and replaced by Soviet advisers who also provided arms. The handing over to Muscat by the British of the Kuria Muria islands caused bitterness in Aden. Although it was believed that the USA had given covert help to the NLF when it was a clandestine anti-British movement, their military attaché was given 24 hours' notice to leave, and the controlled press made much of their connections with Israel and with Saudi Arabia which had emerged as the principal enemy of the new state.

On the day he assumed office ash-Shaabi declared that 'the aim of our Revolution has been since the beginning to unite both parts of Yemen. We are all one people'. He appointed one of the most influential NLF leaders, Abd al-Fattah Ismail, as Minister of Yemeni Unity Affairs; a similar ministry was set up in San'a. No ambassadors were appointed between the two Governments, whose relations were handled by these ministries. North and South helped each other against local opponents and there was talk of a Greater Yemen embracing Asir, Najran and even Muscat.

The country was in a desperate financial plight as a result of the ending of British subsidies and the departure of the large, free-spending expatriate community which coincided with the closure of the Suez Canal which had been Aden's only other source of income. Faced with the problem of actually running the country, ash-Shaabi showed a definite pragmatism by refusing to dismantle working institutions. Although he had been imprisoned by Nasser, ash-Shaabi believed, like the Egyptian leader, in egalitarianism, imposed by firm authority, and was in no way a communist. Opposing him was an extreme left group, under the leadership of Ismail and Ali Salim al-Baid which called for a complete new beginning with 'scientific socialism' based on rural soviets, collectivization of land, a people's militia, nationalization of banks and foreign trade and the export of revolution throughout the Peninsula. These policies divided the party at the Zinjibar Congress of March 1968 and the leftist view prevailed. Ash-Shaabi, however, persuaded the army that its status would be threatened by the proposed militia and, on his behalf, it arrested his leading opponents.

Ash-Shaabi had, however, been alarmed by the strength of the extremists and he moved to the left. He spoke of the socialist path and the redistribution of land. He took control of imports although he was still anxious to encourage the investment of foreign capital. He called on the Saudi people to overthrow their monarch and provided bases for the Dhofari rebels. His numerous visits abroad included Moscow and Pyongyang (North Korea) among the destinations. These moves, at a time when the YAR was moving into the Saudi orbit, led to verbal hostilities between San'a and Aden.

Ash-Shaabi had released his left-wing opponents and even included some of them in his Government. In June 1969 he quarrelled over the posting of an officer with the Minister of the Interior, Muhammad Ali Haitham, a man with very similar political views, and dismissed him. Haitham, who had considerable influence with the army and with the tribes, thereupon joined forces with the left, and later that month, in a bloodless coup, ash-Shaabi and his cousin, Prime Minister Faisal Abd al-Latif, were deposed. He was replaced by a five-man Presidential Council, chaired by Salim Rubai Ali and including Ismail and Haitham, who was appointed Prime Minister. The shift to the left was signalled immediately by the recognition of East Germany by the new Minister of Foreign Affairs, Ali Salim al-Baid. In October, having called on all Arab countries to follow his lead, he severed diplomatic relations with the USA.

There followed a period of harsh repression with constant speeches about conspiracies, mass arrests with special courts untrammelled by ordinary law 'to review anti-state activity'. Large numbers of citizens, some estimated up to a quarter of the population, fled abroad. The army, whose commander escaped to Taiz, and the police, were subjugated through purges and indoctrination. Military training started in schools. Ismail encouraged the spread of party branches throughout the country.

The Government called for revolution in 'the Occupied Gulf' and refused to recognize the independence of Bahrain, Qatar and the UAE. There was a frontier clash with Saudi Arabia at al-Wadiah in November 1969. Such strong support was given to the rebels in Dhofar that they also succeeded in capturing Salala. Haitham, however, worked to improve relations with the YAR and in November 1970 was the first South Yemeni Prime Minister to visit Taiz where he urged unification. A new Constitution, with its adoption of the name People's Democratic Republic of Yemen (PDRY) was announced. Drawn up by an East German and an Egyptian, its commitment to socialism, tolerance of Islam, stress on the rights of women, and vesting of all power in the party differed greatly from the Constitution adopted shortly afterwards in the YAR. This, drawn up after intensive local consultations, was, more than any other recent Arab Constitution, based on Islamic principles, with a constitutional court of *'ulama* (ulema), empowered to ensure that laws were based on Islamic principles.

Abd al-Fattah Ismail, as Secretary-General, was immersed in party and doctrinal affairs, building a following amongst the urban proletariat. Ali, the Chairman, visited the People's Republic of China, returning inspired by Maoist ideas of spreading the revolution in the countryside by encouraging the seizure of land by the peasants and in 1970 he signed a series of decrees nationalizing businesses and concentrating most economic activities in the hands of the state. In the same year Aden ceased to be a free port. Aid from the USSR alone kept the country afloat. Facing the problem of actually administering a country in a perpetual economic crisis, Haitham tried to moderate foreign and domestic policies to encourage foreign and local investment. His colleagues, Ali and Ismail, both adopted a more dogmatic approach and conspired against him. He was replaced in August 1971 by Ali Nasser Muhammad, the Minister of Defence. There followed a new wave of purges and arrests.

The Constitutions of 1970 had shown that there was no common ideological grounds between North and South Yemen and the financial dependence of one on Saudi Arabia and the other on the USSR prevented any move towards unity: indeed neither the Cabinet of the PDRY nor that of the YAR contained a Minister of Unity Affairs. The situation was intensified by the presence on Northern territory of thousands of exiles from the South, armed and funded by Saudi Arabia. Border incidents followed their incursions and a leading northern tribal sheikh was lured across the frontier and murdered with 60 of his followers. In San'a, army officers, who were partly funded by Saudi Arabia, called for war to end communism in the South. Each side accused the other of increasingly grave acts of aggression and in September there was widespread fighting which continued for several days, in the course of which the North captured Kamaran. An Arab League mission mediated a cease-fire and then, on 28 October 1972, to general amazement, an agreement was reached in Cairo, Egypt, which provided for a single unified state, with one flag, one capital, one leadership, with single legislative, executive and judicial organs. A formal Treaty of Union was signed between the two Presidents in Tripoli, Libya in November.

Eight committees were set up to discuss the details of unification with instructions to finalize proceedings within a year, after which a new Constitution would be put to a referendum. Saudi Arabia and the USSR both publicly welcomed the union but each feared that its own protegé would be the weaker partner and become submerged beneath the predominance of the opposing camp. Conservatives in San'a, who had contacts with Saudi Arabia, put obstacles in the way of progress and when in May 1973 a leading opponent of unification was murdered, it was generally believed that Aden had been responsible. President al-Iryani personally favoured unification but admitted that little progress had been made by the committees. After his removal from office, prospects for unity seemed to increase, for his successor, Lt-Col Ibrahim al-Hamadi, established cordial personal relations with Ali; each felt the support of the other would be beneficial in internal politics in which each was under threat, and in foreign affairs in weakening dependence on their respective patrons. They agreed on a gradual approach to unity through economic co-operation and in February 1977 they constituted a council of themselves and senior ministers to meet every six months. A joint diplomatic mission toured the oil states. There was speculation that there would be an important announcement concerning unification when al-Hamadi visited Aden in October 1974 but, two days before he was due to arrive, he was murdered. After his death Lt-Col Ahmad ibn Hussein al-Ghashmi, his successor, established closer contacts with the Saudis and relations with Aden deteriorated.

The death of King Faisal enabled the establishment of diplomatic relations with Saudi Arabia and in August 1977 Ali visited Riyadh. A cease-fire was announced with Oman. Kuwait and Abu Dhabi provided aid. Relations with Britain improved and the Aden refinery was taken over by agreement. In October 1977 at the UN Ali made preliminary overtures to the USA. He tried to maintain equal loyalty to the USSR and the People's Republic of China. All these moves angered Ismail who wanted friendship exclusively with the USSR and with Cuba which provided instructors. The foreign policy of the PDRY followed an erratic course as the two leaders struggled for control. Ismail managed to send troops to assist the new revolution in Ethiopia, the success of which was vitally important to the USSR. Ali, meanwhile, had arranged to receive an envoy from the USA.

It seems that at this juncture Ali attempted to establish with al-Ghashmi the same close ties that he had had with al-Hamadi. He sent a special messenger in whose briefcase a bomb, possibly placed by an agent of Ismail, exploded, killing both the YAR

President and the envoy. Fighting immediately broke out in Aden, either because Ali attempted to arrest his opponents or Ismail ordered an attack, in which it is said Soviet and Cuban elements took part, on the presidential palace. Ali was captured, found guilty of numerous crimes and executed.

THE NORTH GOES RIGHT (1970–1978)

Abd ar-Rahman al-Iryani, who had succeeded Sallal, played an indispensable role in national reconciliation after eight years of war. An obviously pious Muslim with a liberal background, he had to take account of a central government weakened by the war, conservative tribal sheikhs and the *ulama*, and young modernisers and townsfolk anxious for reform against a background of financial crisis with an army demanding expensive new equipment. He played a major part in drafting a Constitution which was a real attempt to find a political system suitable to the country. Consequently, the first (indirect) elections in Yemeni history took place in April 1971.

In foreign affairs he succeeded in creating good relations with all the Arab states and with the West without alienating the USSR. The YAR could reasonably be described as a neutral country, despite its government's dependence on Saudi Arabia for financial aid. This largesse was also extended to influential individuals, especially the tribal chiefs whose domination of the Consultative Council hampered moves towards the unity with the South agreed in 1972.

Within a month of its signature, its principal architect, the Prime Minister Mohsin al-Aini, a man of leftist tendencies but influential tribal background, resigned. Al-Iryani appointed a deeply religious conservative, Qadi Abdullah al-Hajari to succeed al-Aini. Al-Hajari immediately went to Riyadh to reassure the Saudis and received financial aid in return for renouncing the Yemeni claim to Asir and Najran. Al-Hajari made no attempt at administrative reform in a period of inefficiency and corruption and executed several supporters of unification. In August 1973, al-Iryani went into exile to show his discontent but returned to build up support against his Prime Minister whom, in February 1974, he felt strong enough to replace by the more competent and progressive Dr Hassan Makki. In June a plot backed by Iraq to overthrow the regime was discovered and al-Iryani opposed any strong action. When the army and tribal leaders threatened a coup, he resigned and went to live in Syria.

His successor was Lt-Col Ibrahim al-Hamadi, not a tribesman but a member of the Qadi class, who appointed al-Aini as his Prime Minister. He suspended the Constitution and the Consultative Council. Al-Hamadi gradually became immensely popular, with inspiring oratory, evident honesty and sincerity and his youth (he was about 30). He seemed to represent a new generation and engendered new hope after decades of harsh rule and civil war. He and al-Aini made a determined effort to eradicate corruption but in January 1975, feeling the need of a technocrat with financial expertise, al-Hamadi appointed Abd al-Aziz Abd al-Ghani as Prime Minister.

During 1975 al-Hamadi travelled widely, visiting nearly every Arab country, Iran and Europe. He returned with financial aid which would enable him to launch new projects and reduce dependence on Saudi Arabia, thus realizing one of his main objectives. He was concerned to develop rural areas on which he concentrated the ambitious development plan of 1977. He paid special attention to the Shafais and enlisted their help in making the army less a monopoly of Zaidi tribal notables. He aimed at a strong centralized state with wide political participation and he encouraged the emergence of the leftist National Democratic Front (NDF). These moves offended the practically independent northern chiefs, some of whom rebelled and were consequently bombed by the airforce. On the night of 11/12 October 1977 al-Hamadi and his brother were murdered. The assassins were never caught nor were the motives for the crime established. He was succeeded by the Chief of Staff, Ahmad al-Ghashmi, a tribesman of the Hashid confederation. A Shafai officer attempted to incite an uprising in Taiz but al-Ghashmi, with the help of the Zaidi tribes, crushed it and the rebels with other members of the NDF sought refuge in Aden where Ismail hoped to use them to bring about unity by overthrowing the Government in San'a. Al-Ghashmi therefore loosened ties with Aden and strengthened relations with Saudi Arabia. He spoke of democracy and nominated a 99-man Constitutional Assembly which was to prepare the way for eventual elections. Preoccupied with day-to-day affairs, he had neither the ability nor the time to make a mark on Yemeni history before his murder on 24 June 1978.

ABD AL-FATTAH ISMAIL AND ALI NASSER MUHAMMAD (1979–1986)

After the execution of Ali in July 1978 several days of heavy fighting ensued with a new flood of refugees to the North. Ali Nasser Muhammad became Chairman of the Presidential Council to which were added the communist, Ali Badeeb and the former guerrilla, Ali Antar. Ismail succeeded in his ambition of changing the NLF into a 'Vanguard Party'—the Yemen Socialist Party (YSP)—with stringent rules for admission and discipline and which contained all his close collaborators, including al-Baid. In December Ismail became Head of State.

The YAR, now led by Col Ali Abdullah Saleh, blamed Aden for the murder of al-Ghashmi and prevailed upon the other Arab states to suspend relations with the PDRY. In February 1979 the PDRY launched an attack against the North in an effort to bring about unity by force. In well-planned attacks the main frontier towns were captured and the YAR army appeared to be on the verge of disintegration. Other Arab states intervened and on 30 March in Kuwait the two Presidents signed an agreement to unite, almost identical with that signed nearly seven years before.

In January 1980 it was stated that 134 articles of a constitution had been agreed. Previously, Ismail had visited the USSR where he signed a Treaty of Friendship which appeared more intimate than those with other Arab states. There was general surprise when on 20 April 1980 he resigned on grounds of ill health, was given an honorary title and went into exile in the USSR.

Ali Nasser Muhammad resumed the Presidency and although he still maintained the Soviet alliance he showed that it was not exclusive by visiting Saudi Arabia, where he established his Muslim credentials by performing *umrah*. He also attended the Islamic Summit in Ta'if. Saudi Arabia gave generous help after floods in March 1982 in which it was estimated that 500 people had perished and 64,000 were made homeless. The hostility to Oman which had existed since independence and continued despite the defeat of the Dhofari rebels nearly a decade before finally ended with an agreement to exchange ambassadors, although this did not happen for several years.

The departure of Ismail did not end Aden's support for the NDF which was extremely active in 1980 and 1981. The two Yemens also adopted different stances in the Iran–Iraq War. San'a was, however, angered by not being allowed to join the Co-operation Council of the Arab States of the Gulf (Gulf Co-operation Council—GCC) and drew nearer to Aden. After a visit by Saleh, in December 1981, Muhammad agreed to reduce help to the NDF and the two Presidents laid down common foreign policy goals in which Saleh appeared to make concessions. They constituted themselves the Supreme Yemeni Council, which would hold regular meetings to discuss the practical details of unification. They also set up joint ministerial committees. Sessions in San'a in August 1983 and in Aden in March 1984 showed some co-ordination of foreign policy. In January 1985 the PDRY and the YAR agreed to co-operate in joint exploitation of natural resources.

Local elections were held in 1981 in which the YSP announced that it had received 94.6% support. Despite nearly 20 years of official condemnation of tribalism, it was noticeable that the President entrusted more and more posts to people from his native Dathina and Abyan. However, when in March 1985 Muhammad decided to divest himself of the premiership, a Saiyid from Hadramawt, Haidar Abu Bakr al-Attas, succeeded him.

In February 1985 Ismail returned from exile and was later given a place on the politburo. He was clearly concerned that Muhammad regarded the purity of Marxist-Leninist dogma as secondary to the practical needs of the country. In January 1986 Muhammad's attempt to arrest or kill his opponents at a meeting of the politburo was only partially successful and triggered a brief but intensive civil war in which at least 2,000, including 55 senior party figures, were killed. The tribes of

Dathina rallied to his side while those of the north-west fought to avenge Ali Antar, who had been killed in the Politburo fighting. Ismail disappeared and his body was never found: al-Baid, of whom Muhammad had hoped to rid himself, escaped. Some 6,000 foreigners were evacuated to Djibouti. Muhammad fled to Ethiopia where he was joined by the navy which had remained loyal to him. During the battle Saleh closed the frontier to prevent YAR tribesmen from joining either side.

ALI ABDULLAH SALEH AS PRESIDENT OF THE YAR (1978–1990)

Evidence that the assassination of al-Ghashmi in October 1974 was plotted from outside the YAR is provided by the fact that no group in San'a was prepared to take advantage of the incident. There was no obvious successor so a temporary Presidential Council was formed in 1978, under the chairmanship of the politically neutral Speaker of the Constitutional Assembly, Qadi Abd al-Karim al-Arshi. Nearly a month later the Assembly, by a large majority, elected as President, Lt-Col Ali Abdullah Saleh, commander of the Taiz military area, who was, like his predecessor, a tribesman of the Hashid. He appointed al-Arshi Vice-President and Abd al-Ghani retained his portfolio as Prime Minister. At first his position was extremely precarious and he was fortunate to escape assassination in September and to survive what appeared to be an attempted military coup, with backing from Aden, in October. The Shafai South, restless since the murder of al-Hamadi, was stirred up by the NDF, based on Aden. There were also reports of fighting in the regions of Sada, Marib and Jawf and the YAR appeared on the point of collapse as Saleh was forced to revert back to the old Imamate policy of relying on the Hashid and Bakil to deal with internal threats. Only the intervention of other Arab states saved the country from complete disaster during the war with the South in September 1979.

Over the next few years Saleh acquired the skills, shown by the old Imams, required to rule an unusually difficult country. He also made a persistent effort to win support by increasing public participation in government. One of his first speeches promised 'real democracy', starting with municipal elections which took place in 1979. Later that year he appointed a 15-man Consultative Council and expanded the membership of the Constituent Assembly. In February 1980 he announced that there would be a general election and in May he set up a 'committee for national dialogue' to prepare for it. He also launched a new party, the Unified Yemeni Organization, with a charter that comprised both the principles of the Revolution and the 'sublime principles of Islam'. In October he called into being a National Assembly of 1,000 representatives, 700 of whom were elected through elections in co-operatives which met in August 1982.

Progress towards elections was disrupted by increased activity by the NDF, whose leader, Sultan Ahmad Omar, stated that he would only participate if the Government committed itself to a series of measures which included land reform, nationalization of industry and less dependence on Saudi Arabia. The NDF overran considerable areas during 1981 but then Aden decreased its support and the Zaidi tribes, worried about the advance of the 'godless', rallied to the support of Saleh. Early in 1982 Saleh ordered a full-scale offensive, defeated the NDF and allowed the survivors to be reintegrated in the North.

In October 1980 there had been a change of Prime Minister when Abd al-Ghani, the Shafai economist, was replaced by another technocrat, an agricultural economist, Dr Abd al-Karim al-Iryani, a member of the Qadi class. In general Saleh's policy was to choose competent officials and not to interfere in administrative matters.

In foreign policy Saleh avoided total commitment either to the East or the West. The Saudis provided enough aid to keep his Government solvent but not enough to permit total economic independence. At the UN, the YAR abstained from voting on the Afghanistan question. Saleh's ministers sought aid and investment from the West but Saleh also needed to obtain Soviet arms and exert pressure on Aden to reduce its backing for the NDF. As a result relations between the YAR and Saudi Arabia were downgraded. Saleh refused to endorse the US Rapid Deployment Force but did not join the Tripartite Pact of Libya, Ethiopia and the PDRY formed to denounce it. The Republic did not join the GCC but sent volunteers to fight for Iraq against Iran. In December 1982 the YAR provided a base for 2,000 Palestine Liberation Organization (PLO) guerrillas after their expulsion from Beirut.

In 1984 Saleh revisited Moscow and signed a treaty of friendship similar to those concluded by the USSR with Syria and the PDRY, but refused to Libya. About the same time it was announced that although the USSR had failed to find oil in the YAR, the USA had succeeded in doing so. Western help was essential for its exploitation and also in the development of agriculture to which the Government attached almost equal importance. Also, in the same year, the YAR signed a five-year trade and aid agreement with the EC.

In November 1982 an earthquake devastated central Yemen, resulting in the deaths of more than 3,000 people and causing damage worth an estimated US $3,000m. In December al-Iryani was put in charge of reconstruction and Abd al-Ghani replaced him as Prime Minister. In 1985 al-Iryani was given the newly-created post of Chairman of the Supreme Council for Petroleum and Mineral Resources and another well-known economist, Dr Muhammad Said al-Attar was appointed Deputy Prime Minister and Minister of Development. Much of the attention of the Government had to be devoted to economic matters as the country exported less than 1% of the value of its imports. Until its petroleum could be fully exploited, the YAR was dependent upon aid and remittances from citizens working abroad and had to observe the utmost austerity in restricting imports. There was, however, a great improvement in the infrastructure with the spread of roads and electricity. A particularly striking feature of the 1980s was the emergence of educated women, holding responsible posts in business and administration. Central Government control was loose in the tribal areas with the mountain tribes benefiting both from Saudi subsidies and from smuggling goods across its border.

In May 1983 Saleh unexpectedly resigned, announcing that he would not stand for re-election. The Assembly, however, unanimously re-elected him for a further five years. In July 1985 the YAR held its first free elections when 17,500 representatives were elected to local councils working for co-operative development. About one-half of the electorate voted and the polls were seen as a significant development which would eventually bring into political life educated young Yemenis and weaken the powers of the tribal sheikhs. On 5 July 1988 the long-postponed general election took place for 128 seats in the new 159-member Consultative Council which replaced the old Constituent Assembly. The remaining 31 members were appointed by the President. More than a million registered to vote, including 60,000 women, and more than 1,200 candidates stood for election. None of the 15 women candidates was successful. Approximately one-sixth of the elective seats, including all six constituencies in San'a were won by candidates sympathetic to the Muslim Brotherhood and many others to tribesmen of conservative background. The Consultative Council was to have a life of five years and was empowered to legislate, to ratify treaties and supervise the work of government, in which it could request a vote expressing 'no confidence'. Its first action was to re-elect Saleh for another five years by 152 votes to none with two abstentions and five absentees. The post was strengthened by no longer having to share power with the Military Command Council. Saleh announced his aim to achieve democracy without repression, claimed that there were no political prisoners and stated that he would give priority to agriculture and industry making use of local materials. Abd al-Ghani was reappointed as Prime Minister. Subsequent events showed that the Consultative Council operated more freely than almost any other in the Arab world, criticizing government policies despite the intensification of a personality cult of the President.

In foreign policy Saleh aimed at being on good terms with as many states as possible by avoiding involvement in other people's quarrels. The exploitation of petroleum, which was first exported in December 1987, required investment and technology from most major states. In Arab matters the YAR tried to work through bilateral agreements through which joint committees arranged co-operation over a wide range of activities. In November 1987, following an Arab League decision that members might resume diplomatic relations with Egypt, the YAR did so and in mid-1988 President Mubarak visited San'a. The Govern-

ment tried to maintain good relations with both Iraq and Syria and the Prime Minister negotiated aid agreements with both countries for the development of the petroleum industry. In October 1988 the Organization of the Islamic Council met in San'a, the first time that the city had hosted an international gathering on such a large scale. Saleh visited Pakistan and China, where he obtained aid worth US $42m. In January 1989 President Saddam Hussain of Iraq visited San'a in order to thank Yemeni troops for their participation in the war with Iran. In the same year the YAR became a founder-member of the Arab Co-operation Council (ACC), with Jordan, Iraq and Egypt. The ACC was formed with the object of creating an Arab Common Market of those states that were ineligible to join the GCC, allowing free movement of labour and capital within the bloc and hoping to double trade between its members in the next few years.

Despite occasional frontier incidents, the outcome of local rivalries rather than government policies, relations with Saudi Arabia were generally good. The Saudi-Yemeni Co-ordinating Committee, formed in 1975, continued to meet to distribute aid. In May 1989 Saudi Arabia lifted almost all restrictions imposed on Yemeni emigrant workers, giving them almost equal rights with Saudi citizens. At various stages of the process towards unity with the South, Saleh travelled to Saudi Arabia to reassure King Fahd.

The USSR continued to provide training and technical personnel and in January 1990 Saleh visited the USA for the first time and was saluted by President Bush as 'a pillar of stability'. Saleh took every opportunity to put forward the case for the Palestinians and returned with increased aid.

Following a bomb explosion in the Grand Mosque in San'a in March 1989, three alleged members of the Muslim Brotherhood were summarily executed. In August 12 people were killed in the Marib area when tribesmen opposed the introduction of vehicle registration (which made smuggling more difficult). Following reports of unrest amongst Zaidi tribesmen who realized that the Shafais would be a majority in a united Yemen, their leader, the Paramount Sheikh of the Hashid who had been one of the most influential figures in the country for nearly 30 years, claimed that tribesmen should retain their right to bear arms. Religious leaders, too, continued to regard the Southerners as atheistic communists and to oppose unification.

THE PDRY 1986–1990

When Ali Nasser Muhammad attempted his coup in January 1986, the Prime Minister, Haidar Abu Bakr al-Attas, was on a mission to India, which he interrupted by visiting Moscow, USSR, hoping for some intervention to achieve a peace settlement. Upon his return, he assumed Muhammad's posts as President and Secretary-General of the YSP and appointed as Prime Minister the Deputy Prime Minister and Minister of Fisheries, Dr Yasin Said Numan. As a result of casualties and mass arrests of Muhammad's supporters, the Council of Ministers, the Politburo and the Central Committee underwent drastic changes. The first problem of the new regime was to restore a situation of normality. There were reports of three assassination attempts aimed at al-Attas. Muhammad had taken refuge in the North, where he was allegedly joined by numerous armed supporters. It was uncertain whether Saleh would be willing or able to prevent Muhammad and his supporters launching an invasion but, with assistance from the USSR, he managed to counteract any such action. Most of Muhammad's supporters who had been detained were gradually released and al-Attas succeeded, by a series of amnesties, in persuading most of those who had fled to return, including the entire navy which had sailed to Ethiopia. By October it was felt safe to hold the delayed general election in which 176 candidates contested the 111 seats in the Supreme People's Council. Al-Attas was elected President for five years but it became apparent that al-Baid, Secretary-General of the YSP, held an equally important post.

In December 1986 the Supreme Court began the public trial of Muhammad and 93 others (48 of whom, including the ex-President, were tried *in absentia*) on charges of treason and terrorist activities. After a year, death sentences were passed on 35 of the defendants (19, including Muhammad, still *in absentia*). There were international appeals for clemency and al-Attas commuted 24 of the death sentences to life imprisonment. Only five were actually executed and in May 1988 Muhammad was offered a retrial if he returned voluntarily. Later that year 35 of the remaining 59 prisoners, including three former ministers, were released. In January 1990, prior to unification, there was a general amnesty for all political offenders.

At a time when it was imperative to neutralize Muhammad and his followers, much power appeared to rest with the military, particularly in the hands of his tribal opponents from the north-west, to the extent that the fourth Congress of the YSP in June 1987 expressed concern about 'opportunist rightists' in the armed forces. Despite the glorification of Ismail, Ali Antar and other 'martyrs' of January 1986, there appeared to be little change in either the internal affairs or foreign policy of the new regime. In the same year al-Attas stated that the relationship with the USSR was the 'corner-stone' of government policy and there was close co-operation in trade, petroleum and economic matters. The USSR replaced the weapons destroyed in January 1986 and agreed to continue aid until 2005.

Nevertheless one of the first visits that al-Attas made as President of the PDRY was to assure King Fahd of Saudi Arabia that there would be no further encouragement to incite revolutionary activities against the Saudi Government. It was noticeable that King Fahd did not, unlike his brother Faisal, finance or arm exiled opponents of the Aden regime. A joint ministerial commission was established, several projects were financed, and the Saudis were the first to give aid after disastrous floods in March 1989. The reconciliation with Oman continued and in October 1988 al-Attas became the first PDRY Head of State to visit Muscat. Amidst references to 'brotherhood', several agreements were signed including one to delimit the frontier. Other Gulf states provided aid. Relations with Ethiopia, a supporter of Muhammad during the fighting of January 1986, were restored as were those with Somalia which had been strained since Ismail had sent troops to oppose the advance into the Ogaden in the war of 1977. As part of the PDRY's attempt to present a more moderate image abroad, diplomatic relations were restored with Morocco, and with Egypt as soon the Arab League lifted its veto. Al-Attas visited Baghdad, Iraq, in July 1988, and later there was an agreement to increase the processing of Iraqi petroleum at Aden refinery with Iraqi crude piped across Saudi Arabia to Yanbu. Dr Abd al-Aziz adh-Dhali in 1989 became the first PDRY Minister of Foreign Affairs to visit an EC capital, and also in 1989 William Waldegrave of the British Foreign Office was the first British Minister to visit Aden since independence. Al-Attas stated that the USA had been approached for the resumption of relations, which were, in fact, restored just before unification. The PDRY therefore ended its separate existence with no outstanding feuds and indeed had achieved international recognition by election to the UN Security Council. In January 1990 al-Attas opened a regional peace conference called by the Organization for Afro-Asian Solidarity, attended by 45 states with a call for withdrawal of all fleets from the Red Sea, the Gulf and the Indian Ocean: Western nations, Iran and Israel were not invited.

Meanwhile, the domestic economy had collapsed after two decades of ideologically-led mismanagement and people were on the verge of starvation. Despite some pressure from military leaders, the USSR under the leadership of Gorbachev stated that there was no need for the Aden base after the end of the cold war and Soviet aid declined from US $400m. in 1988 to $50m. in 1989. In 1989 the communist regimes of Eastern Europe started to collapse. There changes were set in motion by a popular revolt but in the PDRY they were introduced by the Government. In early July the YSP set up six working parties to study a comprehensive list of changes, including that of its own role and relationship with the state, and concerning economic, administrative and cultural affairs. There had long been a chronic shortage of housing and it was announced that private individuals might build for sale or rent; then private ownership of hotels and factories was permitted. Adenis were encouraged to invest their capital locally with exemptions from taxes and tariffs. Foreign investors might transfer profits abroad. In particular investment was sought in petroleum, tourism and the port of Aden. In December the Government promised to compensate owners of shares in the banks national-

ized in 1969. Just before unification the Government announced that the properties of exiles would be restored. The ponderous communist bureaucracy was dismantled and government monopolies, such as that of supplying ships, were ended. In February 1990 plans were published to re-establish Aden as a free zone.

Al-Baid put forward a programme for political *perestroika*, including a rotating presidency, civil rights and correction of 'wrong stands on Arab and Islamic culture and religion'. In October Numan stated that a multi-party system was 'very necessary for democracy' and that the private sector should 'play its true role in economic developments'. Al-Baid said that things had gone wrong because of the 'leftist adventurist tendency rather than right-wing deviationism'. Pluralism and democracy were more important than ideology. The Institute of Scientific Socialism was renamed the Institute of Social Sciences while the two ash-Shaabis and Salim Rubai Ali were rehabilitated as they had been condemned in the 'absence of democratic thought'. Citizens were given the right to travel abroad. There were local elections, the fifth since independence but the first with any real choice of candidates.

In December 1989 the YSP ended its monopoly and the formerly outlawed Nasserite party applied for recognition and was quickly followed by the Yemeni Unity Party (YUP), the first to have members both South and North of the frontier. Even the partisans of former President Muhammad were able to form the Unionist Democratic Party. In January 1990 the ban on foreign publications was lifted and later permits were issued for a range of independent newspapers and journals.

The relaxation of controls triggered inflation which, in turn, provoked an unprecedented series of strikes for higher pay. The first, on 13 January 1990, was at the petroleum refinery and was followed by strikes in the electricity, banking, textile and fishing industries. Workers claimed that the cost of living had risen by 30% and wages had not kept pace. The Government made concessions and the strikes were usually of short duration.

THE ROAD TO UNIFICATION

Presidents Saleh and Ali Nasser Muhammad had established a good working relationship but during the fighting in Aden in January 1986, San'a remained neutral and abstained from commenting upon events in Aden. The new regime of President al-Attas quickly declared its commitment to unity but the situation was complicated by the presence of Muhammad and his followers in camps just north of the frontier. Gradually the conciliatory policy of the Aden Government led many of them to go home and those that remained refrained from provoking any confrontational incidents between the two states.

In July 1986 both Heads of State met for the first time as participants in a summit in Tripoli, Libya. Although an agreement was not reached they consulted again in September and Saleh stated that he would give priority to unity. Although the exiles were inactive, their presence still caused difficulties and after a death sentence had been passed on Muhammad, Aden demanded his extradition which San'a refused. Kuwait tried to mediate a settlement of the refugee problem but it was still a high priority when al-Baid went to San'a in July 1987 in the hope of co-ordinating economic and social policies. Meanwhile, there had been disputes concerning the exact location of the frontier which had never been delimited and was particularly vague in the area of Shabwa where it was anticipated that petroleum would be found. In December 1987 al-Iryani denied that there had been armed clashes but in the following April there were reports that both sides were reinforcing their border troops. Saleh declared that the long-standing dispute could only be resolved through unification and in May al-Baid travelled to San'a and negotiated a series of agreements. The Higher Yemeni Council, the Joint Ministerial Committee and other joint committees were reconstituted. There was a declaration that there should be no recognition of frontiers drawn up during foreign occupation or during the reign of the Imamate, existing border posts would be replaced by new ones, jointly manned, movement between the two states should be unrestricted, troops should be withdrawn from frontier areas and there should be joint exploitation of a zone of 2,200 sq km in the Marib/Shabwa area which would be demilitarized. Saleh travelled to Riyadh, Saudi Arabia, to reassure King Fahd that this *rapprochement* was not directed against Saudi Arabia, while Muhammad declared that he welcomed the agreement. The first practical results were the abolition of the need for passports for travel between North and South and a meeting of the Ministers of Petroleum who agreed on the establishment of the Yemeni Company for Investment in Oil and Mineral Resources for joint exploitation of Marib/Shabwa. The head office was in San'a, its capital was US $10m. and it was soon able to announce that it had received 45 bids from international oil companies. The Southern Minister of Petroleum said that neither North nor South could develop properly unless they were united while al-Baid spoke of 'creating unified economic interests that would be a material basis for the political success of unity'. A major objective was to revive the port of Aden as a free zone and to provide it with a larger and more prosperous hinterland. It was clear that neither state could finance its own development unilaterally or attract enough outside help but through unification this would be possible. The Arab Fund for Economic and Social Development (AFESD) agreed to provide $18m. and subsequently $63m. to link the two electricity systems. It appeared that the two Yemens were now set upon at least economic integration.

However, a financial crisis, leading to *perestroika*, started in Aden shortly afterwards, and in the general ferment the stability of the YAR became more attractive. In November 1989 al-Iryani and the Assistant Secretary-General of the YSP, Salim Salih Muhammad spent three days in San'a discussing a 136-article Constitution, based on agreements reached by the constitutional committee established following the war in 1979. It was published while Saleh was in Aden and he proposed that it should be referred to both Legislatures and then be put to a referendum; this set a target date for unification of November 1990. Al-Baid emphasized that unity in Yemen should be seen as a step towards full Arab unity. Delegations were sent to all the Arab countries to inform them of Yemen's intention to form a single state. The PDRY removed obstacles to a joint foreign policy by ending its last diplomatic dispute, including the restoration of relations with the USA and an invitation to Sultan Qaboos of Oman to visit Aden. The ACC had no objection to the adherence of the PDRY. It was agreed that the YSP and the General People's Congress (GPC), which was regarded as its northern equivalent, should preserve their independence and that there should be room for political parties; the YUP, set up in January 1990, was the first to recruit from both North and South. In the same month al-Iryani travelled to Aden to discuss preparations for elections and for merging the Ministries of the Interior. Plans were announced for a merger of the state airlines. A new press law was introduced in both states. A few days later the two Cabinets held a joint meeting in San'a. All political prisoners were released and a joint committee set up to negotiate with other political parties. This led to an agreement concluded in April that there should be no foreign funding nor campaigning in mosques or barracks and Saleh welcomed 'a multi-party system provided that it is of Yemeni origin'. In February there was a second joint Cabinet meeting, in Aden, at which 46 laws were approved on such matters as customs procedures, taxation, trade unions and education. Plans were drawn up for a single currency from a unified central bank and later Aden promised pay rises to ensure parity with wages in the North. After a brief summit in Mukayras, south of the frontier, Saleh visited Riyadh, Saudi Arabia, and announced that King Fahd supported unity 'totally and without limit', although many doubted that he would really welcome a united democratic Yemen on his southern flank. The USSR, USA and the People's Republic of China welcomed the prospect of unity.

In early March 1990 there was a prolonged summit in Taiz, Aden and again in Taiz, which ended without a communiqué, suggesting that problems had arisen. There still appeared to be opposition amongst hard-line communists in Aden while in the North dissatisfaction amongst religious and tribal leaders was more public. There were reports of fighting in the Saada and of tribesmen receiving Saudi arms and money. A leading Muslim Brother attacked 40 articles of the proposed Constitution as unislamic and demanded that the *Shari'a* should be the only source of law. There was concern over Aden's tolerance of alcohol and freedom given to women. In a four-day meeting in San'a in April Saleh and al-Baid decided to pre-empt the opposition by bringing forward the date of unification to 22 May. On 4 May both currencies were declared legal tender. On 21 May the

agreement to unite was passed unanimously in Aden but in San'a three Islamic fundamentalist members walked out and five abstained amid demonstrations by their supporters. The following day a joint session of the two Assemblies elected a five-man Presidential Council, headed by Saleh (promoted to the rank of General), al-Baid (Vice-President), Salim Salih Muhammad, Abd al-Ghani and the former Speaker, al-Arshi.

The priorities of the Government of the Republic of Yemen, which were announced in late May 1990, were to develop the country's economic infrastructure and to improve relations with other Arab states. In particular, the Government was committed to resolving long-standing border disputes with neighbouring Saudi Arabia and Oman. In July 1990 both President Mubarak of Egypt and the Chairman of the PLO, Yasser Arafat, visited Yemen and were reported to have discussed regional issues with President Saleh.

In September 1990 it was reported that more than 30 new political parties had been formed in Yemen since unification. The Yemeni Islah Party (YIP), an Islamic party with widespread support in the new House of Representatives, was regarded as the most important of the new parties.

In November 1990 the Government established a Supreme Council for National Defence, which would be responsible for military mobilization and wartime civil defence. The council would be authorized to declare war and states of emergency. It was to be chaired by the President and would comprise the Vice-President and various members of the Council of Ministers.

In mid-May 1991 the people of Yemen voted in a referendum on the Constitution for the unified state. A few days earlier religious fundamentalists and sympathizers, among whom were members of the YIP, demonstrated about the role of Islam under the proposed Constitution, and urged a boycott of the referendum: a clause in the Constitution stated that *Shari'a* law would be the main source of legislation, but the Islamists stipulated that *Shari'a* law should be the only source of legislation. Those who participated in the referendum approved the new Constitution by a large majority, although fewer than 50% of the electorate registered to vote. Members of the YIP and other opposition groups claimed that irregularities in the voting procedure had rendered the result null and void.

YEMEN'S RESPONSE TO THE GULF CRISIS

In August 1990 Iraq's invasion and annexation of Kuwait placed the Government of Yemen in an especially difficult position. The economy of Yemen was heavily dependent on trade with, and aid from, Iraq, and also on aid from Saudi Arabia, which normally hosts very large numbers of Yemeni expatriate workers. Moreover, there was evidence of widespread popular support in Yemen for President Saddam Hussain of Iraq. These factors explained the Government's equivocal response to the Iraqi invasion of Kuwait and to subsequent developments in the Gulf region. In the immediate aftermath of the invasion the Government condemned Iraq, but also criticized the arrival of US and other Western military forces to defend Saudi Arabia. At the summit meeting of leaders of Arab League member states, held in Cairo on 10 August 1990, Yemen voted against the proposal to send Arab forces to Saudi Arabia as part of a multinational force to deter aggression by Iraq. Yemen also abstained in the UN Security Council vote to impose economic sanctions on Iraq. By late August, however, the Government appeared to be committed to implementing the UN sanctions against Iraq, albeit reluctantly. In October the Yemeni Minister of Foreign Affairs, Abd al-Karim al-Iryani, announced that Yemen would support any measures taken to achieve a peaceful withdrawal of Iraqi troops from Kuwait, but that this should result in the withdrawal of all foreign forces from the area.

Yemen's relations with Saudi Arabia deteriorated as a result of Yemen's initial strong opposition to the presence of foreign armed forces in the Gulf and to the ambiguous stance it subsequently adopted in this respect. On 15 September 1990, in what was regarded as a retaliatory action, Saudi Arabia announced that it had withdrawn the privileges which Yemeni workers in Saudi Arabia had previously enjoyed. This resulted in an exodus from Saudi Arabia of an estimated 500,000–800,000 Yemeni workers during October and November, which caused widespread economic and social disruption. The expulsion and return of the Yemeni workers not only caused a reduction in the country's income from remittances sent home by the expatriates, but also led to a serious increase in unemployment.

In November 1990 the Yemeni Government voted against the UN Security Council resolution to authorize the multinational contingent stationed in the Gulf to use 'all necessary means' against Iraq in order to remove its forces from Kuwait if they had not withdrawn by 15 January 1991. This prompted a visit to Yemen by the US Secretary of State, James Baker, in an attempt to persuade Yemen to modify its position concerning the UN resolution. In late November the Minister of Foreign Affairs, Abd al-Karim al-Iryani, visited France, Germany and Algeria in the hope of gathering support to prevent the UN Security Council resolution from being passed. In December Yemen assumed the chair of the UN Security Council (which rotates on a monthly basis) and the Government increased its efforts to mediate in the Gulf crisis: the Vice-President of Yemen, Ali Salim al-Baid, met King Hussein of Jordan, in Amman, and the Iraqi President, Saddam Hussain, in Baghdad, for talks concerning the crisis. In January 1991 Yemen presented a peace plan in an attempt to prevent war in the Gulf; the plan included an Iraqi withdrawal from Kuwait, the withdrawal of the multinational military force, and the holding of an international conference on the Arab–Israeli conflict. Despite numerous diplomatic initiatives undertaken by the Yemeni Government, prior to the UN deadline of 15 January, the peace plan failed to prevent the outbreak of war in the Gulf on 16–17 January. Following the US-led military offensive against Iraq, Yemen issued a statement in which it condemned the action, and hundreds of thousands of Yemenis demonstrated in support of Iraq. Later in January it was confirmed that US aid to Yemen was to be severely reduced, apparently as a result of Yemen's policy towards Iraq.

POLITICAL AFFAIRS AFTER REUNIFICATION

The two government parties, the Northern GPC and the Southern YSP, had agreed to share power equally until elections were held in November 1992 but within months of the referendum there were reports that extreme members of each were increasing their stocks of weapons for use against the other. Due to the disparity in the population—10m. in the North and two million in the South—posts had to be found in the North for southerners, who were regarded as secularists, indeed as former communists, and whose presence was resented. Northerners were shocked by the unislamic lifestyle of many in Aden and by the enhanced role of women. The deaths and injuries in both cities that attended an Aden–San'a football match were indicative of the mutual animosity.

In September 1991 a YSP official was murdered; in December two more were killed at a party meeting in Ibb, where a fourth was killed in February. Two were later wounded in Sa'ada and another killed in Taiz. In April 1992, the Minister of Justice, Abd al-Wasi Salam, a YSP leader, survived after gunmen opened fire on his car; there was suspicion that the attempt was connected with his imminent departure for Muscat for frontier negotiations. In May the house of Salim Salih Muhammad, a YSP representative on the Presidential Council, was attacked. Only three days later there was a bomb at the house of the Prime Minister who denied that it had any connection with the Oman dispute. In June the YSP claimed, but the Government denied, that there had been an attack on the home of the editor of their newspaper and the brother of the Prime Minister was murdered in the southern port of Shihr: this was seen as an attempt to disrupt the unification process as he had played no part in politics. In July, in circumstances that are disputed, a colonel, a member of the YSP central committee, 'killed himself' after a shootout in which two policemen were also killed: his car which had failed to stop at a road-block was found to be full of weapons. A former Deputy Prime Minister of the PDRY, Anis Hassan Yahya, escaped assassination in Aden and at the beginning of August security forces defused a mine outside the house in San'a of the former Prime Minister Muhammad Ali Haitham. The YSP also claimed that several of their local officials had been shot dead in provincial towns, mainly in the North of the country. However, in September there were reports of bomb attacks on the homes of leading GPC members.

One of the ways in which the YSP could assert its strength was through its control of the trade unions, particularly in

Aden. President Saleh declared industrial unrest unpatriotic but in March 1992 100,000 workers in Aden brought everything from the airport to government services and the university to a halt. They threatened a three-day stoppage unless wages were raised by 40%, a job creation scheme for people expelled from Saudi Arabia and a price 'freeze' were implemented. They later settled for a wage increase of 25%, backdated to January, and a barely credible promise to keep prices at 1991 levels. Different labour grievances then emerged as the staff of the government newspaper in Aden went on strike for parity of wages with their colleagues in the San'a press.

A human rights organization, Amnesty International, asserted that all political prisoners in the South had been released before reunification, although there were possibly 25 in the North. No executions had taken place although there had been five amputations of hands. Much forcibly-nationalized property in the South was restored to its former owners and journalists sacked under Ismail were reinstated. In May 1992 an amnesty was extended to former President Ali Nasser Muhammad and five of his associates.

The Government estimated that the Gulf crisis had cost the Yemeni economy US $3,000m., and although some of this was recouped by the sale of petroleum concessions, the economic situation remained serious. Only 20% of debt repayments were met. In March 1992 the budget envisaged a deficit of $1,000m. The general economic conditions and social unrest proved fertile soil for Islamic fundamentalists, who provided education and other services which the state could not. The question of the place of the *Shari'a* in the legal system continued to provoke controversy. The YIP became, after the two government parties, the next strongest and probably displaced the YSP in the North. It seemed, however, likely to split between its religious and its tribal leadership and even within its tribal element. It was also attacked by some religious leaders, such as Sheikh Ahmad ash-Shami (Secretary-General of the al-Haq party), as an instrument of Saudi Arabia and in thrall to old-fashioned tribal sheikhs. President Saleh was said to have guaranteed Vice-President al-Baid that his position would not be affected whatever the result of the elections, but that other parties would join the government. Meanwhile, the estimated 30–40 political parties were encouraged to merge in order to reduce electoral confusion.

FOREIGN AFFAIRS AFTER THE GULF WAR

Yemen's stance during the Gulf War was not quickly forgotten in the Arabian peninsula and, one year later, relations with some of its states were still frosty. On the first anniversary of reunification the only Arab head of state to attend was Yasser Arafat, although Yemen had tried to establish its Arab credentials by raising the question of Israeli settlements at the UN Security Council, and by denying that it had approved an Israeli plan to resettle the remaining 1,500 Yemeni Jews. In mid-1992 French, British and US Jewish groups mounted a diplomatic campaign in order to organize the discreet departure from Yemen of the small remaining Jewish community. The Yemeni response was that, whereas emigration was open to all its citizens, emigration to Israel was forbidden by the Constitution. Israel claimed in July 1993 to have secretly airlifted about 250 Yemeni Jews into the country, although the Yemeni Government denied all knowledge of the affair.

In addition to its resentment at Yemen's attitude to the Gulf crisis, Saudi Arabia, which had ceased its financial support of some US $600m. per year and had expelled immigrant workers constituting about 8% of the total population of Yemen, disliked Yemen's new political pluralism and free press, and, in any case, can scarcely have been enthusiastic about reunification. Saudi Arabia delayed the sale of its 49% share-holding in the San'a-based airline Yemenia, thus preventing the company's merger with the Adeni airline Alyemda. Contrary to previous practice, Saudi visas were required from Yemeni *Hajj* pilgrims. More seriously, in April 1992, Saudi Arabia warned the four oil companies, including British Petroleum (BP), that were prospecting in the eastern desert in an area where the frontier had not been precisely delimited that they were trespassing on Saudi territory, and, to the great indignation of the Yemenis, the companies ceased work. A similar threat to the US Hunt Oil Co was said to have been withdrawn after an intercession by President Bush. The frontier dispute continued, with the Saudis claiming that the Yemenis were not serious about wanting a settlement while the Yemenis felt that the dispute was being prolonged to sabotage their development. In September 1992, however, a committee of experts assembled in Riyadh to discuss the border dispute. No apparent progress was made, either on this occasion, or at further meetings in October and November. The process was subsequently suspended during Ramadan and the Yemeni elections, but in August 1993, against a background of improved relations between Yemen and Saudi Arabia, the committee assembled for a fifth round of talks aimed at solving the dispute. Little progress had been made by January 1994 when the talks entered their seventh round. Nevertheless, the Minister of Foreign Affairs, Muhammad Salim Basindwa, appointed because of his good relations with the Gulf states, declared that improving relations with Saudi Arabia was his top priority and the eighth round of talks concerning demarcation took place in April.

The Saudis also disapproved of Yemen's increasing friendship with Iran. Both the Iranian Minister of Foreign Affairs, Velayati, and the Speaker of the Majlis, Mahdi Karrubi, visited San'a, and agreements were signed for co-operation in a range of fields. There were proposals for a joint fishing company and for processing Iranian petroleum at Aden refinery. The GCC stopped funding the expansion of Aden port, and Kuwait instructed its airline not to sell tickets to Yemenis. In mid-1993 it was reported that the Ministers of Foreign Affairs of Kuwait and Yemen were to meet in Vienna, Austria, reflecting a gradual improvement in relations between the two states. The meeting was subsequently cancelled, however, following opposition from the Speaker of the Kuwaiti National Assembly. Yemen's one ally in the Arabian peninsula was Oman, with frequent high-level visitors exchanging messages between Sultan and President. In December 1991 President Saleh said that the agreement on frontier delimitation, envisaged in the Oman–PDRY reconciliation of 1988, would be concluded within two weeks. However, opposition arose, as it was believed that Yemen would relinquish nearly 6,000 sq miles of territory, and the YUP and the local Mahra authorities challenged the Government's right to do so. In October 1992 Yemen and Oman signed an agreement to establish the demarcation of their border. The agreement was officially ratified in December and co-operation between Yemen and Oman in the areas of construction, transport and commerce was subsequently envisaged. In April 1993 the two countries agreed on measures to open border points and increase bilateral trade.

Relations with the three remaining GCC member states also showed signs of gradual improvement. In February 1993 Sheikh Muhammad al-Maktoum, the UAE Minister of Defence, visited Yemen, and in the following month his visit was returned by the Yemeni Minister of Planning and Development. In June 1993 the Yemeni Minister of Foreign Affairs, Muhammad Basindwa, declared that improving relations with the Gulf states was his highest priority, and in the following month he visited Bahrain.

In August 1991 al-Iryani flew to Egypt and relations were repaired, although Cairo later rejected Yemen's proposal for a revival of the ACC, initially without Iraqi participation. Yemen's relations with the other ACC member, Jordan, were cordial, and in September 1991, during a visit to Amman, Prime Minister al-Attas signed a series of agreements for co-operation in trade, agriculture, educational exchanges and tourism. In the same month, Yemen and Iraq signed a cultural agreement, and in May 1992 Iraq undertook to provide teachers to support Yemen's campaign to develop education. Yemen continued to oppose sanctions against Iraq, but in March 1993 Saddam Hussain sent his half-brother to San'a to protest at Yemeni attempts to improve its relations with the Gulf states.

Reconciliation with the Western powers was smoother. The USA, unwilling to offend its more important GCC allies, let it be known that its attitude would depend upon Yemen's actions in the Security Council and over human rights, but in August 1991 it agreed to sell Yemen 300,000 tons of subsidized wheat, more than ever before. Yemen fully supported the US Middle-East peace initiative. US firms were chosen to draw up the master plan for Aden free port and a feasibility study for a gas-fired power station in Marib. In January 1992 the Deputy

Secretary of State for Energy, Hanson Moore, visited the country.

The British had been less upset than their allies over Yemen's attitude to the Gulf War, and relations were fully restored in time for a successful visit by al-Iryani to London in February 1992. Al-Baid had already visited Britain in August 1991, followed by a financial team to seek investment in the free port. British firms won various contracts including one to prospect for gold in the Hadramawt and another to print new currency. The cordiality of relations between Britain and Yemen was confirmed by a successful visit of the Yemeni Minister of Planning and Development to London.

In the West there was a growing belief that Yemen had developed into the most genuine democracy in the Arab world—a sentiment articulated by the French Minister of Foreign Affairs on a visit in October 1991. The EC sent a parliamentary delegation to San'a in June 1992 and in the same month the German President, Dr Richard von Weizsäcker, made a state visit during which he promised aid. The Yemeni Chief of Staff, Brig.-Gen. al-Busheiry, also visited Paris. The problems of investment were discussed in July at a conference in Geneva at which the presence of Qatar gratified the Yemenis. The need for aid and also the broad range of the participants in the development of its oil industry—including Japan, Indonesia, Norway and Canada—kept Yemen active diplomatically, although financial difficulties forced the closure of 16 Yemeni embassies at the end of 1992.

Yemen had increasingly been drawn into the affairs of its neighbours across the Red Sea. In July 1991 Yemeni officials collaborated with French diplomats to settle disputes in Djibouti. After the fall of Lt-Col Mengistu, ships of the Ethiopian navy took refuge in Aden: Zimbabwe's Minister of Foreign Affairs helped to mediate and the fleet returned home. More serious was the crisis that arose from the civil war in Somalia, which obliged Yemen to give refuge to more than 60,000 Somali refugees during 1992 and 1993. The Yemeni Government had great problems in accommodating and feeding them. Finally an agreement was reached whereby Yemen would accept further refugees on the understanding that the UN should take responsibility for their welfare.

THE 1993 ELECTIONS AND THE ENSUING POLITICAL CRISIS

In spite of the climate of unrest, voter registration for the legislative elections, scheduled for 27 April 1993, took place between 15 January and 16 February. An outbreak of attacks on expatriate workers prompted a warning, in February, that the Government could not guarantee the safety of expatriate residents owing to the threat of certain hostile Yemeni tribes. There were 3,400 candidates for the 301 seats in the House of Representatives, many standing as independents. Of the major political parties presenting candidates, the GPC, led by the President, Ali Abdullah Saleh, and the YSP, led by the Vice-President, Ali Salim al-Baid, were the largest. The two other major parties were the YIP, widely reported to have received substantial financial assistance from Saudi Arabia, led by Sheikh Abdullah bin Hussain al-Ahmar, and the Baath (Renaissance) party, led by Mujahid Abu Shuarib. There were also more than 40 smaller parties, but most of them were in alliance with one of the four major parties.

After lively campaigning in the months preceding the elections, the turn-out on election day was very high. International observers expressed broad satisfaction with the conduct of the elections, the first nation-wide, multi-party elections based on universal suffrage in the Arabian peninsula. Inevitably there were reports of disturbances in several towns and accusations of fraudulent practices by both of the leading parties. When the results were announced the GPC had, not surprisingly, won the majority of the vote and gained 123 of the 301 seats, most of them in the former YAR. The YIP took second place with 62 seats, again mainly in the former YAR, with the YSP relegated to third place with 56 seats, most of them in the former PDRY. The Baath party took seven seats, minor parties five seats and independents 47 seats. Of the 50 women candidates who stood for election, two won seats.

After the election the YIP is reported to have threatened to boycott the new House of Representatives unless it was admitted to government. The three main parties eventually agreed to form a coalition, with the GPC and YSP each taking two seats on the Presidential Council and the YIP the one remaining seat. The YIP was also allocated six posts in the Council of Ministers, but these did not include the portfolios of education and finance which the party had demanded. However, the leader of the YIP, Sheikh Abdullah bin Hussain al-Ahmar, became Speaker of the House of Representatives. The YSP leadership was disappointed by the election results and became increasingly apprehensive and resentful about the emerging alliance between the GPC and the YIP. The GPC found it easier to co-operate with the YIP on a number of important political issues, especially proposed constitutional changes, than with the YSP; this co-operation was assisted by the fact that the GPC leader's tribe, the Sanhan, belonged to the Hashid tribal federation, of which the YIP leader was the paramount Sheikh. In August 1993 the Vice-President refused to take part in the Government and decided to return to Aden. His departure from San'a marked the official beginning of a political crisis that was to lead to civil war. This crisis intensified following a series of assassinations of YSP officials, including the Vice-President's nephew, who was shot in Aden on 29 October. It was widely rumoured in San'a that these assassinations were ordered by the President's 'entourage', notably his brother and three half-brothers who commanded key military units and the security services.

In an attempt to put pressure on President Saleh to make concessions that would restore southern influence, the Vice-President had issued an 18-point list of demands in September. They included security and military reforms and decentralization to allow each governorate more freedom in administrative and financial affairs. In November al-Baid declared that the North was attempting to annex the South rather than unifying with it. Efforts to mediate between the two factions by Oman, Jordan, PLO Chairman Arafat, the USA and the *'ulama* (religious scholars) failed to resolve the crisis, while the departure of the Vice-President and other southern officials including the Prime Minister, Haidar al-Attas, brought the business of government to a standstill, aggravating already chronic economic problems. Riots in San'a and Taiz in early January 1994 reflected popular discontent at rising prices and the falling value of the Yemeni riyal. Meanwhile the security situation in the country continued to deteriorate. There were more political killings—al-Baid claimed that more than 150 YSP members had been killed since May 1990—and further kidnappings of foreign nationals.

Amidst the deepening political crisis a National Dialogue Committee was formed with representatives from across the political spectrum, to try to work out a formula acceptable to both factions. After months of discussions and deliberations, the committee drew up a 'Document of Pledge and Agreement' on 18 January 1994 which incorporated many of the demands made by al-Baid in his 18-point list. The document proposed major constitutional reform that would clearly define the powers of the Presidential Council, the President and the Vice-President, devolution of power from central government to local and regional assemblies, the restructuring of the armed forces and the arrest and trial of those responsible for the wave of assassinations largely directed at YSP officials. On 20 February the President and Vice-President signed the document at a public ceremony in Amman, Jordan, attended by representatives from Oman, the USA, France, the PLO and the Arab League. There was no reconciliation between the two Yemeni leaders however; they refused to shake hands after signing the document and al-Baid demanded that Saleh order the immediate arrest of his brothers. Al-Baid and his principal lieutenants walked out on follow-up talks and further strained relations with the President by visiting Saudi Arabia and the Gulf states to seek support for their cause. Some analysts argued that President Saleh had no intention of honouring the concessions made in Amman, but only wanted to gain time, having already chosen the military option. The real intentions of the southern leadership were also unclear. Several observers maintained that while some of the YSP leaders wanted secession, the majority had sought to escalate the political crisis in order to topple the President and take over a united Yemen.

The day after the ceremony there were clashes between rival military units in the southern province of Abyan and in other

parts of the country. After unification the armed forces of the former YAR and PDRY had not been integrated; the GPC continued to control the northern forces and the YSP those of the south. The fighting that continued sporadically for some months involved not only forces under the command of the GPC and the YSP, but also YSP forces loyal to the former South Yemen President, Ali Nasser Muhammad, as well as tribal militias which used the opportunity to promote their own interests. The GPC was reported to have mobilized the powerful Hashid tribal federation, while the YSP called on the support of their traditional rivals, the Bakil tribes. At the beginning of March a joint military committee of northern and southern officers, Jordanian and Omani officers and the US and French military attachés, attempted to disengage the widely dispersed and intermixed rival military units. Jordan, Oman, Egypt and the UAE all made diplomatic efforts to mediate between the two main rival factions but made no progress. In April both Oman and Jordan withdrew from the joint military committee.

THE CIVIL WAR

On 27 April 1994, the anniversary of the general election, a major tank battle took place between rival army units at Amran, some 60 km to the north of San'a. It was the biggest clash between the opposing forces since the crisis began. Some 200 tanks were involved in the fighting; 85 tanks were reported to have been destroyed and more than 400 soldiers killed or wounded. Both sides claimed that the other attacked first. The YSP claimed that the attack was tantamount to a declaration of war, while the President accused al-Baid of secessionism and pledged to fight to defend the unity of the country. During the night of 4 May fighter aircraft under the command of the YSP attacked northern airports at San'a, Taiz and Hodeida, the presidential palace in San'a, the country's two main power stations, Hodeida port, and petroleum storage and pipeline facilities at Marib. Northern aircraft retaliated on 5 May, badly damaging the airport at Aden. The northern military command reported pitched battles in several areas along the old frontier between the YAR and PDRY and claimed that southern forces had suffered heavy losses in seven of the country's 17 provinces. The civil war had begun in earnest. The President declared a 30-day state of emergency and dismissed the Vice-President. France announced that it was evacuating its nationals and the USA advised its citizens to leave. On 10 May Prime Minister al-Attas, a southerner, was dismissed after he appealed for outside forces to help end the civil war. The Minister of Petroleum and Minerals, Hussainoun, was among other YSP members dismissed from their posts in the Council of Ministers. On 21 May al-Baid proclaimed the breakaway 'Democratic Republic of Yemen' (DRY) and began diplomatic efforts to secure recognition of the old frontier. Al-Attas, the former Prime Minister of Yemen, who had joined the secessionist government in Aden, travelled to Egypt to seek the backing of Arab moderates and appealed to the West for support and recognition for the southern government. Al-Baid was named President of the new state, with a five-man Presidential Council drawn from a range of political and tribal affiliations, including the opposition League of the Sons of Yemen, the Nasserite Federation for the Liberation of South Yemen, and the wing of the YSP associated with the ex-President of the PDRY, Ali Nasser Muhammad. The breakaway state adopted the same Constitution as the North, and the same legal system, based on Islamic law. President Saleh denounced the secession, offering an amnesty to all those in the former PDRY who rejected it, with the exception of al-Baid and 15 other YSP leaders.

As northern forces advanced on Aden, Saudi Arabia together with Bahrain, Oman, the UAE and Egypt requested a meeting of the UN Security Council to discuss the Yemeni conflict. San'a's UN representative strongly objected to what it considered interference in its internal affairs. Nevertheless, on 1 June 1994 the Security Council unanimously adopted Resolution No. 924 appealing for an immediate cease-fire and requesting the dispatch of a UN commission of inquiry to assess prospects for a renewed dialogue between the belligerents. It also urged an immediate cessation of the supply of arms and other materials that might contribute to the conflict. The Resolution, which Prince Bandar bin Sultan, the Saudi Arabian ambassador to Washington, was reported to have played an important role in drafting, deliberately omitted any direct endorsement of Yemeni unity. Two days later the UN Secretary-General, Dr Boutros Boutros-Ghali, appointed the much respected former Algerian Minister of Foreign Affairs, Lakhdar al-Ibrahimi, as his special envoy and head of the fact-finding mission. Spokesmen for the North and South welcomed al-Ibrahimi's appointment and promised their full co-operation. However, before the commission of inquiry began its work, the Ministers of Foreign Affairs of the GCC, meeting on 4–5 June, issued a statement effectively blaming the North for the conflict and implicitly recognizing the DRY. The Ministers warned that continued hostilities would have repercussions for the GCC states, forcing them to adopt appropriate measures against 'the party that does not abide by the cease-fire'. Only Qatar dissented. While Saudi Arabia maintained that its only concern was to prevent the destabilization of the region, many observers argued that the YSP leadership, given the smaller military forces under its command, would not have declared independence unless it had the support of its powerful neighbour. The Government in San'a condemned the GCC statement and Dr Abd al-Karim al-Iryani, the Minister of Planning and Development and principal political counsellor to President Saleh, maintained that they had clear evidence that arms purchased with Saudi funds were being supplied to the South. The North accused Saudi Arabia of encouraging the secessionists in order to create a new petroleum emirate in the Hadramawt under Saudi influence and providing it with an outlet to the Indian Ocean. One of the principal oil concessions in Hadramawt is held by the Nimr company, owned by the Saudi Arabian Ibn Mahfouz family, who were originally from the Hadramawt. Saudi Arabia had not forgiven Yemen for its support for Iraq during the Gulf crisis and feared that a united and democratic Yemen would threaten its supremacy in the Arabian peninsula. Despite official statements of strict neutrality in the conflict, it was widely believed that Egypt was hostile to the North because the GPC leadership had allowed Egyptian Islamist militants to train in camps set up in Yemen under the protection of Sheikh Abd al-Majid az-Zindani, the leading ideologue of the YIP and a member of Yemen's Presidential Council. Sheikh Zindani was reported to have raised 63m. riyals for the northern war effort through collections from mosques and religious associations. Support for the North came from Iraq, Iran and Sudan. The South accused both Iraq and Sudan of providing military assistance to the North, accusations which Iraq and Sudan denied.

By the first week in June 1994 northern forces were besieging the southern capital of Aden and there were reports of air attacks on strategic installations and heavy shelling and artillery fire from northern forces. On 6 June, shortly after the arrival of the UN commission of inquiry, San'a agreed to observe a cease-fire, as did the South. Al-Ibrahimi managed to secure the agreement of both factions to the formation of a monitoring body to police the truce, but when San'a suggested that the joint military committee should be revived, Aden objected and demanded a full UN multinational peace-keeping force and the withdrawal of northern forces to behind the old frontier between the YAR and the PDRY. The cease-fire lasted only six hours. Talks arranged in Cairo by al-Ibrahimi also collapsed because San'a insisted that it would only negotiate with the YSP in the context of a united Yemen, whereas the South demanded that negotiations should be between two independent states. The southern negotiating team, led by Muhsin bin Farid, the 'Deputy Prime Minister' of the self-proclaimed DRY, walked out of the talks and appealed for UN intervention to enforce a truce and punish the North for continuing its assault on Aden. Southern officials admitted publicly in mid-June that they were being supplied with arms by 'friendly Arab countries'. On 17 June it was reported that military equipment, including 30–40 tanks and more than 100 missiles, had been unloaded at the port of Mukalla in the south over the past two weeks. Later in June there were reports that the South had acquired new MiG-29 fighter planes from Eastern Europe, with Gulf funding, and was using its air power to bomb the Marib oilfields.

At the end of June 1994 the UN Secretary-General reported that UN efforts to mediate between the two rival factions had made no progress. He expressed concern that the fighting had not stopped and drew attention to the deteriorating humanitarian situation. The Security Council, meeting on 29 June,

adopted Resolution No. 931 which requested that the Secretary-General continue to mediate between the two factions in order to secure a durable cease-fire and called for a monitoring force to supervise the truce. The Resolution was seen as a setback for supporters of the self-proclaimed DRY who had urged the UN to condemn the North for the continued fighting and to initiate moves that might extend to the official recognition of the DRY. Several observers pointed to the critical role of the USA which finally decided to support a unified Yemen and warned Saudi Arabia against interfering. Despite talks in Moscow on 30 June and again in New York on 2 July on implementing and supervising a cease-fire, northern forces continued their advance and by 4 July had entered northern districts of Aden which was without water or electricity. On 7 July Aden surrendered to northern forces and the self-proclaimed DRY collapsed. Al-Baid fled to Oman, and his 'Vice-President', Abd ar-Rahman al-Jifri, to Saudi Arabia, from where he pledged to continue the struggle against the North. President Saleh reported that 931 civilians and soldiers had been killed in the civil war and 5,000 had been wounded, although others claimed that the death toll was much higher. It was estimated that the war against the southern secessionists had cost the central government US $8,000m. Saleh estimated that it would cost $7,500m. in post-war reconstruction. Following the announcement of a general amnesty and the termination of the state of emergency, southern Yemeni soldiers began returning to the country. There were reports that during the dismantling of the southern army, irregular tribal forces carried off much of the army's military equipment.

THE AFTERMATH OF THE CIVIL WAR

After the fall of Aden to northern forces, the victorious North pledged to work for national reconciliation. On 7 July 1994 a document was submitted to the UN Secretary-General stating that military operations would cease immediately, a general amnesty would be declared, democracy and political pluralism, together with human rights, freedom of speech and of the press would be respected, and national dialogue within the framework of constitutional legitimacy would be resumed. These statements were reaffirmed during a meeting of the Council of Ministers in Aden on 12 July, in which it was declared that all northern military units would return to barracks. (In August, moreover, President Saleh announced that party membership would no longer be permitted within the armed forces.) A committee was formed to implement the reconstruction of Aden, which was named as the country's economic capital. However, UN attempts to bring the two opposing sides together for talks in Geneva at the end of July failed. Al-Iryani of the GPC, who had been scheduled to meet al-Attas of the YSP for talks in the presence of UN mediator Lakhdar al-Ibrahimi, denied that any negotiations were under way and stated that the UN had no further role to play as any discussions between the different parties would take place within Yemen itself. After a meeting of the YSP politburo in Damascus, Syria, under Secretary-General Salim Salih Muhammad, a statement was issued condemning the secession and appealing for unity and reconciliation, and a return to the principles incorporated in the Document of Pledge and Agreement signed in Amman earlier in the year. In September the YSP in Yemen elected a new politburo, none of whose members had been involved in the declaration of the DRY. The politburo elected Ali Saleh Obad as the new Secretary-General of the YSP. In the following month remnants of the secessionist administration, now grouped around Abd ar-Rahman al-Jifri in the newly-formed National Opposition Front, also appealed for a settlement on the basis of the Amman agreement, but while declaring that they hoped to achieve their aims through dialogue, they did not preclude resorting to armed struggle. From exile in Oman, al-Baid had declared that he was retiring from politics.

On 28 September 1994 the House of Representatives in San'a adopted a series of constitutional reforms which greatly strengthened the position of the President, including the abolition of the Presidential Council. Following the defeat of the secular YSP and the dispersal of its military and political power base, the Islamist YIP began asserting its authority. As part of the constitutional reforms *Shari'a* (Islamic law) became the only, rather than the principal, source of legislation, and the last references to the specific rights of women were removed from the Constitution. On 1 October Saleh was re-elected President of the Republic and despite much rhetoric about reconciliation, the YSP was excluded from the new Government. During an interview in early 1995 President Saleh stated that he did not preclude the eventual reintegration of the YSP into the power structure, but only after it had reformed and was prepared to 'respect constitutional rules'. In the new Council of Ministers appointed by the President on 6 October, the GPC retained the majority of posts but the YIP increased its membership from six to nine, including the influential portfolios of education and justice. The South was represented in the new Council of Ministers by four ministers, together with Vice-President Maj.-Gen. Abd ar-Rabbuh Mansur Hadi, all of whom were now standing as members of the GPC but were former allies of the Ali Nasser Muhammad faction.

Despite its minority representation in government, the YIP was the most influential party in the country with the best and most dynamic organization. Its officials were active in the towns and even in remote parts of the countryside, and its broad-based constituency included the tribes, the commercial bourgeoisie and the influential Muslim Brotherhood. In September the YIP congress elected members of the Muslim Brotherhood to most of its key posts. Yet despite the ascendancy of its ideologues, the YIP moved cautiously and was careful in its public statements to stress its commitment to political pluralism and to a market economy, while condemning violence and terrorism in all its forms. The YIP Assistant Secretary-General, Abd al-Wahab al-Ansi, interviewed in early 1995, stated that if the party obtained an absolute majority in the next election, it would not monopolize power since it believed it was necessary to have the co-operation of all Yemeni political groupings in order to solve the problems of underdevelopment. However, statements by the party's leader, Sheikh Abdullah bin Hussain al-Ahmar, and the Chairman of its *majlis*, Sheikh Abd al-Majid az-Zindani, contradicted the YIP's stated commitment to a pluralist democratic system. For their part, YIP ministers acted with discretion but determination. The Minister of Education, Abd Ali al-Qubati, for example, did not overturn existing teaching programmes; however, he did increase the hours devoted to Koranic studies at the expense of science teaching, suspend teachers suspected of socialist and secular sympathies and replace them with Islamist teachers recruited from Sudan or Egypt. He also gradually phased out co-educational classes in schools and in the university in the southern provinces, and 'recommended' that female teachers and students observe the proper dress code. The Minister of Justice, Dr Abd al-Wahab Lufti ad-Daylami, dismissed women judges whose appointment had survived from the former PDRY, stating that they were totally incompetent in Islamic law. The YIP and the GPC, meanwhile, co-operated to destroy the YSP and appeared determined to 'Islamize' the southern provinces. The Government seized all properties belonging to the YSP, and thousands of civil servants suspected of socialist sympathies were dismissed. Both parties blamed southern officials and the YSP for widespread corruption despite the complexity of the problem which could not be ascribed to a single party or faction. Nevertheless in early 1995 there were reports of tensions between the GPC and the YIP, which appeared to have become increasingly dissatisfied with its role in government. Differences emerged over economic policy, for example, with the GPC apparently accepting as inevitable at least some of the economic reforms recommended by the World Bank and the IMF, whereas the YIP expressed its opposition to the introduction of austerity measures. Some observers argued that the eclipse of the YSP, the only obstacle to the growing influence of the Islamists, could lead to the weakening of political pluralism, the erosion of basic liberties and the eventual emergence of a new single-party dictatorship under the YIP, with or without President Saleh.

In early February 1995 13 opposition parties from across the political spectrum formed a common front to oppose the ruling GPC/YIP coalition. The new Democratic Coalition of Opposition adopted as its platform the Document of Pledge and Agreement signed before the civil war and urged the Government to abide by its terms. The new bloc demanded that the Government act without delay to implement the economic measures endorsed by the House of Representatives at the end of November 1994

and to eradicate corruption in the country's administration. Because of increasing government interference in what had been a free press, with opposition papers being targeted for harassment by the authorities, and widespread illiteracy, the new coalition stated that it would take its campaign to the people by the use of audio-cassettes.

The economic repercussions of the civil war presented additional problems for the Government in the form of a number of popular protests and civil disturbances, particularly in the south. In September 1994 hundreds demonstrated in Abyan province in protest at water and electricity shortages and the price of basic foodstuffs, which in some instances had increased fivefold. In February 1995 more than 150 wholesalers were arrested in San'a for their alleged role in inflating prices. In late March and early April, moreover, following the devaluation of the riyal and the doubling of the price of fuel, demonstrators clashed with police in Aden, San'a and Dhamar, resulting in more than 50 arrests and three deaths. The activities of Islamist militants, meanwhile, posed a potential threat to internal stability. In early September 1994 some 20 people were reported to have been killed in clashes with the security forces in Abyan province, following the destruction of three Muslim saints' shrines by Islamist militants who deemed them idolatrous. In April 1995 Islamist militants were involved in skirmishes in Hadramawt province, resulting in the deaths of two members of the Hussainain tribe, after they levelled similar accusations at the tribe for unislamic burial practices.

In a reorganization of the Council of Ministers in mid-June 1995 the GPC increased its share of portfolios at the expense of independents, with the result that the Council consisted entirely of members of the GPC and the YIP. Later in the month President Saleh was re-elected head of the GPC at the party's first general assembly to be held since 1988, and was given the new title of party Chairman. The Deputy Prime Minister and Minister of Foreign Affairs, Abd al-Karim al-Iryani, assumed Saleh's previous position of Secretary-General, and the post of party Vice-Chairman was taken by the country's Vice-President, Abd ar-Rabbuh Mansur Hadi. In accordance with a decision to rationalize and restructure the party, the permanent committee, elected to represent the constituencies, was reduced to 300 members, and the size of the politburo, elected by the permanent committee, was reduced from 23 to seven members. Meanwhile, the government continued to pursue a policy of decentralization and was reported to have granted the governorates a degree of control over their own budgets and greater freedom in appointing local officials. New provincial governors were appointed, and in April the President announced the demobilization of some 50,000 troops as part of a plan to rationalize the armed forces.

The tensions which had emerged between the GPC and the YIP in early 1995 continued as the year progressed, with differences over many aspects of policy becoming more pronounced. While some elements in the YIP were keen to further Islamist influence over the country's banking system, the GPC was in favour of its privatization. The YIP, which had established its own system of educational establishments, quite separate from the state-run education system, was also opposed to the GPC's aim of educational integration and unification. During 1994–95 these religious schools enrolled 326,484 pupils, 13% of total school enrolment in that year. The YIP also declared its opposition to the development of the free-trade zone at Aden, arguing that it would attract large numbers of non-Yemenis and thereby undermine the country's Islamic identity. In November YIP ministers boycotted the weekly meeting of the Council of Ministers in protest at a newspaper report that claimed the party was colluding with Islamist radicals. Relations between the YIP and the GPC continued to deteriorate. The YIP expressed its opposition to economic reforms recommended by the World Bank, and criticized the GPC for attending an economic summit meeting in Jordan, in October, at which representatives of Israel were present. Moreover, in December the YIP Minister of Trade and Supply, Muhammad Ahmad Afandi, resigned from his post, citing political and economic differences with the GPC. (In January 1996 responsibility for the portfolio was given to a GPC member, Abd ar-Rahman Muhammad Ali Othman.) A new Minister of Education was appointed in October 1996.

The situation in the southern governorates remained tense. There was widespread frustration and resentment in the south that commitments to reconciliation and reconstruction were not honoured by the Government in San'a after the end of the civil war. With the collapse of the YSP, the southern governorates felt increasingly marginalized and neglected, and reconstruction work in the south has been mainly financed by foreign governments and organizations. Violent outbreaks continued in 1996 with explosions in Aden and other southern towns. In June 19 people died in riots in Mukalla and a bomb attack on the Egyptian embassy in July was blamed on 'separatist elements'. Although the exiled National Opposition Front denied responsibility, the group's leader, former Vice-President al-Baid, issued a statement reaffirming his commitment to a separate southern state and for a referendum to secure better terms for the southern governorates. He warned of further violence if these issues were not addressed. At the end of September new anti-government demonstrations occurred in Hadramawt but were quickly suppressed. Attempts by Islamists to enforce stricter public morality in the southern governorates were believed to have contributed to the continuing unrest. In November Ali Nasser Muhammad (a former President of the PDRY, in exile since 1986) returned to Yemen at the invitation of President Saleh. He insisted that he did not seek a political role, but there was speculation that the GPC might urge him to mediate with the south.

THE 1997 ELECTIONS

Tensions between the GPC and its coalition partner, the YIP, increased in the weeks preceding Yemen's second multi-party elections. In October 1996 the YIP took part in a press conference organized by six opposition parties which criticized the registration process, demanded a revision of new voter lists and called for changes to the independent committee responsible for organizing the elections. Some parties indicated that they might boycott the elections unless action was taken. The YIP held talks with several opposition parties including the ideologically-opposed YSP. In an earlier interview, the Prime Minister had played down the recent conflicts between the GPC and the YIP, arguing that each party merely wished to emphasize its distinct political identity as the elections approached. He also expressed support for the emergence of an effective opposition and for the return of the YSP to an active role, but stipulated that the party should first dissociate itself from the secessionists. In December the GPC announced plans to bring the YIP-controlled religious institutes into the state education system. This was seen as a direct challenge to the YIP, as the institutes are used for Islamic indoctrination and recruitment. Discussion of the subject within the Council of Ministers prompted YIP ministers to walk out, but the plan was later approved during a further meeting which the YIP ministers did not attend. Despite their differences the leaders of both parties met in January 1997 and renewed their coalition agreement. Earlier, opposition parties had accused both the GPC and the YIP of monopolizing access to the state-controlled media and using public funds for their election campaigns.

In the elections, held on 27 April 1997, the GPC swept to victory winning 187 of the 301 seats, 64 more than in 1993. With almost two-thirds of all seats, the GPC secured a clear majority in the new parliament. Its only serious rival, the YIP, secured only 53 seats, compared with 62 in 1993. Many candidates from the party's radical Islamist wing were defeated in the elections, while the more traditional tribal elements retained their seats. The party leader, Sheikh Abdullah bin Hussain al-Ahmar, the head of the Hasid tribal federation, was re-elected parliamentary speaker. The YSP, which won 56 seats in 1993, boycotted the elections along with several other opposition groupings. They claimed that the elections would not be fair because of irregularities in voter registration. Nevertheless, some YSP members did stand as independents. In total, independent candidates increased their representation from 48 to 54 seats. Of these, 39 declared their support for the GPC and six for the YIP. The GPC increased its representation throughout the country, particularly in the south, which, in 1993, had been dominated by the YSP. Only four parties were represented in the new parliament compared with eight in 1993.

The Government, which for months had mounted a campaign to encourage people to register to vote, estimated that voter turn-out on election day was around 80%; foreign observers put the figure at 60%. Some procedural improvements were made, such as the introduction of party symbols on ballot slips to aid illiterate voters. However, as in 1993, the election process was characterized by demonstrations and outbreaks of violence in which at least 20 people were reported to have been killed, and all parties except the GPC made accusations of fraudulent practices. International observers, including the US National Democratic Institute and the mainly European Joint International Observer Group in Yemen, were invited by the Government to monitor the elections, and although they were critical of some aspects of the elections, on balance, they pronounced them reasonably free and fair. In May a new Council of Ministers was named; 25 of the 29 members were GPC members, three were independents and there was one members of al-Haq, a conservative Islamic party which won no seats in the 1997 election. The GPC emphasized that they were 'participants' and not partners in government. An independent, Faraj Said bin Ghanim, was appointed Prime Minister. A number of GPC members retained their portfolios, and among the new appointments was a former Governor of the Central Bank, Alawi Salih as-Salami, who became Minister of Finance. As a result of their move to opposition, the YIP forfeited all its ministerial portfolios and consequently its control over the Ministry of Education, and immediately after the election the President confirmed that the YIP's religious institutes would be incorporated in the state education system and their finances and curriculum brought into line with state schools. In a move seen by many as the first step towards the creation of an upper house of parliament, President Saleh appointed 59 members to a new Consultative Council, designed to broaden the base of participation. Although lacking executive or legislative authority, the Council has a committee structure which parallels that of the Council of Ministers and was given a mandate to draft laws on local administration including the reorganization of provincial boundaries, a politically sensitive issue. In December the House of Representatives approved the promotion of President Saleh from lieutenant-general to the rank of field marshal.

After two bombs exploded in Aden at the end of July 1997 120 people were arrested throughout the southern governorates, mainly members of those opposition parties which had boycotted the 1997 elections. The authorities claimed that the opposition parties were responsible for the bombings, but Abd ar-Rahman al-Jifri, the leader of the League of the Sons of Yemen, insisted that the bombs had been planted by the Yemeni Government in an attempt to discredit the opposition. Later in the year the authorities stated that most of those detained had been released, but the opposition claimed that the majority of the men were still in prison and that two of the detainees had died after being tortured. The arrests provoked demonstrations during August and September in Mukalla, the capital of the Hadramawt, where support for the exiled separatist leader Ali Salim al-Baid remains strong. The demonstrators were also reacting to a decision by the newly formed Consultative Council to divide the province of Hadramawt into two parts, a move which was interpreted as an attempt to isolate the coastal areas, including the towns of Mukalla and Shihr (where the YSP retains a strong presence) from the interior of the province. At the end of October several car bombs exploded in Aden. No casualties were reported and some 27 men were arrested and charged, including a Syrian who was reported to have confessed to working for Saudi Arabia's intelligence services. The Saudi Arabian authorities, however, denied any involvement in the bombing campaign, and the decision by the Yemeni Government to report the confession was interpreted by some as an attempt to divert attention away from mounting popular discontent in the country. In December several members of the YSP and the League of the Sons of Yemen imprisoned in Mukalla staged a hunger strike; after their health deteriorated President Saleh ordered their release.

Elsewhere in the country the Government's economic reforms were provoking widespread and often violent protests. In October 1997, after fuel prices were increased, local people in Dhammar, Marib and Al-Jawf protested by blocking roads to the capital. Tribal leaders supported the protestors' actions and the authorities responded by dispatching troops to reopen the roads. At Dhammar three people died and many were injured in clashes between armed tribesmen and the security forces. Foreigners were no longer considered immune from violent attacks, and there was a sharp increase in the number of kidnappings of foreign residents and tourists, mainly by tribes seeking to extract material benefits from the state or to demonstrate their dissatisfaction with certain government actions. In November 1997 Brig. Hussain Muhammad Arab, the Minister of the Interior, linked the increase in the number of kidnappings with the Aden bombings, describing them as part of a campaign to 'tarnish Yemen's image and shake its stability'. In the same month 31 people alleged to be 'foreign agents' were put on trial in San'a charged with attacking and robbing military posts.

In a report published in March 1997 Amnesty International described Yemen as a 'major violator of human rights' despite having ratified or acceded to most human rights treaties and incorporated many of their safeguards into its domestic legislation. The report criticized the activities of the political branch of the security forces and the dramatic increase in the use of the death penalty since 1990, and alleged the systematic use of torture in prisons and the arbitrary arrest and detention of political opponents. It also listed abuses against women. The Deputy Prime Minister expressed surprise at the criticism, but the Government promised to investigate the alleged abuses and gave assurances that the political security branch would be brought under judicial control. At the beginning of April the European Parliament urged the European Commission to put pressure on the Yemeni authorities to improve the country's human rights record, and a new co-operation agreement signed with the EU at the end of the month (replacing the 1984 agreement) was made conditional on progress both in human rights and democracy in Yemen. Later in the year Amnesty International deplored the increase in extra-judicial punishments and instances where international standards to ensure fair trials were disregarded. In a number of cases, following lenient sentencing, crowds of armed civilians took the law into their own hands and the authorities made little effort to curb the increase in vigilante activity. In October a formal Yemeni application for membership of the Commonwealth (former British) was rejected on the grounds that Yemen did not meet the required standards in terms of democracy, the rule of law and respect for human rights. In February 1998 Mansur Rajih, who had been adopted as a prisoner of conscience by several human rights organizations, was released after 15 years in prison under threat of execution.

At the end of March 1998 the year-long trial of 15 members of the separatist southern Yemeni leadership during the 1994 civil war finally came to an end. Five of the men, including the former Yemeni Vice-President, Ali Salim al-Baid, and former Prime Minister Haidar al-Attas, were condemned to death, three, including Abd ar-Rahman al-Jifri, were sentenced to 10 years in prison, five received suspended sentences and two were acquitted. All the accused, who fled abroad after the southern secessionists were defeated by northern forces, were tried *in absentia* and it was thought unlikely that they would be extradited. In April it was reported that more than 2,000 people had demonstrated in the southern town of Mukalla in protest at the death sentences and that three people had been killed and several injured. There were further bomb explosions in Aden at the end of May and violent clashes between demonstrators and police in the southern province of Abyan. Kidnapping of foreigners by tribesmen continued; there were 21 actual kidnappings in 1997 and six attempts and 16 kidnappings in the early part of 1998, and little prospect of those involved being arrested. In April 1998 President Saleh instructed the Consultative Council to find a way of ending the practice, and later instructed the Council to form a permanent committee to study the issue of vengeance-related violence in Yemeni society. In June three British journalists were arrested for filming illegally in Yemen and were only released following diplomatic exchanges. The Government claimed that the murder of a group of nuns in July was the work of 'deranged extremists'. In August a decree was issued whereby the maximum legal penalty imposable on conviction of kidnapping was increased to death.

In late March 1998 the Prime Minister, Faraj Said bin Ghanim, left for Switzerland, ostensibly for medical treatment,

but on his return to Yemen in late April he resigned from the premiership, after only eleven months in office. His resignation appeared to have been prompted by differences with President Saleh over ministerial changes. For some months bin Ghanim had expressed his frustration at the political obstacles that were thwarting his economic reform programme. The President appointed the Minister of Foreign Affairs, Abd al-Karim al-Iryani, to head a provisional administration, and in mid-May al-Iryani was confirmed in the post when a new Government was announced. There were three new appointees to the enlarged Council of Ministers, but apart from bin Ghanim only one minister, an independent, departed. The most significant change was the promotion of Abd al-Qadir Bajammal, the former Minister of Planning and Development, to the post of Deputy Prime Minister and Minister of Foreign Affairs. Presenting the new Government's programme to parliament on 1 June, al-Iryani pledged to continue wider-ranging reforms to tackle the country's economic problems and to begin implementing comprehensive administrative, employment and legal reforms. The Government also indicated that it would proceed with efforts to settle the long-standing border dispute with Saudi Arabia (see below). On 7 June the new Government won a vote of confidence from parliament on its policy programme, with 226 members voting in favour, 17 against and 26 abstentions.

The Government's decision, in mid-June 1998, to increase prices of fuel and some basic foodstuffs by up to 40% with immediate effect led to a week of riots and demonstrations in the capital and several other towns, including Taiz, Dhammar, Ibb and Marib. Official sources stated that some 34 people had been killed and 102 injured in the violence, but opposition sources abroad claimed that up to 100 people had died in the unrest. Some 21 soldiers were reported to have been killed on 26 June when the security forces tried to reopen the road from Marib to San'a which had been blocked by tribesmen; an estimated 20-30 tribesmen were reported to have died in the clashes around Marib. On 29 June Hunt Oil stated that its oil pipeline from Marib to the Red Sea had been punctured by bullets fired by protestors, but was still operational. The southern provinces were reported to have been relatively quiet, but there was a large peaceful demonstration at Mukalla on 30 June urging the President to reverse the price rises. A group of five opposition parties issued a statement blaming the Government for the rioting and urging it to reverse its 'wrong policies' because they were impoverishing the people. Al-Iryani, however, told parliament that the price rises would not be cancelled, but that fuel prices would not be increased again for another four years. Officials accused members of the YIP of direct involvement in the disturbances. (The YIP had announced its intention to bring down the al-Iryani Government.) By the end of June the security forces appeared to have brought the disturbances in the towns under control, but in early July there were reports that tribesmen had seriously damaged the oil pipeline from Marib to the Red Sea. According to the *Yemen Times*, the cost of repairs would exceed US $1m., although both the Government and Hunt Oil played down the seriousness of the incident. At the same time at least two explosions were reported in Aden. By the end of the year there had been 17 separate attacks on the Marib oil pipeline since June, and the Government responded by forming a committee charged with protecting oil installations. A Yemeni source reported that in mid-November an attempt was made to assassinate President Saleh in ad-Dali. Four local men disguised as soldiers are alleged to have attempted to attack the President's motorcade, but their equipment failed. A later report accused an exiled opposition group based in London, United Kingdom, of planning the attack.

At the end of December 1998 the spate of kidnappings took a more serious and tragic turn when 16 Western tourists were taken hostage in the southern province of Abyan and four of the hostages (three Britons and an Australian) were killed during a rescue operation by the security forces. In this incident, the tourists had not been kidnapped by tribesmen but by the so-called 'Islamic Army of Aden-Abyan', a small faction of the Yemeni Islamist group, Islamic Jihad, whose commander, Abu Hassan al-Mihdar, was captured during the rescue attempt along with two of his accomplices. Islamic Jihad has a number of international connections dating back to the war in Afghanistan, including Osama bin Laden (see chapter on Saudi Arabia), and operates a military training camp in the mountains of southern Yemen, which the Yemeni authorities have been trying to close for some time. Much uncertainty surrounded precisely who killed the four tourists. The kidnappers had used them as 'human shields', but it was unclear whether the security forces had only opened fire after the kidnappers had begun killing the hostages or whether they had been hit in crossfire between the kidnappers and the security forces during the rescue attempt. The actions of the security forces were heavily criticized in the British media. Abu Hassan later admitted in court that he had given instructions to kill male hostages if the security forces opened fire, but two of the hostages who died were women. The incident sparked a diplomatic row between Britain and Yemen, with British officials accusing the Yemeni authorities of ignoring their advice to seek a negotiated end to the kidnapping (see below). The motive for the kidnapping was also unclear. It was suggested that it may have been a reprisal for the US-UK air strikes against Iraq earlier in December. It was reported that the kidnappers sought the release of Sheikh Salih Haidara al-Atawi, the leader of Islamic Jihad, who had been arrested in mid-December following clashes between Jihad militants and the security forces. It was also claimed that the kidnapping was linked to an extremist Islamist group based in London known as 'Supporters of the *Shari'a*' and led by an Egyptian, Abu Hamza al-Masri (see below). In May 1999 a court in Zinjibar sentenced the three kidnappers to death, but the men immediately appealed against their sentences. Having adopted a tough stance against hostage-taking, some observers felt that the Government's authority would be undermined if the executions were not carried out. This was the first kidnapping for many years in which hostages had died. However, there were also fears of reprisals from the men's tribal and religious supporters if they were executed. The Islamic Army had already threatened to assassinate the Minister of the Interior. Furthermore, the group's leader, Abu Hassan al-Mihdar, was reported to have a number of high-level contacts, including the President's half-brother, Ali Muhsin al-Ahmar.

A few days before the kidnapping in Abyan, the Yemeni authorities had arrested five young British Muslims and an Algerian (who had been living in Britain) in connection with an alleged plot to bomb the British consulate and a British-built church in Aden. The authorities claimed that the men were members of a London-based extremist Islamist group, 'Supporters of the *Shari'a*', and had been sent to Yemen by the group's leader, Abu Hamza al-Masri, a veteran of the Afghan war, to take part in a terrorist campaign there. The families of the men, however, insisted that they were in Yemen simply to learn Arabic. Abu Hamza's group was reported to have had links with the Islamic Army of Aden–Abyan for some time, and in October 1998 the group had issued a communiqué in Arabic on behalf of the Islamic Army, warning 'unbelievers' to leave the Arabian Peninsula. It later emerged that one of the British Muslims arrested was the stepson of Abu Hamza. The Yemeni authorities claimed that the London-based group was implicated in both the alleged bomb plot in Aden and the kidnappings in Abyan. Abu Hamza admitted that he had had a telephone conversation with the leader of the Islamic Army during the Abyan kidnapping, and some maintained that the Western tourists had been taken hostage in order to secure the release of those arrested for the alleged Aden bomb plot. At a press conference in London on 20 January 1999 Abu Hamza called for the overthrow of the Yemen Government and warned non-Muslims against visiting Yemen on pain of death.

The six suspects went on trial in Aden at the end of January 1999, accused of membership of an armed group and of planning to commit acts of sabotage against Yemeni and foreign interests in Aden. The men all denied the charges and retracted their confessions, declaring that they had been obtained under torture. Meanwhile Abu Hamza's teenage son, Mustafa Kamil, was arrested in Abyan along with two Britons, an Algerian and two members of the Islamic Army implicated in the kidnapping of the Western tourists. Kamil was reported to have 'confessed' that he had been encouraged by his father to undertake *jihad* (holy war) and had arrived in Yemen to join the Islamic Army. Kamil, the two Britons and the Algerian were put on trial in Aden together with the original six suspects. At the end of February one of the British lawyers involved in their defence

was arrested and then expelled from Yemen. He claimed that he had been beaten and threatened by the security forces. In mid-March British police arrested Abu Hamza in London for questioning, but released him three days later. Abu Hamza had earlier issued a new threat on behalf of the Islamic Army, warning the British and American ambassadors to leave Yemen. The Yemeni authorities had been seeking his extradition—Abu Hamza has British citizenship and there is no extradition treaty between the two countries—and there was some speculation that Britain and Yemen may have reached an understanding under which Britain would take action against Abu Hamza in order to secure lenient treatment for the Britons on trial in Aden. In April the judge in the Aden trial agreed to an independent medical examination of the defendants, after the defence insisted that their confessions had been obtained under torture. In August the court in Aden found the 10 defendants guilty as charged, and five of the British nationals were sentenced to terms of imprisonment of three to seven years. In September the men were granted leave to appeal against the sentences. Meanwhile, the kidnapping of foreigners by tribesmen continued. During January and February 11 foreigners were seized by northern tribes, but they were all eventually released unharmed.

In May 1999 official sources reported that President Saleh had stopped chewing qat and had persuaded some of his top aides to follow his example and take up sports and useful exercises instead. At the beginning of June Dr Abd al-Aziz as-Saqqaf, the influential publisher of the *Yemen Times*, died after being hit by a car in San'a.

In July 1999 some 30 candidates applied to contest Yemen's first direct presidential election, due to take place at the end of September. Several candidates quickly withdrew, however, and three were disqualified by the vetting committee so that only 24 names were submitted for parliamentary approval. In order to qualify under electoral rules, candidates had to gain the support of at least 10% of the 301-member parliament. President Saleh, who had the backing of the ruling GPC and the YIP, which together control most of the seats in parliament, secured 182 votes, and Najib Qahtan ash-Shaabi, the son of the first President of South Yemen, who, although a member of the GPC, was standing as an independent, also qualified with 39 votes. Ali Saleh Obad, the YSP leader, whose party has no parliamentary representation but who was supported by a number of extra-parliamentary opposition groups, failed to qualify, securing only seven votes, while the remaining candidates failed to secure a single vote. Under Yemen's constitution, presidential elections must be 'competitive'. The head of the YSP's political department questioned whether an election in which both candidates were members of the same party would be considered constitutional, adding 'We have one candidate competing with his shadow'. Shaabi, who has been a member of parliament since 1992, told a press conference that, if he won the election, he would combat all the evils of Yemeni society, including the chewing of qat and blood feuds, and also promised to promote full political and social rights for women. However, on 23 September President Saleh was re-elected, with 96.3% of the votes cast.

FOREIGN RELATIONS AFTER THE CIVIL WAR

In the aftermath of the civil war President Saleh quickly embarked on a diplomatic offensive to isolate the secessionists and ensure that they could not regroup in neighbouring countries, most of which had supported the South during the two-month conflict. Oman and Djibouti promised the prompt return of military equipment brought there by the fleeing southern forces, and most states, including Egypt, expressed their support for a unified Yemen. Relations with Oman were strengthened further in June 1995 when the demarcation of the Yemeni-Omani border (initiated in 1992) was officially completed. Relations with Sudan also improved and Iran showed growing interest in Yemen and began providing some medical assistance. However, the arrival of militants from Algeria's banned Front islamique du salut (FIS), and later from the extremist Groupe islamique armé (GIA), provoked a strong protest from the Algerian Government and in January 1995 Algeria recalled its ambassador from San'a. The YIP was known to have provided military training and political indoctrination for Islamist militants from Algeria and also from Egypt, while declaring publicly that the party supported an end to violence in Algeria and dialogue leading to free, multi-party elections. The Yemeni Government strongly denied the existence of training camps for militant Islamists until 1995 when President Saleh, on a visit to Cairo, declared that his security forces had discovered a cell of the militant Egyptian group, Islamic Jihad, and offered to exchange members of the group for Yemeni separatists based in Cairo. Towards the end of 1997 the Yemeni authorities were reported to have arrested a number of Yemeni and foreign Islamist militants, including the so-called 'Arab Afghans', possibly in a move to curb the activities of the more extremist elements within the YIP.

Long-standing difficulties with Yemen's powerful neighbour, Saudi Arabia, continued to dominate foreign relations. After the civil war ended, Saudi Arabia provided assistance for the reconstruction of Aden hospital, and promises of further assistance for health projects were made during a visit by Saudi Arabia's Deputy Minister of Health in December 1994, the first sign since the end of the Gulf war that Saudi Arabia might begin to resume financial aid to Yemen. Yemen promised to begin a new chapter in its relations with Saudi Arabia based on 'co-operation, security and stability'. However, in late December tensions between the two countries increased over the disputed border, and there were reports of armed clashes between Saudi and Yemeni forces in disputed territory. The Saudi Minister of Defence, Prince Sultan ibn Abd al-Aziz Abd as-Sa'ud, was reported to have told Prime Minister Abd al-Aziz Abd al-Ghani that the Saudi air force would bomb Yemen unless it withdrew military units stationed in certain frontier areas. A large Saudi force of 20,000 men, together with 400 tanks, armoured vehicles and pieces of heavy artillery, penetrated some 70 km inside Yemeni territory. The intervention of the Syrian Vice-President, Abd al-Halim Khaddam, defused the situation and produced a compromise in January 1995. After a month of difficult negotiations the two countries signed a memorandum of understanding in Mecca on 26 February, establishing the basis for future discussions. Under the memorandum, Yemen accepted the terms of the 1934 Ta'if agreement, which had lapsed in 1994, thereby effectively conceding sovereignty over the provinces of Najran, Gizan and Asir, which were annexed by Saudi Arabia in 1934. Although the Ta'if agreement dealt principally with the border area in the north-west of the country, Yemen's Minister of Foreign Affairs succeeded in ensuring that future talks would deal with the entire length of the border between the two countries. The memorandum signed in Mecca provided for the establishment of six joint committees to delineate the land and sea borders and develop economic and commercial ties; both sides also agreed that they would not permit their country to become 'a base and centre for aggression' against the other. If the negotiations did not lead to agreement, the memorandum provided for international arbitration, a point initially rejected by Prince Sultan. On 8 March 1995 the memorandum was approved by the Yemeni Council of Ministers and later in the month the joint Yemeni-Saudi military committee, established by the memorandum, held its first meeting in Riyadh. In early June President Saleh and a high-ranking delegation visited Saudi Arabia, constituting the first official visit to that country since February 1990. In a joint statement, issued at the end of the visit, the two Governments expressed their satisfaction with the memorandum of understanding and, in addition, pledged their commitment to strengthening economic, commercial and cultural co-operation. Yemen clearly hoped that the memorandum would lead to the normalization of relations with Saudi Arabia, and that negotiations could lead to the return of at least some of the 800,000 Yemeni workers expelled from Saudi Arabia during the Gulf crisis, as well as the resumption of significant Saudi aid. By the end of 1995 some progress had been made in implementing the February memorandum of understanding as the various joint committees began their work. The military committee produced plans to reduce troop levels in border areas, and border controls between the two countries were relaxed, allowing an increase in trade. Notably, the Saudi Government agreed to allow Yemenis to seek work in the kingdom, declaring that the Saudi Ministry of Labour would begin issuing work permits to Yemenis provided they had a Saudi sponsor. It was assumed that many Yemenis expelled in 1990 would return to their former employers and

businesses in the kingdom, although it was thought unlikely that the level of emigration would be as great as before the expulsion. In December 1995 reports of armed clashes along the disputed border were denied by Saudi Arabia and early in 1996 the two countries reached a preliminary agreement on their land frontier. Talks also began on the delimitation of the maritime boundary between the two countries. In July, the two countries signed a bilateral security agreement aimed mainly at combating cross-border drugs-trafficking, but also at preventing Yemen from becoming a refuge for radical Saudi dissidents. In the past Yemen had been accused of providing refuge for foreign dissidents, particularly members of Islamist groups, but since mid-1995 the Government has moved to arrest and extradite many such dissidents, including the Arab *mujahidin* who fought in Afghanistan against the Soviet occupation. The two countries concluded a new trade agreement in September 1996. During August and September 1996 a number of high-level meetings were held between Saudi and Yemeni officials, including a visit to San'a by the Saudi Minister of Defence, responsible for negotiations with Yemen, and the Minister of the Interior. After the elections in Yemen, in May 1997, President Saleh stated that he would visit Saudi Arabia in order to seek a settlement of the border issue, as little progress had been made since the signing of the preliminary agreement. However, tensions between the two countries quickly re-emerged. After a visit to Jeddah, the new Minister of Foreign Affairs, Abd al-Karim al-Iryani, a noted critic of Saudi Arabia, complained that he had not been treated with the correct diplomatic protocol. The Yemeni press immediately launched a campaign accusing the Saudis of trying to destabilize Yemen in order to strengthen their hand in the border negotiations. After border clashes were reported in late June and early July, the interior ministers of the two countries held urgent talks which both Governments declared would lead to an early and permanent settlement of the border dispute. However, the joint committees set up under the 1995 memorandum of understanding (see above) had failed to reach any common positions and tensions arose again after the Saudi-owned television station in London, the Middle East Broadcasting Corporation, transmitted an interview with the southern Yemeni leader, al-Baid, who was on trial *in absentia* in Yemen. Later in 1997, after further high-level meetings between the two sides, including a meeting between President Saleh and Prince Sultan, the Yemeni press suggested that a settlement of the border dispute was imminent. However, in October al-Iryani accused Saudi Arabia of supporting the tribal unrest in Yemen, and the Yemeni authorities also claimed to have evidence that Saudi Arabia was involved in a series of bombings in Aden (see above). Further border clashes occurred in November in which several soldiers were reported to have been killed. At the end of November al-Iryani held talks with King Fahd and Crown Price Abdullah in Riyadh but no progress was made towards a settlement. In early December al-Iryani stated that Yemen might take the dispute to international arbitration if negotiations remained deadlocked. Despite the renewal of immigration visas for Yemenis in May 1998, for the first time since the end of the 1991 Gulf crisis, the border dispute flared up again at the end of the month, when it was reported that Saudi forces had occupied several islands in the Red Sea, which are also claimed by Yemen, and expelled the resident population. While this was regarded as an attempt by Saudi Arabia to establish its own claim to the area, some also interpreted it as signalling Saudi disapproval of the new Yemeni Government headed by al-Iryani. The occupation may also have been motivated, in part, by Saudi Arabia's desire to prevent Yemen supporting Ethiopia in its dispute with Eritrea. In July Saudi Arabian forces shelled the disputed islands, killing three Yemenis, only one week after they had crossed the land border to take part in pacification operations against local tribes supported by Saudi Arabia in their struggle against the Yemeni Government. There were protests from President Saleh, but the two countries later agreed to work towards a peaceful solution to their differences. A joint military committee meeting attended by the respective Chiefs of Staff was held in August, but only agreements governing 'guarantees and rules' between the two countries were concluded.

The participation of the USA in the negotiations between Yemen and Saudi Arabia was believed to have played an important role in securing at least a provisional agreement between the two countries and was seen as marking another stage in the gradual normalization of relations between Yemen and Western countries. On a visit to San'a in October 1997, the US Assistant Secretary of State for Middle East and Near East Affairs, Martin Indyk, expressed continued US support for all measures to strengthen security and stability in the region and stated that Washington was keen to promote and expand co-operation with Yemen. He praised the Yemeni Government for their 'rational approach' to the border dispute with Saudi Arabia. In late May 1998 the Commander-in-Chief of the US Central Command, Anthony Zinni, visited Yemen for talks with President Saleh on military co-operation. Security around the US embassy in San'a was increased after the US and Britain launched air strikes against Iraq ('Operation Desert Fox') in December, and thousands of Yemenis took part in a peaceful demonstration in the capital against the attacks. In March 1999 the editor of an opposition newspaper, *al-Haqq*, was arrested after the paper published an article claiming that the Government was planning to offer the USA military facilities on the island of Socotra, at the entrance of the Gulf of Aden. There were reports that military co-operation between Yemen and the USA was increasing and had aroused much controversy, not only among Yemen's Islamists.

In February 1995 President Saleh visited the Netherlands, Germany and France, concluding a number of new aid agreements and other joint projects. In April the United Kingdom announced that its aid programme for Yemen would be resumed at a modest level, and in June Japan stated that it was prepared to reactivate fully its economic aid programme for Yemen. After the parliamentary elections in May 1997 Saleh again visited a number of European capitals securing promises of increased aid, help with outstanding debts and new co-operation agreements. In mid-November he made an official visit to the United Kingdom, the first visit by a Yemeni head of state since Britain's evacuation of Aden in 1967. However, relations between the two countries became strained at the end of 1998 when a diplomatic row broke out over a kidnapping incident in southern Yemen in which three British tourists were killed during a rescue operation mounted by the security forces (see above). Britain complained that Yemen had ignored advice to seek a negotiated settlement to the kidnapping, and accused the Yemeni authorities of failing to provide a full account of the rescue attempt. The row deepened when it emerged that Yemen had failed to inform Britain of an alleged bomb plot against British interests in Aden earlier in December, and when the Yemeni authorities announced that five of the suspects in the alleged plot were British Muslims (see above). Yemen insisted that both the kidnapping incident and the alleged bomb plot were linked to a London-based Islamist group, 'Supporters of the *Shari'a*', and accused Britain of harbouring terrorists.

Early in 1998 the President visited Malaysia (a country with which Yemen has long-established links), China and Indonesia. Relations with Oman improved after June 1995, when a border demarcation agreement, initiated in 1992, was completed. By mid-1996 the last remaining troops had been withdrawn from the border area, and agreements on economic co-operation and investment had been signed. Later in the year the two countries agreed to set up a free-trade zone near the border. In early 1997 agreements were signed to improve air and road links between the two countries, and at the end of May final demarcation maps for their joint border were signed. Although Saudi Arabia had not formally opposed the 1992 agreement, it was reported in April 1998 that Saudi Arabia claimed some of the territory covered in the border demarcation agreement between Yemen and Oman. There was speculation that these claims might be linked to Saudi Arabia's ambitions to secure a corridor to the Arabian Sea between Yemen and Oman. In early July 1995, following a statement made in the previous month by Kuwait's Deputy Prime Minister and Minister of Foreign Affairs, Sheikh Sabah al-Ahmad al-Jaber as-Sabah, which stipulated that Yemen would have to officially demand Iraq's implementation of the UN Security Council's resolutions before Yemeni-Kuwaiti relations could be normalized, the GPC issued a policy statement requiring Iraq's implementation of the aforementioned resolutions. In September a delegation of Kuwaiti trade unionists visited Yemen and at the end of the year the Kuwait-based

AFESD agreed to support a development project in Yemen. However, relations with Kuwait remained strained. In October Yemen's Minister of Foreign Affairs, Abd al-Karim al-Iryani, had accused Kuwait of supporting the southern separatists in the civil war. In December 1996 Kuwait opposed the Yemeni application for GCC membership, which was rejected two months later. This decision provoked acrimonious exchanges in the Kuwaiti and Yemeni press, although in early 1997 Yemen did succeed in joining the Indian Ocean Rim Association for Regional Co-operation which promotes co-operation in trade, investment and economic development. In June 1998 the Minister of Foreign Affairs, Dr Abd al-Qadir Bajammal, stated that Yemen would not repeat its request to join the GCC. Yemen's Minister of Foreign Affairs visited Kuwait in May 1999, at the invitation of the Kuwaiti Government, in order to formalize the normalization of relations between the two countries. The Yemeni Government continued to express solidarity with Iraq and urged an end to the UN oil embargo on Iraq. A parliamentary delegation and a senior official of the GPC visited Baghdad in October 1995. Although popular feeling in Yemen remains fiercely pro-Iraqi, the Yemeni Government has been careful not to alienate mainstream international opinion. During the crisis in relations between Iraq and the USA in February 1998 President Saleh cut short a visit to Indonesia to attend discussions on the crisis in Abu Dhabi, and security forces in San'a were reported to have dispersed unlicensed demonstrations against the US and British military build-up in the Gulf. In late 1996 a Libyan-sponsored conference of opponents of the Middle East peace process was held in San'a and several GPC members attended. However, in an interview in January 1997, the Minister of Foreign Affairs stated that the Yemeni Government was not opposed to the peace process and supported the principle of 'land-for-peace'. Although Yemen traditionally maintains a hard-line stance towards Israel, it agreed to attend the fourth Middle East and North Africa economic conference held in Doha, Qatar, in November 1997 at which an Israeli delegation was present. Leading Arab states, including Egypt and Saudi Arabia. had refused to take part in the summit.

In November 1995 there were reports that Eritrean troops had attempted to land on the Red Sea island of Greater Hanish, one of three islands (the others being Lesser Hanish and Zuqar) claimed by both Yemen and Eritrea. The attempted invasion had apparently been prompted by Yemen's announced intention to develop Greater Hanish as a tourist resort, and its subsequent refusal to comply with an Eritrean demand that the island be evacuated. Negotiations in Yemen and Eritrea in late November and early December failed to defuse the crisis, and on 15 December fighting broke out between the two sides, resulting in the deaths of six Eritrean and three Yemeni soliders. On 17 December Yemen and Eritrea agreed to a cease-fire, to be monitored by a commission comprising a senior official from each country and two US diplomats. None the less, fighting was renewed the following day and Eritrean forces succeeded in occupying Greater Hanish. The cease-fire was subsequently adhered to, and some 180 Yemeni soliders (captured during the fighting) were released at the end of the month. Attempts by the Ethiopian and Egyptian Governments to broker an agreement between the two sides proved unsuccessful. In late January 1996 France assumed the role of mediator. On 21 May representatives of Eritrea and Yemen signed an arbitration accord in Paris, France, whereby the two sides agreed that they were prepared to submit the dispute to an international tribunal. France and the USA subsequently undertook to observe and supervise military movements in the area around the disputed islands. In August, however, Eritrean troops occupied Lesser Hanish and Yemen threatened to send troops to force them to withdraw. After intervention by the UN and France, Eritrea withdrew its forces and in October the two countries reaffirmed their agreement to allow an international arbitration panel to settle the dispute. The five-member panel began work in January 1997 and is expected to make a judgment on the sovereignty of the Hanish islands and the location of the maritime border between Yemen and Eritrea. By July the arbitration had entered its second stage, but relations remained strained. In November 1998 Yemen assumed control over the majority of the Hanish islands following an award made in its favour in October by the arbitration panel of the International Court of Justice. Some argued that a similar procedure might be adopted to resolve Yemen's border dispute with Saudi Arabia.

Economy

ALAN J. DAY

INTRODUCTION

In 1996, according to World Bank estimates, Yemen's GNP, measured at average 1994–96 prices, was US $6,016m. GNP per head in 1996 was an estimated $380, placing Yemen in the lower ranges of the world's low-income countries. In 1989, the last year before Yemeni unification, the World Bank had estimated Yemen's GNP per head as $650, based on aggregated data for the then Yemen Arab Republic (YAR or North Yemen) and the People's Democratic Republic of Yemen (PDRY or South Yemen). Although widely varying estimates have been produced by other sources, the World Bank estimates appear to be broadly consistent with the course of events in Yemen in the years following unification in May 1990. Early plans for economic development and integration were quickly disrupted by the Gulf crisis of 1990–91, particularly by the UN trade embargo on Iraq, which Yemen applied with some reluctance in view of its close economic links with that country. Also damaging was the enforced return of up to 1m. Yemeni workers from Saudi Arabia and other Gulf states and the consequential loss of crucial remittance income. Financial difficulties associated with the crisis obliged the Government to adjust economic policy, notably by reducing expenditure and food subsidies, with the result that social unrest increased in 1992. During the following year the Government appeared to be moving towards the introduction of fundamental structural reforms, but in 1994 normal economic planning was again disrupted by a political crisis, associated on this occasion with the onset of civil war.

Unification created a country of 536,869 sq km with a population estimated at 11,282,000 in mid-1990, excluding up to 2.5m. Yemenis working abroad, mainly in Saudi Arabia. Of the two components, the YAR had a population of 9,274,173 (including nationals abroad) in 1986, while the PDRY had a population of 2,345,266 in 1988. The YAR had fared better economically, achieving a GNP per head of US $640 by 1988 (according to the World Bank), whereas the PDRY's equivalent statistic was $430. The results of Yemen's first post-unification census, carried out on 16 December 1994, indicated a total population of approximately 14.6m. (25% of whom lived in urban areas). During 1990–96 the population of Yemen increased by an annual average of 4.7%. Other World Bank statistics for 1995 gave the average life expectancy at birth in Yemen as 53 years and the infant mortality rate as 100 per 1,000 live births, while in 1994 the male literacy rate was 68.6% and the female literacy rate was 23.1%. In July 1999 a UN report on human development estimated that the proportion of Yemen's population living in poverty (as defined by current UN measures of living standards) stood at 27% in 1998, compared with 19% in 1992. The report forecast that Yemen's total population would reach 18.9m. by 2001.

In the mid-1980s the economic prospects of both countries were significantly improved by the discovery of hydrocarbons in commercial quantities, and the perceived need for rapid joint development of their oil and gas sectors was a major factor in the two countries' decision to unite. Prior to unification, both countries had sought to promote development by means of three- or five-year plans which called for large inflows of foreign aid,

but both had usually failed to achieve their targets. The YAR's second five-year plan had been disrupted in December 1982 by a major earthquake in Dhamar province which killed about 3,000 people and caused an estimated US $650m. of damage. In 1983, moreover, there was a slump in earnings from the remittances of North Yemenis working abroad, caused by cutbacks in petroleum production, reduced revenues and, hence, less profitable employment in the petroleum industries of Saudi Arabia and the Gulf States. These factors caused a crisis in the economy of the YAR, leading to the introduction of austerity measures. However, in 1984 the country's prospects improved, following increases in aid for the relief of the earthquake region. In July 1984 petroleum was discovered in the YAR, and was being produced at a rate of 180,000 barrels per day (b/d) by the time of unification in May 1990.

Under British rule, South Yemen was sustained by Aden's position on the main international shipping lanes. The British Petroleum (BP) refinery was the focus of industry and trade. However, the closure of the Suez Canal in 1967, and the withdrawal of British troops in the same year, put an end to Aden's commercial prosperity, making it impossible for the post-independence Government to cover the budget deficit. Seeking new sources of finance and technical aid to assist it in the transition from a service economy to one based on agriculture and manufacturing, the PDRY accepted the favourable terms offered by the Soviet Union and other communist countries. In November 1969 the Government decreed the nationalization of all important foreign assets in the republic, with the exception of the BP refinery, which was not taken over until 1977. Meanwhile, the reopening of the Suez Canal in 1975 had not produced the anticipated revival in Aden's economy. In 1980 the PDRY Government introduced measures of liberalization, aimed mainly at helping farmers, fishermen and merchants. The political turmoil of January 1986, when the regime of Ali Nasser Muhammad was overthrown by an uncompromising Marxist faction, caused considerable economic disruption in the country. The new Government called for international aid to rebuild the city of Aden, large areas of which had been destroyed, and promised to honour its contracts with foreign companies. The discovery of petroleum in commercial quantities in 1983 improved the PDRY's economic prospects, although little headway had been made in developing production by the time of unification in 1990.

The onset of the Gulf crisis in August 1990 seriously disrupted unified Yemen's economy, especially when the Government, after some hesitation, decided to adhere to UN sanctions against Iraq and Iraqi-occupied Kuwait. Prior to the crisis Yemen had been greatly dependent on trade with, and aid from, both Iraq and, to a lesser extent, Kuwait. It had also relied heavily, for balance-of-payments purposes, on hard currency remittances from Yemeni workers in Saudi Arabia and the Gulf States, who returned home in large numbers, especially from Saudi Arabia, which in late September 1990 terminated Yemeni workers' privileges in retaliation for Yemen's opposition to the US-led military build-up in the Gulf. In October 1990 the Government, in support of a request for special aid from the international community, calculated its actual and prospective losses in 1990–91 at US $1,686m. Later Yemeni estimates of the overall cost of the crisis included one by President Saleh in May 1991 which put Yemen's total prospective losses, including 1992, at over $3,000m. Moreover, in April 1991 the Government valued property and assets lost by Yemeni nationals forced to leave Saudi Arabia at $7,900m. By then the total number of returnees from Saudi Arabia was estimated by Yemeni officials at up to 1m., representing a 10% increase in the country's population and giving rise to serious social problems and pressure on scarce resources. Against this background, the World Bank co-ordinated international moves to provide emergency aid and credits for Yemen totalling $245m. Aggravating Yemen's problem was a foreign debt said to be in excess of $7,000m.

In November 1991 President Saleh conceded that Yemen was experiencing an economic crisis, with unemployment between 25% and 30%, and lost aid and other negative effects producing a 50% shortfall in government receipts compared with the original 1991 budget. In response, the Government implemented austerity measures, including cuts in food subsidies and defence expenditure, and co-operated informally with the IMF and other international agencies in adjusting short-term economic policy. On the positive side, activity in the oil and gas sectors accelerated sharply in 1991–92, on the strength of discoveries of significant new reserves, although output from existing oilfields declined in 1992, when government oil revenues remained modest in relation to the country's current financial needs. By mid-1993 there were signs that relations with Saudi Arabia and other GCC states were beginning to improve, and in August 1993 oil production started to rise when the first shipments were made from a newly-developed field.

In 1994 political events led once more to deep economic crisis as the armed conflict of May–July further destabilized the deficit-ridden public finances and burdened the country with a costly agenda of post-war repair work to be undertaken before the normal development programme could resume. An initial assessment of civil war damage by the UN Development Programme (UNDP) put the cost of essential repairs to basic infrastructure and services in the Aden area at between US $100m. and $200m., and in mid-August the UN launched an appeal for $22m. of emergency aid to cover the immediate needs of the population of the southern war zone for the next six months. The Yemen Government estimated the overall cost of the war at $4,000m., and anticipated a $3,500m. spending requirement for reconstruction work. Widespread shortages of food, water and electricity continued to be reported in many parts of the country in September 1994, when a particular cause of popular discontent was the fivefold rise in prices of some basic foodstuffs since early July. In mid-September the World Bank authorized the expenditure of $35m. on emergency reconstruction work in five sectors of the economy, while the UNDP announced a $4m. distribution of food aid in the war-affected areas over a period of two months. Countries which extended various types of emergency aid through national agencies included Italy, Germany, the Netherlands and the USA. The World Bank package utilized funds which formed part of Yemen's accumulated entitlement to $345m. of International Development Association (IDA) finance for projects whose implementation had been delayed by bureaucratic inefficiencies in Yemen. The package included $21m. for the power sector but only $700,000 for the water sector, which had already secured some bilateral aid. Allocations for health, education, agriculture and fisheries were to be spent mainly on the replacement of looted equipment and supplies.

Prior to the outbreak of civil war, the Yemen Government had discussed the prospects for structural economic reform in some detail with experts from the World Bank, whose primary recommendation was that the Government should curb the fiscal deficit, adjust the currency exchange rate and adopt a disciplined monetary policy as first steps in any reform programme. A delegation of World Bank and IMF officials visited San'a in January 1995 to reassess the situation and draw up proposals for immediate remedial action. It was estimated at this point that prices were rising at an annual rate of 60% despite direct and indirect government subsidies totalling more than US $400m. per year, while the unemployment rate was around 30%, despite widespread overmanning throughout the public sector. By late March the inflation rate was reported to have risen to 100%, and the unemployment rate to 50%, as the country awaited a major economic policy initiative by the Government. The main components of this initiative were price increases and other measures to curb the budget deficit; adoption of a more liberal exchange-rate policy; and a commitment to implement wide-ranging structural reforms (to be finalized in consultation with the IMF and World Bank) from 1996 onwards. Implementation of an IMF-approved reform programme began on schedule in January 1996, and in July the Government published a detailed development plan for the remainder of the decade. At the end of 1996 the World Bank congratulated the Yemeni Government on its 'remarkable success' in stabilizing the currency and reducing the rate of price inflation (which by November 1996 was less than 10% on an annualized basis). In June 1997 a consultative group of 26 international aid donors met in Brussels to review the implementation of Yemen's structural adjustment programme. The World Bank, the IMF and other major donors agreed that progress to date had exceeded all expectations and expressed their strong confidence in the future of the programme. The meeting pledged a total of $1,800m. of aid to Yemen over the

next three years. In July 1999 the IMF, which had approved a new support package for Yemen in late 1997, commended the Government for 'pushing ahead effectively with its reform programme' in the 'difficult circumstances' arising from the 1998 downturn in oil export prices. In April 1999 the World Bank indicated its willingness to consider up to $700m. of new lending to Yemen over the next three years, subject to satisfactory implementation of existing Bank-funded projects. World Bank estimates for 1997 gave Yemen's GNP as $4,300m. ($270 per head) on a conventional exchange-rate basis. Measured on the basis of 'purchasing power parity', GNP amounted to an estimated $11,800m. ($720 per head) in 1997.

AGRICULTURE AND FISHERIES

The agriculture and fisheries sector contributed an estimated 14.7% of GNP in 1995, while agriculture provided 58% of male employment and 95% of female employment among the 77% of Yemen's population who lived in rural areas at the time of the December 1994 census. The average annual growth rate of agricultural production in the decade to 1995 was estimated as 3.7% by FAO. Only 6% of Yemen's land area is categorized by the World Bank as arable (and only one-half of this as 'crop land') while 7% is classed as forest and woodland and 30% as permanent pasture. The remaining 57% is largely desert and scrub.

The greater part of the arable land is in the western part of the country, which is the most fertile area of the Arabian peninsula, with a long tradition of intensive cultivation by smallholders. The wide range of climatic conditions across the hillsides, mountains, valleys, coastal plains and highland plateaus of western Yemen make it possible to cultivate a diversity of crop types, including dates, tobacco and cotton on the drought-prone Tihama plain and in coastal areas further to the south; coffee (at altitudes above 1,300 m); the qat bush (mainly at altitudes between 1,500 m and 2,500 m); sorghum or durra (at altitudes up to 3,000 m); and other cereals including wheat, barley and maize. Traditional fruit and vegetable crops in the highland areas include citrus fruits, apricots, peaches, grapes, tomatoes and potatoes, while newer crops encouraged since the 1970s under agricultural development programmes (often backed by bans on fruit and vegetable imports) include watermelons, cucumbers, peas, cauliflowers and lettuces. Mangoes, bananas and papayas are grown at lower altitudes where subtropical conditions prevail. The less favourable climate and terrain of Yemen's desert interior restrict agricultural production mainly to the wadi areas with sufficient water resources to support farming. The fertile Wadi Hadramawt, extending across 160 km of eastern Yemen, is the largest wadi system in the Arabian peninsula.

Agricultural development projects, mainly financed by foreign aid, featured prominently in the development plans of the former YAR and PDRY and have remained a priority since unification. The Tihama Development Authority (TDA) was set up with aid from IFAD, IDA and other sources to oversee the development of irrigation systems, water storage schemes and ground-water exploitation in the Tihama region. The TDA's Wadi Sihan project is designed to irrigate an initial 5,700 ha of land. The building of a major new Marib dam at Wadi Abida was completed in 1986 with financing from the Abu Dhabi Fund for Arab Economic Development. The dam has a storage capacity of 390m. cu m and is designed to provide perennial irrigation for 6,000 ha of cereal crops, with 5,000 ha of intermittent irrigation. Plans for a second development phase of the Marib dam scheme were being finalized in 1999. Small-scale dam-building projects have been undertaken in many other wadi areas throughout Yemen. A major scheme was inaugurated in eastern Yemen in the 1980s to increase production on 3,225 ha of agricultural land in Hadramawt. Third-phase work on this scheme—originally scheduled for completion by 1996 as an irrigation project—was to be extended to include flood control systems designed to provide better protection against exceptionally heavy rainfall (the area having suffered extensive flood damage in early 1989).

Livestock farming and animal herding are important activities in most parts of Yemen, supplying much of the local demand for meat and dairy products and providing a small exportable surplus of hides and skins. A Livestock Development Corpn was set up in the former YAR in 1976 to promote new projects and to raise standards throughout the industry. In 1997 Yemen's estimated livestock numbers included 4.3m. sheep, 3.9m. goats, 1.2m. cattle and 25m. poultry. Production of meat (including poultry) in that year totalled around 143,000 tons, production of milk around 193,000 tons and production of hens' eggs around 26,000 tons. The total catch of the Yemeni fishing industry in 1997 was 104,000 tons; this compared with catches of around 50,000 tons in the former PDRY and 21,000 tons in the former YAR in the mid-1980s. It has long been recognized that the Arabian Sea fishing grounds off southern Yemen and, to a lesser extent, the Red Sea grounds off western Yemen, have considerable untapped development potential. Ongoing fisheries expansion schemes at the time of unification in May 1990 included a long-term programme in the south which was then mid-way through its third phase. Fourth-phase funding was subsequently secured in 1991–92 from IDA, IFAD and the EC. Yemen's fish-canning factories at Mukalla and Shukra were in mid-1998 seeking new investment (possibly involving privatization) to double their production capacity. In 1998 the Yemeni fish catch totalled 120,000 tons, about 90% of which was marketed within Yemen. The Government's planning target was to achieve an annual catch of 168,000 tons by 2000. Proposals were under consideration in 1999 to set up a fisheries protection service to deter illegal fishing in Yemeni waters.

Yemen's trade in agricultural produce is heavily in deficit, annual production of such exportable cash crops as coffee and cotton having remained at fairly modest levels (around 11,000 tons each in 1996) while local production of staple food crops has supplied a diminishing proportion of local demand. In 1996 an area of 103,000 ha was planted to wheat and 149,000 tons of wheat were harvested (a decrease of 14% compared with the 1994 yield). Yemen's imports of wheat averaged 1.7m. tons per year between 1990 and 1994. Production of sorghum and millet increased by 1.5% in 1997, to 417,000 tons. Other major crops in 1997 included tomatoes (225,000 tons), potatoes (196,000 tons), watermelons (90,000 tons) and grapes (153,000 tons). Yemen spent an estimated US $595m. (28% of total expenditure on imports) on imported foodstuffs in 1993.

The true balance between food crops and cash crops in the agriculture of Yemen is difficult to assess accurately, because a key crop, qat, is not reliably recorded in official statistics. There is no doubt that the qat bush is by far the most profitable cash crop, although its growers are not eligible for such benefits as concessionary agricultural loans and do not have access to export markets (qat use being banned in neighbouring Arab countries). Inside Yemen, however, the chewing of qat leaves (which contain a mild stimulant) is a regular social ritual for the majority of the adult population. Chewing sessions take place every day from 2 p.m. to sunset, the former PDRY's 'weekend only' restriction having been abolished after Yemeni unification. Qat growing occupies a significant proportion of Yemen's best agricultural land—between 50,000 ha and 70,000 ha in the mid-1980s, and an estimated 120,000 ha in the late 1990s—and entails weekly irrigation, accounting for an estimated 16% of national water usage. Moreover, qat grows year-round, permanently occupying land that might have been used for crop rotation. Qat has no nutritional value. The World Bank has estimated that Yemen's internal trade in qat generates at least 25% of GDP and 16% of employment. A 1998 estimate by Yemeni analysts suggested that qat-chewing sessions occupied up to 20m. man-hours each day and that current spending on qat exceeded the value of the national budget. Many regular users are said to spend 25% to 50% of their total incomes on qat; some users as much as 66% of income.

Critics of qat cultivation in Yemen include experts on water resource depletion. A World Bank study of regional water resources, published in 1997, described Yemen as the most 'water stressed' country in the Middle East and North Africa, with only 176 cu m of water available per head of population per year from renewable underground reserves, compared with a regional average of 1,250 cu m and a world average of 7,500 cu m. ('Availability' in this context is the maximum rate of extraction from aquifers without causing irreversible depletion of reserves.) In 1994, the report said, Yemen pumped an estimated 2,800m. cu m of water from aquifers whose sustainable withdrawal rate was 2,100m. cu m per year. With all available surface water resources in full use, more than 60% of Yemen's

total 1994 water supply was from aquifers, and 93% of the withdrawals from aquifers were for agricultural use. Sustainable patterns of water use on farms with traditional terraced irrigation systems had been critically disrupted by the introduction of modern tube-well technology in response to the pressure of rapid population growth over the past 20 years. The San'a basin, containing 10% of Yemen's population, faced complete exhaustion of its aquifers within 10 years if extraction from them continued at its 1994 rate of 224m. cu m per year. There were at least 45,000 groundwater wells in Yemen in 1994, when the depths of some newly drilled wells in the San'a basin exceeded 2,000 m. Underground water levels near Amran (a major centre of the qat trade) fell by 30 m in the first half of the 1990s. The 1997 World Bank report said that the Government had, in effect, contributed to Yemen's water crisis by banning the importation of qat (which is also cultivated in Ethiopia, Somalia and Kenya), banning the importation of fruit and vegetables, and failing to abolish all subsidies on the price of diesel (the main fuel for water pumps). Yemen's new Prime Minister acknowledged in mid-1998 that the water crisis was his country's 'greatest problem'. There was, he said, a case for differential pricing in the agricultural sector to curb wasteful usage by qat growers. In May 1999 it was announced that President Saleh had ceased to use qat and had launched a campaign to encourage other prominent Yemenis to follow his example.

PETROLEUM AND NATURAL GAS

The discovery in July 1984 of significant oil deposits in the Marib/al-Jawf region, in the north-east of the YAR, was followed by discoveries across the border in the neighbouring Shabwa region of the PDRY. Small-scale production of crude oil began in the YAR at the end of 1985 and in the PDRY in mid-1987. Talks between the YAR and PDRY Governments on closer economic co-operation led to the establishment in January 1989 of a joint company to administer oil exploration and development rights in a cross-border area totalling 2,200 sq km. At the time of Yemeni unification in May 1990, aggregate oil output averaged 180,000 b/d, of which less than 10,000 b/d was produced in the former PDRY's Shabwa region. The first-phase development work in Shabwa was carried out by Soviet contractors, who suspended their oilfield production operations in mid-1990 pending completion of a pipeline link to the port of Bir Ali on the Gulf of Aden. The 200-km Bir Ali pipeline was inaugurated in May 1991 with a rated capacity of 100,000 b/d, greatly exceeding the installed output capacity of the Shabwa wells.

Concession rights in the former YAR's Marib/al-Jawf oilfields were held by a US–South Korean consortium whose operating company was Yemen Hunt Oil Co (a subsidiary of Hunt Oil of the USA). Yemen Hunt Oil's annual average production reached nearly 170,000 b/d in 1988 following the completion in 1987 of a 440-km pipeline running west from Marib to a Red Sea export terminal at Ras Isa, offshore from the port of Salif. The rated capacity of the Ras Isa pipeline was 225,000 b/d, expandable to 400,000 b/d if required in the future. Installations on the Alif oilfield (the first of the Marib/al-Jawf fields to go into production) include a 10,000 b/d 'topping' (primary distillation) plant which came on stream in April 1986 to supply gasoline, diesel and fuel oil for local consumption. Proposals were put forward in 1999 to expand the capacity of this plant to between 15,000 b/d and 20,000 b/d, the state-owned Yemen Oil Refining Co having made it known in October 1998 that it was seeking to take over ownership of the plant with a view to securing new foreign investment in an expansion scheme. In an exploration block immediately to the east of the Marib/al-Jawf concession area, the Jannah oilfield was brought into production by a separate Hunt Oil subsidiary (Jannah Hunt Oil Co) as operator for a consortium of US, French, Kuwaiti and Russian oil companies. The Jannah field's output, which is transported to the coast via the Ras Isa pipeline, averaged 15,000 b/d on start-up in October 1996 and was targeted to reach 75,000 b/d by 1999.

After Yemeni unification more than 10 significant oilfields were discovered in the 1,260 sq km Masila exploration block in the eastern Hadramawt region. Canadian Occidental Petroleum (CanOxy), the operating company in this block, made its first oil shipment in August 1993 via a 140-km pipeline built to link the Masila fields to an export terminal west of the port of ash-Shihr on the Gulf of Aden. Yemen's average annual oil output rose from 210,000 b/d in 1993 to 345,000 b/d in 1994 (about 45% of the 1994 total coming from Masila). In the East Shabwa concession area, immediately west of the Masila fields, Total-CFP (the operator for a consortium of French, Kuwaiti, US and Australian oil companies) brought the Kharir oilfield into production at the end of 1997 at an initial rate of 20,000 b/d. Output from East Shabwa, which is transported via CanOxy's Masila export pipeline, was targeted to reach 30,000 b/d by 1999. Expectations of production growth in the main Shabwa exploration areas (situated 200 km west of the East Shabwa block) were not fulfilled in the 1990s despite extensive exploration work. In 1991 Nimir Petroleum (a Cayman-registered company owned by private Saudi Arabian oil interests) paid an exceptionally high premium to obtain the operating licence for the only Shabwa block with established production facilities (in the Ayadh field linked to the Bir Ali pipeline). However, Nimir's output from the Ayadh field did not exceed 5,000 b/d and was around 3,500 b/d when the company suspended production during Yemen's civil war in 1994. Nimir subsequently sought improved financial terms, bringing the Ayadh field back into production in 1997 at an initial rate of 1,500 b/d after the legislature had approved an amended production-sharing agreement.

In mid-1997 a total of 167,602 sq km of Yemeni territory—including some of the least intensively explored parts of the Arabian peninsula—was divided into 56 oil exploration blocks, of which 31 remained open to bids from prospective concession holders. Yemen currently had 4,000m. barrels of proved oil reserves (virtually all of which were in fields discovered between 1984 and 1993). Competition between foreign oil companies for new oil concessions had been strongest in Yemen's 1991–92 licensing round, which included notably Shabwa blocks regarded at that time as prime development sites. Disappointing exploration results in the Shabwa region caused several companies to opt for non-renewal of their agreements in 1994–95, while Nimir Petroleum, as the operator of a producing Shabwa field, suspended production until it secured improved terms (see above). Prior to the start of small-scale production in the East Shabwa block, Total-CFP successfully negotiated for a 70% cost-recovery allowance (compared with a previous government offer of a 40% allowance). There was a general improvement in 1995–96 in the terms offered to new concession-holders, including an increase of 5% in average cost-recovery allowances, and the Government made particular efforts during 1997 to attract new investment in smaller blocks and blocks that had been assessed as marginal on the basis of previous exploration work. Foreign companies signing new oil exploration agreements or renewing existing agreements in 1997–98 included Transglobe Energy, First Calgary Petroleum and Calvalley Petroleum (all of Canada), Kerr McGee Corpn (of the USA), MOL (of Hungary), Preussag Energie (of Germany) and three British companies, Mayfair Petroleum, Dove Energy and Oil and Gas Mine Co (OGMC, owned by Yemeni interests). In 1997 the state-owned Yemen Oil and Gas Corpn was authorized to acquire minority equity stakes (of 15% to 25%) in newly awarded exploration blocks.

Yemen's total oil output averaged 350,000 b/d in 1995, 355,000 b/d in 1996 and 370,000 b/d in 1997. In April 1998, when production was running at 386,500 b/d, the contributions of the respective producing companies were 200,000 b/d from CanOxy's Masila block, 140,000 b/d from Yemen Hunt's Marib/al-Jawf block, 25,000 b/d from Jannah Hunt's Jannah block, 20,000 b/d from Total-CFP's East Shabwa block and 1,500 b/d from Nimir Petroleum's Shabwa block. The estimated government share of April 1998 oil output was just over 200,000 b/d, of which about 115,000 b/d was exported and the remainder consumed locally. Yemeni crude oil was normally priced with reference to standard international benchmarks—thus in 1997–98 Marib light crude was priced at parity with North Sea Brent crude, while Masila crude was priced at a specified discount relative to Brent. The Government's reported oil export revenue rose from US $958m. in 1996 to a record $1,012m. in 1997, reflecting an increase in production during a period of relatively strong export prices. In the first half of 1998, however, a slump in the world oil market cut the average price of Yemen's main export grade by 32% (from $17.27 per barrel in January–June 1997 to $11.80 per

barrel in January–June 1998). Over the same period the state share of Yemeni oil output declined by an estimated 20%, resulting in a fall of 45% in the Government's reported oil export revenue (from $464.6m. in January–June 1997 to $254.6m. in January–June 1998). Yemen was one of several non-members of OPEC to make a public pledge of support for OPEC production cutbacks designed to counteract the 1998 price slump. A March 1998 statement from Yemen's Ministry of Oil and Mineral Resources said that a Yemeni oil production cutback of 2% to 3% was to be introduced (although the state oil corporation continued to forecast an 11% production increase by the end of 1998). In the event, average 1998 oil output was estimated at 385,000 b/d (3.6% higher than the 1997 average); the Government's average share of output in 1998 was 189,000 b/d, of which 107,120 b/d was exported; and the Government's 1998 oil export revenue totalled $453.8m. (a fall of more than 55% compared with 1997). In 1999 production increases were reported from several areas (including Masila, where output averaged 210,000 b/d in the second quarter of the year, and Jannah, where output reached 65,000 b/d in the third quarter of the year), while export prices recovered from the depressed levels of 1998.

At the end of 1997 Yemen had proved reserves of natural gas totalling 480,000m. cu m, discovered both separately and in association with oil by companies drilling in oil concession areas (the main discoveries of non-associated gas having been made in the Marib/al-Jawf and Jannah blocks). Throughout the first half of the 1990s various proposals were put forward for a major gas development project centred on the export of liquefied natural gas. In March 1997 the Yemeni legislature approved the establishment of a consortium to organize the planned project. As constituted in October 1997, the consortium comprised Total-CFP (the project leader, with a 36% interest), the state-owned General Gas Corpn (21%), Hunt Oil (15.1%), Exxon (14.5%) and the South Korean companies Yukong (8.4%) and Hyundai (5%). It was envisaged that gas would be piped from Marib to a liquefaction plant on the Gulf of Aden with an export capacity of 5.3m. tons per year, However, the consortium's sole memorandum of understanding, with the Turkish company Botas, was not renewed on its expiry at the end of 1997, by which time many target markets in Asia were experiencing severe economic downturns. Total-CFP acknowledged in March 1998 that there could be little progress on the project until firm sales agreements were secured. In May 1998 discussions were opened with BG UK Holdings regarding the possible supply of Yemeni LNG to an import terminal under construction on the west coast of India by British Gas International. The Yemen Government was meanwhile awaiting the completion of a feasibility study on the economics of creating a local gas supply grid and of establishing gas-fired power plants in Yemen.

INDUSTRY AND MINING

In 1998 manufacturing's share of GDP was estimated to be 12.3%. The largest industrial plant in Yemen at the time of unification in 1990 was the former BP oil refinery at Aden, opened in 1954 when Aden was among the world's busiest seaports. The Government designated Aden as the 'economic capital' of the unified state, its aim being to re-establish the port as a major regional trading centre incorporating an industrial free-trade zone.

The state-owned Aden Refinery Co, set up by the former PDRY Government when the predominantly export-oriented Aden refinery was nationalized in 1977, obtained crude oil processing contracts from various countries during the 1980s, including India, Saudi Arabia, Libya, Kuwait, Iran, Algeria, Iraq and the Soviet Union. At the time of the Iraqi invasion of Kuwait in August 1990, Iraq (30,000 b/d) and Kuwait (20,000 b/d) were the Aden refinery's principal suppliers of preferentially priced crude oil. Part of unified Yemen's own recently developed crude oil production (which in mid-1990 came wholly from oilfields in the former YAR) was subsequently diverted from its intended export markets in order to cover the refinery's loss of imports resulting from the UN embargo on trade with Iraq and Iraqi-occupied Kuwait. Only about one-third of the refinery's nominal processing capacity of 170,000 b/d was in use in the early 1990s, when the Government of unified Yemen was seeking financing for a two-phase modernization programme to raise that capacity by 80,000 b/d (the first 30,000 b/d at an estimated cost of US $150m., and the final 50,000 b/d at an estimated cost of $200m.). The Aden refinery was shut down for some weeks during and immediately following the 1994 civil war after several of its storage tanks were destroyed in the fighting. There was no major damage to the distillation facilities, and the plant was operating at its normal pre-war production volume by early August 1994. In early 1995 the refinery was processing crude oil from Yemen, Malaysia, Iran and Oman and producing an average 95,000 b/d of refined products.

At the end of 1995 the Aden refinery was processing an average 60,000 b/d of domestic crude and 40,000 b/d of imported crude. In 1996 detailed specifications were drawn up for upgrading works which would entail the construction of a new smaller processing facility at Aden to provide some continuity of supply during a shutdown of the existing plant. Having put the upgrading project out to three successive rounds of tendering, the Government decided in late 1997 to seek private investment in the Aden Refinery Co with the aim of financing the upgrading work out of the proceeds of share sales to local and foreign investors. The principle of returning the company to majority private ownership was approved by the Council of Ministers in May 1998. In an unrelated development, a private Yemeni company secured a US $300,000 grant from the US Trade and Development Agency in June 1997 towards a feasibility study for a proposed new oil refinery on northern Yemen's Red Sea coast, near the Ras Isa oil export terminal. The scheduled completion date for the study was April 1998.

A plant for blending lubricating oils was opened at Taiz in May 1996. The US $20m. plant, with an annual production capacity of 60,000 tons, was 30% owned by Mobil and Royal Dutch/Shell and 70% owned by a Yemeni firm which had previously distributed imported lubricants. In 1993 unified Yemen achieved self-sufficiency in bottled liquefied petroleum gas (LPG, for which there had previously been a $40m. annual import requirement), following the opening of a bottling plant at San'a.

Non-hydrocarbon manufactures in the former PDRY included textiles, agricultural implements, cigarettes, ginned cotton, liquid batteries, animal feedstuffs, construction materials (including cement blocks, tiles and bricks), crystallized sea salt, food and drink products, plastic products and aluminium goods. It was the policy of the post-unification Government that Yemeni businesses affected by the former PDRY's nationalization policies should in due course be returned to their former private owners. The Arabian peninsula's only brewery, in the Aden suburb of Mansura, was forced to close down in 1994 in the aftermath of the civil war. Industrial development in the former YAR was aimed primarily at achieving self-sufficiency in food processing, clothing and construction materials and at developing traditional occupations using local raw materials, including textiles, leather goods, basketry, jewellery and glass making. In the mid-1980s one-third of the loans to YAR businesses by the Industrial Bank of Yemen were for food and drink production. Other sectors of particular interest to the bank were construction materials; light and household chemicals and plastics; light engineering; woodworking; and electrical and mechanical services. The relatively modest scale of unified Yemen's manufacturing base was illustrated by 1997 estimates showing that local flour production was around 210,000 tons per year, while imports of flour were currently around 800,000 tons per year. Contracts were awarded in late 1997 for a 1,500 tons-per-day flour mill and associated silos at Aden (scheduled for completion in 1999) and for a 600 tons-per-day flour mill and associated silos at the Red Sea port of Salif (scheduled for completion in 2000).

Yemen's two state-owned cement works are located in the former YAR, at Bajil (a 350,000 tons-per-year plant built by Soviet contractors) and at Amran (a 500,000 tons-per-year plant built by Japanese contractors). Planning permission was granted in 1998 for the construction of Yemen's first private-sector cement factory, which was reported to have a design capacity of 670,000 tons per year and a target start-up date of 2001. The importation into the Hadramawt region of between 80,000 and 100,000 tons per year of cement from Oman was due to start in August 1999 on completion of a packaging plant and distribution depot at Mukalla. In 1997 a US $120m. iron smelter was under construction in Abyan. Its developer, the

United Company for Mineral Industries (owned by Bugshan Steel of Saudi Arabia), anticipated that three-fifths of the smelter's raw materials would consist of scrap iron available within Yemen and that the remainder would be imported.

The principal mine and quarry products of Yemen include rock salt, limestone, marble, gypsum, granite, basalt and clay. Deposits of copper, nickel, zinc, lead, coal, iron, sulphur, silver, gold and uranium are also known to exist, and improved mapping and evaluation of mineral resources have been prioritized by the post-unification Government, which has obtained financial assistance from the World Bank, UNDP and IDA for surveying work. Most government interest centres on the possibility of Yemen's becoming a significant producer of gold, which Soviet surveyors had first discovered at Medden (50 km west of Mukalla) in the early 1980s. Gold-prospecting licences were held by Irish, Dutch and British companies in 1992, and in 1993 prospecting rights in a further 30,000 sq km were granted to a Yemeni company. In 1997 a Canadian company, Menora Resources, was carrying out a pre-feasibility drilling programme at Medden, where the measured resource of gold was put at 280,000 oz. In early 1998 the Yemen Government said that five companies were currently engaged in mineral prospecting, including exploration for zinc and lead, and that new gold discoveries had been made by Canadian, US and Indonesian prospecting companies.

The centre-piece of unified Yemen's industrial development strategy is a commercial and industrial free-zone development at Aden, modelled on similar initiatives in other developing countries. Inaugurated in May 1991 (at which time 50 industrial projects had already received outline approval), the zone was to be developed in stages over a period of years. A proposal submitted by US consultants in 1993 recommended total investment of US $5,600m. in four phases over a period of 25 years, centred on the development of port infrastructure to take full advantage of Aden's potential as a transhipment centre for the container traffic of regional ports situated further away from the main international shipping lanes. The plan included proposals for new harbour facilities, an airport extension, a new 300-MW gas-turbine power station and new manufacturing infrastructure, and recommended that development be on a fully-privatized basis. The Yemen Free Zones Public Authority (YFZPA) subsequently announced its intention to seek full privatization of all administrative operations at the port and airport, to countenance full private ownership of the proposed extensions, and to open up Aden's existing port and airport facilities to some form of joint-venture participation by private interests.

In March 1996 the YFZPA finalized an agreement whereby a company called Yemen Investment and Development International (Yeminvest) became the concession holder and project coordinator for the Aden development programme. Ownership of Yeminvest from October 1997 was 51% by Yemen Holdings (owned by Saudi Arabian private interests) and 49% by PSA Corpn (formerly known as the Port of Singapore Authority). PSA was to manage and operate a new Aden container terminal for 20 years following completion of the first phase of construction, scheduled for March 1999. Costing up to US $280m., the first-phase works included dredging harbour channels, building six quays and a new trans-shipment terminal, installing a small power plant, equipping the terminal with cranes and other facilities and providing access roads and other ancillary features. The handling capacity of the terminal would be 500,000 20-foot-equivalent units (TEUs) per year. Work began in 1996 and was 50% complete by mid-1998. It was intended that completion of the port facilities should be followed by the development of a 1,350-ha site for export-oriented industries; modernization and improvement of infrastructure and facilities and expansion of cargo-handling capacity at Khormaksar international airport; construction of a new power station; and (as the final phase of the development programme) construction of a World Trade Centre complex including 100,000 sq m of office space and 9,300 sq m of exhibition space. According to Yeminvest's initial revenue projections, the free-zone development would be self-financing by its seventh year, with the container port playing an important income-generating role. The Yemen Government's entitlement to revenue from free-zone operations was to rise gradually from 25% to 100% over the 25-year life of the concession. The Aden container terminal opened on schedule in March 1999 on completion of the bulk of the first-phase development work. Its first regular user, American President Lines, stepped up its transhipment volumes from April 1999 (having made a corresponding reduction in its use of the Sri Lankan port of Colombo). The British shipping consortium, Beacon, began to call at the Aden terminal on a trial basis in August 1999.

Yemen's General Investment Authority (GIA), established in 1991 to encourage and supervise new investment in Yemen (including investment by Yemenis resident abroad) was in 1998 operating within the framework of recently amended investment laws offering an extensive range of tax and other incentives. Current GIA promotional campaigns placed particular emphasis on investment in labour-intensive export industries, including the manufacture of textiles, for which Yemen offered the advantage of quota-free access to the EU, the USA and other main markets.

INFRASTRUCTURE

In 1997 Yemen had 69,000 km of roads, 12% of which were asphalted and a further 24% of which were classed as paved roads. Some 535,200 road vehicles (55% of them goods vehicles and buses) were in use in 1996. Road-building and maintenance are important development priorities, and have been funded to a large extent by foreign aid donors in recent years. After Yemeni unification in 1990 there was an increased emphasis on the improvement of road links across the former YAR–PDRY border. In 1993 the Government of Oman agreed to finance a highway across Oman's newly opened border with Yemen. Road-building schemes scheduled to go to tender in 1998 included 180 km in the south (between Aden and Mukalla) and 65 km in the west (between Salif and Hodeida), both of which were to be financed by the World Bank. More than 800 km of existing roads were included in upgrading plans under consideration in 1998.

The port of Aden, developed around a natural deep harbour, was ideally placed to benefit from the growth of international Suez Canal traffic during the period of British colonial rule. Its trade was especially hard hit by the closure of the Canal from 1967 to 1975 and the subsequent failure of the PDRY Government to respond adequately to changing shipping patterns (including the rapid growth of containerization). The first phase of a major modernization and expansion of Aden's port facilities was begun in 1996 and was scheduled for completion in 1999 (see 'Industry and Mining' section above). The state transport sector in Aden, including existing port operations, made a net profit of 424m. riyals on a turnover of 1,200m. riyals in 1997. The port's existing freight and distribution services were transferred to seven private contractors in mid-1998 as part of the Government's privatization programme. The main port serving the easternmost region of Yemen is Mukalla, an important fishing centre with deep-water harbour facilities developed during the 1980s. The region's main oil export terminal is situated about 35 km east of Mukalla. The main port on Yemen's Red Sea coast is Hodeida, which was greatly expanded in the 1970s and 1980s in line with the growth in the import trade of the former YAR. The selection of Aden as unified Yemen's commercial capital in 1990 implied some slowdown in the future expansion of port facilities at Hodeida. The port of Mocha, situated south of Hodeida (and therefore closer to Aden) cancelled many of its own expansion plans after unification. In contrast, the port of Salif, north of Hodeida, benefited in the 1990s from its proximity to Yemen's Red Sea oil export terminal at Ras Isa.

Aden's international airport at Khormaksar was extensively upgraded in the late 1980s with Soviet financial assistance. However, its terminal building, capable of handling 250,000 passengers per year, was damaged in the 1994 civil war. Repairs to the terminal, as well as the construction of a new control tower and related technical facilities, were included in a World Bank-supported airport rehabilitation project which was put out to tender at the start of 1998. In June 1999 a US $24m. contract was awarded for the project, which was scheduled for completion over a period of 30 months. Yemen's other international airports are at San'a, Hodeida, Taiz and Mukalla. There are 12 main local airports for domestic flights. In total, Yemen

had 46 airports and airfields in the mid-1990s, and most towns were linked by internal air services. Yemen's national carrier, Yemen Airways or Yemenia, was established in May 1996 through the merger of the former YAR airline (also called Yemenia) and the former PDRY airline (Al-Yemen, previously known as Alyemda). Saudi Arabian Airlines held a 49% shareholding in the merged airline, which took delivery of two Airbus A310-300 aircraft in March 1997. There were substantial increases in domestic and international air fares from April 1995 onwards as part of the Government's subsidy reduction programme. Yemenia carried about 700,000 passengers in 1997 (an increase of 18% over 1996). A major fleet renewal programme—involving the replacement of four Boeing 737s, three Boeing 727s and four Dash 7s—was under consideration in 1998.

Yemen has modern international telecommunications links via satellite stations and microwave relays, as well as relatively good links between major centres within the country. However, many smaller towns and rural areas still had fairly limited telephone networks in the mid-1990s, while there was a generally inadequate provision of lines within urban centres. Overall, Yemen had only 1.29 fixed telephone lines per 100 inhabitants in 1996. There were 8,800 cellular phone subscribers in the same year (although mobile telecommunications services, suspended during the 1994 civil war, were not restored until September 1996). It was expected that there would be 260,000 fixed telephone lines in Yemen in the year 2000. Contracts worth US $3m. were awarded in November 1996 for an expansion of the telephone network within San'a and the upgrading of links between San'a and other population centres. In March 1997 Japan announced a $29m. loan to help finance the installation of more than 50,000 additional telephone lines in Aden. In late 1997 the French company Alcatel (currently working at 45 locations in Yemen) was awarded a $14m. contract to install 82,000 new lines throughout the country. Alcatel subsequently won a contract to install a modern telecommunications system on Socotra island. In 1999 Yemen's analogue mobile telephone network (set up in 1992) had 18,000 subscribers, over 60% of them based in San'a. A new mobile satellite communications service, serving the hydrocarbons, agricultural and tourism sectors, was licensed in June 1999. In the same month, the Government announced its intention to seek two service providers to set up competing GSM (global standard for mobiles) networks in Yemen, although it did not indicate when the GSM projects (involving extensive infrastructure provision) would be put out to tender.

A main planning priority in the power sector after unification in 1990 was to link the electricity grids of the former YAR and PDRY. This was finally achieved in July 1997 at a total cost of US $64m. (of which $54m. was funded by the AFESD). It was estimated that Yemen's nominal electricity generating capacity from all sources (including small public supplies not connected to the national grid, as well as private diesel generators in remote areas) did not exceed 700 MW in 1997. The World Bank estimated that the Public Electricity Corpn's total 1997 installed capacity was a nominal 596 MW, of which only 408 MW was effectively available because of the technical limitations of Yemen's power plants and distribution lines. High growth of energy demand—stimulated partly by subsidized tariffs—had placed Yemen's electricity supply system under severe pressure for some years. San'a had experienced particularly bad power shortages since 1993, and some generating and transmission facilities had suffered damage in the 1994 civil war. In 1997 the Government drew up a $51m. emergency power project to cover Yemen's electricity needs until the year 2001. As submitted to IDA (from which funding was sought) the project called for the rapid installation of 30 MW of additional generating capacity at the Dhahban power plant serving San'a; the rehabilitation of 20 MW of existing diesel generating capacity at the same plant; and the improvement of transmission lines to ensure that the plant's increased output was fully available to the grid. Work on the installation of 30 MW of new oil-fired generating capacity began in December 1998 and was scheduled for completion by the end of 1999.

Major water-supply initiatives in post-unification Yemen included a project to bring drinking water to 45,000 people in over 100 villages to the north of Aden. The first phase of this project, involving the drilling of wells in the coastal Wadi Bani and the construction of the means of raising the water 1,500 m to the Laboos plateau, was under way in late 1991. The Radaa water supply and sanitation project, involving the supply of drinking water to some 30,000 people, was also under way. Aden's water supply system and sewerage facilities were severely disrupted during the civil war in 1994, and serious water shortages continued to be reported three months after the end of the fighting in the city. UN agencies identified an emergency requirement for up to US $5m.-worth of essential repairs to water and sewerage infrastructure. New water and sewerage schemes under consideration in 1996 included a pilot project to improve the water supply in Taiz (for which $10m. was to be provided by the World Bank) and the construction of a wastewater treatment plant in San'a (to be financed by the World Bank, the AFESD and the OPEC Fund for International Development). Two loan agreements relating to water and wastewater projects in San'a were approved by the Yemeni legislature in May 1999 (the sums involved being $25m. from the World Bank and KD 18m. from the AFESD).

According to a World Bank study, about 88% of Yemen's urban households had access to piped water supplies in 1997, although such supplies were often erratic and interruptions of up to eight weeks could be experienced in some areas. (See 'Agriculture and Fisheries', above, for details of Yemen's underlying water shortage.) In some large cities, including Taiz and San'a, over one-fifth of the population depended on private-sector water suppliers. It was estimated that two-thirds of all water consumed in San'a in 1997 was provided by these largely unregulated private suppliers. About 90% of Yemen's urban households were estimated to have access to adequate wastewater facilities, although in the majority of cases these took the form of closed pit systems rather than public sewer networks. The disposal of solid waste was a particular problem in urban Yemen in the mid-1990s, as municipal collections tended to be limited to market areas and main streets, leading to accumulations of rubbish in side streets and to uncontrolled dumping of waste outside towns. Laws on environmental protection and waste management were introduced in 1995 to provide a basis for improving this situation.

EXTERNAL TRADE, AID AND PAYMENTS

The official trade and payments statistics for Yemen, before and after unification, provide a broad outline of developments, based on recorded information. There is a deficiency of accurate and detailed information in several key areas, mostly relating to labour migration and workers' remittances, and some official trade figures give unrealistically low import totals (smuggling having been particularly widespread in the former YAR in the late 1970s and early 1980s). The blurring of such statistics reflects the very high levels of economic inter-dependence that developed within the Arabian peninsula in the 1970s and 1980s as Saudi Arabia and other oil-rich Gulf states provided mass employment opportunities for Yemeni workers. Insofar as they were used to offset the large deficits in the Yemeni states' basic commodity trade, the inflows of remittance income from the oil states strengthened the overall balance-of-payments positions of the YAR and PDRY. (In practice, significant amounts of remittance income were spent on imported consumer goods, particularly in the YAR.) However, remittance income did not eliminate either state's heavy dependence on foreign aid to finance development projects and budget deficits, nor did it represent a stable and predictable income source, being highly dependent on fluctuations in the host countries' economic cycles, which were closely linked to swings in world oil prices. In the 1990s, unified Yemen benefited from a stronger export base as it developed its own oilfields. At the same time import demand was boosted, and remittance income cut, as the country absorbed the impact of the large repatriations of Yemeni workers arising out of the 1990–91 Gulf crisis. Having become accustomed to modest rises in export earnings as oil production developed, Yemen was in 1998 adjusting to a major slump in world oil prices. In late 1997 Yemen secured substantial relief in respect of its major arrears of foreign debt (including debt stemming from the former PDRY's heavy reliance on Soviet aid).

Until the late 1980s, the former YAR's merchandise exports covered less than 3% of the value of imports. World Bank statistics showed that in the period 1965–80 exports grew at an

annual average rate of only 2.8%, whereas imports grew by 23.3% per year. In the period 1980–88, however, the average annual growth in exports was 35.6%, while imports declined by 10% per year. The improvement in export performance was attributable to the start of crude oil exports at the end of 1987. In 1987 YAR exports were worth only US $19m., against imports of $1,311m.; in 1988 exports rose sharply to $485m., against imports of $1,310m. In the early 1980s the YAR's official annual trade deficit ran at around $1,500m., falling to around $1,200m. per year in 1986 and 1987 and to $835m. in 1988. The estimated value of goods smuggled into the former YAR to avoid high import duties was $1,000m. in 1983. According to the World Bank, oil and other minerals accounted for 88% of YAR exports by value in 1988 (compared with 9% in 1965), manufactured goods for 11% (0% in 1965) and other primary commodities for 1% (91% in 1965). In the same year food accounted for 28% of total imports by value (compared with 41% in 1965), manufactured goods for 55% (47% in 1965), fuels for 8% (6% in 1965) and other primary commodities for 6% (6% in 1965).

According to the World Bank, the former PDRY's exports declined in value in the period 1965–80 by an annual average of 13.7%, while imports fell by 7.5% per year. In the period 1980–88, however, exports increased by an average of 1.9% per year and imports by 4.4% per year. In 1988 exports were worth US $80m., while imports reached $598m. The former PDRY's main export commodities (excluding refined petroleum products) were cotton, hides and skins, fish, rice and coffee. The chief imports (excluding crude oil) were manufactured goods for development projects, clothing, foodstuffs and livestock. Fuels and minerals accounted for 90% of total PDRY exports by value in 1988 (against 80% in 1965), other primary commodities for 9% (14% in 1965) and manufactured goods for 1% (8% in 1965).

Following unification, Yemen's external trade was temporarily disrupted by the UN embargo on trade with Iraq and Kuwait, which necessitated a diversion to the Aden refinery of Yemeni crude oil that would otherwise have gone for export (see Industry and Mining, above). Yemen's merchandise exports in 1990 totalled 7,066m. riyals (including 6,188m. riyals from oil), whereas merchandise imports totalled 20,863m. riyals, producing a visible trade deficit of 13,795m. riyals, compared with a combined deficit for the YAR and PDRY in 1989 of 11,533m. riyals (exports 6,765m. riyals, imports 18,298m. riyals). There was a visible trade deficit of 18,238.4m. riyals in 1992 (exports 6,075.9m. riyals, imports 24,314.3m. riyals). The provisional trade figures for 1993 showed a deficit of 25,382.3m. riyals (exports 5,693.3m. riyals, imports 31,075.6m. riyals). The visible trade deficit in 1994 was 13,850m. riyals (exports 9,940m. riyals, imports 23,790m. riyals). There were further visible trade deficits in 1995 and 1996. In 1997 merchandise trade was in deficit by US $142.5m. (exports $2,264m., imports $2,406.5m.), while in 1998 there was a sharply increased deficit of $700.5m., export earnings having fallen by 33.7% to $1,500.7m. as a result of that year's downturn in world oil prices, whereas import spending was reduced by 8.5% to $2,201.2m. in 1998.

Yemen had an overall current-account deficit of 1,711m. riyals in 1990, compared with a combined YAR and PDRY deficit of 9,853m. riyals in 1989. The services account showed receipts of 17,518m. riyals in 1990 (5,519m. riyals in 1989) exceeding payments of 5,432m. riyals (3,839m. riyals in 1989). The strong upturn in private remittances in 1990 was attributable to Yemeni nationals returning from Saudi Arabia because of the Gulf crisis. The World Bank assessed Yemen's net remittance income at US $800m. in 1991, and suggested that the current account was $20m. in surplus in that year. Prior to the 1990 Gulf crisis, remittance income had averaged around $2,000m. per year. According to World Bank estimates, a fall in Yemen's net remittance income to $340m. in 1992 was a contributory factor in an overall current-account deficit of $1,582m. in that year. In mid-1994 the Arab Monetary Fund extended a $47m. loan to Yemen to support the financing of the country's 1993 balance-of-payments deficit. Yemen had a current-account deficit of $1,248m. and an overall balance-of-payments deficit of $1,113m. in 1993. In 1994 there was a current-account surplus of $366m. and an estimated overall deficit of $653m. In 1995 Yemen received estimated remittance income of $1,120m. and recorded a surplus of $183m. on the current account. In 1996 Yemen received remittance income of $1,182m. and recorded a current-account deficit of $70m. In 1997 net current transfers totalling $1,255.3m. were received, producing a current-account surplus of $51.6m. when set against the merchandise trade deficit of $142.5m., a services deficit of $426.3m. (credits $207.6m., debits $633.9m.) and an invisible income deficit of $634.9m. (credits $69.6m., debits $704.5m.). In 1998 net remittance income was estimated to be virtually unchanged at $1,256.3m., leaving the current account in deficit by $228.1m. when set against the merchandise trade deficit of $700.5m., a services deficit of $362m. (credits $207.5m., debits $569.5m.) and an invisible income deficit of $421.9m. (credits $65.5m., debits $487.4m.). The 30.8% reduction in outgoings on the invisibles account in 1998 was attributable, in part, to debt rescheduling agreements with overseas creditors.

Much practical aid in the fields of health, education and social welfare flowed into the former YAR, particularly from oil-rich Arab countries and organizations, China, the USSR, the World Health Organization and UNICEF. Kuwait, Saudi Arabia and the UAE provided schools, hospitals and clinics, and many other Arab countries sent teachers to the YAR. Qatar provided aid for schools, hospitals and roads, and staff training for radio and television productions. Arab aid supported major infrastructural projects, such as the San'a sewerage scheme, the modernization of San'a International Airport and road building schemes. During the first half of the 1980s the USSR spent about US $1,000m. to arm and train the army of the YAR. Thereafter, however, military equipment was purchased increasingly from the USA, with finance provided by Saudi Arabia. Although the USSR remained a major aid donor, increasing amounts of aid were provided in the 1980s by OECD members, including the Netherlands, the Federal Republic of Germany, the USA, Japan and Britain. The World Bank was also an important source of loans through the IDA, and UN agencies provided much technical assistance. Overall, the former YAR's receipts of official development aid from all sources totalled $412m. in 1982, $328m. in 1983, $326m. in 1984, $283m. in 1985, $275m. in 1986, $348m. in 1987 and $223m. in 1988. Between 1962 and 1982, it is estimated, the YAR borrowed some $2,325m., of which the USSR lent $819m., and other Arab countries $744m. In September 1987, according to Central Bank figures, the debt to the Soviet Union was $1,064m., almost half of the country's total external debt of $2,136m.

From 1969 onwards, the USSR was the former PDRY's main development partner under a series of economic agreements. In the 1980s Soviet aid financed several major projects, including major Aden port and airport developments, the exploitation of fishery resources, and mineral surveys. The PDRY also benefited from infrastructural work carried out by the USSR in connection with its military facilities in the country. The former PDRY obtained large development loans in 1979 from Bulgaria and Czechoslovakia, while China lent a further US $12.5m. for the purchase of industrial goods. In the 1980s Czechoslovakia and the GDR were involved in mineral survey work, Bulgaria undertook to help in the development of tourist facilities, and China continued to finance and to execute road-building schemes. Official grants from Arab aid donors reached a record $126m. in 1982, but declined to an annual average of $40m. in subsequent years. The main sources of multilateral aid were the UN and the World Bank. The former PDRY's receipts of official development aid from all sources totalled $143m. in 1982, $106m. in 1983, $103m. in 1984, $113m. in 1985, $71m. in 1986, $74m. in 1987 and $76m. in 1988.

In June 1990 the World Bank confirmed that Yemen would be entitled to concessionary finance and that loan programmes and development projects under way in the YAR and the PDRY would continue in the unified country. Unified Yemen's receipts of official development aid amounted to US $405m. in 1990 and $313m. in 1991 (in which year it represented 3.9% of GNP).

In 1982 the PDRY and YAR Governments established the Yemen Tourism Co to promote 'package' tours to both countries. In 1987 about 28,000 tourists visited the PDRY. In 1989 the YAR was visited by 55,088 tourists who spent an estimated US $22m. In 1995 there were 61,000 tourist arrivals in unified Yemen, over half of them from European countries, generating an estimated revenue of $38m. Yemen's largest tourism company, Universal Travel and Tourism, had links with some 300 overseas tour operators in Europe, the USA and Japan in 1995,

when several major hotel developments were in progress to cater for a projected rise in visitor numbers. The main developer was the Tourism Investment Co (50% owned by Universal Travel and Tourism). Yemen earned around $55m. from tourism in 1996, when there were 229 registered hotels in the country. An Egyptian-led consortium submitted proposals in mid-1998 for a major tourism resort development on the thinly populated Yemeni island of Socotra. A total of 82,270 tourists visited Yemen in 1998, generating an estimated revenue of $84m. This small increase in tourist arrivals (from 80,450 in 1997) occurred despite an upturn during 1998 in kidnappings of tourists by tribal communities with grievances against the central Government. In an incident of a more serious nature at the end of the year, four foreign hostages were killed during an armed clash between government forces and a militant extremist group. Tourist numbers fell significantly in the first half of 1999 as a result of adverse publicity about Yemen's internal security situation.

Figures disclosed in July 1990 showed unified Yemen's total foreign debt as US $7,256m., equivalent to about 110% of current GNP and some 50% higher than the previous Western estimate of about $5,000m. Of the total, $4,366m. was debt attributable to the former PDRY (owed mainly to the USSR, China and eastern European countries) and $2,890m. to the former YAR. In September 1990 France agreed to cancel all of Yemen's outstanding debt to it—some $55m.—and Japan also granted debt-relief aid. According to the World Bank, Yemen's external debt totalled $6,598m. at the end of 1992. In December 1994 the Government said that it intended to negotiate with Russia for the cancellation of 90% of Yemen's debt to the former Soviet Union. In mid-1995 Japan's cumulative debt-relief grants to Yemen totalled $68.4m. In September 1996 the 'Paris Club' group of creditor countries agreed to recommend the rescheduling of about $100m. of Yemen's debt. In April 1997 the USA announced a rescheduling of Yemeni debt over a period of 40 years, including a 20-year exemption period.

Russia, which became a member of the 'Paris Club' in 1997, disclosed that it was owed US $400m. of commercial debt by Yemen, three-quarters of which was overdue for repayment. However, the bulk of the former Soviet Union's lending had been on non-commercial terms within the framework of bilateral co-operation agreements with the former PDRY and YAR. The total lending under these agreements was nearly $6,700m., of which $6,500m. (including nearly $2,700m. of arrears) was still outstanding. Loan agreements had been denominated in roubles, with typical repayment periods of between 5 and 15 years and typical interest rates of 2% to 5%, and had usually specified repayment in hard currency by the YAR or 'in the national currency for subsequent purchase of goods' by the PDRY. The former Soviet Union had by 1988 acceded to 19 requests for postponements of debt repayments, the total value of all repayments received being less than 170m. roubles.

At a 'Paris Club' meeting in November 1997, Russia agreed to waive about US $5,360m. of Yemeni debt (80% of $6,700m.) and to apply so-called 'Naples conditions' (67% of debt written off and 33% rescheduled over a greatly extended period at very low interest rates) to the remainder. Yemen's debts to the other 'Paris Cub' countries were to be reviewed by each country with a view to rescheduling on Naples terms. Total Yemeni indebtedness to foreign creditors other than Russia was estimated to be about $1,500m. in 1997. Yemen's Prime Minister said after the November 1997 'Paris Club' meeting that creditor countries in two regions—the Arab world and eastern Europe—had not as yet discussed debt rescheduling with Yemen. In the case of eastern Europe, the amounts involved were relatively modest and were not considered a problem by Yemen. In the case of major Arab creditor countries, including Saudi Arabia, Kuwait and Iraq, the Yemen Government had requested rescheduling negotiations with a view to obtaining terms similar to those applied by 'Paris Club' countries. There had, however, been no response from any of the countries concerned, with the result that all debts to other Arab governments remained 'in place and frozen' at the end of 1997. In June 1999 it was reported that Yemen's current net outstanding debt to Russia totalled $426m. and was to be repaid over 33 years at an interest rate of 1.19%.

POST-UNIFICATION BUDGETS AND ECONOMIC POLICY

After unification, the respective currencies of the two former Yemeni states were legal tender in the Republic of Yemen and could be used at a rate of 1 (South) Yemeni dinar = 26 (North) Yemeni riyals until 20 June 1996, when the old dinar was formally abolished and the riyal became the sole currency unit for the unified Yemen. In mid-1993, when the standard official exchange rate was US $1 = 12.01 riyals (as it had been since February 1990), the black-market value of the Yemeni currency was approximately $1 = 46 riyals (reflecting, in part, the country's annual inflation rate of about 200% at that time). In 1992 the Government had introduced a 'customs rate' of $1 = 18 riyals for all non-essential imports, and in May 1993 it had introduced an 'incentive rate' of 25 riyals to the US dollar for oil companies and tourists.

In the unified state's first budget, for 1991, expenditure was projected at 50,980m. riyals (compared with an aggregate figure of 46,256m. riyals in 1990) and revenue at 35,218m. riyals (24,704m. in 1990). The resultant forecast deficit of 15,762m. riyals represented a 27% reduction against the 1990 combined deficit of 21,552m. riyals. The biggest allocation in the 1991 budget was for defence (12,700m. riyals), followed by investment and development (11,000m. riyals) and education (8,300m. riyals). The investment and development allocation did not include loans and grants from external sources, which were seen as crucial for offsetting losses attributable to the Gulf crisis.

The 1992 budget provided for estimated revenue of 45,778m. riyals and expenditure of 58,114m. riyals, and thus for a deficit of 12,336m. riyals. The Government's financial projections for the year envisaged: that its foreign exchange resources would total US $2,185m. to meet anticipated commitments of $2,349m. (as against resources of $1,836m. and outgoings of $2,212m. in 1991); that imports of wheat, flour, rice and essential drugs would cost $368m.; that all foreign debt obligations would be met in 1992; and that defence spending would be reduced by 12% compared with 1991. The Government did not publish 1993 budget proposals, and was assumed to be organizing its finances on a month-to-month basis, using its 1992 spending as a guideline for the current year. According to press reports (said to be based on internal Finance Ministry records), actual spending in 1992 had totalled 58,060m. riyals (of which 53,637m. riyals was current spending), while actual revenue had amounted to only 32,008m. riyals (about one-third of estimated GNP). The largest single component of expenditure in 1992 was the public-sector salary bill, reported to total 32,735m. riyals. In 1994 the Government again failed to reach any agreement on a national budget, and was assumed to be maintaining a form of month-to-month accounting system until May, when established procedures were disrupted by the onset of civil war.

According to estimates published by independent Yemeni economists in January 1994, the Government spent 74,000m. riyals in 1993 and collected revenue of 32,000m. riyals, leaving a deficit of 42,000m. riyals, equivalent to more than one-third of the current GDP (which was estimated to be between 110,000m. and 120,000m. riyals). It was not known how the budget deficit had been financed. Following the end of the civil war in July 1994, the Government said that it planned to issue bonds to raise funds for post-war reconstruction work. The Yemeni currency's unofficial exchange rate against the US dollar, which had declined to 80 riyals before the outbreak of hostilities, fell below 100 riyals for the first time during June 1994. Retrospective budget statistics for 1994, published long after the end of that year, showed total revenue of 41,384m. riyals and total expenditure of 85,875m. riyals. The overall deficit was 44,491m. riyals.

In 1995 the Government prepared a formal budget (approved by the legislature on 30 April) which provided for total expenditure of 111,128m. riyals and total revenue of 89,646m. riyals, leaving a deficit of 21,482m. riyals. It had previously been announced in December 1994 that capital spending in 1994 would total around 35,000m. riyals, of which 20,000m. riyals would be spent on post-war reconstruction and infrastructural development. The 1995 budget was preceded by a package of economic measures designed to limit the size of the budget deficit (which would otherwise have reached an estimated 60,000m. riyals). On 29 March the prices of a wide range of commodities

and services were raised by between 50% and 100% (petrol being one of the items which doubled in price), while public-sector pay and pensions were increased by between 20% for top grades and 50% (or a minimum of 1,000 riyals per month) for lower grades. Flour and wheat prices remained heavily subsidized, while imported medicines, milk and rice were exempted from increases in customs duties. Significant cutbacks were announced in expenditure on Yemen's diplomatic missions and official offices in other countries, while the armed forces were instructed to retire or discharge a total of 50,000 personnel. On 30 March a unified official exchange rate of 50 riyals per US dollar was introduced, and on 7 May local banks were authorized to carry out currency trading at prevailing free-market exchange rates (which remained far weaker than the new official rate).

Following talks with delegations from the World Bank and the IMF, the Government announced in late May 1995 that it was drawing up a five-year plan to restructure the economy over the period 1996–2000. The draft plan envisaged the flotation of the riyal within three years; progressive withdrawal of price subsidies on basic goods, including grain, rice and flour; liberalization of the food distribution system; far-reaching administrative reforms, including some decentralization measures; full harmonization of the northern and southern legal systems; and the introduction of a privatization programme (to be followed by the establishment of a stock market). Joint public-private sector ventures would be encouraged in infrastructural and other projects, and particular efforts would be made to secure high levels of private investment in labour-intensive projects. Seven publicly-owned companies in Aden (five of which were food-processing concerns) were earmarked for early privatization, as were a number of small-scale power generation facilities. The Government was expected to finalize the content of the five-year plan after further consultations with IMF/World Bank representatives, who were understood to favour a 50% cutback in public-sector employment and a two-year phasing-out period for all government price subsidies. The Yemen Government, for its part, was hoping that IMF/World Bank financial assistance for structural reforms would be complemented by measures to secure a reduction in Yemen's external indebtedness.

In July 1995 the Central Bank of Yemen raised its maximum deposit rate from 9% to 22% to stimulate savings in local currency, and used an estimated US $27m. of its foreign assets to support the free-market exchange rate of the riyal, which had declined in late June to its lowest ever level of 165 to the dollar (a level previously reached on the unofficial currency market in April, prior to the authorization of free-market currency dealing through the banking system). In mid-July Yemen's Prime Minister said that the public finances were currently showing a slightly smaller deficit than had been forecast in the 1995 budget, while a senior World Bank official expressed strong confidence in government economic policy and foresaw a tripling of World Bank assistance to Yemen if the Government moved quickly to implement key structural reforms. The free-market exchange rate per dollar strengthened to 55 riyals during August before declining to 114 riyals in November and 130 riyals in December. At the beginning of December the Central Bank held its first ever auction of treasury bills, having announced that it would be issuing short-dated bills with a total face value of 12,000m. riyals over the next six months with the aim of reducing excess liquidity in the country's economy.

In January 1996 the Government announced the immediate abolition of the official exchange rate of 50 riyals per dollar while stating its readiness to intervene in the currency market if the riyal's free-market value weakened beyond 'the real and practical rate'. (At the same time the so-called customs exchange rate—now the main indicator of current government estimates of the 'real and practical' value of the currency—was devalued to 100 riyals per dollar.) The Central Bank was authorized to use up to US $480m. of foreign reserves to support the riyal during the first 15 months of the floating exchange rate regime. Intervention by the Central Bank caused the exchange rate to strengthen to 100 riyals per dollar at some points during the first quarter of 1996. In April 1996, when the Central Bank did not intervene in the local currency market, the rate fell back to 134 riyals per dollar.

As well as abolishing the official exchange rate at the beginning of 1996, the Government reduced official price subsidies for many basic foodstuffs. Market prices rose sharply, and some commodities were in short supply for a time, as a result of hoarding prompted by expectations of future price increases. In January 1996 the Government announced that electricity prices were to rise by 50%–100% and water charges by 40%–60%, depending on consumption. Prices of oil products and domestic gas were also increased, although the price increase for diesel (originally 100%) was reduced to 33% after protest action by farmers.

The 1996 budget provided for expenditure of 181,416m. riyals (a 63.2% increase over the previous budget) and revenue of 155,886m. riyals (an increase of 73.9%), resulting in a deficit of 25,530m. riyals (19% less than the 1995 budget deficit). The spending allocations included 1,000m. riyals to alleviate the severity of economic reforms for the most vulnerable sections of the population. A January 1996 meeting of multilateral, regional and bilateral donors commended Yemen's current economic policies and pledged a total of US $500m. of new funding in 1996 ($350m. in support of structural reforms and $150m. to finance development projects). The Arab Monetary Fund was to provide $68m. under a loan agreement signed in November 1995. A 15-month stand-by credit of SDR 132m. (about $194m.) was formally approved by the IMF in March 1996, and the World Bank approved an $80m. structural reform programme in April, to be supplemented by further credits for a number of civil works projects designed to provide short-term employment for labourers. It was announced in late June that the Government was to set up a $20m. Social Development and Employment Fund, through which investment in job-creation and related programmes would be channelled.

In July 1996 the Government finalized its development plan for the period 1996–2000, which included a GDP growth target of 7.2% per annum. Oil and gas production was targeted to grow by 55% during the period of the plan. It was envisaged that total investment would amount to 818,000m. riyals (more than US $5,800m. at the prevailing exchange rate). Of this, nearly 390,000m. riyals represented foreign investment in the oil and gas sector (three-quarters of which was for the planned LNG export scheme). There were 207,000m. riyals of foreign aid, 121,600m. riyals of public investment and the balance (nearly 100,000m. riyals) came from private-sector investment.

As originally adopted, Yemen's 1997 budget provided for total expenditure of 313,985m. riyals and total revenue of 301,222m. riyals, leaving a deficit of 12,763m. riyals. However, additional expenditure of 12,610m. riyals was approved by the legislature in September 1997, increasing the final 1997 budget deficit to 25,373m. riyals. When capital items were excluded, the revised 1997 budget was in surplus by 2,690m. riyals on current account. The largest revenue sources in the 1997 budget were oil and gas (63%), taxation (11%), customs duties (10%) and foreign aid (6%), while the largest expenditure categories in the revised total were subsidies on food and energy prices (23%), defence (16%), education (16%), new investment (12%) and debt servicing (10%). The Central Bank's foreign exchange reserves increased from US $564m. at the end of 1995 to $969m. at the end of 1996 and stood at $1,072m. in mid-1997. The currency exchange rate averaged around 130 riyals to the dollar in the year to mid-1997. The Central Bank's minimum interest rate on riyal bank deposits (which had been 20% in April 1997) was reduced to 12% in August 1997 and 11% in December 1997.

In early June 1997 the UN Development Programme announced an allocation of US $200m. to support projects in Yemen over the next five years. The World Bank had previously announced $420m. of new loan allocations over a period of three years. In mid-June 1997 IMF officials held talks with Yemen's new Government to discuss the terms of a proposed three-year extended structural adjustment facility. Later that month a meeting of 26 donor bodies affirmed aid pledges to Yemen totalling $1,800m. over three years. In pursuance of its structural reform programme, the Government introduced substantial price increases for fuel, wheat and flour at the start of July 1997, while at the same time increasing public-sector wages by 10%. In September 1997 the Government announced its intention to establish an official stock exchange in early 1998 and to begin preparations to privatize the National Bank of Yemen

(established in 1969 through the nationalization of foreign commercial banks' operations in the PDRY).

At the end of October 1997 the IMF approved a US $512m. loan and credit package in support of the Government's economic programme for the period 1997–2000. The package comprised SDR 264.8m. ($366m.) in loans under the IMF's enhanced structural adjustment facility, plus a credit of SDR 105.9m. ($146m.) under the extended fund facility. The objectives of the medium-term strategy for 1997–2000 were to achieve average non-oil GDP growth of 6% per annum in real terms; to keep the core inflation rate at or below 5% per annum; to restrict the external current-account deficit to 2% of GDP; and to maintain sufficient foreign exchange reserves to cover 4.5 months of imports. The budget deficit was to be limited to an average 2% of GDP. The structural adjustment process was to involve reorienting spending towards social sectors and infrastructure; reforming direct and indirect taxation; eliminating price subsidies; introducing administrative, civil service and financial sector reforms; implementing a 'rapidly moving and broad privatization programme'; and taking steps to 'enhance the competitive environment'. The World Bank approved two new loans in November 1997: SDR 58.9m. ($80m.) to assist the structural reform process in the financial and banking sector and SDR 17.7m. ($24.7m.) to support rural development in southern Yemen.

Yemen's 1998 budget provided for an 11.7% increase in total revenue, to 336,583m. riyals, while expenditure was set at 350,054m. riyals (7% higher than the revised 1997 total). The resultant deficit of 13,471m. riyals was wholly attributable to capital spending, as the current account was expected to show a surplus of 31,028m. riyals. The oil and gas sector was expected to contribute 61% of revenue in 1998, followed by taxation (13%), customs duties (9%) and foreign aid (6%). The main expenditure categories were education (18%), new investment (16%), defence (15%), subsidies on food and energy prices (14%) and debt servicing (10%). The central assumption in the 1998 revenue estimates was that crude oil prices would average US $18 per barrel in 1998. In practice, oil prices fell by around one-third in the opening months of 1998 (see Petroleum and Natural Gas section above), with the result that Yemen's budget deficit stood at 36,200m. riyals, instead of an expected 4,400m. riyals, at the end of April 1998.

In April 1998 the Government announced forthcoming 40% increases in wheat and flour prices and said that it intended to phase out all subsidies on these items by the end of the century. In 1997 the annual cost of wheat and flour subsidies was 48,000m. riyals. Further price rises in mid-June 1998, affecting various subsidized commodities including gasoline, kerosene, bottled gas and basic foodstuffs, sparked protest demonstrations in San'a and several other urban centres. At least 34 deaths were reported as protesters clashed with security forces. The Government raised public-sector wages by 15% from the start of July 1998, having secured IMF approval for a higher 1998 budget deficit (5% of GDP) than had originally been targeted. There was an increase in 1998 in kidnappings of foreigners and government officials by armed tribesmen in rural areas, reportedly aimed at publicizing grievances over low levels of development spending. There was also a reported increase in petty damage to oil pipelines by disaffected tribesmen. Within the oil industry, employees of Yemen Hunt Oil threatened to take strike action unless their pay and conditions were improved.

Yemeni officials made it known in 1998 that Saudi Arabia had begun to issue entry visas to Yemeni workers for the first time since the Gulf war, although Yemenis were now required to have Saudi sponsors and to obtain work and residence permits (requirements that had previously been waived for Yemenis). An estimated 400,000 Yemenis were already working in Saudi Arabia in early 1998. There was no expectation of a large-scale influx of Yemenis into Saudi Arabia at this time, not least because the Saudi economy was itself adversely affected by the sharp downturn in world oil prices.

The 1999 budget provided for expenditure of 335,500m. riyals (4.1% less than in 1998) and revenue of 294,400m. riyals, leaving a deficit of 41,100m. riyals. In contrast to the situation in 1998, when revenue fell far below budgeted levels because of depressed oil export prices, the outlook in mid-1999 was for above-budget revenue in the current year, reflecting the unexpectedly strong recovery of the oil market since the end of 1998. An IMF report issued in March 1999 noted the severe impact of reduced oil income on all sectors of Yemen's economy in 1998, the final fiscal deficit in 1998 being equivalent to about 6% of GDP, while the estimated 1998 inflation rate was around 11% and GDP growth was below 3%, in real terms. In July 1999 the IMF was forecasting a fiscal deficit of around 3% of GDP in 1999, coupled with inflation of less than 10% and real growth of 4% in non-oil GDP. By July 1999 a total of SDR 153m. ($206m.) had been approved for disbursement under the October 1997 IMF support package for Yemen.

In April 1999 the Government raised public-sector salaries while reducing some price subsidies. In the following month the prices of kerosene, fuel oil and bottled gas were increased. The currency exchange rate declined to 170 riyals per US dollar in early June 1999, necessitating an increase in the minimum interest rate for riyal bank deposits (which had been moving upwards since October 1998) to 20%—a level last seen in 1997. At the same time the minimum proportion of deposits that banks were required to hold in riyals was raised from 10% to 15%. In mid-August 1999 the currency exchange rate was 148 riyals per dollar.

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units

100 fils = 1 Yemeni riyal.

Sterling, Dollar and Euro Equivalents (30 April 1999)

£1 sterling = 250.24 riyals;
US $1 = 155.19 riyals;
€1 = 164.45 riyals;
1,000 Yemeni riyals = £3.996 = $6.444 = €6.081

Average Exchange Rate (Yemeni riyals per US $)

1996	94.157
1997	129.281
1998	135.882

Note: The exchange rate of US $1 = 9.76 Yemeni riyals, established in the YAR in 1988, remained in force until February 1990, when a new rate of $1 = 12.01 riyals was introduced. Following the merger of the two Yemens in May 1990, the YAR's currency was adopted as the currency of the unified country. In March 1995 the official exchange rate was amended from 12.01 to 50.04 riyals per US dollar. The rate has since been adjusted. In addition to the official rate, there is a market-determined exchange rate, applicable to most private transactions.

GENERAL BUDGET (million riyals)

Directory

The Constitution

A draft constitution for the united Republic of Yemen (based on that endorsed by the Yemen Arab Republic (YAR) and the People's Democratic Republic of Yemen (PDRY) in December 1981) was published in December 1989, and was approved by a popular referendum on 15–16 May 1991.

On 29 September 1994 52 articles were amended, 29 added and one cancelled, leaving a total of 159 articles in the Constitution.

As revised in 1994, the Constitution defines the Yemeni Republic as an independent and sovereign Arab and Islamic country. The document states that the Republic 'is an indivisible whole, and it is impermissible to concede any part of it. The Yemeni people are part of the Arab and Islamic nation.' The Islamic *Shari'a* is identified as the basis of all laws.

The revised Constitution provides for the election, by direct universal suffrage, of the President of the Republic; the President is elected for a five-year term, renewable only once.* The President is empowered to appoint a Vice-President. The President of the Republic is, *ex officio*, Commander-in-Chief of the Armed Forces.

Legislative authority is vested in the 301-member House of Representatives, which is elected, by universal suffrage, for a four-year term. The legislature is empowered to debate and approve legislation, to decide general state policy, to supervise public spending, and to ratify international treaties and agreements. The Constitution states that 'the President can dissolve the House of Representatives only when necessary'.

The President of the Republic appoints the Prime Minister and other members of the Government on the advice of the Prime Minister. The Constitution empowers both the President and the legislature to impeach the Prime Minister and other government members 'for crimes committed in the performance of their duties'.

The Constitution delineates the separation of the powers of the organs of State, and guarantees the independence of the judiciary. The existence of a multi-party political system is confirmed, although serving members of the police and armed forces are banned from political activity.

* The amendments to the Constitution enacted in September 1994 provided for the abolition of the Presidential Council, which had previously been empowered to elect the President of the Republic.

On 1 October the House of Representatives, meeting as an electoral college, confirmed Ali Abdullah Saleh as President for a five-year term; following the expiry of this mandate, subsequent elections to the presidency would be as defined above.

HEAD OF STATE

President: Field Marshal ALI ABDULLAH SALEH (took office 24 May 1990; re-elected 1 October 1994, 23 September 1999).

Vice-President: Maj.-Gen. ABD AR-RABBUH MANSUR HADI.

COUNCIL OF MINISTERS
(September 1999)

Prime Minister: Dr ABD AL-KARIM AL-IRYANI.

Legislature

THE HOUSE OF REPRESENTATIVES

The House of Representatives has 301 members, elected for a four-year term. It originally comprised the 159 members of the Consultative Council (*Majlis ash-Shura*) of the former YAR; the 111 members of the Supreme People's Council of the former PDRY; and 31 new members nominated by President Saleh. A general election for a new House of Representatives was held on 27 April 1993, and again on the same date in 1997.

Speaker: Sheikh ABDULLAH BIN HUSSAIN AL-AHMAR.

General Election, 27 April 1997

Party	Seats
General People's Congress (GPC)	187
Yemeni Islah Party (YIP)	53
Independents	54
Baathist and Nasserite parties	7
Total	301

Political Organizations

In the former PDRY the YSP was the only legal political party until December 1989, when the formation of opposition parties was legalized. There were no political parties in the former YAR. The two leading parties that emerged in the unified Yemen were the GPC and the YSP. During 1990 an estimated 30 to 40 further political parties were reported to have been formed, and in 1991 a law was passed regulating the formation of political parties. Following the civil war from May to July 1994, President Saleh excluded the YSP from the new Government formed in October 1994. In 1995 43 parties were known to be in existence.

Al-Haq: San'a; conservative Islamic party; Sec.-Gen. Sheikh AHMAD ASH-SHAMI.

Democratic Coalition of Opposition: San'a; f. 1995 as a coalition of 13 political parties and organizations, including a splinter faction of the YSP and the LSY.

General People's Congress (GPC): San'a; e-mail gpc@y.net.ye; internet http://www.gpc.org.ye; a broad grouping of supporters of President Saleh; Chair. Field Marshal ALI ABDULLAH SALEH; Vice-Chair. Maj.-Gen. ABD AR-RABBUH MANSUR HADI; Sec.-Gen. Dr ABD AL-KARIM AL-IRYANI.

League of the Sons of Yemen (LSY): Aden; represents interests of southern tribes; Leader ABD AR-RAHMAN AL-JIFRI; Sec.-Gen. MOHSEN FARID.

Nasserite Unionist Popular Organization: Aden; f. 1989 as a legal party.

Yemen Socialist Party (YSP): San'a; f. 1978 to succeed the United Political Organization—National Front (UPO—NF); fmrly Marxist-Leninist 'vanguard' party based on 'scientific socialism'; has Political Bureau and Cen. Cttee; Sec.-Gen. ALI SALEH OBAD.

Yemeni Islah Party (YIP): POB 23090, San'a; tel. (1) 213281; fax (1) 213311; f. 1990 by mems of the legislature and other political figures, and tribal leaders; seeks constitutional reform based on Islamic law; Leader Sheikh ABDULLAH BIN HUSSAIN AL-AHMAR; Sec.-Gen. Sheikh MUHAMMAD ALI AL-YADOUMI.

Yemeni Unionist Rally Party: Aden; f. 1990 by intellectuals and politicians from the fmr YAR and PDRY to safeguard human rights; Leader OMAR AL-JAWI.

Other parties in Yemen include the **Arab Socialist Baath Party**; the **Federation of Popular Forces**; the **Liberation Front Party**; the **Nasserite Democratic Party**; the **National Democratic Front**; the **National Social Party**; the **Popular Nasserite Reformation Party**; and the **Yemen League**.

Religion

ISLAM

The majority of the population are Muslims. Most are Sunni Muslims of the Shafi'a sect, except in the north-west of the country, where Zaidism (a moderate sect of the Shi'a order) is the dominant persuasion.

CHRISTIANITY

The Roman Catholic Church

Apostolic Vicariate of Arabia: POB 54, Abu Dhabi, United Arab Emirates; tel. (2) 461895; fax (2) 465177; e-mail apvicar@emirates.net.ae; responsible for a territory comprising most of the Arabian peninsula (including Saudi Arabia, the UAE, Oman, Qatar, Bahrain and Yemen), containing an estimated 900,000 Roman Catholics (31 December 1997); Vicar Apostolic GIOVANNI BERNARDO GREMOLI, Titular Bishop of Masuccaba (resident in the UAE); Vicar Delegate for Yemen Rev. GEORGE PUDUSSERY.

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, Yemen forms part of the diocese of Cyprus and the Gulf. The Anglican congregations in San'a and Aden are entirely expatriate; Bishop in Cyprus and the Gulf: Rt Rev. JOHN BROWN (resident in Cyprus); Archdeacon in the Gulf: Ven. MICHAEL MANSBRIDGE (resident in the UAE).

HINDUISM

There is a small Hindu community.

Judicial System

Yemen's Constitution guarantees the independence of the judiciary and identifies Islamic (*Shari'a*) as the basis of all laws.

Yemen is divided into 18 Governorates, each of which is further divided into Districts. Each District has a Court of First Instance in which all cases are heard by a single magistrate. Appeals against decisions of the Courts of First Instance are referred to a Court of Appeal. Each Governorate has a Court of Appeal with four divisions: Civil, Criminal, Matrimonial and Commercial, each of which consists of three judges.

The Supreme Court of the Republic, which sits in San'a, rules on matters concerning the Constitution, appeals against decisions of the Courts of Appeal and cases brought against members of the Legislature. The Supreme Court has eight divisions, each of which consists of five judges.

The Supreme Judicial Council supervises the proper function of the courts and its Chairman is the President of the Republic.

The Press

Legislation embodying the freedom of the press in the unified Republic of Yemen was enacted in May 1990. The lists below include publications which appeared in the YAR and the PDRY prior to their unification in May 1990.

Water

National Water and Sanitation Authority (NWSA): (Taiz Branch) POB 5283, Taiz; tel. (4) 222628; fax (4) 212323.

TRADE UNIONS

Agricultural Co-operatives Union: POB 649; tel. (1) 270685; fax (1) 274125.

General Confederation of Workers: POB 1162, Maalla, Aden; f. 1956; affiliated to WFTU and ICFTU; 35,000 mems; Pres. RAJEH SALEH NAJI; Gen. Sec. ABD AR-RAZAK SHAIF.

Trade Union Federation: San'a; Pres. ALI SAIF MUQBIL.

Transport

RAILWAYS

There are no railways in Yemen.

ROADS

In 1996 Yemen had a total road network of 64,725 km, including 5,234 km of main roads and 2,474 km of secondary roads. An estimated 8% of the road network was paved in 1996.

General Corpn for Roads and Bridges: POB 1185, Zubeiri St, Asir Rd, San'a; tel. (1) 202278; telex 2208; fax (1) 209571; responsible for maintenance and construction.

Yemen Land Transport Co: Aden; telex 2307; f. 1980; incorporates fmr Yemen Bus Co and all other public transport of the fmr PDRY; Chair. ABD AL-JALIL TAHIR BADR; Gen. Man. SALIH AWAD AL-AMUDI.

SHIPPING

Aden is the main port. In 1986 the port handled vessels with a combined displacement of 8.3m. net registered tons. Aden Main Harbour has 28 first-class berths. In addition there is ample room to accommodate vessels of light draught at anchor in the 18-foot dredged area. There is also 800 feet of cargo wharf accommodating vessels of 300 feet length and 18 feet draught. Aden Oil Harbour accommodates four tankers of 57,000 tons and up to 40 feet draught. A new port at Nishtun was opened in 1984 to assist in the exploitation of the rich fishing grounds nearby. A multi-purpose port terminal at Maalla was opened in 1993. During the mid-1990s work was proceeding on a US $580m. programme to expand container handling facilities at Aden, with the aim of establishing the port as a major transhipment centre. Completion of the main terminal was scheduled for March 1999.

There were three ports in the former YAR: Hodeida, Mocha and Salif. Hodeida is a Red Sea port of some importance, which has been considerably extended with Soviet aid. The Yemen Navigation Line, which is based in Aden, operates passenger and cargo services to many parts of the Middle East and Africa.

At 31 December 1997 Yemen's merchant fleet comprised 45 vessels, amounting to 26,239 grt.

Hodeida Port Authority: POB 3183, Hodeida; tel. (3) 75057; telex 5565.

Yemen Ports Authority: POB 1316, Steamer Point, Aden; tel. (2) 204953; telex 6278; fax (2) 213805; f. 1888; Harbour Master Capt. BARAKAT ALI DARWISH.

Principal Shipping Companies

Aden Refinery Co: POB 3003, Aden 110; tel. (2) 376234; telex 6213; fax (2) 376600; Exec.-Dir MUHAMMAD HUSSAIN AL-HAJ.

Arabian Gulf Navigation Co (Yemen) Ltd: POB 3740, Hodeida; tel. (3) 2442; telex 5507.

Elkirshi Shipping and Stevedoring Co: POB 3813, Al-Hamdi St, Hodeida; tel. (3) 224263; telex 5569; operates at ports of Hodeida, Mocha and Salif.

Hodeida Shipping and Transport Co Ltd: POB 3337, Hodeida; tel. (3) 238130; telex 5510; fax (3) 211533; cargo, container and ro-ro handling.

Middle East Shipping Co Ltd: POB 3700, Hodeida; tel. (3) 217276; telex 5505; fax (3) 211529; e-mail mideasthod@y.net.ye; f. 1962; Chair. ABD AL-WASA HAYEL SAEED; Gen. Man. ABD AR-RAHIM ABD AL-GHAFUR; brs in Mocha, Aden, Taiz, Mukalla, San'a, Salif, Ras Isa, ash-Shihr.

National Shipping Co: POB 1228, Steamer Point, Aden; tel. (2) 204861; telex 6217; fax (2) 202644; shipping, bunkering, clearing and forwarding, and travel agents; Gen. Man. MUHAMMAD OTHMAN.

Yemen Navigation Line: POB 4190, Aden; tel. (2) 24861; telex 295; fleet of 3 general cargo vessels.

Yemen Shipping Development Co Ltd: POB 3686, Hodeida; tel. (3) 239252; telex 5530; fleet of 4 general cargo vessels; Shipping Man. FAHDLE A. KARIM.

CIVIL AVIATION

There are six international airports—San'a International (13 km from the city), Aden Civil Airport (at Khormaksar, 11 km from the port of Aden), al-Ganad (at Taiz), Mukalla (Riyan), Seyoun and Hodeida Airport. In 1995 a total of 375,000 passengers travelled on scheduled services in the Republic of Yemen.

A merger of the former national carriers of the YAR and the PDRY (see below) took effect in May 1996.

Yemen Airways (Yemenia): POB 1183, Airport Rd, San'a; tel. (1) 232380; telex 2204; fax (1) 252991; f. 1963 as Yemen Airlines; nationalized as Yemen Airways Corpn 1972; present name adopted 1978; merged with airlines of fmr PDRY in 1996; owned 51% by Yemeni Govt and 49% by Govt of Saudi Arabia; supervised by a ministerial cttee under the Ministry of Transport; internal services and external services to destinations in the Middle East, Asia, Africa and Europe; Chair. HASSAN ABDO SOHBI.

Tourism

The former YAR formed a joint tourism company with the PDRY in 1980. In 1998 some 82,270 tourists visited Yemen, and tourist receipts for that year were estimated at US $84m.

Yemen Tourism Promotion Board: POB 8075, San'a; tel. (1) 254032; fax (1) 223628; Man. ABDU LUFF.

Yemen Tourist Co: POB 1526, San'a; Chair. ABD AL-HADI AL-HAMDANI.

Defence

The armed forces of the former YAR and the PDRY were officially merged in May 1990, but by early 1994 the process had not been completed and in May civil war broke out between the forces of the two former states, culminating in victory for the North. In October President Saleh announced plans for the modernization of the armed forces, which would include the banning of party affiliation in the security services and armed forces, and in March 1995 the full merger of the armed forces was announced.

Supreme Commander of the Armed Forces: Field Marshal ALI ABDULLAH SALEH.

Chief of Staff of the Armed Forces: (vacant).

Chief of the General Staff: Brig.-Gen. ABDULLAH ALI ULAYWAH.

Estimated defence budget (1998): US $414m.

Military Service: conscription, 3 years.

Total Armed Forces (August 1998): 66,300: army 61,000; navy 1,800; air force 3,500. Reserves 40,000 (army).

Paramilitary Forces: an estimated 50,000-strong Ministry of National Security Force, and at least 20,000 tribal levies.

Education

Primary education in the Yemen is compulsory between the ages of six and 15. Secondary education, beginning at 15, lasts for a further three years. In 1996 enrolment at primary schools was equivalent to 70% of children in the relevant age-group (boys 100%; girls 40%). Enrolment at secondary schools in that year was equivalent to just 34% of students in the appropriate age-group (males 53%; females 14%). In the 1993/94 academic year, 11,999 pupils were in pre-primary education. In 1996/97 2,699,788 pupils attended primary institutions. There were 354,288 pupils in secondary education in that year. Some 65,675 students progressed to higher education, with 25,715 students enrolled at universities in San'a and Aden. The average rate of adult illiteracy, according to unofficial sources, is 68% (males 62%; females 74%). In 1998 public expenditure on education was estimated at 56,462m. riyals, equivalent to 18.9% of total government spending.
